IAT TOR

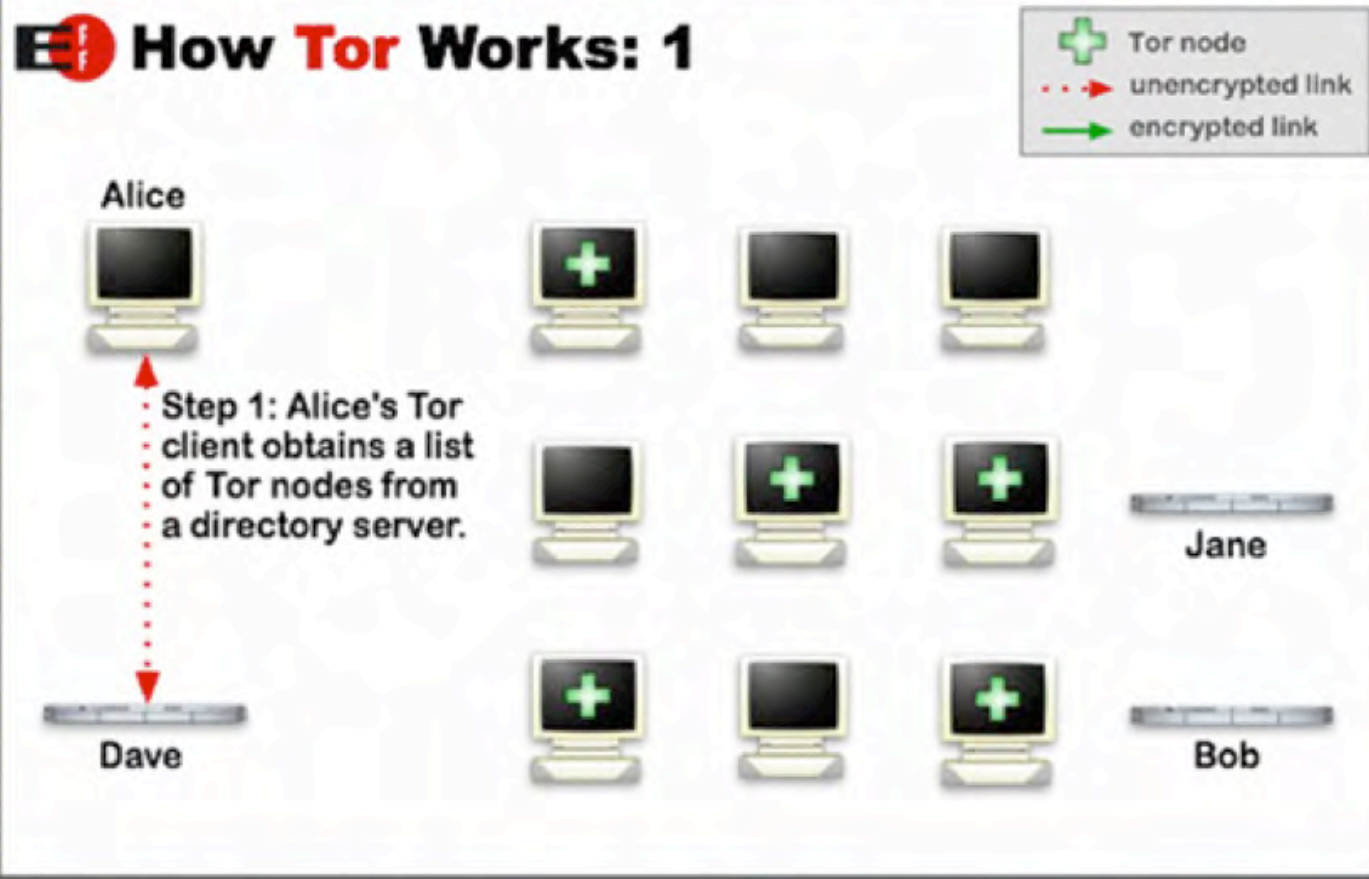

(C//REL) Types of IAT – Advanced Open Source Multi-Hop

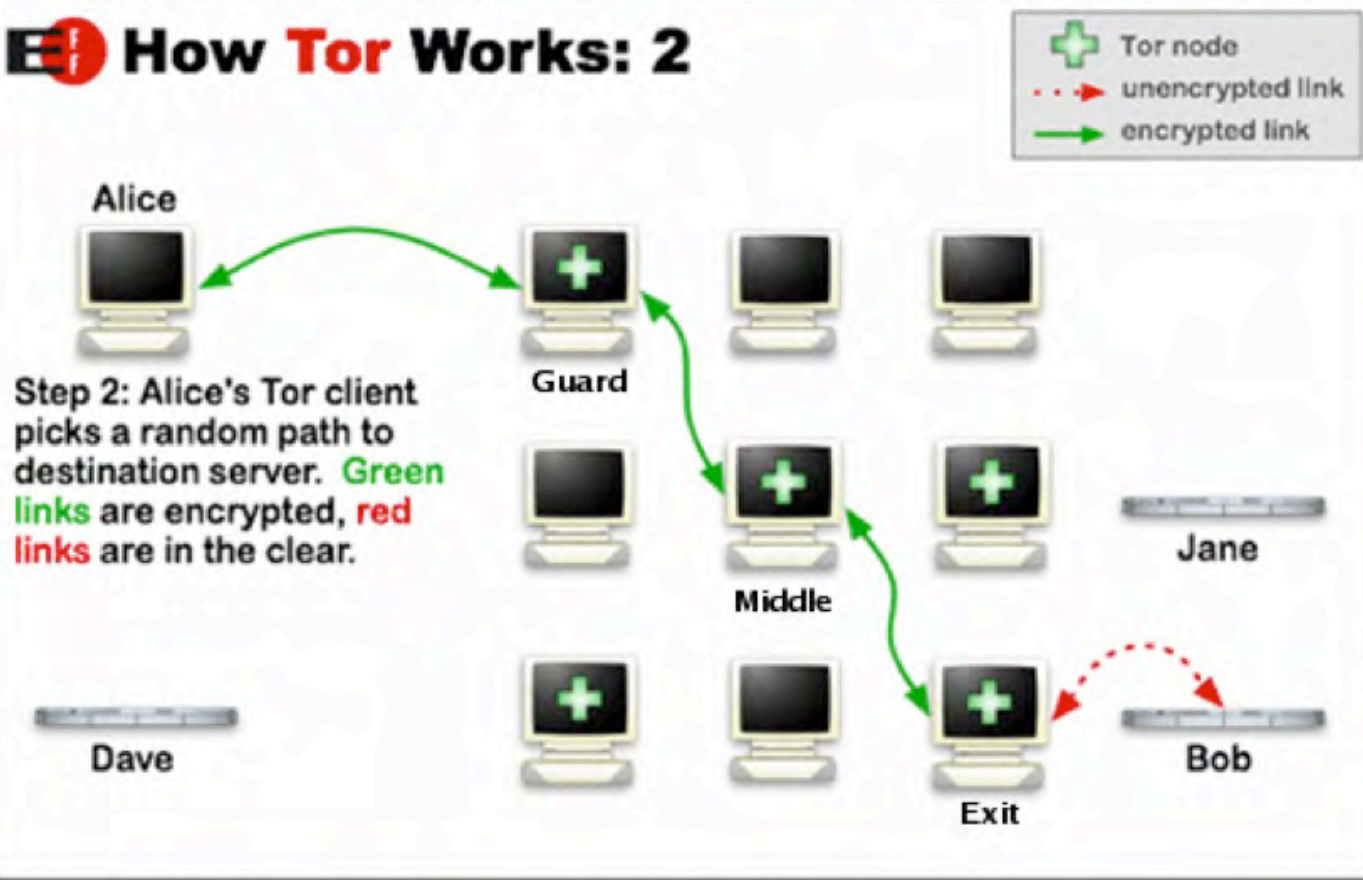

- (S//REL) Open Source Multi-Hop Networks
 - (S//REL) *Tor*
 - (S//REL) Very widely used worldwide
 - (S//REL) Open Source
 - (S//REL) Active Development
 - (S//REL) Mitigates Threats
 - (S//REL) Very Secure
 - (S//REL) Low enough latency for most *TCP* uses
 - (S//REL) Still the King of high secure, low latency Internet Anonymity
 - (S//REL) There are no contenders for the throne in waiting

TOP SECRET//SI//REL TO USA,FVEY
(S//REL) *Tor* Operation (1)

TOP SECRET//SI//REL TO USA,FVEY
(S//REL) Tor Operation (2)

How Tor Works: 2

(S//SI//REL) Passive *Tor* Traffic Analysis

- (S//SI//REL) For Normal SIGINT flow, need to identify *Tor* traffic!
 - (S//SI//REL) Only outer *TLS* layer visible → How to Distinguish?
 - (S//SI//REL) *Tor* developers attempt to remain anonymous by blending in with myriad other *TLS* traffic
 - (S//SI//REL) *Tor TLS* has changed over the years
 - (S//SI//REL) There ARE some server → client features which are recognizable
 - (S//SI//REL) Certificate: Specific *Diffie-Hellman (DH)* Modulus – byte search
 - (S//SI//REL) Certificate: Issuer and Subject random names of same form – ex: *CN=www.ofzfkdxvrss.net* – regex match
 - (S//SI//REL) Certificate: always 2 hour lifetime – *ASN.1* parsing, more computation
 - (S//SI) Multiple XKS fingerprints from multiple parties deployed

TOP SECRET//SI//REL TO USA,FVEY
(S//REL) *Tor* Project Censorship Driven Activity

- (S//REL) Driven by Censorship Circumvention, Hide Signature
 - (S//REL) China and Iran still main adversaries
 - (S//REL) Researching better bridge distribution strategies
 - (S//REL) Claim by *Tor Project* is 8000 requests/day for <1000 total
 - (S//REL) Around Feb 2011, changed the *TLS* handshake
 - (S//REL) Signature more like *Apache* web-server
 - (S//REL) Different *DH* Modulus
 - (S//SI//REL) New XKS Signatures address this
 - (TS//SI//REL) Proposed eventual change will kill identification!
 - (S//REL) Each *Tor* node will generate random-ish signatures in a volatile way specifically designed to look like normal website *TLS* traffic!

(S//REL) Censorship Driven Protocol Obfuscation – *Psiphon 3 / Tor*

(S//REL) Extreme Censorship blocking: Common encrypted protocols

- (S//REL) In the case of *Psiphon 3*: *SSH*
- (S//REL) In the case of *Tor*: *TLS*
- (S//REL) Make deep packet inspection (*XKS* :-) work harder
- (S//REL) Both use work of a open source project (*brl/obfuscated-openssh*)

(S//REL) Idea is both sides transmit random seed and verifier information

- (S//REL) Verifier is hash of seed and other data
- (S//REL) If verifier passes data used from both side seeds to generate key
- (S//REL) Key used in symmetric cipher to encrypt native *SSH* or *SSL* protocol
- (S//REL) So for random stream, need to de-obfuscate and test for *SSH / SSL*

(S//REL) Details for *Psiphon 3*

- (S//REL) Hash used for verifier, key generation: 6000 iterations *SHA-1*
- (S//REL) Symmetric cipher is *RC-4*

(S//REL) Details for *Tor Obsfproxy*

- (S//REL) Hash used for verifier, key generation: 100K iterations *SHA-256*
- (S//REL) Symmetric cipher is *AES-CTR-128*
- (S//REL) Key uses seed from both sides!

(S//REL) *Tor* Project and friends Recent Activity

- (S//REL) *Tor* on non-traditional platforms
 - (S//REL) *ORBOT*, *Tor* for *Android* smartphones – Associated browser, easy to use!
 - (S//REL) *Tor* Router Project – Modified *Linksys* Router (everything over *Tor*)
 - (S//REL) *Hide-My-IP-Address*
 - (S//REL) Proprietary replacement for *Tor Browser Bundle*
 - (S//REL) From “*WCCL Network*” not part of *Tor* Project
 - (S//SI//REL) Looked at based on reference by CT target
 - (S//REL) *Tor* Project working on improving support for circumvention
 - » (S//REL) Handshake obfuscation (discussed)
 - » (S//REL) Better bridge proliferation / distribution
 - (S//REL) *Tails*: Complete Bootable OS on CD for anonymity – includes *Tor*
 - (S//REL) Adds Severe CNE misery to equation
 - (S//SI//REL) Has been discussed by CT targets

(S//REL) *Tor* Project and friends Recent Activity

- (S//REL) Advanced *Tor* “Obfuscation” Project: *SkypeMorph*
 - (S//REL) Another option for pluggable transport
 - (S//REL) More sophisticated concept than *Obfsproxy*
 - (S//REL) Open connection to Skype server with “bridge Skype ID”
 - (S//REL) Encapsulate *Tor* in encrypted data mimicking *Skype* Video Traffic
 - (S//REL) Sort of traffic flow steganography vice content steganography
 - (S//REL) True Public Key cryptography vice obfuscation with known key
 - (S//REL) Product of University research – Non-trivial to deploy
- (TS//SI//REL) Most Recent SIGINT Work on Exploiting *Tor*
 - (TS//SI//REL) REMATION II Workshop (US/UK) at MHS spring 2012
 - (S//SI//REL) Unleashed Networking/CNE legions...
 - (S//REL) See later talk by [REDACTED] for the scoop

(S//REL) *Tor* Project and friends Recent Activity

- (S//REL) Online Feud between 2 IAT Products: *Ultrasurf* and *Tor*
 - (S//REL) “ Technical Analysis of the *Ultrasurf* proxying software” (Applebaum)
 - (S//REL) Analysis (including some SRE) – highly critical
 - (S//REL) Single hop, controlled by one authority
 - (S//REL) Security by obscurity
 - (S//REL) No perfect forward secrecy (forensic traces exploitable)
 - (S//REL) Responsible Disclosure: *Ultrasurf* notified 12/2011, published 04/2012
 - (S//REL) “*Tor*’s critique of *Ultrasurf*: A reply from the *Ultrasurf* developers”
 - » (S//REL) Posted on *Ultrasurf* site days after *Tor* published critique
 - » (S//REL) All talk and no show
 - » (S//REL) Not fully analyzed
 - » (S//REL) One Approach to IAT: *Tor* – higher anonymity, smaller scale
 - » (S//REL) One Approach to IAT: *Ultrasurf* – focus on circumvention, massive scale
