FAQ | Network Solutions

What is Legal Lock?

A Legal Lock is a Registrar lock placed on the Registry on a domain name that is the subject of a legal case such as two party disputes or bankruptcy. Domain name registrars that have a Legal Lock can only be removed. Domain information cannot be modified and for domain names cannot be transferred until a Legal Lock status. For more information, contact customer service.

New York, NY 10014

Dear Mr. Young:

Thank you for your letter of 1/19/11 regarding your request for information under the Freedom of Information Act (FOIA) regarding the National Institute of Standards and Technology (NIST) in which you requested copies of the FOIA records regarding "CNC" files.

Your request was received in our Public and Business Affairs Office and then forwarded to the FOIA Officer for review. Your request was reviewed in the FOIA Control Desk on February 16, 2011, and was assigned FOIA Log #13-061.

FOIA is following three different processing paths of your electronic records responses to your request on the involved records (12) files.

Some documents being released may be protected by copyrights owned by private third parties or organizations, and may be subject to redactions on such. You may want to consult legal advice prior to further dissemination.

Sincerely,
Dimitris S. Flakos
Freedom of Information Act Officer

PRINCIPLES

Machine is combined teleprinter and cipher machine. It generates running key, expressed electrically in 5-bands teletype apparatus. By passage of surplus through multiple paths in an 8-wire maze, and applies this key band-by-band to plain text to accomplish encipherment, addition following the rule "units less than produce mark impulses."

Current input: 1 band of 5 wires on the left endplate.
Key output: 5 bands of 3 wires on the right endplate.

Document titled 'Fahndung' (Search) with a table for recording search results. Includes fields for 'Merkmal' and 'Datum'.

A document titled 'CI FILE' with handwritten notes and a date of '12/10/10'. It appears to be a file folder or document page.

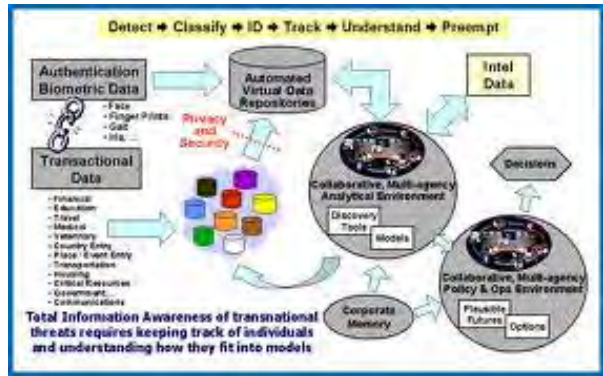

A news article titled 'Drugs and Crime Gang Profile' and 'Gangster Disciples' from the Department of Justice. It discusses the activities of the Disciples gang.

A document titled 'OFFER SHEET' with various fields and checkboxes, possibly a form for a project or contract.

A document with a header 'COMPTON' and several paragraphs of text, possibly a report or memo.

A small table with columns and rows, possibly a data table or schedule.

A document with a header '485,9 p/15' and several paragraphs of text, possibly a report or memo.

Subject: Re: Message Out

It will be a lot of fun to take control of you and live you again and again. My favorite thing is to go down on you for a make long time, using my fingers and tongue to make you over and over. Only after you are completely satisfied and totally wet will I finally imply you standing up in front of my full-length mirror to start so you can watch my back and feel as me deep inside you. I will wrap my strong arms around your waist and bounce you up and down on my hard penis and your hard around my penis. Then I will drop you on the bed and keep her many positions. I can make you from behind I explode deep inside your full wet.

After all that physical intimacy we can talk. I'm well read and have a problem with an MD and the director of pharmacology research at Ohio State medical school. Another brother owns his own software business. If you're Google+ Agoutoff you have a bit of an idea of what I do from what life is like. You own very smart and down, which makes you a good match for me.

All in all it could be an interesting weekend for both of us. Roy

According to EASI vol2 'Notes on German High level Cryptography and Cryptanalysis', p56-57

c. Statistical 'depth-increase' - The 'Turmoil' or 'Toren-Clock' was a device for testing a sequence of forty consecutive cipher letters statistically against a given 'depth' or similar sequences. To determine whether the former belonged to the given depth it was used 'primarily' for work on the U.S. strip cipher when cribbing which was generally employed was impossible. It cost approximately \$7,000.00.

The apparatus consisted of a single teleprinter tape reading head (speed 1 1/2 symbols per second), a solenoid magnet, by which any one of five different scores could be assigned, on the basis of frequency, to each of the letters in the 30 separate monoalphabets that resulted from the 30 columns of depth; a distributor that rotated in synchronism with the tape stepping, and selected which set of 30 scores was to be used as basis for evaluating the successive cipher letters; and a pen recording device.
