Third, "due to" is not defined. The plain meaning of this phrase is "because of": there must be a causal relationship between the inability to fund operating expenses and the COVID-19 emergency. See U.S. Postal Serv. v. Postal Regulatory Comm’n, 640 F.3d 1263, 1267 (D.C. Cir. 2011) (construing "due to" in the statute authorizing exigent price increases). What is less clear is how close the causal nexus must be (and hence the level of proof that must be provided to substantiate that causal nexus). On that question, courts have recognized that "the phrase 'due to' is ambiguous. . . . The causal nexus of 'due to' has been given a broad variety of meanings in the law ranging from sole and proximate cause at one end of the spectrum to contributing cause at the other." Id. at 1268 (quoting Kimber v. Thiokol Corp., 196 F.3d 1092, 1100 (10th Cir. 1999)) (brackets, internal quotation marks, and further citation omitted). Thus, it would certainly be possible to read Section 6001(b) as authorizing borrowing to the sole extent that financial strains can be specifically attributed to the COVID-19 emergency and that those strains overrun all other sources of funding. Cf. id. at 1267-68 (describing the Postal Regulatory Commission’s (Commission’s) initially strict application of “due to” in the exigency statute). But "due to"

   can mean 'due in part to' as well as 'due only to.' A financial crisis can often result from multiple contributing factors[.] It would not be incorrect to say that [a need for relief] is 'due to' [one] factor simply because it is also 'due to' other factors as well.

---

2 We are aware of at least two alternative uses of "operating expenses" in relation to the Postal Service. First, in the Postal Service’s periodic financial reports, "operating expenses" encompass all expenses (including depreciation on capital investments) other than interest expense. E.g., U.S. Postal Serv., FY2019 Form 10-K, at 24-39. Second, under the pre-PAEA provision that governed the Governors’ ratemaking authority, rates were required to cover “total estimated costs,” the definition of which, in turn, distinguished operating expenses from depreciation on capital investments, interest and other debt-related expense, and an amount for contingencies. 39 U.S.C. § 3621 (2005). Although an argument could be made for applying a different reading, the permanent borrowing statute (39 U.S.C. § 2005(a)) is clearly more directly relevant to the CARES Act’s borrowing provision than either periodic financial reporting or ratemaking.
Id. at 1268 (emphasis in original). Hence, in the Section 6001(b) context, it could be enough for the Postal Service to face an inability to fund operating expenses because of the COVID-19 emergency as well as other factors. 3

Fourth, the inability to fund operating expenses must be “due to the COVID-19 emergency.” The “COVID-19 emergency” is expressly defined in relation to the President’s declaration of a national emergency under the Robert T. Stafford Disaster Relief and Emergency Assistance Act. CARES Act § 6001(a)(1). Once the President has rescinded that emergency declaration, then the predicate condition for borrowing could be curtailed. More precisely, to access the CARES Act borrowing authority thereafter, the Postal Service would need to determine that the inability to fund operating expenses remains “due to” emergency conditions prior to rescission.

The Postal Service can certainly argue that, to the extent that mail volumes remain lower and/or costs remain higher at a given point in time than they would have been had the pandemic not occurred, such continuing effects are “due to” the pandemic, even if the emergency declaration has been rescinded. This would justify continued funding under this provision if these continuing effects mean that the Postal Service cannot fund operating expenses without borrowing. That said, assuming that Treasury cooperates in lending money during the COVID-19 emergency, it could decide to stop doing so earlier than the Postal Service believes to be warranted, if Treasury decides that the Postal Service’s inability to fund operating expenses is no longer “due to” the emergency. Such a prospect would resemble the Commission’s decision to truncate the amount of Great-Recession-era losses that the Postal Service was able to recover through an above-inflation rate increase. There, the Commission relied on the “due to” language in the exigency statute discussed above to establish a cut-off point, after which it would no longer deem continuing mail-volume losses to be “due to” the Great Recession. The Commission based this cut-off point on a determination of when the Postal Service theoretically entered a “new normal,” based on macroeconomic indicators and when the Postal Service began to gain an “ability to adjust” its operations at the depth of the recession’s impact. See Order No. 1926, Order

3 In USPS v. PRC, the court remanded the case to the Commission to interpret “due to” in the exigency statute. The Commission subsequently adopted a view close to the stricter end of the interpretive spectrum by requiring the Postal Service to quantify financial impacts attributable to the exigent circumstance (in that case, the Great Recession) rather than to other causes, although it granted that the quantification need not be absolutely precise. See generally Order No. 864, Order Resolving Issues on Remand, PRC Docket No. R2010-4R (Sept. 20, 2011). Key factors in the Commission’s reasoning were the Postal Service’s econometric resources, the scale of relief that it could seek (into the billions of dollars), and the fact that the exigency provision “is not intended as a remedial provision, but rather as a narrow exception to the price cap.” Id. at 44. In the context of borrowing under the CARES Act, the Postal Service’s resources and the scale of relief are comparable to what the Commission considered, and the additional borrowing authority could arguably (albeit not necessarily) be seen as a narrow exception to the Postal Service’s normal borrowing authority. That said, critical differences between the two contexts militate against applying the Commission’s logic here: the CARES Act’s “due to” language is to be applied by the Postal Service itself, not by an external oversight body, and borrowing money that must be repaid (with interest) – unlike a price increase – does not permanently affect any other party’s property interest.
Granting Exigent Price Increase, PRC Docket No. R2013-11 (Dec. 24, 2013), at 83-94.\(^4\) Even if the Postal Service might assert that COVID-19 impacts persist beyond the emergency declaration’s rescission, Treasury, taking a page from the Commission’s book, could nonetheless point not only to the emergency’s formal end, but also impute (however unrealistically) to the Postal Service an “ability to adjust” that renders its inability to fund operating expenses no longer “due to” the emergency.

Fifth, another interpretative ambiguity in the statute is the relationship between the necessity determination and the actual amount of borrowing that the Postal Service may request. In particular, the statute requires that the Postal Service determine that we could not fund operating expenses due to the pandemic “without borrowing money,” but does not directly limit the size of the resulting request in any way other than by imposing a $10 billion cap. In this regard, the Postal Service could argue that so long as we demonstrate a need to borrow money, we can borrow the full $10 billion under the statute, and need not justify the precise amount requested within that overall cap. On the other hand, Treasury could argue that while the $10 billion is an overall cap, the statute also is most reasonably read to limit the size of a request to only what is strictly necessary to ensure that operating expenses are funded.

Sixth, all of this analysis is to be conducted as part of a determination by the Postal Service, but the scope of our actual discretion is unspecified. Section 6001(b)(2) provides that Treasury “may” – not “must” – lend money requested by the Postal Service. Cf. 39 U.S.C. § 2006(b) (authorizing the Postal Service to “require the Secretary of the Treasury to purchase” up to $2 billion in Postal Service obligations). Treasury could point to this discretionary language as allowing it to refuse to lend money on the basis that it disagrees with the Postal Service’s determination of need. As further support, Treasury could contrast the CARES Act language with an earlier House version of the bill, which would have required Treasury to lend moneys requested by the Postal Service. H.R. 6379, 116th Cong. § 140001(a)(2) (2020) (“[T]he Secretary of the Treasury shall lend up to such amount at the request of the Postal Service.”). This mandatory language was abandoned in favor of the discretionary language in the final bill. Given the intense negotiations between Congressional leaders and Treasury that produced the final CARES Act, as well as the attention that the Administration reportedly gave to the postal provisions, this result is almost surely meaningful, rather than accidental. In the end, even if the Postal Service is correct that we have discretion regarding the necessity determination as a legal matter, as a practical matter the Treasury could still refuse to provide the money for other reasons.

\(^4\) The Postal Service challenged this cut-off as arbitrary, as macroeconomic indicators did not necessarily correspond to mail-volume trends, and as it made little sense to cut off recovery at the depth of the losses, when the Postal Service had merely begun to adjust but had not yet adequately adjusted. These challenges were unsuccessful. See Alliance for Nonprofit Mailers v. Postal Regulatory Comm’n, 790 F.3d 186, 196 & n.3 (D.C. Cir. 2015); Order No. 2623, Order Resolving Issues on Remand, PRC Docket No. R2013-11R (July 29, 2015) (denying reconsideration), at 15-28, affd, U.S. Postal Serv. v. Postal Regulatory Comm’n, 841 F.3d 508 (D.C. Cir. 2016).
In the event that Treasury attempts to second-guess the Postal Service’s determination of need, the Postal Service could point to Congress’s express conferral on the Postal Service of discretion to determine need; if Congress had intended to subject that determination to Treasury’s oversight, it easily could have so provided. Given our recent experience with disagreements over statutory construction, it is possible that we would be unable to persuade Treasury of our interpretation, and resolution of any interagency dispute might ultimately lie with the Office of Legal Counsel (OLC) at the Department of Justice. To minimize the risk of a time-consuming and uncertain dispute, the Postal Service would be well-advised to seek a common understanding with Treasury concerning this aspect of the statute.

While these interpretative issues present room for potential dispute with Treasury, the Postal Service does have a very strong argument that borrowing the full amount of the $10 billion is clearly necessary under the terms of the statute at this time. In this regard, our projections show that the Postal Service will experience a cash shortfall, and hence an inability to fund operating expenses, this calendar year unless the $10 billion is borrowed, and that we will need the full $10 billion to continue operations for as long as possible next fiscal year. This circumstance is a direct result of the precipitous declines in mail volumes that we forecast for Quarter 3 of FY2020, which would not have occurred but for the onset of the pandemic. Therefore, the Postal Service is legally authorized under the statute to request the full $10 billion at this time. While the above-mentioned interpretive issues may complicate our ability to utilize this funding source, we think that such issues are more likely to arise as time passes than they would if we seek these funds now, when the longer-term effects of the pandemic are unclear.

II. Treasury Agreement to Conditions

Under Section 6001(b)(2), any borrowing must be “upon terms and conditions mutually agreed upon by the Secretary and the Postal Service.” As you know, in adopting this language, Congress declined our proposed alternative, which would have allowed for negotiation against a backdrop of default terms from the now-expired note purchase agreement. Without such a backdrop, Treasury could seek to reject our proposed terms and to propose terms that we would view as unlawful, inappropriate, or otherwise undesirable. (Indeed, Treasury’s insistence on such terms is what led to the expiration, rather than the renewal, of the note purchase agreement last year.)

Treasury might argue that, regardless of any disagreement concerning the appropriate terms and conditions of borrowing under Title 39, it has freer rein to propose such conditions under the CARES Act. As OLC has recognized, the legislative history of the

---

5 The projections show the potential for a cash shortfall by October. However, as noted above, the statute arguably requires capital expenses to be excluded from the determination of necessity. The Postal Service’s projection assumes capital expenses of $2.0 billion over the rest of this fiscal year, and $2.5 billion for next fiscal year. If these capital expenses are excluded, the Postal Service would still likely experience a cash shortfall this calendar year, or early next calendar year.
Title 39 borrowing provision, as well as legislation establishing the Federal Financing Bank enacted shortly thereafter, is replete with Treasury’s disavowals of any intent to interfere with the Postal Service’s operational and business decisions. See Scope of Treasury Department Purchase Rights with Respect to Financing Initiatives of the U.S. Postal Service, 19 Op. Off. Legal Counsel 238, 245 n.5 (1995); Authority of the Secretary of the Treasury Regarding Postal Service Bond Offering, 17 Op. Off. Legal Counsel 6, 8-10 (1993). By contrast, the CARES Act contains no such legislative history, and its additional borrowing authority is expressly distinguished from, rather than subordinate to, the Title 39 borrowing provision. If anything, the contrast between the final CARES Act and the House bill demonstrates that the “mutual agreement” requirement was intentionally added. See H.R. 6379, 116th Cong. § 140001(a)(2) (containing no language about terms and conditions).

That said, any attempt by Treasury to use even this borrowing authority to oversee or second-guess the Governors’ and Board’s decisions would still vitiate Congress’s intent in creating the Postal Service to be insulated from direct political control, and hence would violate constitutional and statutory parameters in the same manner as its prior attempt to impose such terms on our Title 39 borrowing. In this regard, the absence of any direct legislative history is simply not a material legal consideration. Let me know if you would like me to send to you our prior memorandum to the Board explaining these constitutional and statutory issues.

Our experience with non-renewal of the note purchase agreement shows that Treasury may not be swayed by the legal bona fides of our position and may insist on inappropriate terms regardless. In such an event, we may be able to seek a legal opinion from OLC supporting our view. Alternatively, Congress clearly expected that Treasury would facilitate borrowing under Section 6001(b), and any significant delay or lack of cooperation by Treasury could become a subject of Congressional inquiry and oversight. As noted above, at present Treasury has advised us that it does not intend to seek to impose “consent” rights.

III. Amount of Borrowing

Section 6001(b)(1) provides that the borrowing shall be “in an amount not to exceed” $10 billion. In contrast to the Title 39 borrowing provisions, this language does not specify whether the $10 billion limit applies to the amount of CARES Act borrowing “outstanding at any one time” or only as of a certain point in time (e.g., the end of a fiscal year), such that greater amounts can be borrowed so long as the outstanding amount is reduced by the cut-off time. See 39 U.S.C. § 2005(a)(1) (containing both types of cap). Without further qualification, however, a plain reading of “not to exceed” indicates that the $10 billion limit applies at all times; the limit cannot be exceeded temporarily so long as it is met later.

A related question concerns whether the $10 billion is a cap similar to the $15 billion cap on Title 39 borrowing, meaning that the Postal Service may access the borrowing authority multiple times (with aggregate borrowing at any one time remaining within the limit), or
whether the statute only authorizes the provision of $10 billion in total. If the latter is true, another question is whether this borrowing authority can only be accessed in a one-time loan, or if multiple loans are allowed.

Based on existing practice and the uncertain duration of the current emergency, the Postal Service could reasonably take the view that it can repeatedly borrow money within the $10 billion limit. It is possible, however, that Treasury (or OLC, in the event of a dispute) could interpret the CARES Act as providing for a provision of $10 billion in total. A contrast with the Title 39 provision shows that Congress had a template for making the limit apply to an aggregate amount of borrowing “outstanding at any time,” id., which was not used in the CARES Act. This, coupled with the plain meaning of the CARES Act language, arguably indicates that Congress did not intend for the CARES Act borrowing limit to operate in the same manner as the $15 billion borrowing cap. It is also conceivable that Treasury could assert that the statute only authorizes a single loan, based on the fact that the statute refers to a singular “amount” of borrowing, and not a multiple “amount of obligations,” as in Section 2005, though this argument would be weaker.

Ultimately, this question only becomes relevant if we attempt to access the CARES Act borrowing authority a second time. Because of the possibility that we could be denied a second round of borrowing, it would be advisable to seek to borrow the maximum amount available ($10 billion) at the outset, which is advisable in any event given all of the interpretative issues concerning the “due to” language. In addition, it might also be advisable to seek to secure as long of a maturity as is feasible.

IV. Restrictions on the Use of Borrowed Funds

Section 6001(b)(1)(A) and (B) provide that borrowed funds can only be used to fund operating expenses and cannot be used to pay outstanding debt.

As discussed in section I above, it would be consistent with the history of the Postal Service’s permanent borrowing statute to construe the reference to “operating expenses” as excluding capital expenses.

In addition, we think it evident that “debt” means liabilities from borrowing. See 39 U.S.C. § 2001(3) (referring to “debt instruments” in the context of the Title 39 borrowing provisions). However, the limitation on using these additional funds to “pay any outstanding debt” is ambiguous in several respects.

---

6 One definition of “debt” refers broadly to any “liability” or “specific sum of money due by agreement or otherwise,” such as payments to a supplier or employee for services rendered. See BLACK’S LAW DICTIONARY, “debt” (11th ed. 2019). However, as noted above, it is appropriate to read the terms of the CARES Act consistently with the terms of Title 39’s borrowing provisions. In addition, it is functionally implausible to believe that Congress intended “debt” to refer to the Postal Service’s liabilities generally, since that would mean that the funds borrowed under the CARES Act could be used only to provide liquidity for future operating expenses, and not for expenses already incurred (and thus “outstanding”).
First, it is unclear whether "outstanding debt" includes all payments on borrowed debt, or only payments on principal. On the one hand, to "pay [down] debt" might generally connote payment that has the effect of reducing or eliminating the principal owed. Perhaps for this reason, the Postal Service reports interest expense as a distinct line item in its periodic financial reports. On the other hand, a debt has not been repaid if accrued interest or prepayment fees remain outstanding. Indeed, the statutory language here does not distinguish between principal and other debt, and contextual definitions are broad enough to encompass any amounts (including interest and fees) that are owed under a loan agreement. See 39 U.S.C. § 2001(3); BLACK'S LAW DICTIONARY, "debt." In our view, the more reasonable construction is that "outstanding debt" includes principal, interest, and any fees arising under a loan agreement.

Second, it is unclear whether "outstanding debt" refers to debt outstanding when the newly borrowed moneys are spent, or only to debt outstanding at the time of enactment. The former reading is more plausible. Other CARES Act provisions, as well as the Title 39 borrowing provisions, use "outstanding" in ways that appear clearly to connote "outstanding at the time of the relevant event," and in no case "outstanding at the time of enactment." See CARES Act, Pub. L. No. 116-136, § 4003(c)(1)(A) (requiring rates for certain Treasury loans to be based on “the current average yield on outstanding marketable obligations of the United States of comparable maturity”); 39 U.S.C. § 2006(a) (same).

On a functional level, Congress placed specific conditions on borrowing under the CARES Act that do not apply to borrowing under Title 39, and so a broader reading of CARES Act’s "outstanding debt" preclusion makes sense as an anti-circumvention measure. Otherwise, the Postal Service could borrow under the CARES Act (while eligible) to pay down Title 39 loans, with the newly liberated Title 39 borrowing authority remaining available even after the COVID-19 emergency had ended. To the extent that Congress was seeking to foreclose that possibility, as the language of the statute indicates that it was, the concern applies equally whether moneys are borrowed under Title 39 before or after the date of enactment.

Third, it is unclear whether "any outstanding debt" means only debt acquired under other authorities (i.e., the Title 39 borrowing provisions), or whether it also precludes using CARES Act borrowing to retire and renew earlier CARES Act debt. Under either reading, the CARES Act would preclude borrowing to repay funds borrowed under Title 39. That much would be consistent with Congress’s apparent concern that the CARES Act borrowing authority remain distinct from Title 39 borrowing. The additional question is whether the preclusion extends to repayment of earlier CARES Act debt. On a formal level, the statutory text — "any outstanding debt of the Postal Service," without further qualification

7 That much is evident from Congress’s decision not to adopt the House’s proposal to cancel all Title 39 debt outstanding on the date of enactment. See H.R. 6379, 116th Cong. § 140001(a)(1). The House bill would then have authorized the Postal Service to borrow $15 billion from Treasury. H.R. 6379, 116th Cong. § 140001(a)(2). In light of the bill’s resetting of outstanding debt to zero, it is unclear whether this additional borrowing authority would have been coextensive with or additional to the $15 billion debt ceiling in 39 U.S.C. § 2005(a).
would plainly include CARES Act debt. Therefore, it arguably would be most prudent for the Postal Service to not use these borrowed funds in such a manner. However, on a functional level, we could argue that precluding the use of these funds to pay outstanding CARES Act debt would make little sense. So long as all relevant borrowing meets the CARES Act criteria, using new borrowing to repay old debt merely consolidates (a) the use of cash to repay an old loan and (b) attainment of new cash by acquiring a new loan. If emergency circumstances remain such that repayment of the old loan would deprive the Postal Service of cash needed to fund operating expenses, then we would immediately qualify for a new loan under the CARES Act. Neither activity would be inconsistent with the CARES Act's purposes on its own, and so there is no apparent reason why they should be precluded in combination. Therefore, despite the facial breadth of "any outstanding debt," it would be reasonable to construe the preclusion as limited to borrowing under Title 39, not under the CARES Act.

In sum, it is reasonable to construe the CARES Act as prohibiting borrowed funds from being used for either capital expenses or the payment of any principal, interest, or fees arising from obligations issued under Title 39. As noted earlier, however, the CARES Act gives Treasury the discretion to refuse to lend, or to limit its lending, to the Postal Service if it disagrees with the Postal Service's interpretation of the law. It would be advisable to seek a common understanding with Treasury about these legal questions, to the extent possible.

Finally, the statute does not explicitly specify any accountability for the use of borrowed funds. It is unclear at this time whether current Treasury leadership (or Congress) will insist on such an accounting.\footnote{According to the Corporate Treasury office, Treasury historically did not insist on a rigid accounting of the Postal Service's use of pre-PAEA borrowing authority, and the Postal Service thus had a fairly free hand to characterize the use of borrowed funds vis-à-vis the statute's distinct annual caps. However, Treasury might require clearer requirements in this circumstance.}

\textbf{CONCLUSION}

On its face, the statute imposes conditions on borrowing but gives the Postal Service discretion to determine when and to what extent additional borrowing is needed. But given Treasury's discretion and the requirement to attain Treasury's agreement on borrowing terms, Treasury could simply refuse to lend if it disagrees with the Postal Service's interpretation, desires accountability for the use of funds, or insists on terms of its choosing (regardless of their legality or acceptability to the Postal Service). The only checks on Treasury are Congressional oversight and potential OLC resolution of a legal dispute.

Please let me know if you have any questions or concerns. Of course, the situation regarding our financial situation is very fluid, so if conditions change in a way that warrants...
material revision of the analysis in this memorandum, we will reexamine our analysis and advise you accordingly.

Lori Rectanus
Director, Physical Infrastructure Issues
Government Accountability Office

RE: U.S. Postal Service: Congressional Action to Enable a Sustainable Business Model Is Essential
(Draft Report No. GAO-20-385)

Dear Ms. Rectanus:

On behalf of the United States Postal Service, this letter responds to your invitation to comment on the draft of the Government Accountability Office’s (GAO’s) audit report number GAO-20-385, which was transmitted to us for review on March 12.

Following the receipt of your draft report, the onset of the Coronavirus Disease 2019 (COVID-19) pandemic has had profound impacts both on the Nation, and the Postal Service. The pandemic has demonstrated the vital nature of the public services that the Postal Service performs, as Americans are being asked to shelter in place and to work from home. We operate by statute as a “basic and fundamental service” provided by the Federal Government to the American people, and the continued provision of postal services is designated as an essential function of the Government during times of emergency pursuant to the framework of the National Continuity Policy. The postal sector is also part of the nation’s critical infrastructure. Every day, the men and women of the Postal Service accept, process, transport, and deliver vital mail and packages to all communities in the Nation, including important governmental information and benefits such as Census materials, social security checks, and materials advising the public on COVID-19; materials relating to elections, including ballots and political mail; materials that are essential to the functioning of our economy, such as transactional mail; and packages containing vital necessities, including medicines and other goods that sustain us that are purchased online.

While the criticality of the services the Postal Service provides has never been more evident, and we are committed to continuing to fulfill our universal service mission, the pandemic has also had drastic impacts on our financial condition. We have experienced significant and sudden declines in mail volume and revenue due to the pandemic. The result is a liquidity crisis that requires immediate action by Congress to ensure our continued ability to operate in the near term.

While short-term action by Congress is critical, the Postal Service’s financial situation has long been unsustainable due to a combination of declining mail volumes and an inflexible statutory and regulatory structure that limits our ability to reduce costs and increase revenue. Therefore, Congress must also adopt financial and/or structural reforms to our business model, in order to ensure the Postal Service’s long-term financial viability, as discussed in your report. As discussed below, we generally concur with your discussion of the structural challenges facing the Postal Service and the general policy options for addressing them, albeit with some clarifications.

As an initial matter, we concur with the National Bankruptcy Conference’s thorough legal analysis, which concludes that the Federal bankruptcy laws do not apply to the Postal Service as an entity of the Federal Government. We further agree that attempting to apply a bankruptcy-like legal process meaningfully to the Postal Service would face significant legal hurdles, given that the central flaws in
our business model derive from statute. In this regard, bankruptcy is a process to address outstanding debts, not significant future liabilities caused by statutory obligations. To place the Postal Service on a sustainable footing requires not only addressing our unpaid past liabilities, but also, more fundamentally, reform of statutorily determined aspects of our business model. Therefore, as the National Bankruptcy Conference and GAO note (e.g., at page 36 of the draft report), "all roads for [restructuring the Postal Service's existing and future obligations] lead back to Congress."

The essential policy issues for Congress can be boiled down to two questions: what does Congress want the Postal Service to do, and how should those mandates be paid for? The former question requires Congress to consider, in particular, the level of universal postal service that is appropriate to meet the evolving needs of the American people (which is particularly important to consider in times like these), and the compensation and benefits structure that should apply to the men and women who provide that essential, fundamental service. The latter question requires Congress to consider how the costs incurred by the Postal Service should be funded, whether through the sale of postal products and services, taxpayer appropriations, or other sources.

Over the past decade, the Postal Service has aggressively pursued opportunities within its control to reduce costs and sustain revenue, some of which are discussed in your report. Yet those opportunities remain insufficient to close the current gap between our costs and revenues. The Postal Service has therefore advocated for financial and structural reforms to our business model to rebalance costs and revenue, and to sustain that balance going forward, by giving the Postal Service greater pricing and product flexibility and greater ability to reduce costs.

The central aspect of our proposal has been to rationalize our post-retirement benefits structure by ensuring that our retiree health benefits program is appropriately integrated with Medicare. As your report notes (on page 13 of the draft), most companies do not offer retiree health benefits, and the number that do has declined over time. What is not specifically mentioned in your report is that, for the minority of employers that do continue to offer a retiree health benefits program, the universal practice is to integrate that program with Medicare. Doing so would wipe out most of the Postal Service's remaining retiree health benefits prefunding liability. While Medicare integration would shift some cost to Medicare, the increase would be very small when considering the Medicare program as a whole: it would increase Medicare spending by a small fraction of one percent. In addition, other options regarding our retirement benefits would not require taxpayer support, such as changes in liability calculation methods and diversified investment of fund assets.

Beyond these policy issues, GAO also recommends that Congress consider whether to retain the Postal Service's status as an independent establishment, or to adopt a different institutional structure. We agree with GAO that this topic could logically be part of a comprehensive examination of the Postal Service's business model by Congress. We understand the purpose of the GAO report is to not make any specific recommendations to Congress in this regard, but simply to lay out the various theoretical and practical effects of various possible institutional forms; our feedback on this matter was offered in the same spirit, and as a part of your intellectual exercise. Ultimately, Congress, with input from our Board of Governors and other interested stakeholders, would need to determine whether changing the Postal Service's institutional structure is necessary or appropriate to ensure the continued provision of prompt, reliable, and efficient universal postal services to the American people.

Given Congress's constitutional responsibility over postal services and the critical nature of the postal system to the functioning of the American economy and society, particularly in times like these, Congress would have to address the basic policy questions noted above regardless of whether the Postal Service remains an independent establishment or were recast in some other form. For example, even where foreign postal operators have been privatized, they remain – uniquely among letter and package delivery providers in their countries – legally obligated to provide universal service under statutory and regulatory conditions that constrain their autonomy over rates and costs. In those countries, privatization processes have involved legislative decisions about
service levels, revenue diversification, labor and employment laws, ratemaking authority, governmental assumption of costs (e.g., pension liabilities in Germany and the United Kingdom, as well as operation of the post office network in the United Kingdom), and other taxpayer support (e.g., tax exemptions in various countries, and £1.1 billion in appropriated modernization funding in the United Kingdom). The draft report notes that the same was true of the privatization of Conrail in this country. And even established private automobile manufacturers and airlines have required Federal assistance and legal reforms in order to continue operating, pursuant to Congress’s determination of the critical role of those industries in the American economy.

Hence, the core motivation of a sustainable postal service for the nation does not hinge on the provider’s institutional form. Rather, that motivation – and the attendant legislative support – should apply so long as Congress deems postal services necessary to the nation’s current and future needs. That said, it bears noting, when assessing how institutional form can affect institutional incentives, that a Government entity will necessarily prioritize the achievement of its service mission set forth in statute, while a privatized entity would have obligations to its shareholders.

At the same time, it should also be noted that (contrary to pages 34-35 of the draft report), institutional form in itself is not determinative regarding efficiency incentives. Although an independent establishment of the Executive Branch rather than a Government or private corporation, the Postal Service has long been recognized as at the forefront of postal operators – ahead of several cited in the draft report – in terms of operating efficiency. Many of the efficiency gains achieved by corporatized and privatized foreign postal operators in recent years essentially represent efforts to catch up to what the Postal Service has already done for decades (e.g., worksharing and automated delivery-point sequencing) or to keep pace with recent changes that the Postal Service began implementing before them (e.g., consolidation of its processing network and introduction of two-tier wage schedules). For example, the Postal Service was the first postal operator in the world to automate delivery sequencing (Royal Mail and La Poste followed more than a decade later). A change in institutional form is therefore clearly unnecessary to incent the Postal Service to be efficient.

In that regard, and particularly considering the highly competitive nature of the marketplace in which we operate for all of our products, we consider the drive to operate efficiently to be a part of the DNA of the Postal Service, and that would remain an inherent part of our culture irrespective of our institutional form. For that reason, we do not believe corporatization or privatization would somehow unlock new efficiency potential that the Postal Service purportedly lacks under the current structure; only reform in the laws governing Postal Service’s cost structure can do that, and they would do so whether or not the Postal Service remains an independent establishment. Finally, for the reasons noted above, we also do not believe that a change in our status to a more typical federal agency that is more reliant on appropriations would result in disincentives for us to be efficient.

Thank you once again for providing us with the opportunity to comment. We would be pleased to assist your office with further information or discussion of this matter if you believe it would be helpful.

Sincerely,

[Signature]

Lori Rectanus  
Director, Physical Infrastructure Issues  
Government Accountability Office

Dear Ms. Rectanus:

On behalf of the United States Postal Service, this letter responds to your invitation to comment on the draft of the Government Accountability Office’s (GAO’s) audit report number GAO-20-385, which was transmitted to us for review on March 12.

Following the receipt of your draft report, the onset of the Coronavirus Disease 2019 (COVID-19) pandemic has had profound impacts both on the Nation, and the Postal Service. The pandemic has demonstrated the vital nature of the public services that the Postal Service performs, as Americans are being asked to shelter in place and to work from home. We operate by statute as a “basic and fundamental service” provided by the Federal Government to the American people, and the continued provision of postal services is designated as an essential function of the Government during times of emergency pursuant to the framework of the National Continuity Policy. The postal sector is also part of the nation’s critical infrastructure. Every day, the men and women of the Postal Service accept, process, transport, and deliver vital mail and packages to all communities in the Nation, including important governmental information and benefits such as Census materials, social security checks, and materials advising the public on COVID-19; materials relating to elections, including ballots and political mail; materials that are essential to the functioning of our economy, such as transactional mail; and packages containing vital necessities, including medicines and other goods that sustain us that are purchased online.

While the criticality of the services the Postal Service provides has never been more evident, and we are committed to continuing to fulfill our universal service mission, the pandemic has also had drastic impacts on our financial condition. We have experienced significant and sudden declines in mail volume and revenue due to the pandemic. The result is a liquidity crisis that requires immediate action by Congress to ensure our continued ability to operate in the near term.

While short-term action by Congress is critical, the Postal Service’s financial situation has long been unsustainable due to a combination of declining mail volumes and an inflexible statutory and regulatory structure that limits our ability to reduce costs and increase revenue. Therefore, Congress must also adopt financial and/or structural reforms to our business model, in order to ensure the Postal Service’s long-term financial viability, as discussed in your report. As discussed below, we generally concur with your discussion of the structural challenges facing the Postal Service and the general policy options for addressing them, albeit with some clarifications.

As an initial matter, we concur with the National Bankruptcy Conference’s thorough legal analysis, which concludes that the Federal bankruptcy laws do not apply to the Postal Service as an entity of the Federal Government. We further agree that attempting to apply a bankruptcy-like legal process meaningfully to the Postal Service would face significant legal hurdles, given that the central flaws in
our business model derive from statute. In this regard, bankruptcy is a process to address outstanding debts, not significant future liabilities caused by statutory obligations. To place the Postal Service on a sustainable footing requires not only addressing our unpaid past liabilities, but also, more fundamentally, reform of statutorily determined aspects of our business model. Therefore, as the National Bankruptcy Conference and GAO note (e.g., at page 36 of the draft report), "all roads for [restructuring the Postal Service's existing and future obligations] lead back to Congress."

The essential policy issues for Congress can be boiled down to two questions: what does Congress want the Postal Service to do, and how should those mandates be paid for? The former question requires Congress to consider, in particular, the level of universal postal service that is appropriate to meet the evolving needs of the American people (which is particularly important to consider in times like these), and the compensation and benefits structure that should apply to the men and women who provide that essential, fundamental service. The latter question requires Congress to consider how the costs incurred by the Postal Service should be funded, whether through the sale of postal products and services, taxpayer appropriations, or other sources.

Over the past decade, the Postal Service has aggressively pursued opportunities within its control to reduce costs and sustain revenue, some of which are discussed in your report. Yet those opportunities remain insufficient to close the current gap between our costs and revenues. The Postal Service has therefore advocated for financial and structural reforms to our business model to rebalance costs and revenue, and to sustain that balance going forward, by giving the Postal Service greater pricing and product flexibility and greater ability to reduce costs.

The central aspect of our proposal has been to rationalize our post-retirement benefits structure by ensuring that our retiree health benefits program is appropriately integrated with Medicare. As your report notes (on page 13 of the draft), most companies do not offer retiree health benefits, and the number that do has declined over time. What is not specifically mentioned in your report is that, for the minority of employers that do continue to offer a retiree health benefits program, the universal practice is to integrate that program with Medicare. Doing so would wipe out most of the Postal Service's remaining retiree health benefits prefunding liability. While Medicare integration would shift some cost to Medicare, the increase would be very small when considering the Medicare program as a whole: it would increase Medicare spending by a small fraction of one percent. In addition, other options regarding our retirement benefits would not require taxpayer support, such as changes in liability calculation methods and diversified investment of fund assets.

Beyond these policy issues, GAO also recommends that Congress consider whether to retain the Postal Service's status as an independent establishment, or to adopt a different institutional structure. We agree with GAO that this topic could logically be part of a comprehensive examination of the Postal Service's business model by Congress. We understand the purpose of the GAO report is to not make any specific recommendations to Congress in this regard, but simply to lay out the various theoretical and practical effects of various possible institutional forms; our feedback on this matter was offered in the same spirit, and as a part of your intellectual exercise. Ultimately, Congress, with input from our Board of Governors and other interested stakeholders, would need to determine whether changing the Postal Service's institutional structure is necessary or appropriate to ensure the continued provision of prompt, reliable, and efficient universal postal services to the American people.

Given Congress's constitutional responsibility over postal services and the critical nature of the postal system to the functioning of the American economy and society, particularly in times like these, Congress would have to address the basic policy questions noted above regardless of whether the Postal Service remains an independent establishment or were recast in some other form. For example, even where foreign postal operators have been privatized, they remain—uniquely among letter and package delivery providers in their countries—legally obligated to provide universal service under statutory and regulatory conditions that constrain their autonomy over rates and costs. In those countries, privatization processes have involved legislative decisions about
service levels, revenue diversification, labor and employment laws, ratemaking authority, governmental assumption of costs (e.g., pension liabilities in Germany and the United Kingdom, as well as operation of the post office network in the United Kingdom), and other taxpayer support (e.g., tax exemptions in various countries, and £1.1 billion in appropriated modernization funding in the United Kingdom). The draft report notes that the same was true of the privatization of Conrail in this country. And even established private automobile manufacturers and airlines have required Federal assistance and legal reforms in order to continue operating, pursuant to Congress’s determination of the critical role of those industries in the American economy.

Hence, the core motivation of a sustainable postal service for the nation does not hinge on the provider’s institutional form. Rather, that motivation – and the attendant legislative support – should apply so long as Congress deems postal services necessary to the nation’s current and future needs. That said, it bears noting, when assessing how institutional form can affect institutional incentives, that a Government entity will necessarily prioritize the achievement of its service mission set forth in statute, while a privatized entity would have obligations to its shareholders.

At the same time, it should also be noted that (contrary to pages 34-35 of the draft report), institutional form in itself is not determinative regarding efficiency incentives. Although an independent establishment of the Executive Branch rather than a Government or private corporation, the Postal Service has long been recognized as at the forefront of postal operators – ahead of several cited in the draft report – in terms of operating efficiency. Many of the efficiency gains achieved by corporatized and privatized foreign postal operators in recent years essentially represent efforts to catch up to what the Postal Service has already done for decades (e.g., worksharing and automated delivery-point sequencing) or to keep pace with recent changes that the Postal Service began implementing before them (e.g., consolidation of its processing network and introduction of two-tier wage schedules). For example, the Postal Service was the first postal operator in the world to automate delivery sequencing (Royal Mail and La Poste followed more than a decade later). A change in institutional form is therefore clearly unnecessary to incent the Postal Service to be efficient.

In that regard, and particularly considering the highly competitive nature of the marketplace in which we operate for all of our products, we consider the drive to operate efficiently to be a part of the DNA of the Postal Service, and that would remain an inherent part of our culture irrespective of our institutional form. For that reason, we do not believe corporatization or privatization would somehow unlock new efficiency potential that the Postal Service purportedly lacks under the current structure; only reform in the laws governing Postal Service’s cost structure can do that, and they would do so whether or not the Postal Service remains an independent establishment. Finally, for the reasons noted above, we also do not believe that a change in our status to a more typical federal agency that is more reliant on appropriations would result in disincentives for us to be efficient.

Thank you once again for providing us with the opportunity to comment. We would be pleased to assist your office with further information or discussion of this matter if you believe it would be helpful.

Sincerely,

RE: U.S. Postal Service: Congressional Action to Enable a Sustainable Business Model Is Essential
(Draft Report No. GAO-20-385)

Dear Ms. Rectanus:

On behalf of the United States Postal Service, this letter responds to your invitation to comment on the draft of the Government Accountability Office’s (GAO’s) audit report number GAO-20-385, which was transmitted to us for review on March 12.

Following the receipt of your draft report, the onset of the Coronavirus Disease 2019 (COVID-19) pandemic has had profound impacts both on the Nation, and the Postal Service. The pandemic has demonstrated the vital nature of the public services that the Postal Service performs, as Americans are being asked to shelter in place and to work from home. We operate by statute as a “basic and fundamental service” provided by the Federal Government to the American people, and the continued provision of postal services is designated as an essential function of the Government during times of emergency pursuant to the framework of the National Continuity Policy. The postal sector is also part of the nation’s critical infrastructure. Every day, the men and women of the Postal Service accept, process, transport, and deliver vital mail and packages to all communities in the Nation, including important governmental information and benefits such as Census materials, social security checks, and materials advising the public on COVID-19; materials relating to elections, including ballots and political mail; materials that are essential to the functioning of our economy, such as transactional mail; and packages containing vital necessities, including medicines and other goods that sustain us that are purchased online.

While the criticality of the services the Postal Service provides has never been more evident, and we are committed to continuing to fulfill our universal service mission, the pandemic has also had drastic impacts on our financial condition. We have experienced significant and sudden declines in mail volume and revenue due to the pandemic. The result is a liquidity crisis that requires immediate action by Congress to ensure our continued ability to operate in the near term.

While short-term action by Congress is critical, the Postal Service’s financial situation has long been unsustainable due to a combination of declining mail volumes and an inflexible statutory and regulatory structure that limits our ability to reduce costs and increase revenue. Therefore, Congress must also adopt financial and/or structural reforms to our business model, in order to ensure the Postal Service’s long-term financial viability, as discussed in your report. As discussed below, we generally concur with your discussion of the structural challenges facing the Postal Service and the general policy options for addressing them, albeit with some clarifications.

As an initial matter, we concur with the National Bankruptcy Conference’s thorough legal analysis, which concludes that the Federal bankruptcy laws do not apply to the Postal Service as an entity of the Federal Government. We further agree that attempting to apply a bankruptcy-like legal process meaningfully to the Postal Service would face significant legal hurdles, given that the central flaws in
our business model derive from statute. In this regard, bankruptcy is a process to address outstanding debts, not significant future liabilities caused by statutory obligations. To place the Postal Service on a sustainable footing requires not only addressing our unpaid past liabilities, but also, more fundamentally, reform of statutorily determined aspects of our business model. Therefore, as the National Bankruptcy Conference and GAO note (e.g., at page 36 of the draft report), "all roads for [restructuring the Postal Service's existing and future obligations] lead back to Congress."

The essential policy issues for Congress can be boiled down to two questions: what does Congress want the Postal Service to do, and how should those mandates be paid for? The former question requires Congress to consider, in particular, the level of universal postal service that is appropriate to meet the evolving needs of the American people (which is particularly important to consider in times like these), and the compensation and benefits structure that should apply to the men and women who provide that essential, fundamental service. The latter question requires Congress to consider how the costs incurred by the Postal Service should be funded, whether through the sale of postal products and services, taxpayer appropriations, or other sources.

Over the past decade, the Postal Service has aggressively pursued opportunities within its control to reduce costs and sustain revenue, some of which are discussed in your report. Yet those opportunities remain insufficient to close the current gap between our costs and revenues. The Postal Service has therefore advocated for financial and structural reforms to our business model to rebalance costs and revenue, and to sustain that balance going forward, by giving the Postal Service greater pricing and product flexibility and greater ability to reduce costs.

The central aspect of our proposal has been to rationalize our post-retirement benefits structure by ensuring that our retiree health benefits program is appropriately integrated with Medicare. As your report notes (on page 13 of the draft), most companies do not offer retiree health benefits, and the number that do has declined over time. What is not specifically mentioned in your report is that, for the minority of employers that do continue to offer a retiree health benefits program, the universal practice is to integrate that program with Medicare. Doing so would wipe out most of the Postal Service's remaining retiree health benefits prefunding liability. While Medicare integration would shift some cost to Medicare, the increase would be very small when considering the Medicare program as a whole: it would increase Medicare spending by a small fraction of one percent. In addition, other options regarding our retirement benefits would not require taxpayer support, such as changes in liability calculation methods and diversified investment of fund assets.

Beyond these policy issues, GAO also recommends that Congress consider whether to retain the Postal Service's status as an independent establishment, or to adopt a different institutional structure. We agree with GAO that this topic could logically be part of a comprehensive examination of the Postal Service's business model by Congress. We understand the purpose of the GAO report is to not make any specific recommendations to Congress in this regard, but simply to lay out the various theoretical and practical effects of various possible institutional forms; our feedback on this matter was offered in the same spirit, and as a part of your intellectual exercise. Ultimately, Congress, with input from our Board of Governors and other interested stakeholders, would need to determine whether changing the Postal Service's institutional structure is necessary or appropriate to ensure the continued provision of prompt, reliable, and efficient universal postal services to the American people.

Given Congress's constitutional responsibility over postal services and the critical nature of the postal system to the functioning of the American economy and society, particularly in times like these, Congress would have to address the basic policy questions noted above regardless of whether the Postal Service remains an independent establishment or were recast in some other form. For example, even where foreign postal operators have been privatized, they remain uniquely among letter and package delivery providers in their countries—legally obligated to provide universal service under statutory and regulatory conditions that constrain their autonomy over rates and costs. In those countries, privatization processes have involved legislative decisions about
service levels, revenue diversification, labor and employment laws, ratemaking authority, governmental assumption of costs (e.g., pension liabilities in Germany and the United Kingdom, as well as operation of the post office network in the United Kingdom), and other taxpayer support (e.g., tax exemptions in various countries, and £1.1 billion in appropriated modernization funding in the United Kingdom). The draft report notes that the same was true of the privatization of Conrail in this country. And even established private automobile manufacturers and airlines have required Federal assistance and legal reforms in order to continue operating, pursuant to Congress’s determination of the critical role of those industries in the American economy.

Hence, the core motivation of a sustainable postal service for the nation does not hinge on the provider’s institutional form. Rather, that motivation – and the attendant legislative support – should apply so long as Congress deems postal services necessary to the nation’s current and future needs. That said, it bears noting, when assessing how institutional form can affect institutional incentives, that a Government entity will necessarily prioritize the achievement of its service mission set forth in statute, while a privatized entity would have obligations to its shareholders.

At the same time, it should also be noted that (contrary to pages 34-35 of the draft report), institutional form in itself is not determinative regarding efficiency incentives. Although an independent establishment of the Executive Branch rather than a Government or private corporation, the Postal Service has long been recognized as at the forefront of postal operators – ahead of several cited in the draft report – in terms of operating efficiency. Many of the efficiency gains achieved by corporatized and privatized foreign postal operators in recent years essentially represent efforts to catch up to what the Postal Service has already done for decades (e.g., worksharing and automated delivery-point sequencing) or to keep pace with recent changes that the Postal Service began implementing before them (e.g., consolidation of its processing network and introduction of two-tier wage schedules). For example, the Postal Service was the first postal operator in the world to automate delivery sequencing (Royal Mail and La Poste followed more than a decade later). A change in institutional form is therefore clearly unnecessary to incent the Postal Service to be efficient.

In that regard, and particularly considering the highly competitive nature of the marketplace in which we operate for all of our products, we consider the drive to operate efficiently to be a part of the DNA of the Postal Service, and that would remain an inherent part of our culture irrespective of our institutional form. For that reason, we do not believe corporatization or privatization would somehow unlock new efficiency potential that the Postal Service purportedly lacks under the current structure; only reform in the laws governing Postal Service’s cost structure can do that, and they would do so whether or not the Postal Service remains an independent establishment. Finally, for the reasons noted above, we also do not believe that a change in our status to a more typical federal agency that is more reliant on appropriations would result in disincentives for us to be efficient.

Thank you once again for providing us with the opportunity to comment. We would be pleased to assist your office with further information or discussion of this matter if you believe it would be helpful.

Government Accountability Office  

RE: U.S. Postal Service: Congressional Action to Enable a Sustainable Business Model Is Essential  
(Draft Report No. GAO-20-385)  

Dear Ms. Rectanus:

On behalf of the United States Postal Service, this letter responds to your invitation to comment on the draft of the Government Accountability Office’s (GAO’s) audit report number GAO-20-385, which was transmitted to us for review on March 12.

Following the receipt of your draft report, the onset of the Coronavirus Disease 2019 (COVID-19) pandemic has had profound impacts both on the Nation, and the Postal Service. The pandemic has demonstrated the vital nature of the public services that the Postal Service performs, as Americans are being asked to shelter in place and to work from home. We operate by statute as a “basic and fundamental service” provided by the Federal Government to the American people, and the continued provision of postal services is designated as an essential function of the Government during times of emergency pursuant to the framework of the National Continuity Policy. The postal sector is also part of the nation’s critical infrastructure. Every day, the men and women of the Postal Service accept, process, transport, and deliver vital mail and packages to all communities in the Nation, including important governmental information and benefits such as Census materials, social security checks, and materials advising the public on COVID-19; materials relating to elections, including ballots and political mail; materials that are essential to the functioning of our economy, such as transactional mail; and packages containing vital necessities, including medicines and other goods that sustain us that are purchased online.

While the criticality of the services the Postal Service provides has never been more evident, and we are committed to continuing to fulfill our universal service mission, the pandemic has also had drastic impacts on our financial condition. We have experienced significant and sudden declines in mail volume and revenue due to the pandemic. The result is a liquidity crisis that requires immediate action by Congress to ensure our continued ability to operate in the near term.

While short-term action by Congress is critical, the Postal Service’s financial situation has long been unsustainable due to a combination of declining mail volumes and an inflexible statutory and regulatory structure that limits our ability to reduce costs and increase revenue. Therefore, Congress must also adopt financial and/or structural reforms to our business model, in order to ensure the Postal Service’s long-term financial viability, as discussed in your report. As discussed below, we generally concur with your discussion of the structural challenges facing the Postal Service and the general policy options for addressing them, albeit with some clarifications.

As an initial matter, we concur with the National Bankruptcy Conference’s thorough legal analysis, which concludes that the Federal bankruptcy laws do not apply to the Postal Service as an entity of the Federal Government. We further agree that attempting to apply a bankruptcy-like legal process meaningfully to the Postal Service would face significant legal hurdles, given that the central flaws in
our business model derive from statute. In this regard, bankruptcy is a process to address outstanding debts, not significant future liabilities caused by statutory obligations. To place the Postal Service on a sustainable footing requires not only addressing our unpaid past liabilities, but also, more fundamentally, reform of statutorily determined aspects of our business model. Therefore, as the National Bankruptcy Conference and GAO note (e.g., at page 36 of the draft report), "all roads for [restructuring the Postal Service’s existing and future obligations] lead back to Congress."

The essential policy issues for Congress can be boiled down to two questions: what does Congress want the Postal Service to do, and how should those mandates be paid for? The former question requires Congress to consider, in particular, the level of universal postal service that is appropriate to meet the evolving needs of the American people (which is particularly important to consider in times like these), and the compensation and benefits structure that should apply to the men and women who provide that essential, fundamental service. The latter question requires Congress to consider how the costs incurred by the Postal Service should be funded, whether through the sale of postal products and services, taxpayer appropriations, or other sources.

Over the past decade, the Postal Service has aggressively pursued opportunities within its control to reduce costs and sustain revenue, some of which are discussed in your report. Yet those opportunities remain insufficient to close the current gap between our costs and revenues. The Postal Service has therefore advocated for financial and structural reforms to our business model to rebalance costs and revenue, and to sustain that balance going forward, by giving the Postal Service greater pricing and product flexibility and greater ability to reduce costs.

The central aspect of our proposal has been to rationalize our post-retirement benefits structure by ensuring that our retiree health benefits program is appropriately integrated with Medicare. As your report notes (on page 13 of the draft), most companies do not offer retiree health benefits, and the number that do has declined over time. What is not specifically mentioned in your report is that, for the minority of employers that do continue to offer a retiree health benefits program, the universal practice is to integrate that program with Medicare. Doing so would wipe out most of the Postal Service’s remaining retiree health benefits prefunding liability. While Medicare integration would shift some cost to Medicare, the increase would be very small when considering the Medicare program as a whole: it would increase Medicare spending by a small fraction of one percent. In addition, other options regarding our retirement benefits would not require taxpayer support, such as changes in liability calculation methods and diversified investment of fund assets.

Beyond these policy issues, GAO also recommends that Congress consider whether to retain the Postal Service’s status as an independent establishment, or to adopt a different institutional structure. We agree with GAO that this topic could logically be part of a comprehensive examination of the Postal Service’s business model by Congress. We understand the purpose of the GAO report is to not make any specific recommendations to Congress in this regard, but simply to lay out the various theoretical and practical effects of various possible institutional forms; our feedback on this matter was offered in the same spirit, and as a part of your intellectual exercise. Ultimately, Congress, with input from our Board of Governors and other interested stakeholders, would need to determine whether changing the Postal Service’s institutional structure is necessary or appropriate to ensure the continued provision of prompt, reliable, and efficient universal postal services to the American people.

Given Congress’s constitutional responsibility over postal services and the critical nature of the postal system to the functioning of the American economy and society, particularly in times like these, Congress would have to address the basic policy questions noted above regardless of whether the Postal Service remains an independent establishment or were recast in some other form. For example, even where foreign postal operators have been privatized, they remain – uniquely among letter and package delivery providers in their countries – legally obligated to provide universal service under statutory and regulatory conditions that constrain their autonomy over rates and costs. In those countries, privatization processes have involved legislative decisions about
service levels, revenue diversification, labor and employment laws, ratemaking authority, governmental assumption of costs (e.g., pension liabilities in Germany and the United Kingdom, as well as operation of the post office network in the United Kingdom), and other taxpayer support (e.g., tax exemptions in various countries, and £ 1.1 billion in appropriated modernization funding in the United Kingdom). The draft report notes that the same was true of the privatization of Conrail in this country. And even established private automobile manufacturers and airlines have required Federal assistance and legal reforms in order to continue operating, pursuant to Congress’s determination of the critical role of those industries in the American economy.

Hence, the core motivation of a sustainable postal service for the nation does not hinge on the provider’s institutional form. Rather, that motivation – and the attendant legislative support – should apply so long as Congress deems postal services necessary to the nation’s current and future needs. That said, it bears noting, when assessing how institutional form can affect institutional incentives, that a Government entity will necessarily prioritize the achievement of its service mission set forth in statute, while a privatized entity would have obligations to its shareholders.

At the same time, it should also be noted that (contrary to pages 34-35 of the draft report), institutional form in itself is not determinative regarding efficiency incentives. Although an independent establishment of the Executive Branch rather than a Government or private corporation, the Postal Service has long been recognized as at the forefront of postal operators – ahead of several cited in the draft report – in terms of operating efficiency. Many of the efficiency gains achieved by corporatized and privatized foreign postal operators in recent years essentially represent efforts to catch up to what the Postal Service has already done for decades (e.g., worksharing and automated delivery-point sequencing) or to keep pace with recent changes that the Postal Service began implementing before them (e.g., consolidation of its processing network and introduction of two-tier wage schedules). For example, the Postal Service was the first postal operator in the world to automate delivery sequencing (Royal Mail and La Poste followed more than a decade later). A change in institutional form is therefore clearly unnecessary to incent the Postal Service to be efficient.

In that regard, and particularly considering the highly competitive nature of the marketplace in which we operate for all of our products, we consider the drive to operate efficiently to be a part of the DNA of the Postal Service, and that would remain an inherent part of our culture irrespective of our institutional form. For that reason, we do not believe corporatization or privatization would somehow unlock new efficiency potential that the Postal Service purportedly lacks under the current structure; only reform in the laws governing Postal Service’s cost structure can do that, and they would do so whether or not the Postal Service remains an independent establishment. Finally, for the reasons noted above, we also do not believe that a change in our status to a more typical federal agency that is more reliant on appropriations would result in disincentives for us to be efficient. Thank you once again for providing us with the opportunity to comment. We would be pleased to assist your office with further information or discussion of this matter if you believe it would be helpful.

EXECUTIVE LEADERSHIP TEAM

SUBJECT: Second Quarterly Report on Form 10-Q for FY2020

As you know, the second Quarterly Report on Form 10-Q for Fiscal Year 2020 is in the drafting process and is expected to be filed with the Postal Regulatory Commission on May 7, 2020.

Please carefully review the attached draft Quarterly Report on Form 10-Q, particularly the Management’s Discussion and Analysis section for any material misstatements or omissions.

If you have comments on the report, please provide them directly to Natalie Bonanno, Associate General Counsel and Chief Ethics & Compliance Officer, via email on or before April 24, 2020. If you do not have any comments on the report, please let Natalie know via email on or before that date.

Please let me know if you have any questions.

Thomas J. Marshall

BRIEFING SHEET
Legal Update

MEETING OF THE BOARD OF GOVERNORS
May 7, 2020
Closed Session

PRESENTER:
Tom Marshall, General Counsel (Note: Mr. Marshall will be prepared to respond to questions on the matters discussed below).

ISSUE/PURPOSE:
The purpose of this Briefing Sheet is to summarize communications from the General Counsel to the Governors or Board of Governors (Board) since the meeting of the Board on April 1, 2020, and to summarize information sent in support of matters on the Board agenda for May 7, 2020.

BACKGROUND:
This summary is informational in nature.

CURRENT STATUS:

I. Communications since the April 1, 2020 Board meeting: Since the April 1, 2020 meeting, the General Counsel forwarded the following communications to the Governors or to the Board.

   • Closing Justification for April 28, 2020 Meeting: By memorandum dated April 27, 2020, the General Counsel advised the Secretary of the Board of Governors of the reasons why each of the items on the agenda for the Board meeting on April 28, 2020 could be closed to the public under the Government in the Sunshine Act.

   • Closing Justification for May 7, 2020 Meeting: By memorandum dated April 23, 2020, the General Counsel advised the Secretary of the Board of Governors of the reasons why each of the items on the agenda for the Board meeting on May 7, 2020 could be closed to the public under the Government in the Sunshine Act.
• **Closing Justification for April 23, 2020 Meeting:** By memorandum dated April 23, 2020, the General Counsel advised the Secretary of the Board of Governors of the reasons why each of the items on the agenda for the Board meeting held on April 23, 2020 could be closed to the public under the Government in the Sunshine Act.

• **Cease and Desist Letter:** By email dated April 23, 2020, the General Counsel advised Chairman Duncan and Governor Barger of the response of a political action committee to a Postal Service’s cease and desist letter, which agreed to cease the unauthorized use of Postal Service intellectual property.

• **The American Spectator:** By emails dated April 19 and 20, 2020, the General Counsel provided to the Governors information concerning a potential Op-Ed concerning the Postal Service’s nonpartisan nature.

• **Draft Letter to Congressional Leadership:** By email dated April 17, 2020, the General Counsel provided to Governors Bloom and Barger a working draft of a letter to Congressional leadership.

• **More Letters:** By emails dated April 16 and 17, 2020, the General Counsel discussed with Chairman Duncan and Governors Barger and Bloom the unauthorized use by a political action committee of Postal Service intellectual property.

• **Cease and Desist Letter:** By email dated April 16, 2020, the General Counsel provided Chairman Duncan and Governor Barger with the final cease and desist letter to address misuse of the Postal Service’s intellectual property by a political action committee, as well as the issued public statement by the Postal Service regarding the use of our intellectual property.

• **Closing Justification for April 9, 2020 Meeting:** By memorandum dated April 15, 2020, the General Counsel advised the Secretary of the Board of Governors of the reasons why each of the items on the agenda for the Board meeting held on April 9, 2020 could be closed to the public under the Government in the Sunshine Act.

• **Appropriate Share D.C. Circuit Decision (UPS v. PRC; D.C. Cir. No. 19-1026):** By email dated April 14, 2020, the General Counsel provided the Governors with information concerning the decision by
the D.C. Circuit Court of Appeals to remand the Postal Regulatory Commission’s appropriate share order.

- Treasury Borrowing Pursuant to the CARES Act: By email dated April 14, 2020, the General Counsel provided the Governors with a memorandum analyzing the provision in the CARES Act that gives the Postal Service an additional $10 billion in borrowing authority, subject to agreement with the Department of the Treasury on terms and conditions.

- USPS IP Issue: By emails dated April 13 and 14, 2020, the General Counsel provided to Chairman Duncan and Governor Barger information regarding a draft cease and desist letter to address misuse of the Postal Service’s intellectual property by a political action committee, as well as a public statement by the Postal Service regarding the use of our intellectual property.

- Legislative Package: By email dated April 9, 2020, the General Counsel provided to Governors Bloom and Barger draft legislative language regarding the Postal Service’s immediate legislative request to address the impacts of COVID-19.

- NY Times Story: By emails dated April 9, 2020, the General Counsel provided to Governors Bloom and Barger information regarding a story in the *New York Times* concerning the Postal Service’s briefing to Congress on the financial impact of the COVID-19 pandemic on the Postal Service, and our legislative request.

- Today’s Call with Our Oversight Committee: By email dated April 9, 2020, the General Counsel provided to Governors Bloom and Barger a summary of the briefing that was held with the House Oversight Committee on the financial impact of the COVID-19 pandemic on the Postal Service, and our legislative request.

- Closing Justification for the April 8, 2020 Meeting: By memorandum dated April 7, 2020, the General Counsel advised the Secretary of the Board of Governors of the reasons why each of the items on the agenda for the Board meeting on April 8, 2020 could be closed to the public under the Government in the Sunshine Act.

II. Communications to the Board Members Sent in Preparation for the May 7, 2020 meeting of the Board of Governors: The following items were sent to the Board in preparation for the May 7, 2020 meeting:
• **PowerPoint Presentation:** The General Counsel forwarded a PowerPoint presentation encompassing the Legal Update. The PowerPoint contains updates on the following matters:
  
  - Appropriate Share Decision
  - Northrop Grumman Litigation Update
  - Greeting Card Association Complaint Update

• **Commercial P.O. Box Redirect Service Market Test:** By memorandum dated April 30, 2020, the General Counsel advised the Governors as to why the market test proposal to establish the Commercial P.O Box Redirect service conforms to applicable statutory requirements and will likely be authorized by the Postal Regulatory Commission. A draft Governors’ resolution authorizing the market test was also provided.

• **Loyalty Program for Small Businesses:** By memorandum dated April 30, 2020, the General Counsel advised the Governors as to why the proposal to change competitive prices to establish a loyalty program for small businesses conforms to applicable statutory requirements and will likely be authorized by the Postal Regulatory Commission. A draft Governors’ resolution authorizing the competitive price change was also provided.

• **New Priority Mail—Non-Published Rates Product:** By memorandum dated April 30, 2020, the General Counsel advised the Governors as to why the proposal to establish a new Priority Mail Non-Published Rates (PMNPR) product conforms to applicable statutory requirements and will likely be authorized by the Postal Regulatory Commission.

Tom Marshall, General Counsel (Note: Mr. Marshall will be prepared to respond to questions on the matters discussed below). 

ISSUE/PURPOSE: 

The purpose of this Briefing Sheet is to summarize communications from the General Counsel to the Governors or Board of Governors (Board) since the meeting of the Board on April 1, 2020, and to summarize information sent in support of matters on the Board agenda for May 7, 2020. 

BACKGROUND: 

This summary is informational in nature. 

CURRENT STATUS: 

I. Communications since the April 1, 2020 Board meeting: Since the April 1, 2020 meeting, the General Counsel forwarded the following communications to the Governors or to the Board. 

   - Closing Justification for April 28, 2020 Meeting: By memorandum dated April 27, 2020, the General Counsel advised the Secretary of the Board of Governors of the reasons why each of the items on the agenda for the Board meeting on April 28, 2020 could be closed to the public under the Government in the Sunshine Act. 

   - Closing Justification for May 7, 2020 Meeting: By memorandum dated April 23, 2020, the General Counsel advised the Secretary of the Board of Governors of the reasons why each of the items on the agenda for the Board meeting on May 7, 2020 could be closed to the public under the Government in the Sunshine Act.
• **Closing Justification for April 23, 2020 Meeting:** By memorandum dated April 23, 2020, the General Counsel advised the Secretary of the Board of Governors of the reasons why each of the items on the agenda for the Board meeting held on April 23, 2020 could be closed to the public under the Government in the Sunshine Act.

• **Cease and Desist Letter:** By email dated April 23, 2020, the General Counsel advised Chairman Duncan and Governor Barger of the response of a political action committee to a Postal Service’s cease and desist letter, which agreed to cease the unauthorized use of Postal Service intellectual property.

• **Draft Letter to Congressional LeadershipOur Discussion Yesterday:** By email dated April 20, 2020, the General Counsel provided Governor Barger with a revised version of the draft communication to Congressional leadership regarding legislative relief.

• **Potential Op-Ed from the GovernorsThe American Spectator:** By emails dated April 19, 20, and 21, 2020, the General Counsel discussed with the Governors a potential Op-Ed concerning the Postal Service’s nonpartisan nature.

• **Draft Letter to Congressional Leadership:** By emails dated April 17, 2020, the General Counsel provided to Governors Bloom and Barger a working draft of a letter to Congressional leadership.

• **Misuse of Posat Service Intellectual PropertyMore Letters:** By emails dated April 16 and 17, 2020, the General Counsel discussed with Chairman Duncan and Governors Barger and Bloom the unauthorized use by a political action committee of Postal Service intellectual property.

• **PostCom Bulletin Issue 16-20:** By email dated April 16, 2020, the General Counsel provided Chairman Duncan and Governors Bloom and Barger with two opinion pieces regarding the Postal Service.

• **Cease and Desist Letter:** By email dated April 16, 2020, the General Counsel provided Chairman Duncan and Governor Barger with the final cease and desist letter to address misuse of the Postal Service’s intellectual property by a political action committee, as well as the issued public statement by the Postal Service regarding the use of our intellectual property.
• **Closing Justification for April 9, 2020 Meeting:** By memorandum dated April 15, 2020, the General Counsel advised the Secretary of the Board of Governors of the reasons why each of the items on the agenda for the Board meeting held on April 9, 2020 could be closed to the public under the Government in the Sunshine Act.

• **PMG Call with Chairman Johnson:** By emails dated April 15, 2020, the General Counsel provided the Governors with a summary of the call held by the Postmaster General with the Chairman of the Senate Oversight Committee.

• **Appropriate Share D.C. Circuit Decision (UPS v. PRC; D.C. Cir. No. 19-1026):** By email dated April 14, 2020, the General Counsel provided the Governors with information concerning the decision by the D.C. Circuit Court of Appeals to remand the Postal Regulatory Commission’s appropriate share order.

• **Treasury Borrowing Pursuant to the CARES Act:** By email dated April 14, 2020, the General Counsel provided the Governors with a memorandum analyzing the provision in the CARES Act that gives the Postal Service an additional $10 billion in borrowing authority, subject to agreement with the Department of the Treasury on terms and conditions.

• **USPS IP Issue:** By emails dated April 13 and 14, 2020, the General Counsel provided to Chairman Duncan and Governor Barger information regarding a draft cease and desist letter to address misuse of the Postal Service’s intellectual property by a political action committee, as well as a public statement by the Postal Service regarding the use of our intellectual property.

• **Legislative Package:** By email dated April 9, 2020, the General Counsel provided to Governors Bloom and Barger draft legislative language regarding the Postal Service’s immediate legislative request to address the impacts of COVID-19.

• **NY Times Story:** By emails dated April 9, 2020, the General Counsel provided to Governors Bloom and Barger information regarding a story in the *New York Times* concerning the Postal Service’s briefing to Congress on the financial impact of the COVID-19 pandemic on the Postal Service, and our legislative request.

• **Today’s Call with Our Oversight Committee:** By email dated April 9, 2020, the General Counsel provided to Governors Bloom
and Barger a summary of the briefing that was held with the House Oversight Committee on the financial impact of the COVID-19 pandemic on the Postal Service, and our legislative request.

• **Closing Justification for the April 8, 2020 Meeting:** By memorandum dated April 7, 2020, the General Counsel advised the Secretary of the Board of Governors of the reasons why each of the items on the agenda for the Board meeting on April 8, 2020 could be closed to the public under the Government in the Sunshine Act.

II. **Communications to the Board Members Sent in Preparation for the May 7, 2020 meeting of the Board of Governors:** The following items were sent to the Board in preparation for the May 7, 2020 meeting:

• **PowerPoint Presentation:** The General Counsel forwarded a PowerPoint presentation encompassing the Legal Update. The PowerPoint contains updates on the following matters:
  
  - Appropriate Share Decision
  - Northrop Grumman Litigation Update
  - Greeting Card Association Complaint Update

• **Commercial P.O. Box Redirect Service Market Test:** By memorandum dated April 30, 2020, the General Counsel advised the Governors as to why the market test proposal to establish the Commercial P.O Box Redirect service conforms to applicable statutory requirements and will likely be authorized by the Postal Regulatory Commission. A draft Governors’ resolution authorizing the market test was also provided.

• **Loyalty Program for Small Businesses:** By memorandum dated May 1 April 30, 2020, the General Counsel advised the Governors as to why the proposal to change competitive prices to establish a loyalty program for small businesses conforms to applicable statutory requirements and will likely be authorized by the Postal Regulatory Commission. A draft Governors’ resolution authorizing the competitive price change was also provided.

• **New Priority Mail—Non-Published Rates Product:** By memorandum dated April 30, 2020, the General Counsel advised the Governors as to why the proposal to establish a new Priority Mail Non-Published Rates (PMNPR) product conforms to applicable statutory requirements and will likely be authorized by the Postal Regulatory Commission.
Legal Update

Thomas J. Marshall, General Counsel
Agenda

- Appropriate Share Decision
- Northrop Grumman Litigation Update
- Greeting Card Association Complaint Update
Under the statute, "all competitive products [must] collectively cover what the Commission determines to be an appropriate share of the institutional costs of the Postal Service."

In determining the appropriate share, the PRC is required by the statute to "consider all relevant circumstances, including . . . the degree to which any costs are uniquely or disproportionately associated with any competitive products."

On February 4, 2019, UPS filed a petition with the D.C. Circuit Court of Appeals, challenging the PRC’s order adopting a formula to calculate the appropriate share on numerous grounds. UPS sought to compel the PRC to significantly increase the appropriate share, which, in turn, would set a higher regulatory price floor for our competitive products.

We intervened on the PRC’s behalf, as did Amazon.com Services, the Parcel Shippers Association and Pitney Bowes, Inc., and filed a joint intervenors brief.

• Our brief underscored that the PRC’s decision is consistent with the statute; the PRC reasonably determined that the Postal Service is not engaged in unfair competition; and UPS’s challenges to the PRC’s formula are arbitrarily constructed and misplaced.

• The D.C. Circuit held oral argument on January 13, 2020.
• On April 14, 2020, the D.C. Circuit remanded the case to the PRC, but in a limited manner, which does not disturb the PRC’s formula or take a position on what the appropriate share determination should be.
  • The Court was not persuaded by any of the unfair competition arguments raised by UPS.
  • However, the Court agreed with UPS that the PRC failed to satisfy its statutory obligation to consider costs that are “uniquely or disproportionately associated with any competitive products,” and erred in assuming, without explaining, that there were “no institutional costs uniquely or disproportionately associated with competitive products.”

• Accordingly, the Court remanded the case so that the PRC could adequately discharge its statutory obligation to consider “the degree to which any costs are uniquely or disproportionately associated with any competitive products.”
On remand, if the PRC provides a more robust analysis of the statutory terms, we believe that its earlier decision can be preserved, meaning the remand will not significantly adversely impact the Postal Service. Such an approach should also pass muster with the D.C. Circuit.

Even if the remand results in changes to the PRC formula, there is a significant gap between the current appropriate share and what competitive products actually contribute to institutional costs, which means that there is a lot of room for the formula to change before it starts to impact our actual pricing discretion.

- In FY2019, competitive products contributed 23% to institutional costs, compared to the minimum appropriate share requirement of 8.8%
Northrop Grumman Update

- This case arises from a Postal Service contract with Northrop Grumman in 2007 for the delivery of 102 Flats Sequencing System ("FSS") machines by October 2010. FSS machines automatically sort flats into delivery-point sequence, thus saving office time for the manual sorting of such mail by the carriers.

- The machines arrived approximately 10 months late, thus depriving the Postal Service of savings for those ten months.

- In 2011, the Postal Service withheld $63.4 million of contract payments from Northrop Grumman in anticipation of even greater damages from the lost savings.

- In May 2012, Northrop Grumman filed suit against the Postal Service in the Court of Federal Claims, seeking approximately $179,000,000 for alleged delays and disruption caused by the Postal Service on the FSS contract. This amount included the $63.4 million in withheld payments.

- The Postal Service counterclaimed for approximately $410,000,000, which consisted mostly of $390,000,000 in claimed lost savings. Prior to trial we reduced the $390,000,000 claim to approximately $178,000,000, due mainly to declining volumes.
• After several unsuccessful attempts at a mediated settlement from 2017 through 2019, the case proceeded to trial on February 3, 2020. This is a “bench trial,” i.e., it is being tried before a single judge with no jury.

• Four weeks of trial were held by March 6, 2020, and Northrop Grumman concluded its case-in-chief. Shortly thereafter, trial was indefinitely suspended due to the Coronavirus pandemic. Trial is not expected to resume before June 1, 2020.

• When trial resumes at a date to be determined, the Postal Service will continue putting on its case-in-chief for approximately two weeks, to be followed by rebuttal cases by both sides.
Northrop Grumman Update

• In off-the-record remarks in mid-March, the judge indicated that Northrop Grumman’s affirmative case was very weak and that he was not inclined to grant them any relief.

• He also indicated that the Postal Service’s lost savings claim was not convincing and that he likewise was not inclined to grant us relief either. However, the Postal Service’s expert witnesses have yet to testify. As such, the judge could change his mind about our lost savings claim.

• If the judge adheres to his expressed inclinations, then he would determine there was no lost savings, and the Postal Service would have to return to Northrop Grumman the $63.4 million of withheld payments plus interest. But Northrop Grumman would not receive any compensation for its other claims.
• Until 2014, USPS assessed the same rate to both single-piece Metered Letters and Stamped Letters.

• In 2014, USPS introduced a separate rate for Metered Letters that was lower than the Stamped rate. This was justified on the grounds that the lower rate would encourage adoption of metered mail by small businesses, which could keep such businesses in the mail and save some Postal Service costs.

• The Presort rates for First-Class Mail are set based on the Metered Letter rate.

• Today, the rate difference between Metered and Stamped Letters is 5 cents, whereas the cost difference is 1.14 cents.

The cost figure is from FY 2018.
• On January 30, 2020, the Greeting Card Association (GCA) filed a complaint with the PRC alleging that the 5-cent differential between the Metered and Stamp rates violates 39 U.S.C. §403(c)’s prohibition against undue and unreasonable discrimination, and does not comport with the ratemaking objectives of 39 U.S.C. § 3622.

• GCA requested that the PRC either eliminate the separate Metered Letter rate, or that it adjust the Metered Letter rate so that the difference between the two rates only reflects the difference in costs.

• Adopting GCA’s position would virtually eliminate pricing flexibility in First-Class Mail:
  • If the Metered Rate is tied to the Stamped rate based only on costing data, this would essentially tie approximately 89% of First-Class pricing authority to the stamp price, since the meter rate is also used as a benchmark for setting Presort rates.

The cost figure is from FY 2018.
We filed a motion to dismiss on February 19, 2020, as did certain industry members.
- Our motions pointed to favorable PRC precedent supporting the Postal Service's position, i.e., favorable review of our flexibility to vary the Metered rate unpegged from the stamp.
- We also highlighted the deficiencies in GCA's 403(c) claims.

On April 28, 2020, the PRC dismissed GCA's complaint with prejudice
- The PRC noted that it had previously addressed and rejected the arguments asserted by GCA, and also determined that the complaint did not raise any novel arguments relating to Section 3622.
- The PRC found that GCA failed to state a claim under Section 403(c), because GCA had failed to prove that the Postal Service lacked a rational and legitimate basis for the lower Metered rate. In reaching this decision, the PRC deferred to our business judgment that a lower Metered Mail encourages the use of the mail. The PRC also pointed to the fact that the rate differential is relatively close to the estimated differences in costs, as further evidence that the Metered rate is rational and legitimate.

GCA has 30 days to decide whether to appeal to the D.C. Circuit Court of Appeals

Based on this decision and the PRC’s prior decision approving the 55 cent Stamped Rate following the Carlson decision, the elements of the current single-piece First-Class Mail rate design are on firm legal ground.
- However, while the PRC has approved the 55 cent Stamp rate, it has not resolved the issue of whether a 5-cent rounding policy is legally permissible for future filings.

The cost figure is from FY 2018.

United States Court of Appeals
FOR THE DISTRICT OF COLUMBIA CIRCUIT

Argued January 13, 2020             Decided April 14, 2020

No. 19-1026

UNITED PARCEL SERVICE, INC.,
PETITIONER

v.

POSTAL REGULATORY COMMISSION,
RESPONDENT

AMAZON.COM SERVICES, INC., ET AL.,
INTERVENORS

On Petition for Review of an Order
of the Postal Regulatory Commission

Kathleen M. Sullivan argued the cause for petitioner. With her on the briefs was Steig D. Olson.

Michael Shih, Attorney, U.S. Department of Justice, argued the cause for respondent. With him on the brief were Michael S. Raab, Attorney, David A. Trissell, General Counsel, Postal Regulatory Commission, Anne J. Siarnacki, Deputy General Counsel, and Reese T. Boone, Attorney.

Eric P. Koetting and Morgan E. Rehrig, Attorneys, U.S. Postal Service, Michael F. Scanlon, John Longstreth, and James Pierce Myers were on the brief for intervenors
Amazon.com Services, et al. in support of the Postal Regulatory Commission.

Before: HENDERSON and MILLETT, Circuit Judges, and EDWARDS, Senior Circuit Judge.

Opinion for the Court filed by Senior Circuit Judge EDWARDS.

EDWARDS, Senior Circuit Judge: This case involves a petition for review filed by United Parcel Service, Inc. (“UPS”), challenging the Postal Regulatory Commission’s (“Commission”) Order Adopting Final Rules Relating to the Institutional Cost Contribution Requirement for Competitive Products, No. 4963, Dkt. No. RM2017-1 (P.R.C. Jan. 3, 2019) (“Order”), reprinted in Joint Appendix (“J.A.”) 515-712. The disputed Order modifies Commission regulations that are meant to “ensure that all [of the Postal Service’s] competitive products collectively cover what the Commission determines to be an appropriate share of the institutional costs of the Postal Service.” 39 U.S.C. § 3633(a)(3). In making this “appropriate share” determination under § 3633(a)(3), the Commission is obligated to “consider,” among other things, “the degree to which any costs are uniquely or disproportionately associated with any competitive products.” Id. § 3633(b). However, the Commission concluded that “there are no costs uniquely or disproportionately associated with competitive products that are not already attributed to those products under the Commission’s current cost attribution methodology” under § 3633(a)(2). Order at 28, J.A. 547.

The problem is that § 3633(a)(2) only requires the Commission to “ensure that each competitive product covers its costs attributable.” The term costs attributable is narrowly defined as “the direct and indirect postal costs attributable to [a

"
particular competitive] product through reliably identified causal relationships.” 39 U.S.C. § 3631(b). However, it is not at all clear that “uniquely or disproportionately associated” costs described under § 3633(b) include only those costs that are attributable “through reliably identified causal relationships.” And § 3633(b) makes it clear that “the Commission shall consider . . . the degree to which any costs are uniquely or disproportionately associated with any competitive products.” Id. § 3633(b) (emphasis added). The Commission’s Order fails to explain why these seemingly distinct statutory phrases cover the same costs, and further elides the requirements of § 3633(a)(3) and (b) by suggesting that, to the extent these statutory phrases overlap, the Commission need not consider costs under § 3633(b) if it already accounted for them under § 3633(a)(2).

UPS argues that the Commission’s position is contrary to law because “the Order fails to consider . . . costs ‘uniquely or disproportionately associated with any competitive products,’ as the Act requires in section 3633(b).” Br. for Petitioner at 3. UPS also contends that the Commission erred in simply assuming, without adequate explanation, that “there are no institutional costs uniquely or disproportionately associated with competitive products.” Id. We agree.

Two aspects of the Commission’s Order require a remand. First, the Commission has not adequately explained how the statutory phrases “direct and indirect postal costs attributable to [a particular competitive] product through reliably identified causal relationships” and “costs . . . uniquely or disproportionately associated with any competitive products” can coincide. It is far from clear that these phrases have the same meaning. And the Commission has not demonstrated that, although they have distinct meanings, the phrases nonetheless coincide in application. Second, in focusing on costs attributed
to competitive products under § 3633(a)(2), the Commission failed to discharge its responsibility under § 3633(b) to “consider . . . the degree to which any costs are uniquely or disproportionately associated with any competitive products.” 39 U.S.C. § 3633(b) (emphasis added). The Commission must consider any costs made relevant by § 3633(b). It does not matter whether the Commission has arguably considered such costs in implementing its responsibilities under § 3633(a)(2). These two points are amplified in the opinion below.

The bottom line is that the Commission’s Order is arbitrary and capricious because it is “largely incomprehensible” with respect to the matters in issue. U.S. Postal Serv. v. PRC, 785 F.3d 740, 753 (D.C. Cir. 2015). Therefore, we are constrained to remand the case for further consideration. On remand, the Commission must adhere to the commands of the statute and address the costs specified in § 3633(b) in determining the “appropriate share” under § 3633(a)(3). Following reconsideration of this case, any Commission Order must be coherent and transparent, and it must satisfy the requirements of reasoned and reasonable decision-making. Id. at 744, 753. The present Order fails to meet these standards “because it fails to articulate a comprehensible standard,” id. at 753, regarding the meaning and application of § 3633(a)(3) and (b).

I. BACKGROUND

A. Statutory Background

The Postal Service offers both “market dominant” and “competitive” products. Market-dominant products, like first-class mail, are “those over which the ‘Postal Service exercises sufficient market power that it can effectively’ raise prices or decrease quality ‘without risk of losing a significant level of business to other firms offering similar products.’” UPS v.
PRC, 890 F.3d 1053, 1055 (D.C. Cir. 2018) (quoting 39 U.S.C. § 3642(b)(1)); see also 39 U.S.C. § 3621 (listing market-dominant products). Competitive products, on the other hand, like priority mail or parcel post, are “products over which the Postal Service faces meaningful market competition” from companies like UPS. UPS v. PRC, 890 F.3d at 1056 (internal quotation marks and citation omitted); see also 39 U.S.C. § 3631 (listing competitive products).

In 2006, Congress enacted the Postal Accountability and Enhancement Act, Pub. L. No. 109-435, 120 Stat. 3198 (2006) (“Accountability Act”), to ensure (among other things) that the Postal Service offers its competitive products on fair terms. See S. Rep. No. 108-318, at 14-16 (2004). To that end, the Accountability Act requires the Commission to promulgate regulations that ensure that the Postal Service is not “using revenues from market-dominant products subject to its monopoly power to defray costs competitive products would otherwise have to be priced to cover.” UPS v. PRC, 890 F.3d at 1055.

Specifically, § 3633(a) requires the Commission to issue three sets of regulations:

(a) In general.—The Postal Regulatory Commission shall, within 18 months after the date of enactment of this section, promulgate (and may from time to time thereafter revise) regulations to—

(1) prohibit the subsidization of competitive products by market-dominant products;

(2) ensure that each competitive product covers its costs attributable; and
(3) ensure that all competitive products collectively cover what the Commission determines to be an appropriate share of the institutional costs of the Postal Service.

39 U.S.C. § 3633(a)(1)-(3). As may be seen, the foregoing provisions refer to “costs attributable” and “institutional costs.” These terms are important in our consideration of the issues presented in this case.

As explained in the introduction to this opinion, the Accountability Act defines the term “costs attributable” as “the direct and indirect postal costs attributable to [a particular competitive] product through reliably identified causal relationships.” Id. § 3631(b). The Commission, in turn, interprets the term “institutional costs” to mean “residual costs” – that is, the Postal Service’s total costs minus its costs attributable under § 3633(a)(2). See UPS v. PRC, 890 F.3d at 1055-56, 1061-63 (explaining the relationship between “institutional costs” and “costs attributable”).

The Accountability Act calls for the Commission to periodically review its “appropriate share” determination under § 3633(a)(3). The statute also specifies that the Commission “shall consider” the following matters when it conducts that review:

(b) Review of minimum contribution.—Five years after the date of enactment of this section, and every 5 years thereafter, the Postal Regulatory Commission shall conduct a review to determine whether the institutional costs contribution requirement under subsection (a)(3) should be retained in its current form, modified, or eliminated. In making its determination, the Commission shall consider all
relevant circumstances, including the prevailing competitive conditions in the market, and the degree to which any costs are uniquely or disproportionately associated with any competitive products.

39 U.S.C § 3633(b).

In effect, then, the Accountability Act requires the Commission to establish a multi-part “price floor” for its competitive products. See UPS v. PRC, 890 F.3d at 1055-56. First, the Commission must issue regulations to prevent market-dominant products from subsidizing competitive products. Second, the price of “each competitive product” must be set high enough to cover the “direct and indirect postal costs attributable to such product through reliably identified causal relationships.” Third, the Commission must also ensure that “all competitive products collectively” cover what the Commission determines to be an “appropriate share” of the Postal Service’s institutional (i.e., unattributed) costs. The Commission, in determining what share is appropriate, “shall consider,” among other things, “the degree to which any costs are uniquely or disproportionately associated with any competitive products.”

B. The Commission’s 2016 Order Addressing § 3633(a)(2)

Commission’s cost-attribution method as “reasonable and reasonably explained.” Id. at 1069. Because the court’s 2018 decision thoroughly explains the Commission’s cost-attribution method, the decision provides important context for the questions at issue in this case.

First, the court’s 2018 decision explains several concepts that the Commission uses to sort out the Postal Service’s costs. To start, the decision explains that “the Commission distinguishes (albeit necessarily imperfectly) between ‘fixed costs,’ . . . which remain constant regardless of overall product volume, and ‘variable costs,’ . . . which vary with the Service’s production levels.” Id. at 1056 (citing 2016 Order at 6). Examples of fixed costs include executive salaries and product-specific fixed costs like advertising. See id. In addition, the decision explains that the Commission distinguishes between variable costs that are “volume-variable” – i.e., which vary directly with the marginal cost of the cheapest relevant unit and the total number of units, id. at 1057 (citing 2016 Order at 36 n.56) – and variable costs that are not “volume-variable” in this sense, which the Commission calls “inframarginal costs,” id. at 1058 (citing 2016 Order at 35). The concept of inframarginal costs is not entirely intuitive. The basic idea is that, thanks to economies of scale, marginal costs tend to decrease with volume, and the sum of the differences between the marginal cost of earlier, more expensive units and the marginal cost of the last, cheapest unit is the inframarginal cost. See id. at 1057-58; 2016 Order at 35-36.

Second, the court’s 2018 decision holds that the Commission’s decision to define “institutional costs” as “residual costs” – that is, as any costs not attributed to competitive products through reliably identified causal relationships under § 3633(a)(2) – was based on a permissible reading of the Accountability Act. UPS v. PRC, 890 F.3d at
1061-63. An important upshot of the Commission’s choice to treat institutional costs as “residual” is that the composition of the Postal Service’s institutional costs will (by definition) depend on how attributed costs are calculated. For example, if the Commission were to attribute to each competitive product its product-specific fixed costs and its volume-variable costs—which is what the Commission did until 2016—then the Postal Service’s institutional costs would include all its other fixed costs and all of its inframarginal costs. See id. at 1056-58.

Third, the court’s 2018 decision upholds the Commission’s revised method for attributing costs under § 3633(a)(2). See id. at 1066-69. In short, the Commission adopted a method that enables it to attribute product-specific fixed costs, volume-variable costs, and some (but not all) inframarginal costs to each competitive product. See id. at 1060. The Commission is able to tie a portion of the Postal Service’s inframarginal costs to specific competitive products through “reliably identified causal relationships” by calculating the “costs that would disappear were the Postal Service to stop offering those products for sale.” Id. at 1055. This “incremental cost” method accounts for not only a “product’s share of volume-variable costs, but also the inframarginal costs that would be removed if the product were not to be provided.” Id. at 1059 (internal quotation marks omitted) (quoting 2016 Order App’x A at 19). In the Commission’s view, “because the portion of inframarginal costs included within a product’s incremental cost has a causal relationship with that product, the Accountability Act requires the Postal Service to attribute it.” Id. at 1059-60 (internal quotation marks omitted) (quoting 2016 Order at 55, 61). The court’s 2018 decision finds the Commission’s position reasonable and reasonably explained. Id. at 1069.
Fourth, the court’s 2018 decision notes that the Commission’s cautious cost-attribution method leaves some of the Postal Service’s inframarginal costs unattributed. See id. at 1060 (“All other costs, including all remaining inframarginal costs, remain classified as institutional.”). Indeed, the decision concludes that the Commission’s caution was reasonable, given the Accountability Act’s requirement that attributed costs have “reliably identified causal relationships” to competitive products. See id. at 1068. For example, the 2018 decision rejects the argument that the Commission’s approach was arbitrary and capricious for assuming that competitive products are responsible for only the lowest-cost units associated with a given activity. The decision reasons that “[a]ttributing more than this amount . . . necessitates guesswork, and the Commission sensibly concluded that such guesswork was inconsistent with its statutory obligation to base attribution on only ‘reliably identified causal relationships.’” Id. (quoting 39 U.S.C. § 3631(b)).

It is clear, then, that the court’s 2018 decision in UPS v. PRC upholding the Commission’s cost-attribution method under § 3633(a)(2) leaves open important questions that provide context for understanding and assessing the Commission’s § 3633(a)(3) determination in this case. These questions include: Are some of the Postal Service’s institutional costs – and especially its unattributed inframarginal costs – still related in some meaningful way to competitive products, even if those costs cannot be attributed under § 3633(a)(2)? And if so – if, for instance, some of those institutional costs are “uniquely or disproportionately associated with competitive products,” 39 U.S.C. § 3633(b) – might they need to be accounted for when the Commission issues regulations under another provision of the Accountability Act?
C. The Commission’s Disputed Order in this Case

On January 3, 2019, the Commission issued the Order modifying its “appropriate share” determination under § 3633(a)(3) that is the subject of the dispute in this case. In the past, the Commission had determined that “all competitive products collectively” must cover at least 5.5% of the Postal Service’s institutional costs. See Order at 4-5, J.A. 523-24 (summarizing the Commission’s 2007 and 2012 orders). In the 2019 Order, however, the Commission decided that the “appropriate share” of the Postal Service’s institutional costs to be covered by “all competitive products collectively” should be set using a dynamic formula. In short, the Commission’s formula relies on two primary variables: the “Competitive Contribution Margin” and the “Competitive Growth Differential.” These variables are meant to represent the Postal Service’s market power and market position. See id. at 19-28, J.A. 538-47. The Commission intends to use the formula “to annually update the appropriate share based on prevailing competitive conditions in the market and other relevant circumstances.” Id. at 19, J.A. 538.

For our purposes, however, the details of the Commission’s formula-based approach are not critical. Instead, our focus in this case is on whether the Commission, in making its determination, adequately discharged its obligation under § 3633(b) to “consider all relevant circumstances, including the prevailing competitive conditions in the market, and the degree to which any costs are uniquely or disproportionately associated with any competitive products.” Therefore, this background section is similarly focused on the Commission’s § 3633(b) analysis and in particular on the Commission’s “consider[ation of] . . . the degree to which any costs are uniquely or disproportionately associated with any competitive products.”
In a section of its Order titled “Connection to Section 3633(b) Criteria,” the Commission recited the factors that the Accountability Act says it “shall consider,” and then explained its position on costs “uniquely or disproportionately associated with” competitive products:

The Commission has repeatedly found that there are no costs uniquely or disproportionately associated with competitive products that are not already attributed to those products under the Commission’s current cost attribution methodology. As a result, the formula-based approach does not separately account for such costs.

Order at 28-29, J.A. 547-48 (citations omitted).

The Commission finds that there are no costs uniquely or disproportionately associated with competitive products that are not already attributed to competitive products. Under the Commission’s methodology, any cost that is uniquely or disproportionately associated with any competitive product is identified as an attributable cost because it exhibits a reliably identifiable causal relationship with
a specific competitive product. With regard to costs that are disproportionately associated with competitive products, the Commission’s cost attribution methodology identifies relationships between costs and cost drivers, which include mail characteristics such as weight and shape (e.g., letters or parcels). . . . In this way, the costs attributed to products reflect any disproportionate association of those costs with any specific products (including any competitive products).

Under the Commission’s methodology, the Commission also classifies any cost that is uniquely associated with any product (including any competitive product) as attributable to that product. These costs are often referred to as product-specific costs. For example, advertisements for a specific product and supplies for money orders are unique costs attributed to specific products under the Commission’s methodology.

. . . .

For the reasons discussed above, the Commission concludes that its costing methodology already accounts for the “the degree to which any costs are uniquely or disproportionately associated with any competitive products.” To the extent that any costs can be attributed to specific competitive products, they are already distributed under the Commission’s current costing methodology and are not included in the institutional costs of the Postal Service.

Initial Notice at 43-45, J.A. 147-49; see also Revised Notice at 52-53, J.A. 304-05 (summarizing this same point).
Later, in response to comments from UPS and others, the Commission provided a succinct summary of the position it took in its Initial Notice. See Order at 138-162, J.A. 657-81.

In [the Initial Notice], the Commission found that there are no costs uniquely or disproportionately associated with competitive products that are not already attributed to those products. This is because all costs that are uniquely or disproportionately associated with competitive products exhibit a reliably identified causal relationship with a specific competitive product or group of products and are therefore attributed. The Commission described “unique” costs as product-specific costs and determined that any cost that is uniquely associated with a competitive product is attributed to that product through a reliably identified causal relationship. . . . In addition, the Commission found that any cost disproportionately associated with a competitive product is attributed to that product through the cost methodology’s use of cost drivers. . . . In this way, the costs attributed products reflect any disproportionate association of those costs with specific products. As a result, the Commission determined that both types of costs are attributed to the competitive products that cause them.

Order at 138-39, J.A. 657-58 (citing Initial Notice at 43-44).

Finally, in response to UPS’s comment suggesting that the Commission’s analysis mistakenly conflate the “associated with” standard and the “reliably identified causal relationships” standard, the Commission concluded that “UPS overlooks key terms in section 3633(b), as well as the context of the statutory
scheme as a whole.” Order at 143, J.A. 662. The Commission emphasized the “degree of flexibility . . . inherent in the appropriate share provisions of section 3633” and the lack of any mechanical relationship between the Commission’s consideration of the statutory factors and the Commission’s ultimate determination. Id. at 144, J.A. 663. The Commission continued:

For the relevant factor at issue, “the degree to which any costs are uniquely or disproportionately associated with any competitive products,” UPS focuses on only a portion of the statutory language—“disproportionately associated.” However, in reading the relevant factor in its entirety, the use of the words “degree” and “any” plainly contemplate that there may be no uniquely or disproportionately associated competitive product costs. Congress does not require costs to be found; only for the Commission to “consider” whether “any” exist. Nothing in section 3633(b) prevents the Commission from concluding as it has—that all costs uniquely or disproportionately associated with competitive products are, in fact, captured by the costing methodology it currently employs pursuant to section 3633(a)(2).

Order at 144, J.A. 663.

In short, the Commission’s position appears to be that the statutory phrase “costs . . . uniquely or disproportionately associated with any competitive products” is no broader than the phrase “direct and indirect postal costs attributable to [a particular competitive] product through reliably identified causal relationships.” And the Commission appears to base that conclusion on the assumption that costs are uniquely or
disproportionately associated with competitive products only if competitive products can be reliably said to cause such costs.

II. ANALYSIS

A. Standard of Review

“Because the Congress expressly delegated to the Commission responsibility to implement [the Accountability Act], we review its interpretation’ of that statute under the standards enunciated in Chevron and its progeny.” U.S. Postal Serv. v. PRC, 785 F.3d 740, 750 (D.C. Cir. 2015) (quoting U.S. Postal Serv. v. PRC, 640 F.3d 1263, 1266 (D.C. Cir. 2011)).

Under Chevron’s First Step, if “Congress has directly spoken to the precise question at issue . . ., that is the end of the matter; for the court, as well as the agency, must give effect to the unambiguously expressed intent of Congress.” If the statute is ambiguous, Chevron’s Second Step then requires us to consider whether the Commission has acted pursuant to delegated authority and, if so, whether its interpretation of the statute is “permissible.”

In deciding whether the Commission’s Order is arbitrary and capricious, we are “reluctan[t] to interfere with [the Commission’s] reasoned judgments about technical questions within its area of expertise.” *UPS v. PRC*, 890 F.3d 1053, 1066 (D.C. Cir. 2018) (internal quotation marks omitted) (quoting *All. of Nonprofit Mailers v. PRC*, 790 F.3d 186, 197 (D.C. Cir. 2015)). At the same time, the Commission must adequately “consider” all the factors that the Accountability Act makes relevant, *see Lindeen v. SEC*, 825 F.3d 646, 657 (D.C. Cir. 2016), and the Commission’s decision-making must be comprehensible, *see U.S. Postal Serv. v. PRC*, 785 F.3d 740, 753 (D.C. Cir. 2015); *Glob. Tel*Link v. FCC*, 866 F.3d 397, 413 (D.C. Cir. 2017).

**B. The Commission’s Disputed Interpretation and Application of § 3633(a)(3)**

The dispositive question before the court in this case is whether the Commission, in reviewing its appropriate share determination, adequately discharged its statutory obligation to “consider” the “degree to which any costs are uniquely or disproportionately associated with any competitive products.” We hold that the Commission failed to do this and, therefore, we are constrained to remand the case.

We do not mean to render any decision on what the appropriate share determination under § 3633(a)(3) should be. That is for the Commission to determine in the first instance. At this point, however, the Commission’s interpretation and application of § 3633(a)(3) and (b) are incomprehensible and, thus, unreasonable. No deference is due to the Commission’s current position because the disputed Order fails to apply the relevant terms of the statute, and it offers no reasoned basis for this failure.
As detailed above, the Commission’s position appears to be that the term “costs . . . uniquely or disproportionately associated with any competitive products” in § 3633(b) is no broader than—and indeed may coincide with—the term “direct and indirect postal costs attributable to [a particular competitive] product through reliably identified causal relationships,” which defines “costs attributable” in § 3633(a)(2). To reach that conclusion, the Commission assumed that “all costs that are uniquely or disproportionately associated with competitive products exhibit a reliably identified causal relationship with a specific competitive product or group of products and are therefore attributed.” Order at 138, J.A. 657. The Commission thus reasons that none of the Postal Service’s institutional costs—including, apparently, its “remaining inframarginal costs,” UPS v. PRC, 890 F.3d at 1060— are uniquely or disproportionately associated with its competitive products in the sense intended in § 3633(b). This leads the Commission to conclude that there are no costs for it to “consider” under § 3633(b). See, e.g., Order at 28-29, J.A. 547-48. The Commission’s analysis defies reasoned decision-making.

As noted at the outset of this opinion, there are two significant problems with the Commission’s position. First, the Commission has not adequately explained how the statutory phrases “direct and indirect postal costs attributable to [a particular competitive] product through reliably identified causal relationships,” 39 U.S.C. § 3631(b), and “costs . . . uniquely or disproportionately associated with any competitive products,” id. § 3633(b), can effectively coincide. Second, in focusing narrowly on costs attributed to competitive products under § 3633(a)(2), the Commission failed to discharge its responsibility under § 3633(b) to “consider . . . the degree to which any costs are uniquely or disproportionately associated
with any competitive products.” *Id.* § 3633(b) (emphasis added). We elaborate on these points in turn.

1. The Commission’s Interpretation of Costs “Uniquely or Disproportionately Associated with Competitive Products” Under § 3633(b)

The Commission’s current analysis of the relationship between costs “attributed through reliably identified causal relationships” and costs “uniquely or disproportionately associated with” is incomprehensible. In the passages from the Commission’s Order reprinted above, the Commission assumes that the Postal Service’s costs can be “uniquely or disproportionately associated with” competitive products only if there is a reliably identified causal relationship between those costs and competitive products. *See* Initial Notice at 43-44, J.A. 147-48; Order at 138-39, 657-58. In its brief to this court and at oral argument, however, the Commission’s counsel suggests that the Commission gave the phrase “uniquely or disproportionately associated with” a distinct interpretation, and only then proceeded to conclude that there are no costs in that independent category that are not already attributed to competitive products under § 3633(a)(2). *See* Br. for Respondent at 29-32; Tr. of Oral Argument at 54-55. It is an understatement to say that one is hard-pressed to understand what the Commission means to say regarding the meaning of § 3633(b).

At this point, we cannot credit either one of the foregoing interpretations of the Accountability Act. To start, the Commission cannot simply *assume* that the “uniquely or disproportionately associated with” standard is subsumed by the “reliably identified causal relationships” standard. That would impermissibly conflate the language of § 3633(a)(2) – which incorporates the definition of “costs attributed” from
§ 3631(b) – with the evidently distinct language of § 3633(b). See BP Energy Co. v. FERC, 828 F.3d 959, 968 (D.C. Cir. 2016) (“Even under the most deferential standard, an agency cannot read statutory provisions out of existence but must interpret statutes ‘so that effect is given to all its provisions . . . [and] no part will be inoperative or superfluous, void or insignificant.’”) (alteration in original) (quoting Corley v. United States, 556 U.S. 303, 314 (2009))). Instead, the Commission must explain why these two statutory phrases have the same practical reach despite the use of different language.

As noted above, the Commission attempted to offer such an explanation in its brief to this court. The Commission belatedly argues that it did not “equate[]” the two statutory phrases “as an interpretative matter.” Br. for Respondent at 34. Rather, the Commission now contends that it gave independent meaning to the statutory terms “uniquely . . . associated with” and “disproportionately associated with,” using the ordinary tools of statutory interpretation. See id. at 29-34; Tr. of Oral Argument at 54-55. Then, according to counsel, the Commission concluded that “all ‘uniquely associated’ costs and all ‘disproportionately associated’ costs satisfy the Commission’s independent definition of the ‘costs attributable’ to a competitive product.” Br. for Respondent at 31. This line of argument is hard to discern in what the Commission actually said, and it is somewhat hard to fathom on its own terms. But if that is the Commission’s view, it must spell it out.

In any event, as things stand now, “we simply cannot comprehend the [Commission’s] reasoning” about the meaning and application of § 3633(b). Glob. Tel*Link v. FCC, 866 F.3d 397, 413 (D.C. Cir. 2017). Therefore, the Commission’s Order is neither reasoned nor reasonable. “At its core, the Commission’s Order is arbitrary and capricious because it fails
to articulate a comprehensible standard . . . .” *U.S. Postal Serv. v. PRC*, 785 F.3d 740, 753 (D.C. Cir. 2015). “[W]e owe no deference to an agency determination that is ‘largely incomprehensible.’” *Id.* (quoting *Coburn v. McHugh*, 679 F.3d 924, 926 (D.C. Cir. 2012)). The bottom line is that the Commission has not adequately explained why the statutory phrases at issue here have similar meanings, nor has it demonstrated that these statutory categories, even if distinct in meaning, nevertheless coincide in application. Therefore, the Commission’s application of § 3633(a)(3) and (b) was arbitrary and capricious and must be remanded.

2. The Commission’s Consideration of “Any” Such Costs Under § 3633(b)

A second problem with the disputed Order is that, in focusing its analysis on costs attributed to competitive products under 39 U.S.C. § 3633(a)(2), the Commission failed to “consider . . . the degree to which any costs are uniquely or disproportionately associated with any competitive products” as required by 39 U.S.C. § 3633(b). As the plain meaning of that provision suggests, the Accountability Act clearly requires the Commission to consider any costs uniquely or disproportionately associated with competitive products at the time it reviews its appropriate share determination under § 3633(a)(3). This includes, but is not limited to, any costs fitting that description that the Commission may have already considered when it promulgated regulations under § 3633(a)(1) or § 3633(a)(2).

The record in this case indicates that the Commission did not follow this statutory mandate. Instead, the Commission, relying on its inadequately explained interpretation of the Accountability Act, focused narrowly on the costs it had considered – and attributed – in promulgating regulations under
§ 3633(a)(2). At oral argument, counsel for the Commission suggested that by piecing together the Commission’s responses to various comments, we could find that the Commission did indeed consider a broader class of costs. Tr. of Oral Argument at 75; see also Br. for Respondent at 35-38. Even assuming that is right, however, the Commission’s Order does not make it clear or comprehensible, and we cannot fill in the blanks in the Commission’s reasoning. The simple point here is that the Commission erred in concluding that it had discharged its responsibility to consider any costs uniquely or disproportionately associated with competitive products by virtue of the fact that it had already considered these costs when setting the price floor under § 3633(a)(2).

An agency Order that is at odds with the requirements of the applicable statute cannot survive judicial review. See, e.g., Michigan v. EPA, 135 S. Ct. 2699, 2706 (2015). “An agency’s failure to consider and address during rulemaking ‘an important aspect of the problem’ renders its decision arbitrary and capricious. A ‘statutorily mandated factor, by definition, is an important aspect of any issue before an administrative agency . . . .’” Mozilla Corp. v. FCC, 940 F.3d 1, 60 (D.C. Cir. 2019) (per curiam) (first quoting Motor Vehicle Mfrs. Ass’n v. State Farm Mut. Auto. Ins. Co., 463 U.S. 29, 43 (1983); then quoting Pub. Citizen v. Fed. Motor Carrier Safety Admin., 374 F.3d 1209, 1216 (D.C. Cir. 2004)). On the record before us, the Commission’s treatment of § 3633(b) cannot survive judicial review. Therefore, we are constrained to remand the Order to the Commission for further consideration.

On remand, the Commission must consider all costs uniquely or disproportionately associated with competitive products in setting the appropriate share, even if it has already accounted for those costs under § 3633(a)(1) and (a)(2).
Furthermore, the Commission should fully address the issue left open in the court’s 2018 decision in \textit{UPS v. PRC}. The court in that decision recognized that, because the costs attributed test under § 3633(a)(2) is conservative, there may be institutional costs that are “uniquely or disproportionately associated with competitive products,” even though they cannot be said to stand in “reliably identified causal relationships” with them. The Commission’s Order in this case does not address this.

In addition, the Commission must explain the relevance (if any) of costs it may have considered in implementing § 3633(a)(1). At oral argument, counsel for the Commission suggested that the Commission might not have to further consider costs uniquely or disproportionately associated with competitive products under § 3633(b) because it had already considered them pursuant to § 3633(a)(1). Tr. of Oral Argument at 43-44, 48, 54-55. However, this possibility is offered as nothing more than a fleeting suggestion in the Commission’s Order and its brief to the court. \textit{Compare} Order at 144, J.A. 663, and Br. for Respondent at 19 (focusing only on § 3633(a)(2)), \textit{with} Order at 160 n.294, J.A. 679 n.294, and Br. for Respondent at 36 (mentioning the Commission’s test under § 3633(a)(1)). If this point is somehow critical to the Commission’s analysis, the Commission must make that clear in the first instance. \textit{See SEC v. Chenery Corp.}, 318 U.S. 80, 94-95 (1943).

We do not mean for these examples to exhaust the issues that the Commission must address on remand, only to illustrate some of what a fuller “consider[ation]” of the relevant costs will involve.

***
In sum, the Commission must address the issues highlighted above before we can say whether its formula-based approach to determining the appropriate share under § 3633(a)(3) is permissible and reasonable. On remand, the Commission might decide to revise its judgment regarding the “appropriate share” under § 3633(a)(3). Indeed, at oral argument, counsel for the Commission conceded that the “floor” established under § 3633(a)(3) might need to be adjusted if the Commission found any costs uniquely or disproportionately associated with competitive products. Tr. of Oral Argument at 49-50. It is also possible, however, that the Commission might decide against revising its bottom-line judgment, given the other factors the Commission must consider under § 3633(b) and the latitude that the text affords the Commission in making a final determination.

We take no position on this matter. It is not for this court to say that the Commission must account for costs in any specific way under § 3633(b) or that the Commission must make any particular “appropriate share” determination under § 3633(a)(3). Rather, the judgment of the court is that, on remand, the Commission must consider all the costs referenced under § 3633(b), as the Accountability Act clearly commands. And any decision that the Commission reaches regarding the meaning and application of § 3633(b) in connection with the “appropriate share” determination under § 3633(a)(3) must be consistent with the terms of the statute, must be comprehensible, and must otherwise satisfy the requirements of reasoned decision-making.

III. CONCLUSION

For the reasons set forth above, we grant UPS’s petition for review and remand the case to the Commission for further consideration consistent with this opinion.
United States Court of Appeals
FOR THE DISTRICT OF COLUMBIA CIRCUIT

Argued January 13, 2020 Decided April 14, 2020

No. 19-1026

UNITED PARCEL SERVICE, INC.,
PETITIONER

v.

POSTAL REGULATORY COMMISSION,
RESPONDENT

AMAZON.COM SERVICES, INC., ET AL.,
INTERVENORS

On Petition for Review of an Order
of the Postal Regulatory Commission

Kathleen M. Sullivan argued the cause for petitioner. With her on the briefs was Steig D. Olson.

Michael Shih, Attorney, U.S. Department of Justice, argued the cause for respondent. With him on the brief were Michael S. Raab, Attorney, David A. Trissell, General Counsel, Postal Regulatory Commission, Anne J. Siarnacki, Deputy General Counsel, and Reese T. Boone, Attorney.

Eric P. Koetting and Morgan E. Rehrig, Attorneys, U.S. Postal Service, Michael F. Scanlon, John Longstreth, and James Pierce Myers were on the brief for intervenors
Amazon.com Services, et al. in support of the Postal Regulatory Commission.

Before: HENDERSON and MILLET, Circuit Judges, and EDWARDS, Senior Circuit Judge.

Opinion for the Court filed by Senior Circuit Judge EDWARDS.

EDWARDS, Senior Circuit Judge: This case involves a petition for review filed by United Parcel Service, Inc. (“UPS”), challenging the Postal Regulatory Commission’s (“Commission”) Order Adopting Final Rules Relating to the Institutional Cost Contribution Requirement for Competitive Products, No. 4963, Dkt. No. RM2017-1 (P.R.C. Jan. 3, 2019) (“Order”), reprinted in Joint Appendix (“J.A.”) 515-712. The disputed Order modifies Commission regulations that are meant to “ensure that all [of the Postal Service’s] competitive products collectively cover what the Commission determines to be an appropriate share of the institutional costs of the Postal Service.” 39 U.S.C. § 3633(a)(3). In making this “appropriate share” determination under § 3633(a)(3), the Commission is obligated to “consider,” among other things, “the degree to which any costs are uniquely or disproportionately associated with any competitive products.” Id. § 3633(b). However, the Commission concluded that “there are no costs uniquely or disproportionately associated with competitive products that are not already attributed to those products under the Commission’s current cost attribution methodology” under § 3633(a)(2). Order at 28, J.A. 547.

The problem is that § 3633(a)(2) only requires the Commission to “ensure that each competitive product covers its costs attributable.” The term costs attributable is narrowly defined as “the direct and indirect postal costs attributable to [a
particular competitive] product through reliably identified causal relationships.” 39 U.S.C. § 3631(b). However, it is not at all clear that “uniquely or disproportionately associated” costs described under § 3633(b) include only those costs that are attributable “through reliably identified causal relationships.” And § 3633(b) makes it clear that “the Commission shall consider . . . the degree to which any costs are uniquely or disproportionately associated with any competitive products.” Id. § 3633(b) (emphasis added). The Commission’s Order fails to explain why these seemingly distinct statutory phrases cover the same costs, and further elides the requirements of § 3633(a)(3) and (b) by suggesting that, to the extent these statutory phrases overlap, the Commission need not consider costs under § 3633(b) if it already accounted for them under § 3633(a)(2).

UPS argues that the Commission’s position is contrary to law because “the Order fails to consider . . . costs ‘uniquely or disproportionately associated with any competitive products,’ as the Act requires in section 3633(b).” Br. for Petitioner at 3. UPS also contends that the Commission erred in simply assuming, without adequate explanation, that “there are no institutional costs uniquely or disproportionately associated with competitive products.” Id. We agree.

Two aspects of the Commission’s Order require a remand. First, the Commission has not adequately explained how the statutory phrases “direct and indirect postal costs attributable to [a particular competitive] product through reliably identified causal relationships” and “costs . . . uniquely or disproportionately associated with any competitive products” can coincide. It is far from clear that these phrases have the same meaning. And the Commission has not demonstrated that, although they have distinct meanings, the phrases nonetheless coincide in application. Second, in focusing on costs attributed
to competitive products under § 3633(a)(2), the Commission failed to discharge its responsibility under § 3633(b) to “consider . . . the degree to which any costs are uniquely or disproportionately associated with any competitive products.” 39 U.S.C. § 3633(b) (emphasis added). The Commission must consider any costs made relevant by § 3633(b). It does not matter whether the Commission has arguably considered such costs in implementing its responsibilities under § 3633(a)(2). These two points are amplified in the opinion below.

The bottom line is that the Commission’s Order is arbitrary and capricious because it is “largely incomprehensible” with respect to the matters in issue. U.S. Postal Serv. v. PRC, 785 F.3d 740, 753 (D.C. Cir. 2015). Therefore, we are constrained to remand the case for further consideration. On remand, the Commission must adhere to the commands of the statute and address the costs specified in § 3633(b) in determining the “appropriate share” under § 3633(a)(3). Following reconsideration of this case, any Commission Order must be coherent and transparent, and it must satisfy the requirements of reasoned and reasonable decision-making. Id. at 744, 753. The present Order fails to meet these standards “because it fails to articulate a comprehensible standard,” id. at 753, regarding the meaning and application of § 3633(a)(3) and (b).

I. BACKGROUND

A. Statutory Background

The Postal Service offers both “market dominant” and “competitive” products. Market-dominant products, like first-class mail, are “those over which the ‘Postal Service exercises sufficient market power that it can effectively’ raise prices or decrease quality ‘without risk of losing a significant level of business to other firms offering similar products.’” UPS v.
PRC, 890 F.3d 1053, 1055 (D.C. Cir. 2018) (quoting 39 U.S.C. § 3642(b)(1)); see also 39 U.S.C. § 3621 (listing market-dominant products). Competitive products, on the other hand, like priority mail or parcel post, are “products over which the Postal Service faces meaningful market competition” from companies like UPS. UPS v. PRC, 890 F.3d at 1056 (internal quotation marks and citation omitted); see also 39 U.S.C. § 3631 (listing competitive products).

In 2006, Congress enacted the Postal Accountability and Enhancement Act, Pub. L. No. 109-435, 120 Stat. 3198 (2006) (“Accountability Act”), to ensure (among other things) that the Postal Service offers its competitive products on fair terms. See S. REP. NO. 108-318, at 14-16 (2004). To that end, the Accountability Act requires the Commission to promulgate regulations that ensure that the Postal Service is not “using revenues from market-dominant products subject to its monopoly power to defray costs competitive products would otherwise have to be priced to cover.” UPS v. PRC, 890 F.3d at 1055.

Specifically, § 3633(a) requires the Commission to issue three sets of regulations:

(a) In general.—The Postal Regulatory Commission shall, within 18 months after the date of enactment of this section, promulgate (and may from time to time thereafter revise) regulations to—

(1) prohibit the subsidization of competitive products by market-dominant products;

(2) ensure that each competitive product covers its costs attributable; and
ensuring that all competitive products collectively cover what the Commission determines to be an appropriate share of the institutional costs of the Postal Service.

39 U.S.C. § 3633(a)(1)-(3). As may be seen, the foregoing provisions refer to “costs attributable” and “institutional costs.” These terms are important in our consideration of the issues presented in this case.

As explained in the introduction to this opinion, the Accountability Act defines the term “costs attributable” as “the direct and indirect postal costs attributable to [a particular competitive] product through reliably identified causal relationships.” Id. § 3631(b). The Commission, in turn, interprets the term “institutional costs” to mean “residual costs” – that is, the Postal Service’s total costs minus its costs attributable under § 3633(a)(2). See UPS v. PRC, 890 F.3d at 1055-56, 1061-63 (explaining the relationship between “institutional costs” and “costs attributable”).

The Accountability Act calls for the Commission to periodically review its “appropriate share” determination under § 3633(a)(3). The statute also specifies that the Commission “shall consider” the following matters when it conducts that review:

(b) Review of minimum contribution.—Five years after the date of enactment of this section, and every 5 years thereafter, the Postal Regulatory Commission shall conduct a review to determine whether the institutional costs contribution requirement under subsection (a)(3) should be retained in its current form, modified, or eliminated. In making its determination, the Commission shall consider all
relevant circumstances, including the prevailing competitive conditions in the market, and the degree to which any costs are uniquely or disproportionately associated with any competitive products.

39 U.S.C § 3633(b).

In effect, then, the Accountability Act requires the Commission to establish a multi-part “price floor” for its competitive products. See UPS v. PRC, 890 F.3d at 1055-56. First, the Commission must issue regulations to prevent market-dominant products from subsidizing competitive products. Second, the price of “each competitive product” must be set high enough to cover the “direct and indirect postal costs attributable to such product through reliably identified causal relationships.” Third, the Commission must also ensure that “all competitive products collectively” cover what the Commission determines to be an “appropriate share” of the Postal Service’s institutional (i.e., unattributed) costs. The Commission, in determining what share is appropriate, “shall consider,” among other things, “the degree to which any costs are uniquely or disproportionately associated with any competitive products.”

B. The Commission’s 2016 Order Addressing § 3633(a)(2)

Commission’s cost-attribution method as “reasonable and reasonably explained.” Id. at 1069. Because the court’s 2018 decision thoroughly explains the Commission’s cost-attribution method, the decision provides important context for the questions at issue in this case.

First, the court’s 2018 decision explains several concepts that the Commission uses to sort out the Postal Service’s costs. To start, the decision explains that “the Commission distinguishes (albeit necessarily imperfectly) between ‘fixed costs,’ . . . which remain constant regardless of overall product volume, and ‘variable costs,’ . . . which vary with the Service’s production levels.” Id. at 1056 (citing 2016 Order at 6). Examples of fixed costs include executive salaries and product-specific fixed costs like advertising. See id. In addition, the decision explains that the Commission distinguishes between variable costs that are “volume-variable” – i.e., which vary directly with the marginal cost of the cheapest relevant unit and the total number of units, id. at 1057 (citing 2016 Order at 36 n.56) – and variable costs that are not “volume-variable” in this sense, which the Commission calls “inframarginal costs,” id. at 1058 (citing 2016 Order at 35). The concept of inframarginal costs is not entirely intuitive. The basic idea is that, thanks to economies of scale, marginal costs tend to decrease with volume, and the sum of the differences between the marginal cost of earlier, more expensive units and the marginal cost of the last, cheapest unit is the inframarginal cost. See id. at 1057-58; 2016 Order at 35-36.

Second, the court’s 2018 decision holds that the Commission’s decision to define “institutional costs” as “residual costs” – that is, as any costs not attributed to competitive products through reliably identified causal relationships under § 3633(a)(2) – was based on a permissible reading of the Accountability Act. UPS v. PRC, 890 F.3d at
An important upshot of the Commission’s choice to treat institutional costs as “residual” is that the composition of the Postal Service’s institutional costs will (by definition) depend on how attributed costs are calculated. For example, if the Commission were to attribute to each competitive product its product-specific fixed costs and its volume-variable costs—which is what the Commission did until 2016—then the Postal Service’s institutional costs would include all its other fixed costs and all of its inframarginal costs. See id. at 1056-58.

Third, the court’s 2018 decision upholds the Commission’s revised method for attributing costs under § 3633(a)(2). See id. at 1066-69. In short, the Commission adopted a method that enables it to attribute product-specific fixed costs, volume-variable costs, and some (but not all) inframarginal costs to each competitive product. See id. at 1060. The Commission is able to tie a portion of the Postal Service’s inframarginal costs to specific competitive products through “reliably identified causal relationships” by calculating the “costs that would disappear were the Postal Service to stop offering those products for sale.” Id. at 1055. This “incremental cost” method accounts for not only a “product’s share of volume-variable costs, but also the inframarginal costs that would be removed if the product were not to be provided.” Id. at 1059 (internal quotation marks omitted) (quoting 2016 Order App’x A at 19).

In the Commission’s view, “because the portion of inframarginal costs included within a product’s incremental cost has a causal relationship with that product, the Accountability Act requires the Postal Service to attribute it.” Id. at 1059-60 (internal quotation marks omitted) (quoting 2016 Order at 55, 61). The court’s 2018 decision finds the Commission’s position reasonable and reasonably explained. Id. at 1069.
Fourth, the court’s 2018 decision notes that the Commission’s cautious cost-attribution method leaves some of the Postal Service’s inframarginal costs unattributed. See id. at 1060 (“All other costs, including all remaining inframarginal costs, remain classified as institutional.”). Indeed, the decision concludes that the Commission’s caution was reasonable, given the Accountability Act’s requirement that attributed costs have “reliably identified causal relationships” to competitive products. See id. at 1068. For example, the 2018 decision rejects the argument that the Commission’s approach was arbitrary and capricious for assuming that competitive products are responsible for only the lowest-cost units associated with a given activity. The decision reasons that “[a]ttributing more than this amount . . . necessitates guesswork, and the Commission sensibly concluded that such guesswork was inconsistent with its statutory obligation to base attribution on only ‘reliably identified causal relationships.’” Id. (quoting 39 U.S.C. § 3631(b)).

It is clear, then, that the court’s 2018 decision in UPS v. PRC upholding the Commission’s cost-attribution method under § 3633(a)(2) leaves open important questions that provide context for understanding and assessing the Commission’s § 3633(a)(3) determination in this case. These questions include: Are some of the Postal Service’s institutional costs – and especially its unattributed inframarginal costs – still related in some meaningful way to competitive products, even if those costs cannot be attributed under § 3633(a)(2)? And if so – if, for instance, some of those institutional costs are “uniquely or disproportionately associated with competitive products,” 39 U.S.C. § 3633(b) – might they need to be accounted for when the Commission issues regulations under another provision of the Accountability Act?
C. The Commission’s Disputed Order in this Case

On January 3, 2019, the Commission issued the Order modifying its “appropriate share” determination under § 3633(a)(3) that is the subject of the dispute in this case. In the past, the Commission had determined that “all competitive products collectively” must cover at least 5.5% of the Postal Service’s institutional costs. See Order at 4-5, J.A. 523-24 (summarizing the Commission’s 2007 and 2012 orders). In the 2019 Order, however, the Commission decided that the “appropriate share” of the Postal Service’s institutional costs to be covered by “all competitive products collectively” should be set using a dynamic formula. In short, the Commission’s formula relies on two primary variables: the “Competitive Contribution Margin” and the “Competitive Growth Differential.” These variables are meant to represent the Postal Service’s market power and market position. See id. at 19-28, J.A. 538-47. The Commission intends to use the formula “to annually update the appropriate share based on prevailing competitive conditions in the market and other relevant circumstances.” Id. at 19, J.A. 538.

For our purposes, however, the details of the Commission’s formula-based approach are not critical. Instead, our focus in this case is on whether the Commission, in making its determination, adequately discharged its obligation under § 3633(b) to “consider all relevant circumstances, including the prevailing competitive conditions in the market, and the degree to which any costs are uniquely or disproportionately associated with any competitive products.” Therefore, this background section is similarly focused on the Commission’s § 3633(b) analysis and in particular on the Commission’s “consider[ation of] . . . the degree to which any costs are uniquely or disproportionately associated with any competitive products.”
In a section of its Order titled “Connection to Section 3633(b) Criteria,” the Commission recited the factors that the Accountability Act says it “shall consider,” and then explained its position on costs “uniquely or disproportionately associated with” competitive products:

The Commission has repeatedly found that there are no costs uniquely or disproportionately associated with competitive products that are not already attributed to those products under the Commission’s current cost attribution methodology. As a result, the formula-based approach does not separately account for such costs.

Order at 28-29, J.A. 547-48 (citations omitted).

The Commission finds that there are no costs uniquely or disproportionately associated with competitive products that are not already attributed to competitive products. Under the Commission’s methodology, any cost that is uniquely or disproportionately associated with any competitive product is identified as an attributable cost because it exhibits a reliably identifiable causal relationship with
a specific competitive product. With regard to costs that are disproportionately associated with competitive products, the Commission’s cost attribution methodology identifies relationships between costs and cost drivers, which include mail characteristics such as weight and shape (e.g., letters or parcels). . . . In this way, the costs attributed to products reflect any disproportionate association of those costs with any specific products (including any competitive products).

Under the Commission’s methodology, the Commission also classifies any cost that is uniquely associated with any product (including any competitive product) as attributable to that product. These costs are often referred to as product-specific costs. For example, advertisements for a specific product and supplies for money orders are unique costs attributed to specific products under the Commission’s methodology.

. . . .

For the reasons discussed above, the Commission concludes that its costing methodology already accounts for the “the degree to which any costs are uniquely or disproportionately associated with any competitive products.” To the extent that any costs can be attributed to specific competitive products, they are already distributed under the Commission’s current costing methodology and are not included in the institutional costs of the Postal Service.

Initial Notice at 43-45, J.A. 147-49; see also Revised Notice at 52-53, J.A. 304-05 (summarizing this same point).
Later, in response to comments from UPS and others, the Commission provided a succinct summary of the position it took in its Initial Notice. See Order at 138-162, J.A. 657-81.

In [the Initial Notice], the Commission found that there are no costs uniquely or disproportionately associated with competitive products that are not already attributed to those products. This is because all costs that are uniquely or disproportionately associated with competitive products exhibit a reliably identified causal relationship with a specific competitive product or group of products and are therefore attributed. The Commission described “unique” costs as product-specific costs and determined that any cost that is uniquely associated with a competitive product is attributed to that product through a reliably identified causal relationship. . . . In addition, the Commission found that any cost disproportionately associated with a competitive product is attributed to that product through the cost methodology’s use of cost drivers. . . . In this way, the costs attributed products reflect any disproportionate association of those costs with specific products. As a result, the Commission determined that both types of costs are attributed to the competitive products that cause them.

Order at 138-39, J.A. 657-58 (citing Initial Notice at 43-44).

Finally, in response to UPS’s comment suggesting that the Commission’s analysis mistakenly conflates the “associated with” standard and the “reliably identified causal relationships” standard, the Commission concluded that “UPS overlooks key terms in section 3633(b), as well as the context of the statutory
scheme as a whole.” Order at 143, J.A. 662. The Commission emphasized the “degree of flexibility ... inherent in the appropriate share provisions of section 3633” and the lack of any mechanical relationship between the Commission’s consideration of the statutory factors and the Commission’s ultimate determination. Id. at 144, J.A. 663. The Commission continued:

For the relevant factor at issue, “the degree to which any costs are uniquely or disproportionately associated with any competitive products,” UPS focuses on only a portion of the statutory language—“disproportionately associated.” However, in reading the relevant factor in its entirety, the use of the words “degree” and “any” plainly contemplate that there may be no uniquely or disproportionately associated competitive product costs. Congress does not require costs to be found; only for the Commission to “consider” whether “any” exist. Nothing in section 3633(b) prevents the Commission from concluding as it has—that all costs uniquely or disproportionately associated with competitive products are, in fact, captured by the costing methodology it currently employs pursuant to section 3633(a)(2).

Order at 144, J.A. 663.

In short, the Commission’s position appears to be that the statutory phrase “costs . . . uniquely or disproportionately associated with any competitive products” is no broader than the phrase “direct and indirect postal costs attributable to [a particular competitive] product through reliably identified causal relationships.” And the Commission appears to base that conclusion on the assumption that costs are uniquely or
disproportionately associated with competitive products only if competitive products can be reliably said to cause such costs.

II. ANALYSIS

A. Standard of Review

“Because the Congress expressly delegated to the Commission responsibility to implement [the Accountability Act], we review its interpretation’ of that statute under the standards enunciated in *Chevron* and its progeny.” *U.S. Postal Serv. v. PRC*, 785 F.3d 740, 750 (D.C. Cir. 2015) (quoting *U.S. Postal Serv. v. PRC*, 640 F.3d 1263, 1266 (D.C. Cir. 2011)).

Under *Chevron*’s First Step, if “Congress has directly spoken to the precise question at issue . . ., that is the end of the matter; for the court, as well as the agency, must give effect to the unambiguously expressed intent of Congress.” If the statute is ambiguous, *Chevron*’s Second Step then requires us to consider whether the Commission has acted pursuant to delegated authority and, if so, whether its interpretation of the statute is “permissible.”

In deciding whether the Commission’s Order is arbitrary and capricious, we are “reluctan[t] to interfere with [the Commission’s] reasoned judgments about technical questions within its area of expertise.” *UPS v. PRC*, 890 F.3d 1053, 1066 (D.C. Cir. 2018) (internal quotation marks omitted) (quoting *All. of Nonprofit Mailers v. PRC*, 790 F.3d 186, 197 (D.C. Cir. 2015)). At the same time, the Commission must adequately “consider” all the factors that the Accountability Act makes relevant, see *Lindeen v. SEC*, 825 F.3d 646, 657 (D.C. Cir. 2016), and the Commission’s decision-making must be comprehensible, see *U.S. Postal Serv. v. PRC*, 785 F.3d 740, 753 (D.C. Cir. 2015); *Glob. Tel*Link v. *FCC*, 866 F.3d 397, 413 (D.C. Cir. 2017).

**B. The Commission’s Disputed Interpretation and Application of § 3633(a)(3)**

The dispositive question before the court in this case is whether the Commission, in reviewing its appropriate share determination, adequately discharged its statutory obligation to “consider” the “degree to which any costs are uniquely or disproportionately associated with any competitive products.” We hold that the Commission failed to do this and, therefore, we are constrained to remand the case.

We do not mean to render any decision on what the appropriate share determination under § 3633(a)(3) should be. That is for the Commission to determine in the first instance. At this point, however, the Commission’s interpretation and application of § 3633(a)(3) and (b) are incomprehensible and, thus, unreasonable. No deference is due to the Commission’s current position because the disputed Order fails to apply the relevant terms of the statute, and it offers no reasoned basis for this failure.
As detailed above, the Commission’s position appears to be that the term “costs . . . uniquely or disproportionately associated with any competitive products” in § 3633(b) is no broader than – and indeed may coincide with – the term “direct and indirect postal costs attributable to [a particular competitive] product through reliably identified causal relationships,” which defines “costs attributable” in § 3633(a)(2). To reach that conclusion, the Commission assumed that “all costs that are uniquely or disproportionately associated with competitive products exhibit a reliably identified causal relationship with a specific competitive product or group of products and are therefore attributed.” Order at 138, J.A. 657. The Commission thus reasons that none of the Postal Service’s institutional costs – including, apparently, its “remaining inframarginal costs,” UPS v. PRC, 890 F.3d at 1060 – are uniquely or disproportionately associated with its competitive products in the sense intended in § 3633(b). This leads the Commission to conclude that there are no costs for it to “consider” under § 3633(b). See, e.g., Order at 28-29, J.A. 547-48. The Commission’s analysis defies reasoned decision-making.

As noted at the outset of this opinion, there are two significant problems with the Commission’s position. First, the Commission has not adequately explained how the statutory phrases “direct and indirect postal costs attributable to [a particular competitive] product through reliably identified causal relationships,” 39 U.S.C. § 3631(b), and “costs . . . uniquely or disproportionately associated with any competitive products,” id. § 3633(b), can effectively coincide. Second, in focusing narrowly on costs attributed to competitive products under § 3633(a)(2), the Commission failed to discharge its responsibility under § 3633(b) to “consider . . . the degree to which any costs are uniquely or disproportionately associated
with any competitive products.” *Id.* § 3633(b) (emphasis added). We elaborate on these points in turn.

1. The Commission’s Interpretation of Costs “Uniquely or Disproportionately Associated with Competitive Products” Under § 3633(b)

The Commission’s current analysis of the relationship between costs “attributed through reliably identified causal relationships” and costs “uniquely or disproportionately associated with” is incomprehensible. In the passages from the Commission’s Order reprinted above, the Commission assumes that the Postal Service’s costs can be “uniquely or disproportionately associated with” competitive products only if there is a reliably identified causal relationship between those costs and competitive products. *See* Initial Notice at 43-44, J.A. 147-48; Order at 138-39, 657-58. In its brief to this court and at oral argument, however, the Commission’s counsel suggests that the Commission gave the phrase “uniquely or disproportionately associated with” a distinct interpretation, and only then proceeded to conclude that there are no costs in that independent category that are not already attributed to competitive products under § 3633(a)(2). *See* Br. for Respondent at 29-32; Tr. of Oral Argument at 54-55. It is an understatement to say that one is hard-pressed to understand what the Commission means to say regarding the meaning of § 3633(b).

At this point, we cannot credit either one of the foregoing interpretations of the Accountability Act. To start, the Commission cannot simply *assume* that the “uniquely or disproportionately associated with” standard is subsumed by the “reliably identified causal relationships” standard. That would impermissibly conflate the language of § 3633(a)(2) – which incorporates the definition of “costs attributed” from
§ 3631(b) – with the evidently distinct language of § 3633(b). See BP Energy Co. v. FERC, 828 F.3d 959, 968 (D.C. Cir. 2016) (“Even under the most deferential standard, an agency cannot read statutory provisions out of existence but must interpret statutes so that effect is given to all its provisions . . . [and] no part will be inoperative or superfluous, void or insignificant.”) (alteration in original) (quoting Corley v. United States, 556 U.S. 303, 314 (2009))). Instead, the Commission must explain why these two statutory phrases have the same practical reach despite the use of different language.

As noted above, the Commission attempted to offer such an explanation in its brief to this court. The Commission belatedly argues that it did not “equate[]” the two statutory phrases “as an interpretative matter.” Br. for Respondent at 34. Rather, the Commission now contends that it gave independent meaning to the statutory terms “uniquely . . . associated with” and “disproportionately associated with,” using the ordinary tools of statutory interpretation. See id. at 29-34; Tr. of Oral Argument at 54-55. Then, according to counsel, the Commission concluded that “all ‘uniquely associated’ costs and all ‘disproportionately associated’ costs satisfy the Commission’s independent definition of the ‘costs attributable’ to a competitive product.” Br. for Respondent at 31. This line of argument is hard to discern in what the Commission actually said, and it is somewhat hard to fathom on its own terms. But if that is the Commission's view, it must spell it out.

In any event, as things stand now, “we simply cannot comprehend the [Commission’s] reasoning” about the meaning and application of § 3633(b). Glob. Tel*Link v. FCC, 866 F.3d 397, 413 (D.C. Cir. 2017). Therefore, the Commission’s Order is neither reasoned nor reasonable. “At its core, the Commission’s Order is arbitrary and capricious because it fails
to articulate a comprehensible standard . . . .” *U.S. Postal Serv. v. PRC*, 785 F.3d 740, 753 (D.C. Cir. 2015). “[W]e owe no deference to an agency determination that is ‘largely incomprehensible.’” *Id.* (quoting *Coburn v. McHugh*, 679 F.3d 924, 926 (D.C. Cir. 2012)). The bottom line is that the Commission has not adequately explained why the statutory phrases at issue here have similar meanings, nor has it demonstrated that these statutory categories, even if distinct in meaning, nevertheless coincide in application. Therefore, the Commission’s application of § 3633(a)(3) and (b) was arbitrary and capricious and must be remanded.

2. **The Commission’s Consideration of “Any” Such Costs Under § 3633(b)**

A second problem with the disputed Order is that, in focusing its analysis on costs attributed to competitive products under 39 U.S.C. § 3633(a)(2), the Commission failed to “consider . . . the degree to which any costs are uniquely or disproportionately associated with any competitive products” as required by 39 U.S.C. § 3633(b). As the plain meaning of that provision suggests, the Accountability Act clearly requires the Commission to consider *any* costs uniquely or disproportionately associated with competitive products at the time it reviews its appropriate share determination under § 3633(a)(3). This includes, but is not limited to, any costs fitting that description that the Commission may have already considered when it promulgated regulations under § 3633(a)(1) or § 3633(a)(2).

The record in this case indicates that the Commission did not follow this statutory mandate. Instead, the Commission, relying on its inadequately explained interpretation of the Accountability Act, focused narrowly on the costs it had considered – and attributed – in promulgating regulations under
§ 3633(a)(2). At oral argument, counsel for the Commission suggested that by piecing together the Commission’s responses to various comments, we could find that the Commission did indeed consider a broader class of costs. Tr. of Oral Argument at 75; see also Br. for Respondent at 35-38. Even assuming that is right, however, the Commission’s Order does not make it clear or comprehensible, and we cannot fill in the blanks in the Commission’s reasoning. The simple point here is that the Commission erred in concluding that it had discharged its responsibility to consider any costs uniquely or disproportionately associated with competitive products by virtue of the fact that it had already considered these costs when setting the price floor under § 3633(a)(2).

An agency Order that is at odds with the requirements of the applicable statute cannot survive judicial review. See, e.g., Michigan v. EPA, 135 S. Ct. 2699, 2706 (2015). “An agency’s failure to consider and address during rulemaking ‘an important aspect of the problem’ renders its decision arbitrary and capricious. A ‘statutorily mandated factor, by definition, is an important aspect of any issue before an administrative agency . . . .’” Mozilla Corp. v. FCC, 940 F.3d 1, 60 (D.C. Cir. 2019) (per curiam) (first quoting Motor Vehicle Mfrs. Ass’n v. State Farm Mut. Auto. Ins. Co., 463 U.S. 29, 43 (1983); then quoting Pub. Citizen v. Fed. Motor Carrier Safety Admin., 374 F.3d 1209, 1216 (D.C. Cir. 2004)). On the record before us, the Commission’s treatment of § 3633(b) cannot survive judicial review. Therefore, we are constrained to remand the Order to the Commission for further consideration.

On remand, the Commission must consider all costs uniquely or disproportionately associated with competitive products in setting the appropriate share, even if it has already accounted for those costs under § 3633(a)(1) and (a)(2).
Furthermore, the Commission should fully address the issue left open in the court’s 2018 decision in *UPS v. PRC*. The court in that decision recognized that, because the costs attributed test under § 3633(a)(2) is conservative, there may be institutional costs that are “uniquely or disproportionately associated with competitive products,” even though they cannot be said to stand in “reliably identified causal relationships” with them. The Commission’s Order in this case does not address this.

In addition, the Commission must explain the relevance (if any) of costs it may have considered in implementing § 3633(a)(1). At oral argument, counsel for the Commission suggested that the Commission might not have to further consider costs uniquely or disproportionately associated with competitive products under § 3633(b) because it had already considered them pursuant to § 3633(a)(1). Tr. of Oral Argument at 43-44, 48, 54-55. However, this possibility is offered as nothing more than a fleeting suggestion in the Commission’s Order and its brief to the court. Compare Order at 144, J.A. 663, and Br. for Respondent at 19 (focusing only on § 3633(a)(2)), with Order at 160 n.294, J.A. 679 n.294, and Br. for Respondent at 36 (mentioning the Commission’s test under § 3633(a)(1)). If this point is somehow critical to the Commission’s analysis, the Commission must make that clear in the first instance. See *SEC v. Chenery Corp.*, 318 U.S. 80, 94-95 (1943).

We do not mean for these examples to exhaust the issues that the Commission must address on remand, only to illustrate some of what a fuller “consider[ation]” of the relevant costs will involve.

***
In sum, the Commission must address the issues highlighted above before we can say whether its formula-based approach to determining the appropriate share under § 3633(a)(3) is permissible and reasonable. On remand, the Commission might decide to revise its judgment regarding the “appropriate share” under § 3633(a)(3). Indeed, at oral argument, counsel for the Commission conceded that the “floor” established under § 3633(a)(3) might need to be adjusted if the Commission found any costs uniquely or disproportionately associated with competitive products. Tr. of Oral Argument at 49-50. It is also possible, however, that the Commission might decide against revising its bottom-line judgment, given the other factors the Commission must consider under § 3633(b) and the latitude that the text affords the Commission in making a final determination.

We take no position on this matter. It is not for this court to say that the Commission must account for costs in any specific way under § 3633(b) or that the Commission must make any particular “appropriate share” determination under § 3633(a)(3). Rather, the judgment of the court is that, on remand, the Commission must consider all the costs referenced under § 3633(b), as the Accountability Act clearly commands. And any decision that the Commission reaches regarding the meaning and application of § 3633(b) in connection with the “appropriate share” determination under § 3633(a)(3) must be consistent with the terms of the statute, must be comprehensible, and must otherwise satisfy the requirements of reasoned decision-making.

III. CONCLUSION

For the reasons set forth above, we grant UPS’s petition for review and remand the case to the Commission for further consideration consistent with this opinion.
Significant outstanding items as of the date of this draft:

UNITED STATES POSTAL REGULATORY COMMISSION
Washington, D.C. 20268-0001

FORM 10-Q

QUARTERLY REPORT PURSUANT TO 39 U.S.C. § 3654 AND SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the Quarterly Period Ended March 31, 2020

UNITED STATES POSTAL SERVICE
(Exact name of registrant as specified in its charter)

Washington, D.C. 41-0760000
(State or other jurisdiction of incorporation or organization) (I.R.S. Employer Identification No.)

475 L’Enfant Plaza, S.W.
Washington, D.C. 20260
(Address of principal executive offices) (ZIP Code)

(202) 268-2000
(Registrant’s telephone number, including area code)

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes ☐ No ☐ Not Applicable ☑

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to rule 405 of Regulation S-T ($232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files). Yes ☐ No ☐ Not Applicable ☑

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, a smaller reporting company or an emerging growth company. See the definitions of "large accelerated filer," "accelerated filer," "smaller reporting company" and "emerging growth company" in Rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer ☐ Accelerated filer ☐ Non-accelerated filer ☐
Smaller reporting company ☐ Emerging growth company ☐ Not applicable ☑

If an emerging growth company, indicate by check mark if the registrant has elected not to use the extended transition period for complying with any new or revised financial accounting standards provided pursuant to Section 13(a) of the Exchange Act. ☐

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). Yes ☐ No ☑

Securities registered pursuant to Section 12(b) of the Act:

NOTES TO UNAUDITED FINANCIAL STATEMENTS

NOTE 1 - BASIS OF PRESENTATION

Interim Financial Statements
The accompanying unaudited interim financial statements of the United States Postal Service (the “Postal Service”) have been prepared in accordance with accounting principles generally accepted in the United States (“GAAP”) for interim financial information and with the instructions to Form 10-Q and Rule 10-01 of the U.S. Securities and Exchange Commission Regulation S-X. These financial statements should be read in conjunction with the Postal Service’s financial statements for the year ended September 30, 2019, included in its Annual Report on Form 10-K (“Annual Report”) filed with the Postal Regulatory Commission (“PRC”) on November 14, 2019, and do not include all information and footnotes which are normally included in the Annual Report. Except as otherwise specified, all references to years are to fiscal years beginning October 1 and ending September 30, and quarters are quarters within fiscal years 2020 and 2019.

In the opinion of management, the accompanying unaudited interim financial statements reflect all material adjustments, including recurring adjustments, necessary to fairly present the financial position as of March 31, 2020, the results of operations for the three and six months ended March 31, 2020, and 2019, the changes in net deficiency for the six months ended March 31, 2020, and 2019, and cash flows for the six months ended March 31, 2020, and 2019. Operating results for the three and six months ended March 31, 2020, are not necessarily indicative of the results that may be expected for all of 2020. Mail volume and revenue are historically greatest in the first quarter of the year, which includes the holiday mailing season.

Reclassifications
Certain reclassifications have been made to the financial statements for the three and six months ended March 31, 2019, as well as subsequent footnotes, to conform to the current period presentation. Specifically, certain retirement benefit expenses have been reclassified from Compensation and benefits and separately identified as Retirement benefits within Operating expenses in the accompanying unaudited Statements of Operations. In addition, unfunded retirement benefits amortization expenses associated with the Civil Service Retirement System (“CSRS”) and the Federal Employee Retirement System (“FERS”) have been reclassified from Unfunded retirement benefits amortization to Retirement benefits within Operating expenses in the accompanying unaudited Statements of Operations.

The liabilities associated with these retirement benefits have also been reclassified from Compensation and benefits and separately identified as Retirement benefits within Current liabilities in the balance sheets. In addition, the unfunded retirement benefits liabilities associated with CSRS and FERS have been reclassified from Unfunded retirement benefits to Retirement benefits within Current liabilities in the balance sheets. Corresponding reclassifications have been made within Changes in current assets and liabilities in the accompanying unaudited Statements of Cash Flows.

These reclassifications had no effect on previously reported total operating expenses, loss from operations or net loss. See Note 9 - Retirement Plans for further disclosure pertaining to retirement benefits.

NOTE 2 - RECENT ACCOUNTING PRONOUNCEMENTS

Recently Adopted Accounting Pronouncement
In February 2016, the Financial Accounting Standards Board (“FASB”) issued Accounting Standards Update 2016-02 Leases, which has since been codified in Accounting Standards Codification (“ASC”) 842, Leases (“ASC 842”). The new standard requires an entity to record most leases in its balance sheets but continue to recognize expenses in its statements of operations in a manner similar to current accounting practices. The new standard requires a lessee to recognize a lease liability for the obligation to make lease payments and a right-of-use (“ROU”) asset for the right to use the underlying asset for the lease term. Expenses associated with operating leases are recognized on a straight-line basis and include embedded interest and amortization components. The Postal Service recognizes expenses associated with operating leases as rent expense or transportation expense within Other operating expenses or Transportation, respectively, in the statements of operations. The Postal Service recognizes expenses associated with finance leases (formerly capital leases under previous guidance) with both
interest and amortization expenses and presents these separately in the statements of operations. As such, finance leases generally have higher expenses in the earlier periods of the lease term.

The Postal Service adopted ASC 842 for its 2020 fiscal year (beginning October 1, 2019). In connection with the adoption of ASC 842, the Postal Service has made necessary changes to relevant policies, processes, information systems and internal controls. For transition purposes, the Postal Service has elected the option not to restate comparative financial statements under the modified retrospective transition model. This option allows the application of the standard to all leases in effect as of the effective date (October 1, 2019) or commencing thereafter, without any restatement impact on the comparative financial statement balances. Accordingly, all comparative financial statements enclosed herein are presented in accordance with the previous ASC 840, Leases (“ASC 840”), with related ASC 840 disclosures provided in Note 12 - Leases.

In implementing ASC 842, the Postal Service has elected the package of practical expedients which permits carrying forward historical accounting positions around lease identification, lease classification and initial direct costs for all leases commencing prior to October 1, 2019. The Postal Service has also made a policy election to not separate the lease and non-lease components for all types of underlying assets and to exclude its short-term leases from the ROU asset and lease liability balances.

The Postal Service adopted ASC 842 on October 1, 2019. The implementation of ASC 842 resulted in an opening balance sheet adjustment, as of October 1, 2019, to recognize $4.4 billion in right-of-use assets and lease liabilities relating to operating leases as follows:

<table>
<thead>
<tr>
<th>CONDENSED BALANCE SHEETS:</th>
<th>As reported on September 30, 2019</th>
<th>Adjustments</th>
<th>Balance on October 1, 2019</th>
</tr>
</thead>
<tbody>
<tr>
<td>Operating lease right-of-use assets</td>
<td>$</td>
<td>—</td>
<td>$4,364</td>
</tr>
<tr>
<td>Total assets</td>
<td>$25,633</td>
<td>$</td>
<td>$29,997</td>
</tr>
<tr>
<td>Operating lease liabilities</td>
<td>$</td>
<td>—</td>
<td>$1,129</td>
</tr>
<tr>
<td>Other current liabilities</td>
<td>1,190</td>
<td>(20)</td>
<td>1,170</td>
</tr>
<tr>
<td>Operating lease liabilities, noncurrent</td>

</tr>
<tr>
<td>Total liabilities and net deficiency</td>
<td>$25,633</td>
<td>$4,364</td>
<td>$29,997</td>
</tr>
</tbody>
</table>

The implementation of ASC 842 did not have a material impact on the Postal Service’s Statement of Operations or Statement of Cash Flows and did not have any impact on the Postal Service’s Statement of Changes in Net Deficiency. See Note 12 - Leases and Item 4. Controls and Procedures for additional disclosures pertaining to ASC 842.

**Accounting Pronouncements Issued but not Adopted**

**Accounting Standards Update 2016-13 Financial Instruments - Credit Losses**

In June 2016, the FASB issued Accounting Standards Update 2016-13 Financial Instruments - Credit Losses, which has since been codified in ASC 326, Financial Instruments - Credit Losses (“ASC 326”). The new standard requires entities to measure expected credit losses on financial instruments and other commitments by replacing the incurred loss impairment methodology in current GAAP with a methodology that reflects expected credit losses and requires consideration of a broader range of reasonable and supportable information to inform credit loss estimates.

The Postal Service intends to adopt ASC 326 for its 2021 fiscal year (beginning October 1, 2020) and the quarters therein. The standard is applicable to the Postal Service’s valuation of its receivables. The Postal Service is currently evaluating the impact of adopting this standard on its financial statements and related disclosures.
**Accounting Standards Update 2018-13 Fair Value Measurement**

In August 2018, the FASB issued Accounting Standards Update 2018-13 *Fair Value Measurement: Disclosure Framework - Changes to the Disclosure Requirements for Fair Value Measurement*, which has since been codified in ASC 820, *Fair Value Measurement* (“ASC 820”). The new standard modifies the disclosure requirements for fair value measurements by adding, modifying or removing certain disclosures.

The Postal Service intends to adopt ASC 820 for its 2021 fiscal year (beginning October 1, 2020) and the quarters therein. The standard is applicable to the Postal Service’s fair value measurements of its revenue forgone installment receivable and its long-term debt, as described further in *Note 13 - Fair Value Measurement*. Under ASC 820, certain disclosures are required to be applied on a retrospective basis and others on a prospective basis. The Postal Service is currently evaluating the impact of adopting this standard on its financial statements and related disclosures.

**Accounting Standards Update 2018-15 Intangibles - Goodwill and Other - Internal-Use Software**

In August 2018, the FASB issued Accounting Standards Update 2018-15 *Intangibles - Goodwill and Other - Internal-Use Software (Subtopic 350-40) - Customer’s Accounting for Implementation Costs Incurred in a Cloud Computing Arrangement*, which has since been codified in ASC Subtopic 350-40, *Intangibles - Goodwill and Other - Internal-Use Software* (“ASC 350-40”). This is an update to a standard the FASB issued in April 2015 for entities evaluating the accounting for fees paid by a customer in a cloud computing (hosting) arrangement by providing guidance for determining when such arrangement includes a software license.

If a cloud computing arrangement includes a license for internal-use software, then the software license is accounted for by the customer in accordance with ASC 350-40. This generally means that an intangible asset is recognized for the software license and, to the extent that the payments attributable to the software license are made over time, a liability also is recognized. If a cloud computing arrangement does not include a software license, the entity should account for the arrangement as a service contract. This generally means that the fees associated with the hosting element (service) of the arrangement are expensed as incurred.

The Postal Service intends to adopt ASC 350-40 for its 2021 fiscal year (beginning October 1, 2020) and the quarters therein. The Postal Service is currently evaluating the impact of adopting this standard on its financial statements and related disclosures.

**NOTE 3 - LIQUIDITY**

The Postal Service’s liquidity consists of unrestricted cash and cash equivalents plus available borrowing capacity.

**Cash**

The Postal Service generates its cash almost entirely through the sale of postal products and services. As of March 31, 2020, and September 30, 2019, the Postal Service held unrestricted cash and cash equivalents of $9.0 billion and $8.8 billion, respectively. See *Note 6 - Cash, Cash Equivalents and Restricted Cash* for further disclosures pertaining to cash.

The *Postal Reorganization Act*, as amended by Public Laws 101-227 and 109-435 (the "PRA"), authorizes the Postal Service to raise cash through the issuance of debt obligations. The Postal Service is limited by statute to annual net increases in debt of $3.0 billion calculated as of the end of each fiscal year, and total debt of $15.0 billion. In 1974, the Postal Service began issuing debt through individual debt agreements to the Federal Financing Bank ("FFB"), a government-owned corporation under the general supervision of the Secretary of the Treasury.

**COVID-19 Considerations**

In March 2020, the World Health Organization declared a novel strain of coronavirus (“COVID-19”) a global pandemic, which has since spread throughout the U.S. Given its mandate to provide universal postal services to the nation, the Postal Service provides an essential service as part of the nation’s critical infrastructure and has continued to process and deliver mail and packages during the pandemic.

The Postal Service expects the COVID-19 pandemic to have a material effect on its financial condition, results of operations and liquidity. Quarantines, shelter-in-place orders and travel and logistics restrictions in connection with the outbreak have affected retail and commercial customers, as well as suppliers and mail service providers. The
Postal Service relies on the sale of postal products and services to fund its operations, and these sales declined significantly in late March 2020 as a result of the pandemic, and the impact has continued to worsen since then. The sudden drop in mail volumes, the Postal Service’s most profitable revenue stream, has been steep and may never fully recover to levels prior to the pandemic.

On March 27, 2020, the President signed the Coronavirus Aid, Relief, and Economic Security Act, enacted as Public Law 116-136 (the “CARES Act”). Notwithstanding the $15.0 billion statutory debt limit and the $3.0 billion limit on annual borrowing, the CARES Act allows the Postal Service to borrow up to an additional $10.0 billion in financing from the U.S. Treasury to fund operating expenses. The U.S. Treasury may lend up to this amount at the request of the Postal Service, upon terms and conditions mutually agreed upon. However, the Postal Service has no assurance that the U.S. Treasury will agree to provide such financing or if it will be provided upon favorable terms.

The Postal Service estimates that the COVID-19 pandemic may increase its net operating loss by more than $22.0 billion over the next eighteen months, threatening its ability to operate. If the Postal Service is able to borrow the $10.0 billion from the U.S. Treasury as provided by the CARES Act, it expects that it will have sufficient liquidity to continue operations through April 2021. However, if the Postal Service is unable to secure this $10.0 billion in financing, it expects to be able to continue to operate only through September 2020.

Given these COVID-19 considerations, the Postal Service may require an additional injection of liquidity, provided by either the U.S. government or other sources, or through additional defaults, to remain a going concern. While the COVID-19 disruption is expected to be temporary, its duration remains uncertain, and the Postal Service expects that its liquidity may continue to worsen if the nation experiences a prolonged period of disruption.

**Subsequent Events**

The CARES Act offers certain employers the ability to defer payment of the employer’s share of the Social Security payroll tax on wages incurred from March 27, 2020, through December 31, 2020. In accordance with this provision, the Postal Service began deferring these payments in April 2020, and intends to continue the deferral for the remainder of calendar year 2020 for an estimated total deferral amount of approximately $1.6 billion. One half of these deferred payments would be due by December 31, 2021, and the other half by December 31, 2022.

On April 1, 2020, the Postal Service drew $3.4 billion on a revolving credit facility with the FFB that survived the expiration of the Note Purchase Agreement (“NPA”). In order to comply with the annual net increase limit, the Postal Service must repay $400 million from this credit facility by September 30, 2020. Given that the credit facility has a maximum term of up to one year, the Postal Service must repay any outstanding balance of the credit facility by April 1, 2021. The credit facility’s interest rate was determined by the U.S. Treasury based on the market rates of similar instruments as of the day of the funding request.

**Debt**

As of both March 31, 2020, and September 30, 2019, the Postal Service had a combination of fixed-rate and floating-rate notes outstanding with various maturities totaling $11.0 billion. As of March 31, 2020, the Postal Service’s statutory borrowing capacity was $4.0 billion, of which $1.0 billion would require repayment by September 30, 2020, to comply with the annual debt net increase limit.

In 1999, the Postal Service entered into the NPA with the FFB to establish standardized procedures for issuing debt. Under the NPA, the Postal Service was able to issue a series of notes and revolving credit line facilities with established terms and conditions by providing two days prior notice. These note arrangements and credit line facilities provided the flexibility to borrow short or long-term, using floating or fixed-rate instruments.

The NPA was extended each year through September 30, 2018, and in shorter increments between that date and August 31, 2019, at which time the NPA expired. This expiration did not affect the terms of any of the Postal Service's outstanding debt as of March 31, 2020, all of which was issued under the NPA. As a contractual matter, the FFB continued to lend to the Postal Service under each commitment and line of credit until it expired. If the Postal Service is unable to renew or replace the NPA with the FFB, it has no assurance that it could obtain alternative debt financing on comparable terms.
Liquidity Concerns
The Postal Service is constrained by laws and regulations, including the Postal Accountability and Enhancement Act ("PAEA"), which restrict revenue sources and mandate certain expenses.

The Postal Service is required, either by law or by union contract, to participate in U.S. government pension and health and benefits programs for employees and retirees, including the Federal Employees Health Benefit ("FEHB") program, CSRS and FERS, which the Office of Personnel Management ("OPM") administers. Statutorily mandated expenses include amortization payments to provide full funding of retirement benefits under CSRS and FERS, as well as FERS normal costs, described in greater detail below and in Note 9 - Retirement Plans. Additionally, the PAEA established the Postal Service Retiree Health Benefits Fund ("PSRHBF") and mandated certain obligations for paying normal costs, the present value of the estimated retiree health benefits attributable to active employees' current year of service, and amortization payments for full prefunding of retiree health benefits. These prefunding obligations, described in greater detail below and in Note 10 - Health Benefits Plans, are unlike expenses imposed on most other federal entities or private-sector businesses that offer such benefits.

The Postal Service reported operating expenses of approximately $80 billion in 2019 and has incurred cumulative net losses of $83.1 billion from 2007 through March 31, 2020.

Notwithstanding the challenges resulting from the COVID-19 pandemic, absent legislative and regulatory change, the Postal Service projects continuing annual net losses in the future. As a result of these losses and its liquidity concerns, the Postal Service will unlikely have sufficient liquidity to meet all of its existing legal obligations when due while also reducing its debt and making the critical infrastructure investments that have been deferred in recent years.

In the event that circumstances leave the Postal Service with insufficient liquidity, it would likely be required to implement additional contingency plans to ensure that its primary mission is fulfilled and that mail deliveries continue. These measures may require the Postal Service to prioritize payments to the FFB, employees and suppliers ahead of some payments to fund retirement and retiree health benefits, as has been done in the past.

Business Model Challenges and Constraints
Market-Dominant services, which accounted for approximately 66% of the Postal Service’s annual operating revenues in 2019, are currently subject to a price cap as measured by the Consumer Price Index for All Urban Consumers ("CPI-U"). However, the Postal Service’s costs are not similarly constrained. A large portion of its cost structure cannot be altered expeditiously due to the Postal Service’s universal service obligation. Further, the number of delivery points continues to grow by approximately one million per year, which drives up delivery costs. When combined with the impact of lower mail volume, the average number of pieces delivered per delivery point per day has decreased from approximately 5.5 pieces in 2007 to 3.4 pieces in 2019, a decline of approximately 39%, and a further significant decline is expected in 2020.

Many employee and retiree benefit costs are mandated by law and cannot be altered without legislative change. Under current law, the Postal Service is generally unable to increase prices sufficiently to offset increased costs, and is likewise constrained by law from reducing many of its costs or from pursuing many alternate sources of revenue.

Aside from its universal service obligation, a significant factor contributing to Postal Service losses is the ongoing decline in the volume of Market-Dominant products and services, and those declines are being exacerbated by the COVID-19 pandemic. Specifically, declines in First-Class Mail are largely the result of changes in consumers' and businesses' use of mail resulting from the continuing migration to electronic communication and transactional alternatives, which have taken place over the last decade and are expected to continue. After experiencing relatively flat volume between 2009 and 2016, beginning in 2017, Marketing Mail volume has generally been challenged by commercial mailers' increasing use of digital and mobile advertising, and more recently by the COVID-19 pandemic, although this class has benefited from strong political and election mail volumes, particularly in the second half of 2018 and the first quarter of 2019.

The Postal Service’s Shipping and Packages category has historically provided revenue and volume growth as a result of its successful efforts to compete in shipping services, including last-mile e-commerce fulfillment markets.
and Sunday delivery as well as end-to-end markets. However, this service category is subject to intense competition which significantly impacts both revenue and volume. Certain major customers of the Postal Service had begun diverting volume from the Postal Service’s network by in-sourcing last-mile delivery. Competitors in the package delivery market are aggressively pricing their products and services in order to fill their networks and grow package density. However, as a result of the temporary surge in e-commerce growth driven by the COVID-19 pandemic, some of these customers increased their volume to the Postal Service’s network during March 2020 due to their delivery capacity constraints.

Because the Postal Service provides its services primarily through its employees, its costs are heavily concentrated in wages and benefits for both current employees and retirees. These costs are significantly impacted by contractual wage increases, employee health benefit premium increases, and statutorily mandated retirement and workers’ compensation programs. Some of these costs have historically increased at a higher rate than inflation.

**Past Due Obligations**

The following table presents the total expenses accrued but unpaid by the Postal Service as of September 30, 2019, related to retiree health benefits, CSRS and FERS and the fiscal years in which the accruals were recorded:

<table>

\(^2\) The 2012 to 2016 period amount includes $247.6 million for 2016, $240.9 million for 2015 and $6.7 million for 2014.

**Mitigating Circumstances**

The Postal Service continues to pursue strategies within its control to increase operational efficiency and improve liquidity. The Postal Service has managed capital in recent years by spending what it believed was essential to maintain its existing facilities and service levels, to ensure employee safety and to increase efficiencies. However, continued increases in capital investment are necessary to upgrade its facilities, fleet of vehicles and processing equipment in order to remain operationally viable. Irrespective of the challenges resulting from the COVID-19 pandemic, aggressive management of the business operations, as well as legislative and regulatory reforms that will enable it to increase revenue and reduce costs, will all be necessary to restore the Postal Service to financial health.

The Postal Service’s status as an independent establishment of the executive branch that does not receive tax dollars for its operations presents unique requirements and restrictions, but also potentially mitigates some of the financial risk that would otherwise be associated with a cash shortfall. With annual total revenue in 2019 of approximately $71 billion, a financially sound Postal Service continues to be vital to U.S. commerce.

The U.S. economy benefits greatly from the Postal Service and the many businesses that provide the printing and mailing services that it supports. Disruption of the mail would cause undue hardship to businesses and consumers as it would significantly inhibit the remittance of payments through the mail, and in the event of a cash shortfall, the U.S. government would likely prevent the Postal Service from significantly curtailing or ceasing operations. The Postal Service continues to inform the executive branch, Congress, the PRC and other stakeholders of the immediate and long-term financial challenges it faces and the legislative and regulatory changes that are required to restore its financial stability.
NOTE 4 - REVENUE RECOGNITION
The Postal Service generates the majority of its revenue from contracts associated with the processing and delivery of different types of mail and packages, both domestically and internationally, which generally occur over a relatively short period of time (e.g., several days).

Disaggregation of Revenue
The following table summarizes the Postal Service’s disaggregated operating revenue for the three and six months ended March 31, 2020, and 2019, by each service category:

</table>

* Prior period amounts for certain service categories include reclassifications of amounts amongst service categories to conform to current period presentation. These reclassifications are immaterial for each affected category, and had no effect on total operating revenue for the period.

Satisfaction of Performance Obligations
A performance obligation is a promise in a contract to transfer a distinct good or service to the customer. A contract’s transaction price is allocated to each distinct performance obligation and recognized as revenue when, or as, the performance obligation is satisfied.

First-Class Mail, Marketing Mail, Shipping and Packages, International Mail and Periodicals are categorized as Mailing and Shipping services for purposes of satisfying performance obligations. The Postal Service recognizes revenue for Mailing and Shipping services as it fulfills its obligation to process and deliver each mailpiece and the customer mail sender/recipient receives and consumes the benefits of these services.

Other revenue includes PO Box services, Return Receipts, Insurance, Other Ancillary Services, Shipping and Mailing Supplies, Collect on Delivery, Registered Mail, Stamped Envelopes and Cards, Money Orders and other goods and services. The Postal Service recognizes revenue for the majority of these services over time as the customer receives and consumes the benefits of the service. The revenue for a small portion of certain goods or services in this service category is recognized at a point in time when the goods or services are provided to the customer.

The vast majority of the Postal Service’s contracts include only one performance obligation. However, if a contract is separated into more than one performance obligation, the total transaction price for each performance obligation is allocated in an amount based on the estimated relative stand-alone selling prices of the promised goods or services underlying each performance obligation. The majority of the goods or services sold by the Postal Service have observable stand-alone sales prices. Further, payment for the majority of the goods and services is received up front.

If the Postal Service were unable to complete delivery to the destination point, another entity would not need to re-perform the entire portion of delivery already performed by the Postal Service. Accordingly, control from the Postal Service to the customer transfers over time for the vast majority of services the Postal Service offers, and revenue is recognized based on the progress of the completion of the performance obligations.
Variable Consideration
The Postal Service offers certain contracts to its customers that contain various types of customer incentives or other provisions that can either increase or decrease the transaction price. Customer incentives include discounts, money back guarantees, rebates, refunds or incentive payments. The other provisions include performance penalties. The Postal Service uses the expected value approach to estimate variable consideration to which it expects to be entitled.

Contract Modifications
The Postal Service considers contract modifications to exist when the modification either creates new enforceable rights and obligations or alters the existing arrangement. Contract modifications do not add distinct services; they are typically used to change the prices that the Postal Service charges its customer for existing services. These contract modifications are accounted for prospectively as the remaining performance obligations are executed.

Principal vs. Agent Consideration
The Postal Service utilizes third parties to assist with the transportation of mailpieces between different points as part of the delivery process. Based on its evaluation of the transfer of control model, the Postal Service has determined that it acts as the principal rather than the agent within these arrangements.

Contract Liabilities
The vast majority of the Postal Service’s contract liabilities consist of Deferred revenue-prepaid postage and prepaid PO Box and Caller Service fees. Deferred revenue-prepaid postage is an estimate of postage that has been sold, but not yet used by customers. The Postal Service recognizes revenue over time as the Postal Service delivers mailpieces. Because payments for postage are collected in advance of the satisfaction of related performance obligations, the Postal Service defers and reports this unearned revenue as Deferred revenue-prepaid postage in its balance sheet. Stamp sales and metered postage account for the majority of Deferred revenue-prepaid postage. The liability also includes an estimate for mail that is in-transit within the Postal Service network.

The prepaid PO Box and Caller Service fees consist of the payments received from customers for PO Box fees at the beginning of their contracts. The Postal Service defers and reflects this unearned revenue as prepaid PO Box and Caller Service fees within Other current liabilities in the accompanying Balance Sheets. Revenue is recognized over time as customers use the PO Box and Caller Services over the terms of their contracts.

The following table presents the balances of the Postal Service’s contract liabilities, including Deferred revenue-prepaid postage and prepaid PO Box and Caller Service fees, as of March 31, 2020, and September 30, 2019, respectively:

</tbody>
</table>

¹ Included within Operating revenue in the accompanying unaudited Statements of Operations.
² Included within Operating expenses in the accompanying unaudited Statements of Operations.
³ Represents interest imputed on the revenue forgone installment receivable as well as interest generated on U.S. Treasury instruments and other cash equivalents held with the Federal Reserve Bank of New York. Included within Interest and investment income in the accompanying unaudited Statements of Operations.
⁴ Incurred on debt issued to the FFB, and included within Interest expense in the accompanying unaudited Statements of Operations.

**NOTE 6 - CASH, CASH EQUIVALENTS AND RESTRICTED CASH**

The following table provides a reconciliation of Cash and cash equivalents and Restricted cash reported in the balance sheets as of March 31, 2020, and 2019, respectively, and as of September 30, 2019, and 2018, respectively (to disclose the opening balances), that sum to the totals of the same such amounts presented in the accompanying unaudited Statements of Cash Flows for the six months ended March 31, 2020, and 2019:

<table>
<thead>
<tr>
<th></th>
<th>March 31,</th>
<th>September 30,</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>2020</td>
<td>2019</td>
</tr>
<tr>
<td>Cash and cash equivalents</td>
<td>$ 8,987</td>
<td>$ 8,108</td>
</tr>
<tr>
<td>Restricted cash</td>
<td>472</td>
<td>546</td>
</tr>
<tr>
<td>Total cash, cash equivalents and restricted cash</td>
<td>$ 9,459</td>
<td>$ 8,654</td>
</tr>
</tbody>
</table>

Restricted cash represents Postal Service cash that is not available for general use. This includes cash originated from forfeitures or seizures related to consumer fraud or other criminal activity related to the mail and either held for third-party beneficiaries or awaiting disposition. Restricted cash also includes funds for use in restricted activities such as congressional appropriation for Postal Service obligations to the PRC and the United States Postal Service Office of Inspector General, or that are otherwise restricted.

The Postal Service holds its Cash and cash equivalents and Restricted cash with the Federal Reserve Bank of New York and invests its excess cash, when available, in highly-liquid, short-term investments issued by the U.S. Department of the Treasury.

**NOTE 7 - PROPERTY AND EQUIPMENT, NET**

Assets within Property and equipment, net in the accompanying Balance Sheets are recorded at cost, which includes the interest on borrowings used to finance construction of major capital additions, less allowances for depreciation and amortization. Interest capitalized during both the three and six months ended March 31, 2020, and 2019, was not significant. Fixed assets are depreciated over estimated useful lives ranging from 3 to 40 years using the straight-line method.

The net book values of assets classified as held for sale were approximately $6 million and $10 million as of March 31, 2020, and September 30, 2019, respectively, and are included within Property and equipment, net in the accompanying Balance Sheets.

For the three months ended March 31, 2020, and 2019, depreciation and amortization expense was $423 million and $424 million respectively, and impairment charges were de minimis. For the six months ended March 31, 2020, and 2019, depreciation and amortization expense was $854 million and $841 million respectively, and impairment charges were de minimis. These items are included within Other operating expenses in the accompanying unaudited Statements of Operations.
NOTE 8 - COMMITMENTS AND CONTINGENCIES

Collective Bargaining Agreements
On January 22, 2020, the Postal Service reached a tentative agreement with the National Postal Mail Handlers Union, AFL-CIO (“NPMHU”) on a new three-year collective bargaining agreement, which the union membership ratified on April 8, 2020. The new contract went into effect on April 25, 2020, and will expire on September 20, 2022.

On March 10, 2020, a three-member arbitration panel reached a decision in the Postal Service’s legally mandated binding interest arbitration process with the American Postal Workers Union, AFL-CIO (“APWU”), which established the terms of a new collective bargaining agreement. The new contract went into effect on March 10, 2020, and will expire on September 20, 2021.

In September 2019, the Postal Service agreed to extend contract negotiations relating to a new collective bargaining agreement with the National Association of Letter Carriers, AFL-CIO (“NALC”). The previous contract with the NALC expired on September 20, 2019, and negotiations with the NALC are at an impasse. The Postal Service and the NALC will continue to follow the current agreement until a new contract is reached through the dispute resolution process.

Contingent Liabilities
The Postal Service’s contingent liabilities consist primarily of claims resulting from labor and employment matters; asset retirement obligations and environmental matters; property damage and injuries on Postal Service properties; and issues arising from Postal Service contracts, personal claims and traffic accidents. Each quarter, the Postal Service evaluates each claim to determine its potential liability. If the Postal Service determines that an unfavorable outcome from a new claim is both probable and reasonably estimable, it records a liability for the amount. Preexisting claims are also reviewed and adjusted quarterly for resolutions or revisions to prior estimates based on new facts and circumstances.

The Postal Service is from time to time involved in other litigation incidental to the conduct of its business, none of which is expected to be material to its financial condition or operations.

Provision for Losses
The Postal Service has made adequate provision for probable losses arising from all claims. The following table presents contingent liabilities by current and noncurrent portions and by category, as of March 31, 2020, and September 30, 2019:

<table>
<thead>

1 Included within Payables and accrued expenses in the accompanying Balance Sheets.
2 Included within Other noncurrent liabilities in the accompanying Balance Sheets.
Reasonably Possible Contingencies
The Postal Service does not accrue for contingencies which it deems reasonably possible of an unfavorable outcome. These ranged in amount from approximately $175 million to $1.0 billion at March 31, 2020, and from approximately $150 million to $1.0 billion at September 30, 2019.

Class Action Litigation
As previously reported, on January 14, 2010, the Equal Employment Opportunity Commission’s (“EEOC”) Office of Federal Operations (“OFO”) certified the case McConnell v. Brennan (first instituted in 2006 as McConnell v. Potter) as a class action against the Postal Service, with the class consisting of permanent-rehabilitation and limited-duty Postal Service employees who the Postal Service assessed under the National Reassessment Process (“NRP”) between the dates of May 5, 2006, and July 1, 2011. The Postal Service utilized the NRP to ensure employees receiving workers’ compensation benefits were placed in jobs consistent with their abilities, and that records regarding employees injured on the job were correct.

The McConnell case alleges violations of the Rehabilitation Act of 1973 resulting from the NRP’s failure to provide a reasonable accommodation, the NRP’s wrongful disclosure of medical information, the NRP’s creation of a hostile work environment, and the NRP’s adverse impact on disabled employees. The class is seeking injunctive relief and damages of an uncertain amount.

In 2015, the Administrative Judge assigned to handle the McConnell case granted in-part both the Class Agent's and the Postal Service's motions for summary judgment. In her decision, the Administrative Judge found that the NRP violated the Rehabilitation Act. The Postal Service appealed this decision to the OFO, and the OFO denied this appeal in 2018. The Postal Service implemented the OFO’s order, and notified all class members of their right to file an individual claim for relief. Class members were allowed thirty days to submit claims to the Postal Service's National Equal Employment Opportunity Investigative Services Office. The claims submission deadline has now passed and the dispute process for individual claims is currently underway before a newly assigned EEOC Administrative Judge.

The class members have the right to pursue individual claims. Should they be successful in establishing liability and damages, the ultimate outcome in this case could have a material impact on the Postal Service’s financial results.

Other
The U.S. is a member of the Universal Postal Union (“UPU”), a specialized agency of the United Nations that facilitates the exchange of international mail. The Postal Service is the designated postal operator for the U.S. under the UPU, and payments to the designated postal operator for the delivery of foreign origin letter-post mails are known as “terminal dues”.

In September 2019, the UPU members had a special meeting -- known as the Extraordinary Congress -- to discuss the terminal dues system. During that meeting, UPU members agreed to establish a new remuneration system that will allow the Postal Service to self-declare rates beginning in July 2020. Other foreign postal operators may also reciprocally apply rates at full-self-declared rates at that time.

In February 2020, the Postal Service officially invoked its provision to self-declare rates beginning in July 2020, creating an obligation to pay the UPU the amount of 40 million Swiss Francs (“CHF”), or approximately $41 million, based on the prevailing exchange rate on March 31, 2020. This amount will be payable over five years in annual increments of 8 million CHF, with the first payment due between July and December 2020.

The Postal Service considers the right to self-declare rates as an intangible asset recorded in Other assets in the accompanying unaudited Balance Sheet at March 31, 2020, and its amortization starts in July 2020 when the self-declared rates are in effect. The current portion of the obligation is recorded in Payables and accrued expenses and the noncurrent portion of the obligation is recorded in Other noncurrent liabilities in the accompanying unaudited Balance Sheet at March 31, 2020, respectively.
NOTE 9 - RETIREMENT PLANS

The majority of career employees participate in one of two U.S. government defined benefit pension programs, CSRS and FERS, which OPM administers. These plans provide retirement, death and disability benefits for eligible employees based on specific eligibility and participation requirements, vesting periods and benefit formulas. Each employee’s participation in either plan is based on the starting date of employment with the Postal Service or another U.S. government entity.

As government-sponsored benefit plans, CSRS and FERS are not subject to the provisions of the Employee Retirement Income Security Act of 1974, as amended. Likewise, because the Postal Service cannot direct the costs, benefits or funding requirements of these plans, it accounts for program expenses under multiemployer plan accounting rules. As such, the Postal Service records required contributions to the plans as an expense in the period in which each contribution is due. For FERS, the Postal Service contributes to the plan an amount established by OPM as the employer portion of retirement benefits for participating employees and their qualifying survivors, upon retirement, for each employee’s current year of service, which is considered the FERS normal cost. As further discussed below, the Postal Service is not required to pay the normal cost for those employees who participate in CSRS.

Career employees may also participate in the Thrift Savings Plan (“TSP”), a defined contribution retirement savings and investment plan administered by the Federal Retirement Thrift Investment Board. The Postal Service’s TSP expenses relate only to its contributions for FERS employees who participate in the TSP.

CSRS provides a basic annuity plan benefit to employees hired before January 1, 1984. CSRS Offset provides Social Security benefits in addition to its basic annuity plan for employees hired between January 1, 1984, and January 1, 1987. CSRS and CSRS Offset employees may also participate in the TSP, although the Postal Service does not match contributions for these participants.

The PAEA suspended the Postal Service’s employer contributions to CSRS that would otherwise have been required under Title 5, Section 8334(a)(1) of the U.S. Code, although CSRS employees continue to contribute to the plan.

Effective January 1, 1987, FERS covers employees hired since December 31, 1983, and FERS employees are covered by an annuity, Social Security and TSP benefits. For FERS employees who participate in TSP, the Postal Service contributes 1% of basic pay and matches voluntary employee contributions up to an additional 4% of basic pay. The Postal Service recognizes Social Security and TSP expenses as they are incurred and records them within Compensation and benefits in the accompanying unaudited Statements of Operations. A liability is established for any contribution due and unpaid at the end of each reporting period and is included within Compensation and benefits in the accompanying Balance Sheets.

FERS employees are further categorized as either FERS, FERS - Revised Annuity Employees (“FERS-RAE”), or FERS - Further Revised Annuity Employees (“FERS-FRAE”) depending on whether their date of hire was before, during, or after calendar year 2013, respectively.

The following table presents the employee and employer contributions, as a percentage of employee basic pay, during the three and six months ended March 31, 2020, and 2019:

<table>
<thead>
<tr>
<th></th>
<th>March 31, 2020</th>

¹ Expense for the accrual for the annual payment due to OPM by September 30 of the respective fiscal year, to amortize the unfunded CSRS retirement obligation. The 2020 amounts are based on updated Postal Service estimates resulting from revised actuarial assumptions. Payments are to be made through 2043 based on OPM invoices.

² Expense for the accrual for the annual payment due to OPM by September 30 of the respective fiscal year, to amortize the unfunded FERS retirement obligation. The 2020 amounts are based on updated Postal Service estimates resulting from revised actuarial assumptions. Payments are to be made over a 30-year rolling period based on OPM invoices.

### FERS Normal Costs

The Postal Service records expenses for FERS normal costs within Retirement benefits in the accompanying unaudited Statements of Operations.

The Postal Service makes payments for FERS normal costs in accordance with its bi-weekly payroll cycle. The employer contributions and employee withholdings not yet remitted to OPM were $209 million and $157 million at March 31, 2020, and September 30, 2019, respectively, and were recorded as a current liability within Retirement benefits in the accompanying Balance Sheets.

### CSRS and FERS Unfunded Retirement Benefits

OPM periodically notifies the Postal Service regarding its revaluation of unfunded CSRS and FERS liabilities. OPM calculates these obligations using Postal Service-specific demographics data and government-wide economic assumptions. The Postal Service records these expenses as Retirement benefits in the accompanying unaudited Statements of Operations. These amounts may be significantly impacted by changes in actuarial assumptions used to revalue the unfunded liabilities.

In October 2019, OPM provided the Postal Service with an actuarial report indicating the projected annual amortization payments due September 30, 2020, would be $1.6 billion for the CSRS obligation and $1.1 billion for the FERS obligation.

On April 2, 2020, the Board of Actuaries of the CSRS, which oversees OPM’s calculation of actuarial liabilities for CSRS and FERS, lowered the discount rate used to calculate CSRS and FERS unfunded retirement liabilities from 4.25% to 4.0%. The Postal Service has estimated that the impact of this change in discount rate on the annual CSRS and FERS amortization expense will result in revised projected amortization payments due September 30, 2020, of approximately $1.8 billion for the CSRS obligation and approximately $1.3 billion for the FERS obligation, increases of $181 million and $226 million, respectively.

Accordingly, the Postal Service accrued additional CSRS and FERS amortization expenses during the three months ended March 31, 2020, to reflect the proportional adjustment between the original OPM estimate and the updated Postal Service estimate as a result of these changes. The Postal Service expects to receive invoices from OPM for the actual amounts due September 30, 2020, during the fourth quarter of 2020, and these invoices may differ from the estimated projections due to further changes in experience, discount rates and/or actuarial assumptions as of the calculation date.
The amounts the Postal Service has accrued for CSRS and FERS unfunded retirement benefits but has not yet paid are recorded as a current liability within Retirement benefits in the accompanying Balance Sheets. Those accrued but unpaid amounts were approximately $9.8 billion and $8.2 billion at March 31, 2020, and September 30, 2019, respectively.

NOTE 10 - HEALTH BENEFITS PLANS
FEHB Program covers nearly all career employees and also covers non-career employees and retirees who meet certain eligibility requirements. OPM administers FEHB and allocates the cost of funding the program to participating U.S. government employers. Separate from FEHB, the Postal Service offers its own healthcare plan to certain non-career employees who are ineligible for FEHB.

Active Employees
The Postal Service paid 71.9% of healthcare premium costs during both the three months ended March 31, 2020, and 2019. The Postal Service paid 72.0% and 72.3% of healthcare premium costs during the six months ended March 31, 2020, and 2019, respectively. Although OPM determines the actual FEHB premium costs, the allocation of these costs between the Postal Service and most of its employees is determined through agreements with Postal Service labor unions.

Postal Service employee health benefits expense (which includes the employer portion of Medicare taxes) is most significantly impacted by the number of employees electing coverage and the premium costs of the selected plans. Postal Service employee health benefits expense was approximately $1.3 billion for each of the three-month periods ended March 31, 2020, and 2019. Postal Service employee health benefits expense was approximately $2.6 billion for each of the six-month periods ended March 31, 2020, and 2019. These expenses are included within Compensation and benefits in the accompanying unaudited Statements of Operations.

Retirees
Postal Service retirees who participated in FEHB for the five years immediately preceding their retirement may continue to participate in the plan during retirement. Qualifying survivors of retirees are also eligible to receive benefits. The Postal Service is required to contribute to the PSRHBF an amount estimated to be equal to the employer portion of FEHB insurance premiums for participating employees and their qualifying survivors, upon retirement, for each employee’s current year of service (normal cost). The Postal Service is also required to contribute an amount sufficient to fully amortize the unfunded liability of the PSRHBF by 2056. These amounts are based, in part, on each current and prospective retiree’s length of federal civilian service occurring on or after July 1, 1971. Each participant’s share of premium costs is set by law and is not subject to negotiation with Postal Service labor unions. The Postal Service cannot direct the costs, benefits or funding requirements of the plans. Therefore, it accounts for program expenses using multiemployer plan accounting rules by recording contributions to the plans that will be required by OPM as an expense in the period in which the contributions are due.

The PAEA required the Postal Service to prefund retiree health benefits during years 2007 through 2016 by paying statutorily specified annual amounts ranging from $1.4 billion to $5.8 billion, totaling $54.8 billion, into the PSRHBF, which began paying the Postal Service’s share of retiree health benefit premiums in 2017. The Postal Service remains obligated to fund the $33.9 billion in statutorily required PSRHBF prefunding payments that it defaulted on for the years 2012 through 2016, as well as the normal cost and amortization payments of $10.7 billion and $2.6 billion, respectively, that it did not pay for the years 2017 through 2019. As of the date of this report, the Postal Service has not been assessed any penalties associated with these non-payments. The cumulative amount of statutorily specified, normal cost and amortization PSRHBF obligations the Postal Service has accrued is $49.7 billion as of March 31, 2020, inclusive of the $47.2 billion that was unpaid as of September 30, 2019. Given that OPM considers these amounts to be due and payable, the Postal Service reflects the cumulative unpaid amount as a current liability within Retiree health benefits in the accompanying Balance Sheets.

As required by PAEA, OPM annually performs an actuarial valuation for the purpose of developing a payment schedule for the Postal Service to fund the remaining unfunded PSRHBF obligation in annual payments through the year 2056. Based on preliminary calculations provided by OPM, the amortization payment due September 30, 2020, is estimated to be $900 million.
Furthermore, the Postal Service is obligated to pay the estimated normal cost of retiree health benefits attributable to the service of its employees during the most recent year. Based on preliminary calculations provided by OPM, the Postal Service has estimated the normal cost payment, also due by September 30, 2020, to be $4.0 billion.

The Postal Service expects to receive the invoice from OPM for with the actual amounts due during the fourth quarter of 2020 and these may differ from the original projected amounts due to changes in discount rates, actuarial assumptions and experience as of the calculation date.

The following table details retiree health benefits expenses for the three and six months ended March 31, 2020, and 2019:

<table>
<thead>
<tr>

</tbody>
</table>

1 Expense for the accrual for the annual payment due to OPM by September 30 of the respective year, as calculated by OPM, to amortize the unfunded PSRHB retirement health benefit obligation. Payments are to be made through 2056 based on OPM invoices.

2 Expense for the accrual for the annual payment due to the PSRHB by September 30 of the respective year, based on information provided by OPM, for the actuarially determined normal cost of retiree health benefits for current employees.

**NOTE 11 - WORKERS’ COMPENSATION**

Postal Service employees injured on the job are covered by the Federal Employees’ Compensation Act (“FECA”), administered by the U.S. Department of Labor’s (“DOL”) Office of Workers’ Compensation Programs, which makes all decisions regarding injured workers’ eligibility for benefits. The Postal Service reimburses DOL for all workers’ compensation benefits paid to or on behalf of Postal Service employees, plus an administrative fee.

**Workers’ Compensation Liability**

The Postal Service records a liability for its workers’ compensation obligations for employees who have been injured on the job and are eligible for benefits, or their qualified survivors. Both the current and noncurrent portions of the workers’ compensation liability are recorded in the accompanying Balance Sheets. The Postal Service uses an estimation model that utilizes four generally accepted actuarial valuation techniques based upon past claim-payment experience and exposure to claims as measured by total employee hours worked.

Changes in the liability are primarily attributable to the combined impacts of routine changes in actuarial assumptions, new compensation and medical cases, the progression of existing cases and changes in discount (interest) and inflation rates, including long-term COLA rates for compensation claims, and medical rates for medical claims. These rates are updated as of the balance sheet date and factored into the model.

To determine the fair value of the liability each quarter, the Postal Service first estimates the future total cost of workers’ compensation claims based on the dates of claim-related injuries, frequency or severity of the injuries, the pattern of historical payments to beneficiaries and the expected trend in future costs. The Postal Service then calculates the amount that would need to be invested at current discount (interest) rates to fully fund the future total cost of claims, and this calculated present value is the recorded value of the workers’ compensation liability.

This liability calculation is highly sensitive to changes in discount rates. For example, a 1% increase in the discount rate would decrease the March 31, 2020, liability and related expense by approximately $2.4 billion. Likewise, a 1% decrease in the discount rate would increase the March 31, 2020, liability and related expense by approximately $3.1 billion.
The following table details the applicable inflation and discount rates for compensation and medical claims used to estimate the workers' compensation liability as of March 31, 2020, and September 30, 2019:

<table>
<thead>
<tr>
<th></th>
<th>March 31, 2020</th>
<th>September 30, 2019</th>

<td>1.07%</td>
<td>1.91%</td>
</tr>
<tr>
<td>Medical inflation rate</td>
<td>3.50%</td>
<td>2.50%</td>
</tr>
</tbody>
</table>

As of March 31, 2020, and September 30, 2019, the Postal Service’s total liability for workers’ compensation was approximately $20.0 billion and $18.5 billion, respectively. As of March 31, 2020, and September 30, 2019, the current portion of the liability was approximately $1.3 billion and $1.4 billion, respectively, and the noncurrent portion of the liability was approximately $18.7 billion and $17.1 billion, respectively, as reflected in the accompanying Balance Sheets.

**Workers’ Compensation Expense**
The impacts of changes in discount rates and inflation rates, as well as the actuarial valuation of new cases and revaluation of existing cases, are components of total workers’ compensation expense as recorded in the accompanying unaudited Statements of Operations. In addition, the Postal Service pays an administrative fee to DOL, which is considered a component of workers’ compensation expense.

The following table presents the components of workers’ compensation expense for the three and six months ended March 31, 2020, and 2019:

**NOTE 12 - LEASES**

**Postal Service Leases**
The Postal Service holds lessee positions in real property leases as well as lessee positions embedded in service contracts involving rights to use transportation equipment and facilities.

Real property leases support retail, delivery, mail processing, maintenance, administrative and support activities. The non-cancellable base terms of these leases typically range from one to five years, with one or more options to renew for additional five-year terms. The lease terms for these arrangements generally range from one to thirty years including any renewal options that are reasonably certain to be exercised. Additionally, certain real property leases contain purchase and termination options. At the commencement of most real property lease arrangements, the Postal Service is not reasonably certain if it will exercise such options. Real property leases include certain variable lease payments associated with non-lease components, such as common area maintenance costs, and non-lease components such as real estate taxes, which are generally charged as a pass-through based on actual amounts incurred by the lessor. The Postal Service records costs associated with real property leases within Other operating expenses in the accompanying unaudited Statements of Operations.
Transportation equipment leases apply primarily to vehicles, trailers, and aircraft. The non-cancellable base terms of these leases typically range from two to five years, and may include one or more options to renew for an additional one or two years. The lease terms for these arrangements generally range from two to five years including any renewal options the Postal Service is reasonably certain to exercise. Transportation equipment leases do not contain purchase options, however certain of these leases contain termination options. At the commencement of most transportation lease arrangements, the Postal Service is not reasonably certain if it will exercise such termination options. Certain transportation leases contain variable lease payments based on the volume of activity under the contract. The Postal Service records costs associated with transportation leases within Transportation in the accompanying unaudited Statements of Operations.

Postal Service leases do not contain any material residual value guarantees or restrictive covenants.

Sublease income was not material to the financial statements for the three and six months ended March 31, 2020.

Balances disclosed herein include those pertaining to certain related-party transactions. See Note 5 - Related Parties for additional information on related party transactions.

The table below reconciles the undiscounted cash flows for the first five years and the total remaining finance lease liabilities and operating lease liabilities recorded in the accompanying unaudited Balance Sheet as of March 31, 2020:

<table>

Capital leases, recorded at historical cost within Property and equipment, net in the accompanying Balance Sheets, were $496 million as of September 30, 2019. Total accumulated amortization related to capital leases was $377 million at September 30, 2019. Amortization expense for capital leases was approximately $33 million and $37 million for the years ended September 30, 2019, and 2018, respectively, and is included within the Other operating expense in the respective Statements of Operations.

Lease Accounting Policies

Lease Accounting Policy for Comparative Periods

As the lessee, the Postal Service classifies leases which have original lease terms greater than one year and that transfer substantially all the risks and rewards of ownership to the Postal Service, as capital leases. These leases are capitalized on the lease commencement date at the lower of the fair value of the leased assets or the present value of the minimum lease payments. The discount rate used to determine the present value is based on average U.S. Treasury rates. Property acquired under a capital lease is amortized over the lease term. Capital leases are included within Property and equipment, net in the accompanying Balance Sheets.

The Postal Service classifies all other lease arrangements in which substantially all risks and rewards of ownership are retained by the lessor as operating leases. Rent expense for operating leases is included in Other operating...
expenses in the accompanying unaudited Statements of Operations on a straight-line basis over the term of the lease.

**Lease Accounting Policy for the Six Months Ended March 31, 2020**
The Postal Service determines at the inception of the contract if an arrangement represents a lease or contains lease components. A contract is deemed to represent or include a lease if it conveys the right to control the use of an identified asset for a period of time in exchange for consideration. The Postal Service is assumed to have the right to control the use of the underlying asset if the contract conveys the rights to obtain substantially all of the economic benefits of the underlying asset and the rights to direct how and for what purpose such asset is used during the contract term.

As the lessee, the Postal Service classifies all leases with original lease terms less than one year as short-term leases. The Postal Service classifies all other leases which transfer substantially all the risks and rewards of ownership to the Postal Service as finance leases. Finance lease right-of-use assets are included within Property and equipment, net in the accompanying Balance Sheets. The current and noncurrent portions of finance lease liabilities are included within Payables and accrued expenses and Other noncurrent liabilities, respectively, within the accompanying Balance Sheets. The Postal Service classifies the remaining leases, not classified as short-term leases or finance leases, as operating leases. The Postal Service considers a lease term to include all non-cancelable periods and renewal periods when the Postal Service is reasonably certain that it will exercise the related renewal option.

For short-term leases, the Postal Service records lease expenses in the statement of operations on a straight-line basis over the lease term.

Leases that do not qualify as short-term are recorded in the balance sheet on the lease commencement date, each as a right-of-use asset and a lease liability.

Lease liabilities are initially measured at the net present value of the lease payments due after the commencement date. For this purpose, lease payments include fixed and in-substance fixed rental payments, variable lease payments that depend on an index or rate, and the price of options that the Postal Service is, at the commencement of the lease, reasonably certain to exercise. Lease liabilities are subsequently increased to reflect the interest accrued and reduced when lease payments are made by the Postal Service.

Right-of-use assets are initially measured at the net present value of the lease payments (including amounts due prior to or on the commencement date), adjusted for the impact of initial direct costs and lease incentives. For finance leases, right-of-use assets are subsequently amortized on a straight-line basis over the shorter of the useful life of the underlying asset or the lease term. For operating leases, right-of-use assets are amortized in such a way that the combination of the interest expense accrued on the lease liability and the asset amortization results in a straight-line expense over the lease term.

Right-of-use assets for operating and finance leases are periodically reviewed for impairment losses, following the same process as for other long-lived assets. Impairment losses on long-lived assets are recorded when events or circumstances indicate that an asset's fair value is less than its carrying value. When such a determination is made, the carrying values of the assets are written down to fair value. The Postal Service uses the long-lived assets impairment guidance in ASC Subtopic 360-10, Property, Plant, and Equipment - Overall, to determine whether a right-of-use asset is impaired, and if so, the amount of the impairment loss to recognize. No impairment losses have been recognized to date.

The discount rates used in net present value calculations are determined based on the Postal Service’s incremental borrowing rates on debt outstanding with the FFB at the beginning of each year, which is approximated as the daily U.S. Treasury Yield Curve Rates for the five-year, 10-year, 20-year and 30-year periods, plus a 12.5 basis point spread.

Variable lease payments, except for those based on an index or rate, are recognized as variable lease expenses in the period in which the obligation for those payments are incurred.
NOTE 13 - FAIR VALUE MEASUREMENT
The Postal Service defines fair value as the price that would be received upon sale of an asset or the price that would be paid to transfer a liability between unrelated parties.

The carrying amounts of certain current assets and liabilities, including cash, accounts receivable, accounts payable and accrued expenses, approximate fair value due to their short-term nature. Assets within Property and equipment, net are recorded at cost and measured at fair value on a nonrecurring basis if they are determined to be impaired or classified as assets held for sale.

Noncurrent receivables and long-term debt are measured using a fair value hierarchy model. This model prioritizes observable and unobservable inputs used to measure fair value, and consists of three broad levels, as defined in authoritative literature.

For the three and six months ended March 31, 2020, no significant transfers between Level 1 and Level 2 assets or liabilities transpired. The carrying amount and fair value of the revenue forgone installment receivable and long-term debt are presented for disclosure purposes only in the following table:

<table>
<thead>
<tr>
<th></th>
<th>March 31, 2020</th>
<th></th>
<th>September 30, 2019</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>

<td>Carrying Amount</td>
<td>Fair Value</td>
</tr>
<tr>
<td>Revenue forgone installment receivable*</td>
<td>$476</td>
<td>$584</td>
<td>$466</td>
<td>$516</td>
</tr>
<tr>
<td>Long-term debt</td>
<td>$11,000</td>
<td>$11,936</td>
<td>$11,000</td>
<td>$11,437</td>
</tr>
</tbody>
</table>

*The carrying amount is included within Other assets (which includes items in addition to the revenue forgone installment receivable) in the accompanying Balance Sheets.

The revenue forgone installment receivable qualifies as a financial instrument in accordance with authoritative literature. To calculate its fair value, the Postal Service recognizes the imputed interest it is owed as interest income and estimates the value of this receivable using the interest method, which converts future cash flows to a single discounted amount using interest rates for similar assets, which are considered Level 2 inputs. The Postal Service then calculates the net present value of anticipated annual installment payments to be received, discounted by the 20-year U.S. Treasury Constant Maturity Rate, which was 1.15% and 1.94% as of March 31, 2020, and September 30, 2019, respectively.

The long-term debt also qualifies as a financial instrument. Because no active market exists for its debt with the FFB, the Postal Service estimates the fair value of the long-term debt by imputing future payments at discount rates provided by the FFB, considered Level 3 inputs. The weighted averages of the FFB discount rates, based on U.S. Treasury Yield Curve Rates, were 0.36% and 1.79% as of March 31, 2020, and September 30, 2019, respectively.

ITEM 2. MANAGEMENT’S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

CAUTIONARY STATEMENTS
The following Management’s Discussion and Analysis of Financial Condition and Results of Operations and other parts of this report describe the principal factors affecting the financial results, liquidity, capital resources and critical accounting estimates of the United States Postal Service (“Postal Service,” “USPS,” “we,” “our” and “us”). Our results of operations may be impacted by risks and uncertainties discussed here and in our Annual Report on Form 10-K for the year ended September 30, 2019, (“Annual Report”) filed with the Postal Regulatory Commission (“PRC”) on November 14, 2019. Such factors, many of which we cannot control or influence, may cause actual results to differ materially from those currently contemplated.

Our operating results for the three and six months ended March 31, 2020, are presented in accordance with accounting principles generally accepted in the United States (“GAAP”). These results are not necessarily indicative of the results to be expected for the year ended September 30, 2020, and should be read in conjunction with our
Annual Report. All references to years in this report, unless otherwise stated, refer to fiscal years beginning October 1 and ending September 30. All references to quarters, unless otherwise stated, refer to quarters within fiscal years 2020 and 2019.

Forward-looking statements contained in this report represent our best estimates of known and anticipated trends believed relevant to future operations. However, actual results may differ significantly from current estimates. Certain forward-looking statements included in this report use such words as “may,” “will,” “could,” “expect,” “believe,” “plan,” “estimate,” “project” or other similar terminology. These forward-looking statements, which involve a number of risks and uncertainties, reflect current expectations regarding future events and operating performance as of the date of this report. These risks include, but are not limited to, the effects of the novel strain of coronavirus (“COVID-19”) on our business, financial condition and results of operations. We have no obligation to publicly update or revise any forward-looking statements, whether as a result of new information, future events or otherwise.

OVERVIEW

With our mandate to provide universal postal services to the nation, we serve retail and commercial customers in the U.S., as well as internationally. Our operations include an extensive and integrated retail, processing, distribution, transportation and delivery network, and we operate throughout the U.S., its possessions and territories. We operate as a single segment and report our performance as such.

The Postal Accountability and Enhancement Act (“PAEA”) classifies our products into two broad categories: Market-Dominant and Competitive “products,” however, we use the term “services” in this document for consistency with other descriptions of services offered. The statutes under which we operate also establish certain requirements that affect our financial results, including obligations for retirement benefits within the Civil Service Retirement System (“CSRS”) and the Federal Employee Retirement System (“FERS”), and obligations for retiree health benefits including funding of the Postal Service Retiree Health Benefits Fund (“PSRHB”). We must coordinate with the U.S. Office of Personnel Management (“OPM”) to address these obligations.

We have successfully implemented initiatives that have reduced the growth in certain costs by billions of dollars while offering new features for customers such as Informed Delivery. However, legal restrictions on pricing, service diversification and operations restrict our ability to cover our costs to provide prompt, reliable and efficient postal services to the nation.

We have established a core set of goals that drive our strategic initiatives and continuous improvement efforts:

1. Deliver a world-class customer experience;
2. Equip, empower and engage employees;
3. Innovate faster to deliver value; and
4. Invest in our future platforms.

As part of these efforts, we aim to achieve long-term financial stability. Our focus on maintaining liquidity and reducing operating expenses reflects current trends, as well as projected future volume of mail and packages. We believe that financial stability is within reach with targeted legislative and regulatory reform to address our overall cost structure and enhance our revenue-generating opportunities as we continue to identify and create innovative and affordable services, and deliver high levels of performance and service. Such financial stability would continue to provide Congress and the executive branch with additional time to address the broader issues regarding our overall cost structure and revenue-generating opportunities.

RESULTS OF OPERATIONS

SUMMARY

The major factors that impact our operating results include overall customer demand, the mix of postal services and contribution associated with those services, volume of mail and packages processed through our network and our ability to manage our cost structure in line with declining levels of mail volume, increased competition in the more labor-intensive Shipping and Packages business and an increasing number of delivery points.
**Effects of COVID-19**

In March 2020, the World Health Organization (“WHO”) declared COVID-19 a global pandemic, which has since spread throughout the U.S. Changing federal, state and local government actions to address the pandemic have been occurring on a daily basis, and government-imposed shelter-in-place and other movement restrictions designed to slow the pace of the outbreak have severely impacted the U.S. economy. We believe the severity and duration of the COVID-19 pandemic is uncertain, and such uncertainty may continue during the second half of 2020.

Our employees provide an essential public service and bind the nation together as a part of the country’s critical infrastructure. At least six days per week, and in some instances seven, our employees accept, process, transport, and deliver vital mail and packages like medicine, essential consumer staples, benefits checks, and important information, in every community, to every home and business, and we will continue to do so. As Americans are urged to stay home, the importance of the mail will only grow as our customers, including those in rural areas and senior citizens, will need access to vital communications, essential packages and other necessities.

Shortly after the WHO declaration, we created a dedicated COVID-19 response team to lead our response efforts. All of our employees are considered essential, and their safety is our highest priority. Following strategies recommended by the Centers for Disease Control and Prevention, we have implemented enhanced safety measures to protect the health of our employees.

In late March 2020, we restricted business travel and implemented remote work arrangements for certain of our office-based employees. We have also implemented new leave policies for employees who may be affected by illness, quarantines or childcare obligations. These arrangements have not materially affected our ability to maintain our business operations, including the operation of financial reporting systems, internal control over financial reporting, and disclosure controls and procedures.

While we have maintained full operations during the pandemic, travel and logistics restrictions have negatively affected our retail and commercial customers, as well as our suppliers and mail service providers. Many of our commercial customers, especially those with consumer-facing businesses, have been required to suspend their operations or operate at a lower capacity. As a result, our mail volumes began to decline significantly in March 2020. The sudden drop in mail volumes, our most profitable revenue stream, is steep and may never fully recover to levels prior to the pandemic.

Although the COVID-19 pandemic has caused a recent surge in the nation’s use of e-commerce, resulting in higher Shipping and Packages volumes, we do not expect the resulting increases in Shipping and Packages revenues to be sustainable or to offset losses in mail service revenue caused by COVID-19. While the future is uncertain, we believe that the nation’s increased use of e-commerce is likely to plateau in the short term as the effects of the pandemic begin to subside, followed by a longer-term regression of e-commerce caused by a weakened U.S. economy. Furthermore, this anticipated economic weakness has resulted in significant interest rate declines, which have caused an increase in certain of our workers’ compensation and retirement benefits expenses.

On March 27, 2020, the President signed the *Coronavirus Aid, Relief, and Economic Security Act*, enacted as Public Law 116-136 (the “CARES Act”). Notwithstanding our $15.0 billion statutory debt limit, and $3.0 billion annual limit on new borrowing, the CARES Act allows us to borrow up to an additional $10.0 billion in financing from the U.S. Treasury to fund operating expenses. The U.S. Treasury may lend up to this amount at our request, upon terms and conditions mutually agreed upon. However, we have no assurance that the U.S. Treasury will agree to provide such financing or if it will be provided upon favorable terms.

We estimate that the COVID-19 pandemic may increase our net operating loss by more than $22.0 billion over the next eighteen months, threatening our ability to operate. If we are able to borrow the $10.0 billion from the U.S. Treasury as provided by the CARES Act, we expect that we will have sufficient liquidity to continue to operate through April 2021. However, if we are unable to secure this $10.0 billion in financing, we expect to be able to continue to operate only through September 2020, unless we default on additional obligations.
Three Months Ended March 31, 2020
As more fully described below in Operating Revenue and Volume, our operating revenue for the three months ended March 31, 2020, increased $349 million, or 2.0%, compared to the same period last year. The increase in operating revenue was due to the following:

- Shipping and Packages revenue increase of $386 million, or 7.1%, with a volume growth of 12 million pieces, or 0.8%, driven largely by the January 2020 price increases applicable to certain Competitive services and the temporary surge in e-commerce resulting from the COVID-19 pandemic; and
- First-Class Mail revenue increase of $89 million, or 1.4%, despite a volume decline of 29 million pieces, or 0.2%. Revenue growth was the result of decennial mailings associated with the 2020 U.S. Census, otherwise revenue and volume would have each declined during the quarter.

The above increases in operating revenue were partially offset by a decrease in Marketing Mail revenue of $94 million, or 2.5%, with a volume decline of 604 million pieces, or 3.4%, largely the result of the COVID-19 pandemic, as many of our commercial customers, especially those with consumer-facing businesses, began to suspend their operations or operate at a lower capacity in March 2020. Political and election mail revenue and volumes increased by approximately $100 million and 500 million pieces, respectively, compared to the same period last year, resulting from the impact of the 2020 primary and general elections.

As more fully described below in Operating Expenses, our operating expenses for the three months ended March 31, 2020, increased approximately $2.8 billion, or 14.2%, compared to the same period last year. The increase in operating expenses was primarily due to the following:

- Workers’ compensation expense increase of approximately $2.2 billion, primarily due to declines in discount rates, outside of management’s control, as the COVID-19 pandemic weighed on the U.S. economy;
- Retirement benefits expense increase of $348 million, or 23.7%, due to revised actuarial assumptions for CSRS and FERS unfunded retirement benefits amortization, which are outside of management’s control, and to increased contribution rates for FERS normal costs, compared to the same period last year;
- Other operating expenses increase of $124 million, or 5.3%, due to spending increases in various categories including enhancements to cyber security and information technology;
- Compensation and benefits expense increase of $119 million, or 1.0%, due primarily to contractual wage increases.

The above increases were partially offset by a decrease in retiree health benefits expense of $50 million, or 3.9%, primarily due to the impact of discount rates in effect during October 2019 that were used in OPM’s preliminary annual estimates.

Overall, we reported a net loss of approximately $4.5 billion for the three months ended March 31, 2020, compared to a net loss of approximately $2.1 billion for the same period last year.

Six Months Ended March 31, 2020
As more fully described below in Operating Revenue and Volume, our operating revenue for the six months ended March 31, 2020, decreased $11 million, which was essentially flat, compared to the same period last year.

The decrease in operating revenue was largely due to the following:

- Marketing Mail revenue decrease of $347 million, or 4.1%, with a volume decline of approximately 2.3 billion pieces, or 5.9%, driven by decreases in revenue and volume from political and election mail in the first quarter. Political and election mail revenue and volumes decreased by approximately $140 million and 900 million pieces, respectively, compared to the same period last year, which benefited from the impact of the 2018 mid-term elections during the first quarter of 2019. Furthermore, volume declined due to the COVID-19 pandemic in the second quarter, as the pandemic affected many of our commercial customers;
- First-Class Mail revenue decrease of $79 million, or 0.6%, with a volume decline of 600 million pieces, or 2.1%, reflecting the continuing migration from mail to electronic communication and transaction alternatives; and
• Periodicals revenue decrease of $57 million, or 9.4%, with a volume decline of 231 million pieces, or 9.8%, driven by the continuing migration to electronic communication and digital advertising.

The decrease in operating revenue was partially offset by an increase in Shipping and Packages revenue of $532 million, or 4.5%, despite a volume decline of 73 million pieces, or 2.2%, as we continued to see revenue growth in this service category during the six-month period driven largely by the January 2020 price increases applicable to certain Competitive services.

As more fully described below in Operating Expenses, our operating expenses for the six months ended March 31, 2020, increased approximately $1.6 billion, or 4.0%, compared to the same period last year. The increase in operating expenses was primarily due to the following:

• Workers’ compensation expense increase of approximately $1.1 billion, primarily due to declines in discount rates, outside of management’s control, as the COVID-19 pandemic weighed on the U.S. economy;
• Retirement benefits expense increase of $477 million, or 16.1%, due to revised actuarial assumptions for CSRS and FERS unfunded retirement benefits amortization, which are outside of management’s control, and to increased contribution rates for FERS normal costs, compared to the same period last year;
• Other operating expenses increase of $122 million, or 2.5%, due to spending increases in various categories including enhancements to cyber security and information technology; and
• Transportation expenses increase of $63 million, or 1.5%, primarily resulting from higher air transportation costs, but partially offset by lower international transportation costs. The increase in highway transportation costs was driven by a one-time adjustment for our adoption of Accounting Standards Update 2016-02 Leases, which has since been codified in Accounting Standards Codification ("ASC") 842, Leases ("ASC 842"), but partially offset by a decrease in the number of miles driven and lower average diesel fuel prices. The decrease in international transportation costs was driven by lower International Mail volumes.

The above increases in operating expenses were partially offset by the following decreases in operating expenses:

• Retiree health benefits expense decrease of $100 million, or 3.9%, primarily due to the impact of discount rate changes in effect during October 2019 that were used in OPM’s preliminary annual estimates; and
• Compensation and benefits expense decrease of $71 million, or 0.3%, primarily due to management’s efforts to align work hours with volume workloads, but partially offset from increases due to contractual wage adjustments.

Overall, we reported a net loss of approximately $5.3 billion for the six months ended March 31, 2020, compared to a net loss of approximately $3.6 billion for the same period last year.

Non-GAAP Controllable Loss
In the day-to-day operation of our business, we focus on costs that can be managed in the course of normal business operations, such as salaries and transportation. We calculate controllable loss, a non-GAAP measure, by excluding items over which we have no control, such as PSRHB actuarial revaluation and amortization expenses, workers’ compensation expenses caused by actuarial revaluation and discount rate changes, and retirement expenses caused by actuarial revaluation. Controllable loss should not be considered a substitute for net loss and other GAAP reporting measures.
The following table reconciles our GAAP net loss to controllable loss for the three and six months ended March 31, 2020, and 2019:

\(^1\) Expense for the accrual for the annual payment due to OPM by September 30 of the respective year, as calculated by OPM, to amortize the unfunded PSRHB/F retirement health benefit obligation. Payments are to be made through 2056 based on OPM invoices.

\(^2\) Net amounts include changes in assumptions, valuation of new claims and revaluation of existing claims, less current year claim payments.

\(^3\) Expense for the accrual for the annual payment due to OPM by September 30 of the respective fiscal year, to amortize the unfunded CSRS retirement obligation. The 2020 amounts are based on updated Postal Service estimates resulting from revised actuarial assumptions. Payments are to be made through 2043 based on OPM invoices.

\(^4\) Expense for the accrual for the annual payment due to OPM by September 30 of the respective fiscal year, to amortize the unfunded FERS retirement obligation. The 2020 amounts are based on updated Postal Service estimates resulting from revised actuarial assumptions. Payments are to be made over a 30-year rolling period based on OPM invoices.

Our controllable loss decreased $14 million for the three months ended March 31, 2020, compared to the same period last year. This decrease was largely driven by the $349 million increase in operating revenue, offset by higher other operating expenses of $124 million, higher compensation and benefits expenses of $119 million, and higher FERS normal costs of $75 million.

Our controllable loss increased $270 million for the six months ended March 31, 2020, compared to the same period last year. This increase was largely driven by higher FERS normal costs of $134 million and higher transportation expenses of $63 million, partially offset by lower compensation and benefits expenses of $71 million.

These items are discussed in greater detail in Operating Revenue and Volume and Operating Expenses below.

**OPERATING REVENUE AND VOLUME**

The combined categories of First-Class Mail and Marketing Mail continued to provide the majority of our revenue, despite long-term trends away from traditional paper communication and correspondence to electronic media. Although this migration to electronic media has resulted in significant volume declines in First-Class Mail over the last decade, Marketing Mail volume remained relatively steady between 2009 and 2016. However, Marketing Mail volume began to decline at a greater rate beginning in 2017 and continued to decline through the first half of 2018. Aside from a volume rebound between the second half of 2018 through the first quarter of 2019 that was driven by increases in political and election mail associated with the 2018 mid-term elections, Marketing Mail resumed its volume decline through the remainder of 2019 and the first half of 2020.
The following table summarizes our operating revenue and volume for the three and six months ended March 31, 2020, and 2019, by each service category:

1 Excludes First-Class Package Service - Retail and First-Class Package Service - Commercial.
2 Excludes Marketing Mail Parcels.
3 Includes Priority Mail, USPS Retail Ground, Parcel Select Mail, Parcel Return Service Mail, Marketing Mail Parcels, Package Service Mail, First-Class Package Service - Retail, First-Class Package Service - Commercial and Priority Mail Express.
4 Revenue includes PO Box services, Certified Mail, Return Receipts, Insurance, Other Ancillary Services, Shipping and Mailing Supplies, Collect on Delivery, Registered Mail, Stamped Envelopes and Cards, Money Orders and Other services.
5 Volume includes Postal Service internal mail and free mail provided to certain congressionally mandated groups.

For the three months ended March 31, 2020, First-Class Mail generated approximately 36% of operating revenue, which was essentially unchanged compared to the same period last year, and approximately 42% of our volume, a 1% increase compared to the same period last year. Marketing Mail generated approximately 21% of operating revenue and 50% of our volume, both 1% decreases from the same period last year.

For the six months ended March 31, 2020, First-Class Mail generated approximately 35% of operating revenue, which is essentially unchanged compared to the same period last year, and approximately 40% of our volume, a 1% increase compared to the same period last year. Marketing Mail generated approximately 22% of operating revenue and 52% of our volume, both 1% decreases from the same period last year.

We continued to experience positive revenue results in our Shipping and Packages category, and it represented approximately 33% of our revenue for the three months ended March 31, 2020, which was a 2% increase from the same period last year, and approximately 33% of our revenue for the six months ended March 31, 2020, a 1% increase from the same period last year. Shipping and Packages generated approximately 4% of our volume for both the three and six months ended March 31, 2020, which was relatively unchanged compared to the same period last year.

Although revenue and volume are closely linked to the strength of the U.S. economy and changes in how our customers use the mail, we have proactively targeted opportunities to grow our business. We continue to focus on our customers’ needs and have increased our investment in mail and package innovation. However, we also
recognize that revenue growth is constrained by laws and regulations restricting the types of products, services and pricing we may offer to our customers and the speed with which we can bring new products to market.

We anticipate that First-Class Mail will continue to lose volume in future years with the migration to electronic communication and transactional alternatives resulting from technological changes. To address the long-term trend that such changes have had on our First-Class Mail revenue and volume, we have been working with the mailing industry to slow the decline through mailing promotions and leveraging the high open-and-read rates of, for example, bills and statements for additional customer engagement and education.

Furthermore, due to the COVID-19 pandemic our First-Class Mail and Marketing Mail volumes began an accelerated decline in March 2020. The sudden drop in mail volumes, our most profitable revenue stream, is steep and may never fully recover to levels prior to the pandemic.

We have also focused on providing new services and innovating with Marketing Mail. We have expanded service offerings such as Informed Delivery, which enables customers to preview mail and manage packages scheduled to arrive as a means of merging digital and physical mail, as well as allowing mailers to launch interactive digital campaigns. Additionally, we are focusing on opportunities to pilot new products and innovate with customers and the mail industry to enhance the value of hard-copy communication. We believe these service offerings will further improve the value of both First-Class Mail and Marketing Mail.

Our Shipping and Packages category has historically experienced revenue and volume growth as a result of our successful efforts to compete in shipping services, including last-mile e-commerce fulfillment markets and Sunday delivery as well as end-to-end markets. We continue to focus on responding to customers’ needs by implementing solutions and maintaining strategic business partnerships that help us capitalize on the growing e-commerce business.

The COVID-19 pandemic has caused a recent surge in the nation’s use of e-commerce, resulting in higher Shipping and Packages volumes. However we do not expect the resulting increases in Shipping and Packages revenues to be sustainable or to offset losses in mail service revenue caused by COVID-19. Although the future is uncertain, we believe that the nation’s increased use of e-commerce is likely to plateau in the short term as the effects of the pandemic begin to subside, followed by a longer-term regression of e-commerce caused by a weakened U.S. economy.

Our Shipping and Packages category is subject to intense competition which significantly impacts both revenue and volume. Certain major customers continue to divert volume from our network by in-sourcing the last-mile delivery into their own networks. These customers are also aggressively pricing their products and services in order to fill their networks and grow package density.

We implemented price increases for certain Market-Dominant and Competitive services in January 2019 and 2020. Additionally, we implemented dimensional weighting provisions that amount to price increases for certain Shipping and Packages subcategories in June 2019.

**First-Class Mail**

First-Class Mail, presented in this report as a mail class and a Market-Dominant service category, includes cards, letters and flats. Prices of First-Class Mail, our most profitable service category, are the same regardless the geographic distance between the origination and delivery points. Because First-Class Mail is classified by law as Market-Dominant, price increases are generally subject to a price cap based on the Consumer Price Index for All Urban Consumers (“CPI-U”).

For the three months ended March 31, 2020, First-Class Mail revenue increased $89 million, or 1.4%, despite a volume decline of 29 million pieces, or 0.2%, compared to the same period last year. Revenue growth was the result of decennial mailings associated with the 2020 U.S. Census, otherwise revenue and volume would have each declined during the quarter. For the six months ended March 31, 2020, First-Class Mail revenue decreased $79 million, or 0.6%, and volume declined 600 million pieces, or 2.1%, compared to the same period last year. The change in revenue for both periods was less than the corresponding volume declines due to the January 2020 price increase applicable to certain Market-Dominant services. The most significant factor contributing to the
declining trend in First-Class Mail volume has been the continuing migration from mail to electronic communication and transaction alternatives.

Due to the COVID-19 pandemic, our First-Class Mail volume began to decline significantly in late March 2020, and it may never fully recover to levels prior to the pandemic. A protracted loss in customer demand for our services will continue to have a material effect on First-Class Mail revenue and volume.

Marketing Mail

USPS Marketing Mail (more commonly, Marketing Mail), presented as a mail class and a Market-Dominant service category, generally consists of advertising, newsletters, catalogs, small marketing parcels and other printed matter not required to be processed and delivered as First-Class Mail or Periodicals.

Between 2009 and 2016, Marketing Mail experienced relatively flat volume. However, Marketing Mail volume began to decline at a greater rate beginning in 2017 and continued to decline through the first half of 2018. Aside from a volume rebound between the second half of 2018 through the first quarter of 2019 that was driven by increases in political and election mail associated with the 2018 mid-term elections, Marketing Mail continued its volume decline through the remainder of 2019 and the first half of 2020, exacerbated by the COVID-19 pandemic.

For the three months ended March 31, 2020, Marketing Mail revenue decreased $94 million, or 2.5%, and volume declined 604 million pieces, or 3.4%, compared to the same period last year. For the six months ended March 31, 2020, Marketing Mail revenue decreased $347 million, or 4.1%, and volume declined approximately 2.3 billion pieces, or 5.9%, compared to the same period last year. For the three months ended March 31, 2020, our revenue and volume from political and election mail increased by approximately $100 million and 500 million pieces, respectively, compared to the same period last year, as we began to benefit from the impact of the 2020 elections during the second quarter of 2020. For the six months ended March 31, 2020, our revenue and volume from political and election mail decreased by approximately $140 million and 900 million pieces, respectively, compared to the same period last year, which benefited from the impact of the 2018 mid-term elections during the first quarter of 2019.

Due to the COVID-19 pandemic, many of our commercial customers, especially those with consumer-facing businesses, have been required to suspend their operations or operate at a lower capacity. As a result, our Marketing Mail volume began to decline significantly in March 2020, and it may never fully recover to levels prior to the pandemic. A protracted loss in customer demand for our services will continue to have a material effect on our Marketing Mail revenue and volume.

Marketing Mail is subject to intense competition, and price increases are currently generally capped at the rate of inflation. Marketing Mail volume is somewhat reflective of the cyclical nature of the U.S. economy, although targeted advertising campaigns can stimulate demand for this service, and our customers have used Marketing Mail to mail to more targeted prospects.
Shipping and Packages
The following table summarizes our operating revenue and volume for Shipping and Packages for the three and six months ended March 31, 2020, and 2019, by each service subcategory:

</table>

<sup>1</sup> Includes Priority Mail, a 1-3 business day delivery service; Priority Mail Express, an overnight delivery service available 365 days per year; and USPS Retail Ground, a retail-only Competitive service priced identically and functionally equivalent to Priority Mail for Zones 1-4.

<sup>2</sup> Includes Parcel Select, Parcel Return, and Marketing Mail Parcels.

<sup>3</sup> Includes First-Class Package Services - Retail and First-Class Package Services - Commercial.

Our Shipping and Packages category has historically experienced revenue and volume growth as a result of our successful efforts to compete in shipping services, including last-mile e-commerce fulfillment markets and Sunday delivery as well as end-to-end markets. However, this service category is subject to intense competition which significantly impacts both our revenue and volume. Shipping and Packages revenue and volume are historically greatest in the first quarter of the year due to the holiday shipping season.

For the three months ended March 31, 2020, Shipping and Packages revenue increased 7.1%, with a volume growth of 0.8%, compared to the same period last year. The volume increased due to a temporary surge in e-commerce resulting from the COVID-19 pandemic, and revenue outpaced volume increases due to the January 2020 price increases associated with certain Competitive services.

For the six months ended March 31, 2020, Shipping and Packages revenue increased 4.5%, despite a volume decline of 2.2%, compared to the same period last year. The revenue increases were largely due to the January 2020 price increases associated with certain Competitive services. The volume declines largely resulted from intense competition and certain major commercial customers and competitors delivering more of their own packages, compared to the same period last year, offset by the temporary surge in e-commerce resulting from the COVID-19 pandemic.

**Priority Mail Services**
Priority Mail Services is our Shipping and Packages subcategory that includes Priority Mail, Priority Mail Express and USPS Retail Ground. Priority Mail and Priority Mail Express services allow customers the ability to send documents and packages requiring expedited transportation and handling. While Priority Mail Services revenue has historically grown year-over-year, its service offerings are price sensitive and its growth rate has been lower than other Shipping and Packages subcategories due to intense competition.

Priority Mail Services accounted for our largest portion of Shipping and Packages revenue, representing approximately 46% of the total for the three and six months ended March 31, 2020, and 2019. However, Priority
Mail Services accounted for approximately 19% and 18% of the total Shipping and Packages volume for three and six months ended March 31, 2020, respectively, essentially unchanged compared to the same periods last year.

For the three months ended March 31, 2020, Priority Mail Services revenue grew 7.0%, on volume growth of 2.2%, compared to the same period last year. For the six months ended March 31, 2020, Priority Mail Services revenue grew 3.4%, despite a volume decline of 1.9%, compared to the same period last year. Revenue grew at a greater rate than volume for the three-month period and despite the volume decline for the six-month period, largely due to the January 2020 price increases applicable to Competitive services.

**Parcel Services**

Our Parcel Services subcategory includes Competitive services Parcel Select and Parcel Return, as well as Market-Dominant USPS Marketing Mail Parcels (more commonly, Marketing Mail Parcels). Parcel Select and Parcel Return services largely consist of last-mile deliveries, offered to large bulk shippers that perform their own sorting before dropping parcels deeper into our network.

For the three months ended March 31, 2020, revenue from Parcel Services increased 9.6%, on volume growth of 3.4%, compared to the same period last year. For the six months ended March 31, 2020, revenue from Parcel Services increased 6.3%, despite a volume decline of 0.8%, compared to the same period last year. This subcategory is primarily a last-mile service that bypasses much of our infrastructure and therefore is one of our lowest-priced package services, and as a result, produces a lower contribution per piece when compared to many of our other services. For the six months ended March 31, 2020, volume declined due to certain major commercial customers delivering more of their own packages. However, for the three months ended March 31, 2020, volume increased due to the temporary surge in e-commerce from the COVID-19 pandemic. Revenue grew at a greater rate than volume for the three-month period and despite the volume decline for the six-month period, largely due to the January 2020 price increases applicable to Competitive services.

**First-Class Package Services**

Our First-Class Package Services subcategory includes the competitively priced First-Class Package Service - Retail, a Competitive service targeted to retail customers for packages weighing up to 13 ounces, and First-Class Package Service - Commercial, a Competitive service targeted to commercial customers for packages weighing up to 16 ounces. This subcategory offers commercial customers that ship primarily lightweight fulfillment parcels the lowest-priced expedited end-to-end tracked package option in the marketplace. First-Class Package Services revenue and volume performance has historically experienced strong increases for the past several years, particularly from our commercial customers. These increases are primarily attributable to growth in e-commerce.

For the three months ended March 31, 2020, First-Class Package Services revenue increased 5.9%, despite a volume decline of 0.3%, compared to the same period last year. For the six months ended March 31, 2020, First-Class Package Services revenue increased 6.0%, despite a volume decline of 1.7%, compared to the same period last year. Revenue grew despite the volume declines, largely due to the January 2020 price increases applicable to Competitive services.

**Package Services**

Our Package Services subcategory is a Market-Dominant service that includes both Bound Printed Matter for materials up to 15 pounds and Library and Media Mail for materials up to 70 pounds. For the three months ended March 31, 2020, Package Services revenue decreased 5.2% on a volume decline of 10.7%, compared to the same period last year. For the six months ended March 31, 2020, Package Services revenue decreased 5.3% on a volume decline of 11.1%, compared to the same period last year. Revenue declined at a slower rate than volume for the three and six months ended March 31, 2020, due to the January 2020 price increase applicable to Market-Dominant services.

**International Mail**

Our International Mail category includes several services that enable customers, both domestic and abroad, to send international mail, including postcards, envelopes, flats and packages with either standard or express delivery options. “Outbound” services, which allow customers in the U.S. to send mail and packages to other countries, generate approximately two thirds of International Mail revenue, but “inbound” services are the opposite, generating two thirds of volume but only one third of the revenue. This is primarily due to the smaller size and lower rates for inbound international e-commerce packages.
For the three months ended March 31, 2020, International Mail revenue increased 2.4%, despite a volume decline of 11.7%, compared to the same period last year. For the six months ended March 31, 2020, International Mail revenue increased 0.4%, despite a volume decline of 9.1%, compared to the same period last year. These revenue increases were largely due to the January 2020 price increases applicable to Competitive services. The declines in both inbound and outbound volume were due to various competitive pricing, political and economic factors.

The U.S. is a member of the Universal Postal Union (“UPU”), a specialized agency of the United Nations that facilitates the exchange of international mail. We are the designated postal operator for the U.S. under the UPU, and payments to the designated postal operator for the delivery of foreign origin letter-post mails are known as "terminal dues”.

In September 2019, the UPU members had a special meeting -- known as the Extraordinary Congress -- to discuss the terminal dues system. During that meeting, UPU members agreed to establish a new remuneration system that will allow us to self-declare rates beginning in July 2020. Other foreign postal operators may also reciprocally apply rates at full-self-declared rates at that time.

In February 2020, we officially invoked our provision to self-declare rates beginning in July 2020.

Periodicals
Periodicals, also presented as a mail class and a Market-Dominant service category, includes services designed for publishers of newspapers, magazines and other periodical publications whose primary purpose is providing publications to subscribers or other users. For the three months ended March 31, 2020, Periodicals revenue decreased 11.1% and volume declined 12.2%, compared to the same period last year. For the six months ended March 31, 2020, Periodicals revenue decreased 9.4% and volume declined 9.8%, compared to the same period last year.

Periodicals revenue and volume have been in decline for more than a decade as trends in hard-copy reading behavior and shifts of advertising away from print have eroded this business. The Periodicals category is not expected to rebound as electronic content continues to grow in popularity with the public.

Other
Other services include ancillary services such as Certified Mail, PO Box services, and Return Receipt services. Also included in this category are money orders and passport services. Other services revenue decreased 1.2%, and 3.3% for the three and six months ended March 31, 2020, respectively, compared to the same periods last year.

OPERATING EXPENSES
In an effort to align our resources with anticipated future mail and package volume, we continue to aggressively manage operating expenditures under management’s control.

We originally designed our mail processing and distribution network to provide overnight delivery service of First-Class Mail within specified delivery areas for a much higher volume of mail than we are required to process and deliver today, and the network’s legacy capabilities are not completely aligned to today’s mail mix and volumes. Consequently, certain of our processing and distribution facilities continue to operate at less than full capacity. Our challenge to contain costs is also compounded by the increasing number of delivery points, which, when combined with lower mail volume, has resulted in a drop in the average number of pieces delivered per delivery point per day from approximately 5.5 pieces in 2007 to 3.4 pieces in 2019, a reduction of approximately 39%, and a further significant decline is expected in 2020.

Compensation and Benefits
Compensation and benefits is our largest operating expense category. These expenses consist of costs related to our active career and non-career employees other than retirement costs associated with U.S. government defined benefit pension programs and retiree health costs which are further discussed in Retirement benefits and Retiree Health Benefits, respectively.
Overall, our compensation and benefits expenses increased 1.0% for the three months ended March 31, 2020, but decreased 0.3% for the six months ended March 31, 2020, compared to the same periods last year. The following table presents compensation and benefits expenses for the three and six months ended March 31, 2020, and 2019:

</tbody>
</table>

Compensation

Compensation expense increased 0.6% for the three months ended March 31, 2020, but decreased 0.5% for six months ended March 31, 2020, compared to the same periods last year. The activity in both periods represents increases due to contractual wage adjustments and approximately 3.6 million hours attributable to the extra work day due to the leap year, offset by management’s efforts to align work hours with volume workloads.

Work Hours

For the three months ended March 31, 2020, total work hours were approximately 286 million, essentially unchanged compared to the same period last year. However, approximately 3.6 million hours, or 1.3%, were attributable to the extra work day due to the leap year in 2020. Were it not for the extra work day due to the leap year, work hours would have declined for the period.

For the six months ended March 31, 2020, total work hours were approximately 592 million, a decrease of 1.0%, compared to approximately 598 million total work hours for the six months ended March 31, 2019. This decrease was the result of management’s efforts to reduce work hours in line with volume workloads.

As a result of the COVID-19 pandemic, work hours began to decline in late March 2020 due to lower mail volumes and workforce availability, and we expect this trend to continue for the duration of the pandemic.

Workforce Composition

The number of career employees at March 31, 2020, was approximately 496,000, a decrease of approximately 1,500 employees, or 0.3%, compared to the same date a year ago. This decrease primarily reflected natural attrition, continued efforts to align our workforce with declining mail volume, offset by conversions of non-career employees to career status, in accordance with our contractual agreements.

The number of non-career employees at March 31, 2020, was approximately 129,500, a decrease of approximately 10,500 employees, or 7.5%, compared to the same date a year ago. This decrease primarily reflected management’s continued efforts to align our workforce with declining mail volume, and the conversions of non-career employees to career status, in accordance with our contractual agreements.

Collective Bargaining Agreements

On January 22, 2020, we reached a tentative agreement with the National Postal Mail Handlers Union, AFL-CIO (“NPMHU”) on a new three-year collective bargaining agreement, which the union membership ratified on April 8, 2020. The new contract went into effect on April 25, 2020, and will expire on September 20, 2022.

On March 10, 2020, a three-member arbitration panel reached a decision in our legally mandated binding interest arbitration process with the American Postal Workers Union, AFL-CIO (“APWU”), establishing the terms of a new collective bargaining agreement. The new contract went into effect on March 10, 2020, and will expire on September 20, 2021.
In September 2019, we agreed to extend contract negotiations relating to a new collective bargaining agreement with the National Association of Letter Carriers, AFL-CIO ("NALC"). The previous contract with the NALC expired on September 20, 2019, and negotiations with the NALC are at an impasse. The parties will continue to follow the current agreement until a new contract is reached through the dispute resolution process.

**Employee Health Benefits**

Our expense for employee health benefits (which includes the employer portion of Medicare taxes) is most significantly impacted by the number of employees electing coverage and the premium costs of the selected plans. Our active employees may participate in the Federal Employees Health Benefits ("FEHB") Program, which OPM administers. Separate from FEHB, we offer our own self-insured healthcare plan to certain non-career employees who are ineligible for FEHB.

Employee health benefits expense increased 3.2% and 0.8% for the three and six months ended March 31, 2020, compared to the same periods last year, driven by average premium increases of 4.0% in calendar year 2020, and partially offset by the lower contribution rate of the employer portion of healthcare premiums that we paid, by management efforts to provide employees with information and tools for selecting the health benefit plans that best meet their needs, and by the small decrease in number of career employees, as previously discussed.

Our share of healthcare premiums for our employees represented 71.9% of the total healthcare premium costs for both the three months ended March 31, 2020, and 2019. Our share of healthcare premiums for our employees represented 72.0% and 72.3% of the total healthcare premium costs for the six months ended March 31, 2020, and 2019, respectively. This decrease in our share of healthcare premium costs for employees during the six-month period was consistent with the terms of our contractual agreements.

**Social Security**

For the three and six months ended March 31, 2020, our Social Security costs increased 1.0% for the three months ended March 31, 2020, but decreased 0.4% for the six months ended March 31, 2020, compared to the same periods last year. These fluctuations were consistent with the general changes in compensation for the period, as described above in Compensation.

The CARES Act offers certain employers the ability to defer payment of the employer’s share of the Social Security payroll tax on wages incurred from March 27, 2020, through December 31, 2020. In accordance with this provision, we began deferring these payments in April 2020, and intend to continue the deferral for the remainder of calendar year 2020 for an estimated total deferral amount of approximately $1.6 billion. One half of these deferred payments would be due by December 31, 2021, and the other half by December 31, 2022.

**Thrift Savings Plan**

Career employees may participate in the Thrift Savings Plan ("TSP"), a defined contribution retirement savings and investment plan administered by the Federal Retirement Thrift Investment Board. Our TSP expenses are related only to our contributions for FERS employees who participate in the TSP. For these employees, we contribute 1% of basic pay and match voluntary employee contributions up to an additional 4% of basic pay.

For the three and six months ended March 31, 2020, our TSP matching costs increased 3.9% and 2.8%, respectively, compared to the same periods last year. The increase in expenses correlates to the changing workforce composition of CSRS and FERS employees.

**Retirement Benefits**

The majority of our career employees participate in one of two U.S. government defined benefit pension programs, CSRS and FERS, based on the starting date of their employment with us or another U.S. government employer. We incur normal costs (the amount determined by OPM representing the employer portion of retirement benefits for participating employees and their qualifying survivors, upon retirement, for each employee’s current year of service) for FERS employees; however, by law we do not pay normal costs for CSRS retirement benefits. FERS employees are further categorized as either FERS, FERS - Revised Annuity Employees (FERS - RAE), or FERS - Further Revised Annuity Employees (FERS - FRAE) depending on whether their date of hire was before, during,
Our retirement benefits expenses consist of three components: 1) FERS normal costs, 2) CSRS unfunded retirement benefits amortization, and 3) FERS unfunded retirement benefits amortization. These retirement benefits expense components are further described in detail in the sections below. The following table presents the retirement benefits expenses for the three and six months ended March 31, 2020, and 2019:

1 Expense for the accrual for the annual payment due to OPM by September 30 of the respective year, based on information provided by OPM, to amortize the unfunded CSRS retirement obligation. Payments are to be made through 2043 based on OPM invoices.

2 Expense for the accrual for the annual payment due to OPM by September 30 of the respective year, based on information provided by OPM, to amortize the unfunded FERS retirement obligation. Payments are to be made over a 30-year rolling period based on OPM invoices.

Our retirement benefits expenses increased 23.7% and 16.1% for the three and six months ended March 31, 2020, respectively, compared to the same periods last year. This increase was due to rising employer contributions rates for FERS normal cost, as well as increases in the CSRS and FERS unfunded retirement benefits amortization, as discussed below.

For additional information, see Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 9 - Retirement Plans.

**FERS Normal Costs**

We record our contributions to FERS normal costs as they are incurred. Any unpaid employer amounts at the end of a period, along with any employee amounts withheld but not remitted at the end of a period, are recorded as a current liability within Retirement benefits in the accompanying Balance Sheets.

As determined by OPM, our FERS normal cost contribution rates increased from 13.7% to 14.7% of basic pay for 2020, an increase of 7.3% from the prior year, affecting most of our FERS participants. As a result of this contribution rate increase, FERS normal cost expenses increased 8.6% and 7.6% for the three and six months ended March 31, 2020, respectively, compared to the same periods last year.

**CSRS and FERS Unfunded Retirement Benefits**

OPM periodically notifies us regarding its revaluation of unfunded CSRS and FERS retirement benefits. The amounts we record as expenses for our unfunded CSRS and FERS liabilities may be significantly impacted by changes in actuarial assumptions used by OPM to revalue the unfunded liabilities.

In October 2019, OPM provided an actuarial report projecting the annual amortization payments due September 30, 2020, to be $1.6 billion for CSRS and $1.1 billion for FERS.

On April 2, 2020, the Board of Actuaries of the CSRS, which oversees OPM’s calculation of actuarial liabilities for CSRS and FERS, lowered the discount rate used to calculate CSRS and FERS unfunded retirement liabilities from 4.25% to 4.0%. We have estimated that the impact of this change in discount rate on the annual CSRS and FERS amortization expense, will result in revised projected amortization payments due September 30, 2020, of approximately $1.8 billion for the CSRS obligation and approximately $1.3 billion for the FERS obligation, increases of $181 million and $226 million, respectively.

Quarter II, 2020 Report on Form 10-Q - United States Postal Service-42

USPS-20-1215-A-003414
Accordingly, we have accrued $495 million and $899 million for the three and six months ended March 31, 2020, for the CSRS amortization expense, reflecting an adjustment of approximately $91 million for the revised assumptions. Likewise, we have accrued $378 million and $643 million for the three and six months ended March 31, 2020, for the FERS amortization expense, reflecting an adjustment of approximately $113 million for the revised assumptions.

Our CSRS and FERS unfunded retirement benefits amortization expenses increased 45.5% and 28.6% for the three and six months ended March 31, 2020, respectively, compared to the same periods last year, due to higher estimated annual amortization payments resulting from revised actuarial assumptions and discount rate changes.

We expect to receive invoices from OPM for the actual amounts due September 30, 2020, for CSRS and FERS during the fourth quarter of 2020, and the amounts invoiced could differ from the projected amounts, due to further changes in experience, discount rates and/or actuarial assumptions as of the calculation date.

**Retiree Health Benefits**

We participate in federal employee benefit programs for retiree health benefits. Retirees who participated in FEHB for the five years immediately preceding their retirement may continue to participate in the plan during retirement. Qualifying survivors of retirees are also eligible to receive benefits.

In accordance with PAEA, since the beginning of 2017, the PSRHBF has funded our share of retiree health benefit premiums. Also since 2017, we have been obligated to pay into the PSRHBF the actuarially determined normal costs of retiree health benefits attributable to the service of our employees, as well as the amortization payment for the PSRHBF unfunded liability. Our total retiree health benefits expenses therefore consist of both the normal and the amortization costs. We record the required contributions to the plan as an expense in the period in which each contribution is due.

Based on preliminary calculations provided by OPM in October 2019, we have projected the PSRHBF amortization payment amount due September 30, 2020, to be $900 million, and therefore accrued expenses of $225 million and $450 million for the three and six months ended March 31, 2020, respectively. We expect to receive the invoice from OPM for the actual amount due during the fourth quarter of 2020 and this may differ from the original projected amount due to changes in discount rates, actuarial assumptions and experience as of the invoice calculation date.

Also, based on preliminary calculations provided by OPM in October 2019 using updated discount rate assumptions, we have estimated the amount of our PSRHBF normal cost payment due September 30, 2020, to be $4.0 billion, and therefore accrued expenses of $1.0 billion and $2.0 billion for the three and six months ended March 31, 2020, respectively. We expect to receive the invoice from OPM for the actual amount due during the fourth quarter of 2020 and this may differ from the original projected amount due to changes in discount rates, actuarial assumptions and experience as of the invoice calculation date.

For the three and six months ended March 31, 2020, our total retiree health benefits expenses decreased by $50 million, or 3.9%, and $100 million, or 3.9%, respectively, compared to the same periods last year, all of which was attributable to a decrease in the estimated amortization payment for the PSRHBF unfunded liability.

For additional information, see Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 10 - Health Benefits Plans, Retirees.

**Workers’ Compensation**

Our employees injured on the job are covered by the Federal Employees’ Compensation Act (“FECA”), administered by the U.S. Department of Labor’s (“DOL”) Office of Workers’ Compensation Programs, which makes all decisions regarding injured workers’ eligibility for benefits. We are legally mandated to participate in the federal workers’ compensation program. Our workers’ compensation expense reflects the impacts of changes in discount rates, as well as the actuarial valuation of new workers’ compensation cases and revaluation of existing ones. We reimburse the DOL for all workers’ compensation benefits paid to or on behalf of our employees, plus an administrative fee.
On a daily basis, we focus on costs that can be managed in the course of normal business operations. Certain aspects of workers' compensation can be managed through human resource initiatives, safety measures, and training. Other workers' compensation costs cannot be managed in the course of normal business operations and are less predictable, including expenses caused by actuarial revaluation and discount rate changes. We subtract the cash payments made by DOL on behalf of workers' compensation obligations, which are relatively predictable, from total workers' compensation expense in order to determine the non-cash component of workers' compensation expense, a non-GAAP financial measure.

The following table presents the components of workers' compensation expense, including the cash payments made by DOL on behalf of workers' compensation obligations, for the three and six months ended March 31, 2020, and 2019:

<table>
<thead>
<tr>
<th></th>

</tr>
<tr>
<td><strong>Total workers' compensation non-cash expense</strong></td>
<td>$2,625 $401</td>
<td>$2,092 $961</td>
</tr>
</tbody>
</table>

For the three months ended March 31, 2020, the portion of workers' compensation expense due to the impact of discount rate changes increased approximately $2.2 billion, compared to the same period last year. For the six months ended March 31, 2020, the portion of workers' compensation expense due to the impact of discount rate changes increased approximately $1.1 billion, compared to the same period last year. These changes are the result of changes in interest rates, outside of management's control.

The combined costs of new workers' compensation cases and revaluation of existing workers' compensation cases increased by $52 million and $14 million for the three and six months ended March 31, 2020, compared to the same periods last year. Changes in actuarial valuation are primarily attributable to the combined impacts of routine changes in actuarial estimation, the progression of existing cases, and updated COLA assumptions, which are largely outside of management's control.

Under FECA, workers' compensation claims for many types of injuries cannot be settled through lump-sum payments, and in some instances, compensation may be paid over many years. Federal law grants COLA rates to those claims, and these factors result in substantially higher costs to us than would likely result if we managed our own claims. Additionally, since we do not manage the FECA program, we have no ability to control the significant administrative costs associated with managing the claims and payments process.

For additional information, see Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 11 - Workers' Compensation.

**Transportation**

Transportation expenses include the costs we incur to transport mail and packages between our facilities, comprising highway, air, and international transportation contracts, plus contract delivery services.

With the exception of contract delivery services, our costs to deliver mail and other products to delivery points are not included within Transportation but in Compensation and benefits for employee costs and in Other operating expenses for fuel, vehicle maintenance and repair, and other costs. Furthermore, transportation expenses do not
include the compensation and related costs of employees responsible for transporting mail and packages between our facilities.

Variations in the volume and weight of mail transported, the mode of transportation used, and fuel prices have significant impact on transportation expenses.

The components of transportation expenses for the three and six months ended March 31, 2020, and 2019, are presented in the following table:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Highway</td>
<td>$ 1,083</td>
<td>$ 1,100</td>

<td>23</td>
<td>24</td>
</tr>
<tr>
<td><strong>Total transportation expenses</strong></td>
<td><strong>$ 2,008</strong></td>
<td><strong>$ 2,000</strong></td>
<td><strong>$ 4,405</strong></td>
<td><strong>$ 4,342</strong></td>
</tr>
</tbody>
</table>

Overall, transportation expenses increased 0.4% and 1.5% for the three and six months ended March 31, 2020, compared to the same periods last year.

Highway transportation expenses decreased 1.5% for the three months ended March 31, 2020, but increased 3.4% during the six months ended March 31, 2020, compared to the same periods in last year. For the three and six months ended March 31, 2020, highway contract expenses decreased, primarily due to a decrease in the number of miles driven and lower average diesel fuel prices. However, results for the six months ended March 31, 2020, include a one-time adjustment resulting from our adoption of ASC 842, whereby we recorded transportation expenses associated with embedded leases in certain of our transportation contracts during the first quarter of 2020 (see Note 2 - Recent Accounting Pronouncements for additional disclosures regarding our adoption of ASC 842).

Air transportation expenses increased 3.9% for the three months ended March 31, 2020, but decreased 0.6% during the six months ended March 31, 2020, compared to the same periods last year. For the six months ended March 31, 2020, the slight decrease was due primarily to lower volumes and lower average jet fuel prices. However, both volumes and average jet fuel prices rose in the three months ended March 31, 2020, leading to an increase in air transportation expenses for the period.

International transportation expenses are related only to outbound services that allow customers in the U.S. to send mail and packages to other countries. For the three and six months ended March 31, 2020, international transportation expenses decreased 1.4% and 2.9% compared to the same periods last year, primarily due to decreases in our international service volumes.
**Other Operating Expenses**

Other operating expenses for the three and six months ended March 31, 2020, and 2019, are detailed in the following table:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>

<td>$4,894</td>
</tr>
</tbody>
</table>

Other operating expenses increased by 5.3% and 2.5% for the three and six months ended March 31, 2020, compared to the same periods in the prior year. While these aggregate changes were relatively immaterial, the period-over-period changes in the various components of other operating expenses for the three and six months ended March 31, 2020, were also relatively immaterial.

**LIQUIDITY AND CAPITAL RESOURCES**

Our liquidity consists of unrestricted cash and cash equivalents plus available borrowing capacity. As of March 31, 2020, and September 30, 2019, we held unrestricted cash and cash equivalents of $9.0 billion and $8.8 billion, respectively. During the six months ended March 31, 2020, our average daily liquidity balance under our statutory borrowing capacity was $12.3 billion, representing approximately 56 days of liquidity available, which we define as liquidity divided by estimated average cash disbursements (including capital expenditures) per calendar day (365 days per year).

We face certain risks caused by the COVID-19 pandemic, including the disruptions to our revenue and business operations, which will have a material effect on our financial condition and results of operations. Quarantines, shelter-in-place orders, and travel and logistics restrictions in connection with the outbreak have affected our retail and commercial customers, as well as suppliers and mail service providers. While the disruption is expected to be temporary, its duration remains uncertain. A protracted loss in customer demand for our services is likely to have a material effect on our financial condition, results of operations and liquidity. The sudden drop in mail volumes, our most profitable revenue stream, is steep and may never fully recover to levels prior to the pandemic.

Notwithstanding our $15.0 billion statutory debt limit, and $3.0 billion annual limitation on new borrowing, the CARES Act allows us to borrow up to an additional $10.0 billion in financing from the U.S. Treasury to fund operating expenses. The U.S. Treasury may lend up to this amount at our request, upon terms and conditions mutually agreed upon. However we have no assurance that the U.S. Treasury will agree to provide such financing or if it will be provided upon favorable terms.

We estimate that the COVID-19 pandemic may increase our net operating loss by more than $22.0 billion over the next eighteen months, threatening our ability to operate. If we are able to borrow the $10.0 billion from the U.S. Treasury as provided by the CARES Act, we expect that we will have sufficient liquidity to continue to operate through April 2021. However, if we are unable to secure this $10.0 billion in financing, we expect to be able to continue to operate only through September 2020, absent additional defaults.

Although our liquidity has generally increased since 2012, it remains insufficient to support an organization with approximately $80 billion in annual operating expenses, to make capital investments necessary for continuity of
operations and to prepare for unexpected contingencies. Much of this liquidity improvement as of March 31, 2020, would not have occurred but for the temporary exigent surcharge, which allowed us to collect a total of $4.6 billion in incremental revenue between January 2014 and April 2016.

Aside from the temporary exigent surcharge, we defaulted on $33.9 billion of statutorily specified PSRHBF prefunding payments from 2012 through 2016, and did not make the approximately $495 million in payments due for FERS unfunded liabilities between 2014 and 2016, or the approximately $21.0 billion in payments due for PSRHBF normal cost and amortization on PSRHBF, CSRS and FERS unfunded liabilities between 2017 and 2019, in order to preserve liquidity, and to ensure that our ability to fulfill our primary universal service mission was not placed at undue risk. The combination of these defaults and non-payments, plus the incremental revenue associated with the temporary exigent surcharge referred to above, and the increased revenue from growth in our Shipping and Packages business, are the primary reasons why our cash and available liquidity has improved.

**CASH FLOW ANALYSIS**

**Operating Activities**
Cash provided by operating activities decreased $148 million for the six months ended March 31, 2020, compared to the same period last year, largely the result of timing differences in cash payments for compensation and benefits.

**Investing Activities**
We invested $741 million in the purchase of property and equipment for the six months ended March 31, 2020, which is an increase of $82 million, or 12.4%, compared to the same period last year. As of the date of this report, the amount of our full year projected capital expenditures is approximately $2.0 billion, which is approximately $300 million less than our original forecast of $2.3 billion. We anticipate that this may further decline if equipment and information technology investments and other programs are deferred to future years as a result of COVID-19.

**Financing Activities**
Except as described otherwise in this quarterly report, the nature and amounts of our payment obligations under our debt, capital and operating lease agreements, purchase commitments and other liabilities as of March 31, 2020, have not materially changed from those described in our Annual Report.

As of both March 31, 2020, and September 30, 2019, the aggregate principal balance of our outstanding debt was $11.0 billion, consisting of a combination of fixed-rate note and floating-rate notes, all of which we consider long-term debt.

**DEBT**
As of March 31, 2020, our statutory borrowing capacity was $4.0 billion, of which $1.0 billion would require repayment by September 30, 2020, to comply with our annual debt increase limits. Furthermore, notwithstanding our $15.0 billion statutory debt limit, and the $3.0 billion annual limitation on new borrowing, the CARES Act allows us to borrow up to an additional $10.0 billion in financing from the U.S. Treasury to fund operating expenses. The U.S. Treasury may lend up to this amount at our request, upon terms and conditions mutually agreed upon.

In 1974, we began issuing debt through individual debt agreements to the Federal Financing Bank (“FFB”), a government-owned corporation under the general supervision of the Secretary of the Treasury. In 1999, we entered into a Note Purchase Agreement (“NPA”) with the FFB to establish standardized procedures for issuing debt. Under the NPA, we were able to issue a series of notes with established terms and conditions by providing two days prior notice. Also under the NPA, we could make borrowings against two annually renewable revolving credit line facilities. These note arrangements and credit line facilities provided the flexibility to borrow short or long-term, using floating or fixed-rate instruments.

The NPA was extended each year through September 30, 2018, and in shorter increments between that date and August 31, 2019, at which time the NPA expired. This expiration did not affect the terms of any of our outstanding debt as of March 31, 2020, all of which was issued under the NPA.
If we are unable to renew or replace the NPA with the FFB, we have no assurance that we could obtain alternative debt financing on comparable terms. However, we believe that we will be able to maintain adequate liquidity through existing and new financing arrangements, as necessary and allowed by statute, to fund our operations.

On April 1, 2020, we drew $3.4 billion on a revolving credit facility with the FFB that survived the expiration of the NPA. In order to comply with the annual net increase limit, we must repay $400 million from this credit facility by September 30, 2020. Given that the credit facility has a maximum term of up to one year, we must repay any outstanding balance of the credit facility by April 1, 2021. The credit facility’s interest rate was determined by the U.S. Treasury based on the market rates of similar instruments as of the day of the funding request.

LIQUIDITY OUTLOOK

We are constrained by laws and regulations, including the PAEA, which restrict revenue sources and mandates certain expenses. Statutorily mandated expenses include amortization payments to provide full funding of retirement benefits under the CSRS and the FERS, as well as FERS normal costs, described in greater detail in Note 9 - Retirement Plans. Additionally, the PAEA established the PSRHBF and mandated certain obligations for paying normal costs, the present value of the estimated retiree health benefits attributable to active employees’ current year of service, and amortization payments for full prefunding of retiree health benefits. These prefunding obligations, described in greater detail in Note 10 - Health Benefits Plans, are unlike expenses imposed on most other federal entities or private-sector businesses that offer such benefits.

We continue to face challenges from the ongoing migration of mail to electronic alternatives, and we are legally limited under current law in how we can price our products and streamline our legacy business model. Our operations will require significant capital investment over the next few years to modernize and improve our processing and delivery infrastructure and update our delivery fleet in order to continue to meet our primary statutory obligation to provide prompt, reliable and efficient postal services to the nation.

Irrespective of our challenges resulting from the COVID-19 pandemic, absent legislative and regulatory change, we project continuing annual net losses in the future. As a result of these losses and our liquidity concerns, we will unlikely have sufficient cash balances to meet all of our existing legal obligations and make all of the critical investments in our infrastructure that are necessary for operational continuity and that have been deferred in recent years.

In the event that circumstances leave us with insufficient liquidity to continue operating, we may deem it necessary to implement additional contingency plans to ensure that our primary mission is fulfilled and that mail deliveries continue. These measures may require us to prioritize payments to the FFB, our employees and suppliers ahead of some payments to fund retirement and retiree health benefits, as we have done in the past.

With the anticipated continued migration to electronic communication and transactional alternatives, we continue to pursue long-term financial sustainability by focusing on the following items:

1. Continued efforts to control costs and drive efficiencies, innovate to keep mail relevant and generate increased revenue;
2. Postal Service reform legislation that addresses our overall cost structure and enhances our revenue-generating opportunities; and
3. Favorable outcome of the PRC’s ten-year review (discussed below), which would allow additional pricing flexibility.

Although we continue to inform the executive branch, Congress, the PRC and other stakeholders of the immediate and long-term financial challenges we face, we have no assurances that our requests will result in meaningful reform in the foreseeable future.
**PRC Ten-year Review**

In December 2016, the PRC initiated its ten-year review of the system for regulating rates and classes for Market-Dominant products as required by the PAEA. The purpose of the ten-year review was to determine if the system for regulating such rates and classes has achieved the objectives Congress established in the PAEA. As part of this review, the PRC evaluated the CPI-U price cap for our Market-Dominant services.

On December 1, 2017, the PRC announced its initial decision in connection with its ten-year review. The PRC concluded that the rates system has not achieved its objectives and needs to be changed, primarily because it does not enable us to achieve our mission of providing prompt, reliable, and efficient universal postal services to the American people in a financially sustainable manner. The PRC’s proposed changes to the system do not include the elimination of the CPI-U price cap; however, its proposal does provide for some additional pricing authority within a price cap system.

On December 5, 2019, the PRC announced a revised decision in connection with its ten-year review. The PRC’s proposed changes to the system still do not include the elimination of the CPI-U price cap. Moreover, while the revised proposal does include adjustment factors as we had requested to provide more flexibility for the regulatory system to better deal with future exogenous changes, the new proposal no longer includes any “true-up” authority to provide us with a reasonable opportunity to cover all of our costs. We continue to assert that the price cap should be eliminated, and that if the PRC insists on maintaining a price cap that the system must include both a resetting of rates so they are compensable, as well as adjustment factors to ensure the system is sufficiently flexible going forward.

The PRC was expected to issue a final rule after considering the comments and reply comments of any interested stakeholders, which were due no later than February 3, 2020, and March 4, 2020, respectively. As of the date of this report, the PRC has not issued a final rule. Additional information regarding the ten-year review may be found at the PRC website: https://www.prc.gov/press-releases/prc-revises-proposals-second-rulemaking-modify-rate-system-classes-market-dominant.

**2020 and Beyond**

Irrespective of our challenges resulting from the COVID-19 pandemic, we anticipate that given our ongoing liquidity concerns, and without legislative action and regulatory reform, we may not be able to pay all legally required obligations and also invest in much-needed capital expenditures in 2020 and future years that are necessary to ensure our ability to fulfill our primary mission. Furthermore, we believe that continuing productivity improvements alone will not be sufficient to address the challenges presented by declining Market-Dominant volume and revenue, and any future growth in operating revenue would unlikely keep pace with increased costs.

**Legally Required Obligations**

In addition to our previously discussed obligations for unfunded retirement and retiree health benefits of approximately $8.0 billion due on September 30, 2020, we expect to pay the DOL approximately $1.3 billion in October 2020, representing the workers’ compensation claims paid by DOL for the chargeback year July 1, 2019, to June 30, 2020, plus the estimated administrative fee.

The CARES Act offers certain employers the ability to defer payment of the employer’s share of the Social Security payroll tax on wages incurred from March 27, 2020, through December 31, 2020. In accordance with this provision, we began deferring these payments in April 2020, and intend to continue the deferral for the remainder of calendar year 2020 for an estimated total deferral amount of approximately $1.6 billion. One half of these deferred payments would be due by December 31, 2021, and the other half by December 31, 2022.

**Capital Investments**

We currently estimate that our required cash outlays for capital investments necessary to ensure that we can continue to perform our universal service obligation will amount to approximately $1.3 billion for the remainder of 2020, and an additional $11.0 billion for years 2021 through 2024, as we plan to invest in a new fleet of delivery vehicles and other appropriate capital assets. Although our future projections include these capital cash outlays, future cash flow from operations alone may not generate the cash needed to enable us to fully fund such necessary capital investments.
Mitigating Circumstances
We continue to pursue strategies within our control to increase operational efficiency and improve liquidity. We have managed capital in recent years by spending only what we believed was essential to maintain our existing facilities and service levels, and to increase efficiencies. However, continued increases in capital investment are necessary to upgrade our facilities, fleet of vehicles and processing equipment in order to remain operationally viable. Aggressive management of the business operations, as well as legislative and regulatory reforms that will enable us to increase revenue and reduce costs, will all be necessary to restore our financial health.

Our status as an independent establishment of the executive branch that does not receive tax dollars for our operations presents unique requirements and restrictions, but also potentially mitigates some of the financial risk that would otherwise be associated with a cash shortfall. With annual total revenue in 2019 of approximately $71 billion, a financially sound Postal Service continues to be vital to U.S. commerce.

The U.S. economy benefits greatly from us and the many businesses that provide the printing and mailing services that we support. Disruption of the mail would cause undue hardship to businesses and consumers as it would significantly inhibit the remittance of payments through the mail, and in the event of a cash shortfall, the U.S. government would likely prevent us from significantly curtailing or ceasing operations. We continue to inform the executive branch, Congress, the PRC and other stakeholders of the immediate and long-term financial challenges we face and the legislative and regulatory changes that are required to restore our financial stability.

LEGISLATIVE, REGULATORY AND RELATED MATTERS

TASK FORCE ON THE UNITED STATES POSTAL SYSTEM
As previously reported, on April 12, 2018, the President issued Executive Order 13829 to establish a Task Force on the United States Postal Service ("Task Force"), to be chaired by the Secretary of the Treasury, as Secretary and as Chairman of the FFB, or his designee. In accordance with the Executive Order, the Task Force conducted an evaluation of our operations and finances, and submitted its report to the President in August 2018.

There has been no further congressional activity related to the President’s Task Force report on the Postal Service subsequent to the March 12, 2019, Senate Homeland Security and Governmental Affairs Committee hearing titled, “A Path to Sustainability: Recommendations from the President’s Task Force on the United States Postal Service.”

LEGISLATIVE UPDATE
As a self-funded independent establishment of the executive branch, our business model and operations are significantly influenced by congressional oversight and legislation. Additionally, Congress intended for us to be governed by an eleven-member Board of Governors ("Board") which generally consists of our Postmaster General, Deputy Postmaster General and nine independent governors ("Governors"). The President appoints the Governors with the advice and consent of the Senate. We have five Senate-confirmed Governors currently in office.

Legislation
Several bills introduced in response to the COVID-19 pandemic have financial implications for us.

On March 18, 2020, the President signed the Families First Coronavirus Response Act, enacted as Public Law 116-127, which provides new paid sick leave that may be used by an employee in COVID-19 situations for themselves, or to care for sick family members, as well as Family and Medical Leave Act-protected unpaid and paid leave if a school/child care is closed.

On March 27, 2020, the President signed the CARES Act, which allows the Postal Service to borrow up to an additional $10.0 billion in financing from the U.S. Treasury to fund operating expenses. The law stipulates that the Secretary of Treasury may lend up to this amount at the request of the Postal Service, upon terms and conditions mutually agreed upon by the Secretary and the Postal Service.

H.R. 6425, the Protect our Post Offices Act, introduced on March 31, 2020, would also appropriate $25.0 billion for payment to the Postal Service Fund for revenue forgone due to the COVID-19 pandemic. The bill was referred to the House Committees on Appropriations and Budget.
Postal Service Reform
The 116th Congress has not introduced any major Postal Service reform bills to date. Legislative and regulatory reforms remain critical for us to meet the needs of the American public, and we will continue to work with Congress and all of our stakeholders to enact Postal Service reform legislation.

Board of Governors Nominations
On March 2, 2020, the President submitted to the Senate the nomination of Donald Lee Moak to serve on the Board for a term expiring December 8, 2022. The nomination was referred to the Senate Homeland Security and Governmental Affairs Committee for its consideration. The nomination of William Zollars to serve for a term expiring December 8, 2022, is also pending the committee’s consideration.

FAIR VALUE MEASUREMENTS
As required by authoritative accounting literature, certain fair value disclosures for the periods ended March 31, 2020, and September 30, 2019, are discussed in Item 1. Financial Statements, Notes to Unaudited Financial Statements. We did not recognize gains as a result of valuation measurements during the three and six months ended March 31, 2020. All recognized losses have been incorporated into our financial statements as of March 31, 2020. See Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 13 - Fair Value Measurement.

RELATED PARTY TRANSACTIONS
As disclosed throughout this quarterly report, we have significant transactions with other U.S. government entities, which are considered related parties for reporting purposes. For a more detailed description, see Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 5 - Related Parties.

CRITICAL ACCOUNTING POLICIES AND ESTIMATES
The preparation of financial statements in accordance with GAAP requires management to make significant judgments and estimates to develop certain amounts reflected and disclosed in the financial statements. In many cases, alternative policies or estimation techniques may be used.

We maintain a thorough process to review the application of accounting policies and to evaluate the appropriateness of the many estimates that are required to prepare the financial statements of a large organization. However, even under optimal circumstances, estimates routinely require adjustment based on changing circumstances and new or better information.

The accounting policies deemed either the most judgmental or which involve the selection or application of alternative accounting policies, and are material to the interim financial statements, are described in Critical Accounting Estimates contained in Management’s Discussion and Analysis of Financial Condition and Results of Operations of the Annual Report. Management normally discusses the development and selection of accounting policies and estimates with the Audit and Finance Committee of the Board.

RECENT ACCOUNTING STANDARDS
See Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 2 - Recent Accounting Pronouncements, for a description of recently announced accounting standards.

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK
In the normal course of business we are exposed to market risks from changes in commodity prices, certain foreign currency exchange rates and interest rates. Our commodity price risk consists primarily of exposure to changes in prices for diesel fuel, unleaded gasoline and aircraft fuel for transportation of the mail, and fuel for heating facilities. We have foreign currency risk related to the settlement of terminal dues and transit fees with foreign postal administrations for international mail.
We have not used derivative commodity or financial instruments to manage market risk related to commodities, foreign currency exchange or interest rate fluctuations for debt instruments. Additionally, we do not purchase or hold derivative financial instruments for speculative purposes.

We also have provisions in our debt agreements that allow us to prepay our $11.0 billion debt at any time at a price determined by the Secretary of the Treasury, based on prevailing interest rates in the U.S. Treasury market at the time of repayment.

See Item 7A. Quantitative and Qualitative Disclosures about Market Risk in the Annual Report for additional information.

ITEM 4. CONTROLS AND PROCEDURES

Management is responsible for the preparation, integrity and fair presentation of our financial statements.

DISCLOSURE CONTROLS

We maintain disclosure controls and procedures that are designed to ensure that information required to be disclosed in quarterly and annual reports is recorded, processed, summarized, and reported within the time frames specified by PAEA, and that this information is accumulated and communicated to our management, including the Postmaster General and Chief Financial Officer, as appropriate, to allow timely decisions regarding required disclosure.

We carried out an evaluation under the supervision and with the participation of management, including the Postmaster General and the Chief Financial Officer, of the effectiveness of the design and operation of disclosure controls and procedures as of March 31, 2020. Based upon and as of the date of the evaluation, the Postmaster General and the Chief Financial Officer concluded that our disclosure controls and procedures were effective.

INTERNAL CONTROLS

We have made no changes in our internal control over financial reporting during the three months ended March 31, 2020, that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.
PART II. OTHER INFORMATION

ITEM 1. LEGAL PROCEEDINGS

For a discussion of legal proceedings affecting us, please refer to Item 1. Financial Statements, Notes to Unaudited Financial Statements and Note 8 - Commitments and Contingencies, as well as our Annual Report.

ITEM 1A. RISK FACTORS

The following risk factor supplements Item 1A. Risk Factors of our Annual Report.

The occurrence of a global pandemic or other adverse public health developments could have a material and adverse effect on our business operations, financial condition and results of operations.

In March 2020, the World Health Organization declared COVID-19 a global pandemic, which has since spread throughout the U.S. Given our mandate to provide universal postal services to the nation, we provide an essential service and have continued to process and deliver mail and packages during the pandemic.

We expect the COVID-19 pandemic to have a material effect on our financial condition, results of operations and liquidity. Quarantines, shelter-in-place orders, and travel and logistics restrictions in connection with the outbreak have affected retail and commercial customers, as well as suppliers and mail service providers. The Postal Service relies on the sale of postal products and services to fund its operations, and these sales have declined significantly as a result of the pandemic. The sudden drop in mail volumes, the Postal Service’s most profitable revenue stream, has been steep and may never fully recover to levels prior to the pandemic.

CERTIFICATION PURSUANT TO
RULES 13a-14(a) AND 15d-14(a) UNDER THE SECURITIES AND EXCHANGE ACT OF 1934, AS ADOPTED PURSUANT TO SECTION 302 OF THE SARBANES-OXLEY ACT OF 2002.

I, Megan J. Brennan, certify that:

1. I have reviewed this quarterly report on Form 10-Q of the United States Postal Service (“Postal Service”);  
2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;  
3. Based on my knowledge, the financial statements and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the Postal Service as of, and for, the periods presented in this report;  
4. The Postal Service’s other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the Postal Service and have:
   a. Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the Postal Service, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;  
   b. Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;  
   c. Evaluated the effectiveness of the Postal Service’s disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and  
   d. Disclosed in this report any change in the Postal Service’s internal control over financial reporting that occurred during the Postal Service’s most recent fiscal quarter (the Postal Service’s fourth fiscal quarter in the case of an Annual Report) that has materially affected, or is reasonably likely to materially affect, the Postal Service’s internal control over financial reporting; and  
5. The Postal Service’s other certifying officer and I have disclosed based on our most recent evaluation of internal control over financial reporting, to the Postal Service’s independent registered accounting firm and the Audit and Finance Committee of the Postal Service’s Board of Governors:
   a. All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the Postal Service’s ability to record, process, summarize and report financial information; and  
   b. Any fraud, whether or not material, that involves management or other employees who have significant role in the Postal Service’s internal control over financial reporting.

Quarter II, 2020 Report on Form 10-Q - United States Postal Service-56

USPS-20-1215-A-003428
CERTIFICATION PURSUANT TO
18 U.S.C. SECTION 1350, AS ADOPTED PURSUANT TO

In connection with the Quarterly Report of the United States Postal Service ("Postal Service") on Form 10-Q for the period ended March 31, 2020, (the "Report"), I, Megan J. Brennan, certify, pursuant to 18 U.S.C. Section 1350, as adopted pursuant to Section 906 of the Sarbanes-Oxley Act of 2002 that:

(1) The Report fully complies with the requirements of Section 13(a) or 15(d) of the Securities Exchange Act of 1934; and

(2) The information contained in the Report fairly presents, in all material respects, the financial condition and results of operations of the Postal Service.

FORM 10-Q

UNITED STATES POSTAL REGULATORY COMMISSION
Washington, D.C. 20268-0001

UNITED STATES POSTAL SERVICE

WASHINGTON, D.C. 20268-0001

UNITED STATES POSTAL SERVICE
(Exact name of registrant as specified in its charter)

Washington, D.C. 41-0760000
(State or other jurisdiction of incorporation or organization) (I.R.S. Employer Identification No.)

475 L’Enfant Plaza, S.W.
Washington, D.C. 20260
(Address of principal executive offices) (ZIP Code)

(202) 268-2000
(Registrant’s telephone number, including area code)

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes ☐ No ☐ Not Applicable ☑

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to rule 405 of Regulation S-T ($232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files). Yes ☐ No ☐ Not Applicable ☑

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, a smaller reporting company or an emerging growth company. See the definitions of "large accelerated filer," "accelerated filer," "smaller reporting company" and "emerging growth company" in Rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer ☐ Accelerated filer ☐ Non-accelerated filer ☐
Smaller reporting company ☐ Emerging growth company ☐ Not applicable ☑

If an emerging growth company, indicate by check mark if the registrant has elected not to use the extended transition period for complying with any new or revised financial accounting standards provided pursuant to Section 13(a) of the Exchange Act. ☐

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). Yes ☐ No ☑

Securities registered pursuant to Section 12(b) of the Act:

NOTES TO UNAUDITED FINANCIAL STATEMENTS

NOTE 1 - BASIS OF PRESENTATION

Interim Financial Statements
The accompanying unaudited interim financial statements of the United States Postal Service (the “Postal Service”) have been prepared in accordance with accounting principles generally accepted in the United States (“GAAP”) for interim financial information and with the instructions to Form 10-Q and Rule 10-01 of the U.S. Securities and Exchange Commission Regulation S-X. These financial statements should be read in conjunction with the Postal Service’s financial statements for the year ended September 30, 2019, included in its Annual Report on Form 10-K (“Annual Report”) filed with the Postal Regulatory Commission (“PRC”) on November 14, 2019, and do not include all information and footnotes which are normally included in the Annual Report. Except as otherwise specified, all references to years are to fiscal years beginning October 1 and ending September 30, and quarters are quarters within fiscal years 2020 and 2019.

In the opinion of management, the accompanying unaudited interim financial statements reflect all material adjustments, including recurring adjustments, necessary to fairly present the financial position as of March 31, 2020, the results of operations for the three and six months ended March 31, 2020, and 2019, the changes in net deficiency for the six months ended March 31, 2020, and 2019, and cash flows for the six months ended March 31, 2020, and 2019. Operating results for the three and six months ended March 31, 2020, are not necessarily indicative of the results that may be expected for all of 2020. Mail volume and revenue are historically greatest in the first quarter of the year, which includes the holiday mailing season.

Reclassifications
Certain reclassifications have been made to the financial statements for the three and six months ended March 31, 2019, as well as subsequent footnotes, to conform to the current period presentation. Specifically, certain retirement benefit expenses have been reclassified from Compensation and benefits and separately identified as Retirement benefits within Operating expenses in the accompanying unaudited Statements of Operations. In addition, unfunded retirement benefits amortization expenses associated with the Civil Service Retirement System (“CSRS”) and the Federal Employee Retirement System (“FERS”) have been reclassified from Unfunded retirement benefits amortization to Retirement benefits within Operating expenses in the accompanying unaudited Statements of Operations.

The liabilities associated with these retirement benefits have also been reclassified from Compensation and benefits and separately identified as Retirement benefits within Current liabilities in the balance sheets. In addition, the unfunded retirement benefits liabilities associated with CSRS and FERS have been reclassified from Unfunded retirement benefits to Retirement benefits within Current liabilities in the balance sheets. Corresponding reclassifications have been made within Changes in current assets and liabilities in the accompanying unaudited Statements of Cash Flows.

These reclassifications had no effect on previously reported total operating expenses, loss from operations or net loss. See Note 9 - Retirement Plans for further disclosure pertaining to retirement benefits.

NOTE 2 - RECENT ACCOUNTING PRONOUNCEMENTS

Recently Adopted Accounting Pronouncement
In February 2016, the Financial Accounting Standards Board (“FASB”) issued Accounting Standards Update 2016-02 Leases, which has since been codified in Accounting Standards Codification (“ASC”) 842, Leases (“ASC 842”). The new standard requires an entity to record most leases in its balance sheets but continue to recognize expenses in its statements of operations in a manner similar to current accounting practices. The new standard requires a lessee to recognize a lease liability for the obligation to make lease payments and a right-of-use (“ROU”) asset for the right to use the underlying asset for the lease term. Expenses associated with operating leases are recognized on a straight-line basis and include embedded interest and amortization components. The Postal Service recognizes expenses associated with operating leases as rent expense or transportation expense within Other operating expenses or Transportation, respectively, in the statements of operations. The Postal Service recognizes expenses associated with finance leases (formerly capital leases under previous guidance) with both
interest and amortization expenses and presents these separately in the statements of operations. As such, finance leases generally have higher expenses in the earlier periods of the lease term.

The Postal Service adopted ASC 842 for its 2020 fiscal year (beginning October 1, 2019). In connection with the adoption of ASC 842, the Postal Service has made necessary changes to relevant policies, processes, information systems and internal controls. For transition purposes, the Postal Service has elected the option not to restate comparative financial statements under the modified retrospective transition model. This option allows the application of the standard to all leases in effect as of the effective date (October 1, 2019) or commencing thereafter, without any restatement impact on the comparative financial statement balances. Accordingly, all comparative financial statements enclosed herein are presented in accordance with the previous ASC 840, Leases (“ASC 840”), with related ASC 840 disclosures provided in Note 12 - Leases.

In implementing ASC 842, the Postal Service has elected the package of practical expedients which permits carrying forward historical accounting positions around lease identification, lease classification and initial direct costs for all leases commencing prior to October 1, 2019. The Postal Service has also made a policy election to not separate the lease and non-lease components for all types of underlying assets and to exclude its short-term leases from the ROU asset and lease liability balances.

The Postal Service adopted ASC 842 on October 1, 2019. The implementation of ASC 842 resulted in an opening balance sheet adjustment, as of October 1, 2019, to recognize $4.4 billion in right-of-use assets and lease liabilities relating to operating leases as follows:

<table>
<thead>
<tr>

</tbody>
</table>

The implementation of ASC 842 did not have a material impact on the Postal Service’s Statement of Operations or Statement of Cash Flows and did not have any impact on the Postal Service’s Statement of Changes in Net Deficiency. See Note 12 - Leases and Item 4. Controls and Procedures for additional disclosures pertaining to ASC 842.

**Accounting Pronouncements Issued but not Adopted**

**Accounting Standards Update 2016-13 Financial Instruments - Credit Losses**

In June 2016, the FASB issued Accounting Standards Update 2016-13 Financial Instruments - Credit Losses, which has since been codified in ASC 326, Financial Instruments - Credit Losses (“ASC 326”). The new standard requires entities to measure expected credit losses on financial instruments and other commitments by replacing the incurred loss impairment methodology in current GAAP with a methodology that reflects expected credit losses and requires consideration of a broader range of reasonable and supportable information to inform credit loss estimates.

The Postal Service intends to adopt ASC 326 for its 2021 fiscal year (beginning October 1, 2020) and the quarters therein. The standard is applicable to the Postal Service’s valuation of its receivables. The Postal Service is currently evaluating the impact of adopting this standard on its financial statements and related disclosures.
Accounting Standards Update 2018-13 Fair Value Measurement
In August 2018, the FASB issued Accounting Standards Update 2018-13 Fair Value Measurement: Disclosure Framework - Changes to the Disclosure Requirements for Fair Value Measurement, which has since been codified in ASC 820, Fair Value Measurement (“ASC 820”). The new standard modifies the disclosure requirements for fair value measurements by adding, modifying or removing certain disclosures.

The Postal Service intends to adopt ASC 820 for its 2021 fiscal year (beginning October 1, 2020) and the quarters therein. The standard is applicable to the Postal Service’s fair value measurements of its revenue forgone installment receivable and its long-term debt, as described further in Note 13 - Fair Value Measurement. UnderASC 820, certain disclosures are required to be applied on a retrospective basis and others on a prospective basis. The Postal Service is currently evaluating the impact of adopting this standard on its financial statements and related disclosures.

Accounting Standards Update 2018-15 Intangibles - Goodwill and Other - Internal-Use Software
In August 2018, the FASB issued Accounting Standards Update 2018-15 Intangibles - Goodwill and Other - Internal-Use Software (Subtopic 350-40) - Customer’s Accounting for Implementation Costs Incurred in a Cloud Computing Arrangement, which has since been codified in ASC Subtopic 350-40, Intangibles - Goodwill and Other - Internal-Use Software (“ASC 350-40”). This is an update to a standard the FASB issued in April 2015 for entities evaluating the accounting for fees paid by a customer in a cloud computing (hosting) arrangement by providing guidance for determining when such arrangement includes a software license.

If a cloud computing arrangement includes a license for internal-use software, then the software license is accounted for by the customer in accordance with ASC 350-40. This generally means that an intangible asset is recognized for the software license and, to the extent that the payments attributable to the software license are made over time, a liability also is recognized. If a cloud computing arrangement does not include a software license, the entity should account for the arrangement as a service contract. This generally means that the fees associated with the hosting element (service) of the arrangement are expensed as incurred.

The Postal Service intends to adopt ASC 350-40 for its 2021 fiscal year (beginning October 1, 2020) and the quarters therein. The Postal Service is currently evaluating the impact of adopting this standard on its financial statements and related disclosures.

NOTE 3 - LIQUIDITY
The Postal Service’s liquidity consists of unrestricted cash and cash equivalents plus available borrowing capacity.

Cash
The Postal Service generates its cash almost entirely through the sale of postal products and services. As of March 31, 2020, and September 30, 2019, the Postal Service held unrestricted cash and cash equivalents of $9.0 billion and $8.8 billion, respectively. See Note 6 - Cash, Cash Equivalents and Restricted Cash for further disclosures pertaining to cash.

The Postal Reorganization Act, as amended by Public Laws 101-227 and 109-435 (the "PRA"), authorizes the Postal Service to raise cash through the issuance of debt obligations. The Postal Service is limited by statute to annual net increases in debt of $3.0 billion calculated as of the end of each fiscal year, and total debt of $15.0 billion. In 1974, the Postal Service began issuing debt through individual debt agreements to the Federal Financing Bank (“FFB”), a government-owned corporation under the general supervision of the Secretary of the Treasury.

COVID-19 Considerations
In March 2020, the World Health Organization declared a novel strain of coronavirus (“COVID-19”) a global pandemic, which has since spread throughout the U.S. Given its mandate to provide universal postal services to the nation, the Postal Service provides an essential service as part of the nation’s critical infrastructure and has continued to process and deliver mail and packages during the pandemic.

The Postal Service expects the COVID-19 pandemic to have a material effect on its financial condition, results of operations and liquidity. Quarantines, shelter-in-place orders and travel and logistics restrictions in connection with the outbreak have affected retail and commercial customers, as well as suppliers and mail service providers. The
Postal Service relies on the sale of postal products and services to fund its operations, and these sales declined significantly in late March 2020 as a result of the pandemic, and the impact has continued to worsen since then. The sudden drop in mail volumes, the Postal Service’s most profitable revenue stream, has been steep and may never fully recover to levels prior to the pandemic.

On March 27, 2020, the President signed the Coronavirus Aid, Relief, and Economic Security Act, enacted as Public Law 116-136 (the “CARES Act”). Notwithstanding the $15.0 billion statutory debt limit, and the $3.0 billion limit on annual borrowing, the CARES Act allows the Postal Service to borrow up to an additional $10.0 billion in financing from the U.S. Treasury to fund operating expenses. The U.S. Treasury may lend up to this amount at the request of the Postal Service, upon terms and conditions mutually agreed upon. However, the Postal Service has no assurance that the U.S. Treasury will agree to provide such financing or if it will be provided upon favorable terms.

The Postal Service estimates that the COVID-19 pandemic may increase its net operating loss by more than $22.0 billion over the next eighteen months, threatening its ability to operate. If the Postal Service is able to borrow the $10.0 billion from the U.S. Treasury as provided by the CARES Act, it expects that it will have sufficient liquidity to continue operations through April 2021. However, if the Postal Service is unable to secure this $10.0 billion in financing, it expects to be able to continue to operate only through September 2020.

Subsequent Events
The CARES Act offers certain employers the ability to defer payment of the employer’s share of the Social Security payroll tax on wages incurred from March 27, 2020, through December 31, 2020. In accordance with this provision, the Postal Service began deferring these payments in April 2020, and intends to continue the deferral for the remainder of calendar year 2020 for an estimated total deferral amount of approximately $1.6 billion. One half of these deferred payments would be due by December 31, 2021, and the other half by December 31, 2022.

On April 1, 2020, the Postal Service drew $3.4 billion on a revolving credit facility with the FFB that survived the expiration of the Note Purchase Agreement (“NPA”). In order to comply with the annual net increase limit, the Postal Service must repay $400 million from this credit facility by September 30, 2020. Given that the credit facility has a maximum term of up to one year, the Postal Service must repay any outstanding balance of the credit facility by April 1, 2021. The credit facility's interest rate was determined by the U.S. Treasury based on the market rates of similar instruments as of the day of the funding request.

Debt
As of both March 31, 2020, and September 30, 2019, the Postal Service had a combination of fixed-rate and floating-rate notes outstanding with various maturities totaling $11.0 billion. As of March 31, 2020, the Postal Service’s statutory borrowing capacity was $4.0 billion, of which $1.0 billion would require repayment by September 30, 2020, to comply with the annual debt net increase limit.

In 1999, the Postal Service entered into the NPA with the FFB to establish standardized procedures for issuing debt. Under the NPA, the Postal Service was able to issue a series of notes and revolving credit line facilities with established terms and conditions by providing two days prior notice. These note arrangements and credit line facilities provided the flexibility to borrow short or long-term, using floating or fixed-rate instruments.

The NPA was extended each year through September 30, 2018, and in shorter increments between that date and August 31, 2019, at which time the NPA expired. This expiration did not affect the terms of any of the Postal Service's outstanding debt as of March 31, 2020, all of which was issued under the NPA. As a contractual matter, the FFB continued to lend to the Postal Service under each commitment and line of credit until it expired. If the Postal Service is unable to renew or replace the NPA with the FFB, it has no assurance that it could obtain alternative debt financing on comparable terms.
Liquidity Concerns
The Postal Service is constrained by laws and regulations, including the Postal Accountability and Enhancement Act ("PAEA"), which restrict revenue sources and mandate certain expenses.

The Postal Service is required, either by law or by union contract, to participate in U.S. government pension and health and benefits programs for employees and retirees, including the Federal Employees Health Benefit ("FEHB") program, CSRS and FERS, which the Office of Personnel Management ("OPM") administers. Statutorily mandated expenses include amortization payments to provide full funding of retirement benefits under CSRS and FERS, as well as FERS normal costs, described in greater detail below and in Note 9 - Retirement Plans. Additionally, the PAEA established the Postal Service Retiree Health Benefits Fund ("PSRHBF") and mandated certain obligations for paying normal costs, the present value of the estimated retiree health benefits attributable to active employees' current year of service, and amortization payments for full prefunding of retiree health benefits. These prefunding obligations, described in greater detail below and in Note 10 - Health Benefits Plans, are unlike expenses imposed on most other federal entities or private-sector businesses that offer such benefits.

The Postal Service reported operating expenses of approximately $80 billion in 2019 and has incurred cumulative net losses of $83.1 billion from 2007 through March 31, 2020.

Notwithstanding the challenges resulting from the COVID-19 pandemic, absent legislative and regulatory change, the Postal Service projects continuing annual net losses in the future. As a result of these losses and its liquidity concerns, the Postal Service will unlikely have sufficient liquidity to meet all of its existing legal obligations when due while also reducing its debt and making the critical infrastructure investments that have been deferred in recent years.

In the event that circumstances leave the Postal Service with insufficient liquidity, it would likely be required to implement additional contingency plans to ensure that its primary mission is fulfilled and that mail deliveries continue. These measures may require the Postal Service to prioritize payments to the FFB, employees and suppliers ahead of some payments to fund retirement and retiree health benefits, as has been done in the past.

Business Model Challenges and Constraints
Market-Dominant services, which accounted for approximately 66% of the Postal Service’s annual operating revenues in 2019, are currently subject to a price cap as measured by the Consumer Price Index for All Urban Consumers ("CPI-U"). However, the Postal Service’s costs are not similarly constrained. A large portion of its cost structure cannot be altered expeditiously due to the Postal Service’s universal service obligation. Further, the number of delivery points continues to grow by approximately one million per year, which drives up delivery costs. When combined with the impact of lower mail volume, the average number of pieces delivered per delivery point per day has decreased from approximately 5.5 pieces in 2007 to 3.4 pieces in 2019, a decline of approximately 39%, and a further significant decline is expected in 2020.

Many employee and retiree benefit costs are mandated by law and cannot be altered without legislative change. Under current law, the Postal Service is generally unable to increase prices sufficiently to offset increased costs, and is likewise constrained by law from reducing many of its costs or from pursuing many alternate sources of revenue.

Aside from its universal service obligation, a significant factor contributing to Postal Service losses is the ongoing decline in the volume of Market-Dominant products and services, and those declines are being exacerbated by the COVID-19 pandemic. Specifically, declines in First-Class Mail are largely the result of changes in consumers' and businesses' use of mail resulting from the continuing migration to electronic communication and transactional alternatives, which have taken place over the last decade and are expected to continue. After experiencing relatively flat volume between 2009 and 2016, beginning in 2017, Marketing Mail volume has generally been challenged by commercial mailers' increasing use of digital and mobile advertising, and more recently by the COVID-19 pandemic, although this class has benefited from strong political and election mail volumes, particularly in the second half of 2018 and the first quarter of 2019.

The Postal Service’s Shipping and Packages category has historically provided revenue and volume growth as a result of its successful efforts to compete in shipping services, including last-mile e-commerce fulfillment markets.
and Sunday delivery as well as end-to-end markets. However, this service category is subject to intense competition which significantly impacts both revenue and volume. Certain major customers of the Postal Service had begun diverting volume from the Postal Service’s network by in-sourcing last-mile delivery. Competitors in the package delivery market are aggressively pricing their products and services in order to fill their networks and grow package density. However, as a result of the temporary surge in e-commerce growth driven by the COVID-19 pandemic, some of these customers increased their volume to the Postal Service’s network during March 2020 due to their delivery capacity constraints.

Because the Postal Service provides its services primarily through its employees, its costs are heavily concentrated in wages and benefits for both current employees and retirees. These costs are significantly impacted by contractual wage increases, employee health benefit premium increases, and statutorily mandated retirement and workers’ compensation programs. Some of these costs have historically increased at a higher rate than inflation.

**Past Due Obligations**
The following table presents the total expenses accrued but unpaid by the Postal Service as of September 30, 2019, related to retiree health benefits, CSRS and FERS and the fiscal years in which the accruals were recorded:

<table>

\(^1\) The 2012 to 2016 period amount includes $5.8 billion for 2016, $5.7 billion for 2015, $5.7 billion for 2014, $5.6 billion for 2013 and $11.1 billion for 2012.

\(^2\) The 2012 to 2016 period amount includes $247.6 million for 2016, $240.9 million for 2015 and $6.7 million for 2014.

**Mitigating Circumstances**
The Postal Service continues to pursue strategies within its control to increase operational efficiency and improve liquidity. The Postal Service has managed capital in recent years by spending what it believed was essential to maintain its existing facilities and service levels, to ensure employee safety and to increase efficiencies. However, continued increases in capital investment are necessary to upgrade its facilities, fleet of vehicles and processing equipment in order to remain operationally viable. Irrespective of the challenges resulting from the COVID-19 pandemic, aggressive management of the business operations, as well as legislative and regulatory reforms that will enable it to increase revenue and reduce costs, will all be necessary to restore the Postal Service to financial health.

The Postal Service’s status as an independent establishment of the executive branch that does not receive tax dollars for its operations presents unique requirements and restrictions, but also potentially mitigates some of the financial risk that would otherwise be associated with a cash shortfall. With annual total revenue in 2019 of approximately $71 billion, a financially sound Postal Service continues to be vital to U.S. commerce.

The U.S. economy benefits greatly from the Postal Service and the many businesses that provide the printing and mailing services that it supports. Disruption of the mail would cause undue hardship to businesses and consumers as it would significantly inhibit the remittance of payments through the mail, and in the event of a cash shortfall, the U.S. government would likely prevent the Postal Service from significantly curtailing or ceasing operations. The Postal Service continues to inform the executive branch, Congress, the PRC and other stakeholders of the immediate and long-term financial challenges it faces and the legislative and regulatory changes that are required to restore its financial stability.
NOTE 4 - REVENUE RECOGNITION
The Postal Service generates the majority of its revenue from contracts associated with the processing and delivery of different types of mail and packages, both domestically and internationally, which generally occur over a relatively short period of time (e.g., several days).

Disaggregation of Revenue
The following table summarizes the Postal Service’s disaggregated operating revenue for the three and six months ended March 31, 2020, and 2019, by each service category:

* Prior period amounts for certain service categories include reclassifications of amounts amongst service categories to conform to current period presentation. These reclassifications are immaterial for each affected category, and had no effect on total operating revenue for the period.

Satisfaction of Performance Obligations
A performance obligation is a promise in a contract to transfer a distinct good or service to the customer. A contract’s transaction price is allocated to each distinct performance obligation and recognized as revenue when, or as, the performance obligation is satisfied.

First-Class Mail, Marketing Mail, Shipping and Packages, International Mail and Periodicals are categorized as Mailing and Shipping services for purposes of satisfying performance obligations. The Postal Service recognizes revenue for Mailing and Shipping services as it fulfills its obligation to process and deliver each mailpiece and the customer mail sender/recipient receives and consumes the benefits of these services.

Other revenue includes PO Box services, Return Receipts, Insurance, Other Ancillary Services, Shipping and Mailing Supplies, Collect on Delivery, Registered Mail, Stamped Envelopes and Cards, Money Orders and other goods and services. The Postal Service recognizes revenue for the majority of these services over time as the customer receives and consumes the benefits of the service. The revenue for a small portion of certain goods or services in this service category is recognized at a point in time when the goods or services are provided to the customer.

The vast majority of the Postal Service’s contracts include only one performance obligation. However, if a contract is separated into more than one performance obligation, the total transaction price for each performance obligation is allocated in an amount based on the estimated relative stand-alone selling prices of the promised goods or services underlying each performance obligation. The majority of the goods or services sold by the Postal Service have observable stand-alone sales prices. Further, payment for the majority of the goods and services is received up front.

If the Postal Service were unable to complete delivery to the destination point, another entity would not need to re-perform the entire portion of delivery already performed by the Postal Service. Accordingly, control from the Postal Service to the customer transfers over time for the vast majority of services the Postal Service offers, and revenue is recognized based on the progress of the completion of the performance obligations.
**Variable Consideration**
The Postal Service offers certain contracts to its customers that contain various types of customer incentives or other provisions that can either increase or decrease the transaction price. Customer incentives include discounts, money back guarantees, rebates, refunds or incentive payments. The other provisions include performance penalties. The Postal Service uses the expected value approach to estimate variable consideration to which it expects to be entitled.

**Contract Modifications**
The Postal Service considers contract modifications to exist when the modification either creates new enforceable rights and obligations or alters the existing arrangement. Contract modifications do not add distinct services; they are typically used to change the prices that the Postal Service charges its customer for existing services. These contract modifications are accounted for prospectively as the remaining performance obligations are executed.

**Principal vs. Agent Consideration**
The Postal Service utilizes third parties to assist with the transportation of mailpieces between different points as part of the delivery process. Based on its evaluation of the transfer of control model, the Postal Service has determined that it acts as the principal rather than the agent within these arrangements.

**Contract Liabilities**
The vast majority of the Postal Service’s contract liabilities consist of Deferred revenue-prepaid postage and prepaid PO Box and Caller Service fees. Deferred revenue-prepaid postage is an estimate of postage that has been sold, but not yet used by customers. The Postal Service recognizes revenue over time as the Postal Service delivers mailpieces. Because payments for postage are collected in advance of the satisfaction of related performance obligations, the Postal Service defers and reports this unearned revenue as Deferred revenue-prepaid postage in its balance sheet. Stamp sales and metered postage account for the majority of Deferred revenue-prepaid postage. The liability also includes an estimate for mail that is in-transit within the Postal Service network.

The prepaid PO Box and Caller Service fees consist of the payments received from customers for PO Box fees at the beginning of their contracts. The Postal Service defers and reflects this unearned revenue as prepaid PO Box and Caller Service fees within Other current liabilities in the accompanying Balance Sheets. Revenue is recognized over time as customers use the PO Box and Caller Services over the terms of their contracts.

The following table presents the balances of the Postal Service’s contract liabilities, including Deferred revenue-prepaid postage and prepaid PO Box and Caller Service fees, as of March 31, 2020, and September 30, 2019, respectively:

</tbody>
</table>

1 Included within Operating revenue in the accompanying unaudited Statements of Operations.
2 Included within Operating expenses in the accompanying unaudited Statements of Operations.
3 Represents interest imputed on the revenue forgone installment receivable as well as interest generated on U.S. Treasury instruments and other cash equivalents held with the Federal Reserve Bank of New York. Included within Interest and investment income in the accompanying unaudited Statements of Operations.
4 Incurred on debt issued to the FFB, and included within Interest expense in the accompanying unaudited Statements of Operations.

**NOTE 6 - CASH, CASH EQUIVALENCIES AND RESTRICTED CASH**

The following table provides a reconciliation of Cash and cash equivalents and Restricted cash reported in the balance sheets as of March 31, 2020, and 2019, respectively, and as of September 30, 2019, and 2018, respectively (to disclose the opening balances), that sum to the totals of the same such amounts presented in the accompanying unaudited Statements of Cash Flows for the six months ended March 31, 2020, and 2019:

<table>
<thead>
<tr>
<th></th>
<th>March 31, 2020</th>
<th>September 30, 2020</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cash and cash equivalents</td>
<td>$ 8,987</td>
<td>$ 8,108</td>
</tr>
<tr>
<td>Restricted cash</td>
<td>472</td>
<td>546</td>
</tr>
<tr>
<td>Total cash, cash equivalents and restricted cash</td>
<td>$ 9,459</td>
<td>$ 8,654</td>
</tr>
</tbody>
</table>

**Restricted cash** represents Postal Service cash that is not available for general use. This includes cash originated from forfeitures or seizures related to consumer fraud or other criminal activity related to the mail and either held for third-party beneficiaries or awaiting disposition. **Restricted cash** also includes funds for use in restricted activities such as congressional appropriation for Postal Service obligations to the PRC and the United States Postal Service Office of Inspector General, or that are otherwise restricted.

The Postal Service holds its **Cash and cash equivalents** and **Restricted cash** with the Federal Reserve Bank of New York and invests its excess cash, when available, in highly-liquid, short-term investments issued by the U.S. Department of the Treasury.

**NOTE 7 - PROPERTY AND EQUIPMENT, NET**

Assets within Property and equipment, net in the accompanying Balance Sheets are recorded at cost, which includes the interest on borrowings used to finance construction of major capital additions, less allowances for depreciation and amortization. Interest capitalized during both the three and six months ended March 31, 2020, and 2019, was not significant. Fixed assets are depreciated over estimated useful lives ranging from 3 to 40 years using the straight-line method.

The net book values of assets classified as held for sale were approximately $6 million and $10 million as of March 31, 2020, and September 30, 2019, respectively, and are included within Property and equipment, net in the accompanying Balance Sheets.

For the three months ended March 31, 2020, and 2019, depreciation and amortization expense was $423 million and $424 million respectively, and impairment charges were de minimis. For the six months ended March 31, 2020, and 2019, depreciation and amortization expense was $854 million and $841 million respectively, and impairment charges were de minimis. These items are included within Other operating expenses in the accompanying unaudited Statements of Operations.
NOTE 8 - COMMITMENTS AND CONTINGENCIES

Collective Bargaining Agreements
On January 22, 2020, the Postal Service reached a tentative agreement with the National Postal Mail Handlers Union, AFL-CIO ("NPMHU") on a new three-year collective bargaining agreement, which the union membership ratified on April 8, 2020. The new contract went into effect on April 25, 2020, and will expire on September 20, 2022.

On March 10, 2020, a three-member arbitration panel reached a decision in the Postal Service’s legally mandated binding interest arbitration process with the American Postal Workers Union, AFL-CIO ("APWU"), which established the terms of a new collective bargaining agreement. The new contract went into effect on March 10, 2020, and will expire on September 20, 2021.

In September 2019, the Postal Service agreed to extend contract negotiations relating to a new collective bargaining agreement with the National Association of Letter Carriers, AFL-CIO ("NALC"). The previous contract with the NALC expired on September 20, 2019, and negotiations with the NALC are at an impasse. The Postal Service and the NALC will continue to follow the current agreement until a new contract is reached through the dispute resolution process.

Contingent Liabilities
The Postal Service’s contingent liabilities consist primarily of claims resulting from labor and employment matters; asset retirement obligations and environmental matters; property damage and injuries on Postal Service properties; and issues arising from Postal Service contracts, personal claims and traffic accidents. Each quarter, the Postal Service evaluates each claim to determine its potential liability. If the Postal Service determines that an unfavorable outcome from a new claim is both probable and reasonably estimable, it records a liability for the amount. Preexisting claims are also reviewed and adjusted quarterly for resolutions or revisions to prior estimates based on new facts and circumstances.

The Postal Service is from time to time involved in other litigation incidental to the conduct of its business, none of which is expected to be material to its financial condition or operations.

Provision for Losses
The Postal Service has made adequate provision for probable losses arising from all claims. The following table presents contingent liabilities by current and noncurrent portions and by category, as of March 31, 2020, and September 30, 2019:

<table>
<thead>
<tr>

<td>$321</td>
<td>$336</td>
</tr>
</tbody>
</table>

¹ Included within Payables and accrued expenses in the accompanying Balance Sheets.
² Included within Other noncurrent liabilities in the accompanying Balance Sheets.
**Reasonably Possible Contingencies**

The Postal Service does not accrue for contingencies which it deems reasonably possible of an unfavorable outcome. These ranged in amount from approximately $175 million to $1.0 billion at March 31, 2020, and from approximately $150 million to $1.0 billion at September 30, 2019.

**Class Action Litigation**

As previously reported, on January 14, 2010, the Equal Employment Opportunity Commission’s (“EEOC”) Office of Federal Operations (“OFO”) certified the case *McConnell v. Brennan* (first instituted in 2006 as *McConnell v. Potter*) as a class action against the Postal Service, with the class consisting of permanent-rehabilitation and limited-duty Postal Service employees who the Postal Service assessed under the National Reassessment Process (“NRP”) between the dates of May 5, 2006, and July 1, 2011. The Postal Service utilized the NRP to ensure employees receiving workers’ compensation benefits were placed in jobs consistent with their abilities, and that records regarding employees injured on the job were correct.

The *McConnell* case alleges violations of the Rehabilitation Act of 1973 resulting from the NRP’s failure to provide a reasonable accommodation, the NRP's wrongful disclosure of medical information, the NRP's creation of a hostile work environment, and the NRP’s adverse impact on disabled employees. The class is seeking injunctive relief and damages of an uncertain amount.

In 2015, the Administrative Judge assigned to handle the *McConnell* case granted in-part both the Class Agent's and the Postal Service's motions for summary judgment. In her decision, the Administrative Judge found that the NRP violated the Rehabilitation Act. The Postal Service appealed this decision to the OFO, and the OFO denied this appeal in 2018. The Postal Service implemented the OFO’s order, and notified all class members of their right to file an individual claim for relief. Class members were allowed thirty days to submit claims to the Postal Service's National Equal Employment Opportunity Investigative Services Office. The claims submission deadline has now passed and the dispute process for individual claims is currently underway before a newly assigned EEOC Administrative Judge.

The class members have the right to pursue individual claims. Should they be successful in establishing liability and damages, the ultimate outcome in this case could have a material impact on the Postal Service's financial results.

**Other**

The U.S. is a member of the Universal Postal Union (“UPU”), a specialized agency of the United Nations that facilitates the exchange of international mail. The Postal Service is the designated postal operator for the U.S. under the UPU, and payments to the designated postal operator for the delivery of foreign origin letter-post mails are known as “terminal dues”.

In September 2019, the UPU members had a special meeting -- known as the Extraordinary Congress -- to discuss the terminal dues system. During that meeting, UPU members agreed to establish a new remuneration system that will allow the Postal Service to self-declare rates beginning in July 2020. Other foreign postal operators may also reciprocally apply rates at full-self-declared rates at that time.

In February 2020, the Postal Service officially invoked its provision to self-declare rates beginning in July 2020, creating an obligation to pay the UPU the amount of 40 million Swiss Francs (“CHF”), or approximately $41 million, based on the prevailing exchange rate on March 31, 2020. This amount will be payable over five years in annual increments of 8 million CHF, with the first payment due between July and December 2020.

The Postal Service considers the right to self-declare rates as an intangible asset recorded in *Other assets* in the accompanying unaudited Balance Sheet at March 31, 2020, and its amortization starts in July 2020 when the self-declared rates are in effect. The current portion of the obligation is recorded in *Payables and accrued expenses* and the noncurrent portion of the obligation is recorded in *Other noncurrent liabilities* in the accompanying unaudited Balance Sheet at March 31, 2020, respectively.
NOTE 9 - RETIREMENT PLANS

The majority of career employees participate in one of two U.S. government defined benefit pension programs, CSRS and FERS, which OPM administers. These plans provide retirement, death and disability benefits for eligible employees based on specific eligibility and participation requirements, vesting periods and benefit formulas. Each employee’s participation in either plan is based on the starting date of employment with the Postal Service or another U.S. government entity.

As government-sponsored benefit plans, CSRS and FERS are not subject to the provisions of the Employee Retirement Income Security Act of 1974, as amended. Likewise, because the Postal Service cannot direct the costs, benefits or funding requirements of these plans, it accounts for program expenses under multiemployer plan accounting rules. As such, the Postal Service records required contributions to the plans as an expense in the period in which each contribution is due. For FERS, the Postal Service contributes to the plan an amount established by OPM as the employer portion of retirement benefits for participating employees and their qualifying survivors, upon retirement, for each employee’s current year of service, which is considered the FERS normal cost. As further discussed below, the Postal Service is not required to pay the normal cost for those employees who participate in CSRS.

Career employees may also participate in the Thrift Savings Plan (“TSP”), a defined contribution retirement savings and investment plan administered by the Federal Retirement Thrift Investment Board. The Postal Service’s TSP expenses relate only to its contributions for FERS employees who participate in the TSP.

CSRS provides a basic annuity plan benefit to employees hired before January 1, 1984. CSRS Offset provides Social Security benefits in addition to its basic annuity plan for employees hired between January 1, 1984, and January 1, 1987. CSRS and CSRS Offset employees may also participate in the TSP, although the Postal Service does not match contributions for these participants.

The PAEA suspended the Postal Service’s employer contributions to CSRS that would otherwise have been required under Title 5, Section 8334(a)(1) of the U.S. Code, although CSRS employees continue to contribute to the plan.

Effective January 1, 1987, FERS covers employees hired since December 31, 1983, and FERS employees are covered by an annuity, Social Security and TSP benefits. For FERS employees who participate in TSP, the Postal Service contributes 1% of basic pay and matches voluntary employee contributions up to an additional 4% of basic pay. The Postal Service recognizes Social Security and TSP expenses as they are incurred and records them within Compensation and benefits in the accompanying unaudited Statements of Operations. A liability is established for any contribution due and unpaid at the end of each reporting period and is included within Compensation and benefits in the accompanying Balance Sheets.

FERS employees are further categorized as either FERS, FERS - Revised Annuity Employees (“FERS-RAE”), or FERS - Further Revised Annuity Employees (“FERS-FRAE”) depending on whether their date of hire was before, during, or after calendar year 2013, respectively.

The following table presents the employee and employer contributions, as a percentage of employee basic pay, during the three and six months ended March 31, 2020, and 2019:

<table>
<thead>
<tr>
<th></th>
<th>March 31, 2020</th>
<th>March 31, 2019</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Employee Contributions</td>
<td>Postal Service Contributions</td>
</tr>
<tr>
<td>CSRS</td>
<td>7.0%</td>
<td>—%</td>
</tr>
<tr>

</tbody>
</table>

1 Expense for the accrual for the annual payment due to OPM by September 30 of the respective fiscal year, to amortize the unfunded CSRS retirement obligation. The 2020 amounts are based on updated Postal Service estimates resulting from revised actuarial assumptions. Payments are to be made through 2043 based on OPM invoices.

2 Expense for the accrual for the annual payment due to OPM by September 30 of the respective fiscal year, to amortize the unfunded FERS retirement obligation. The 2020 amounts are based on updated Postal Service estimates resulting from revised actuarial assumptions. Payments are to be made over a 30-year rolling period based on OPM invoices.

**FERS Normal Costs**

The Postal Service records expenses for FERS normal costs within *Retirement benefits* in the accompanying unaudited *Statements of Operations*.

The Postal Service makes payments for FERS normal costs in accordance with its bi-weekly payroll cycle. The employer contributions and employee withholdings not yet remitted to OPM were $209 million and $157 million at March 31, 2020, and September 30, 2019, respectively, and were recorded as a current liability within *Retirement benefits* in the accompanying *Balance Sheets*.

**CSRS and FERS Unfunded Retirement Benefits**

OPM periodically notifies the Postal Service regarding its revaluation of unfunded CSRS and FERS liabilities. OPM calculates these obligations using Postal Service-specific demographics data and government-wide economic assumptions. The Postal Service records these expenses as *Retirement benefits* in the accompanying unaudited *Statements of Operations*. These amounts may be significantly impacted by changes in actuarial assumptions used to revalue the unfunded liabilities.

In October 2019, OPM provided the Postal Service with an actuarial report indicating the projected annual amortization payments due September 30, 2020, would be $1.6 billion for the CSRS obligation and $1.1 billion for the FERS obligation.

On April 2, 2020, the Board of Actuaries of the CSRS, which oversees OPM’s calculation of actuarial liabilities for CSRS and FERS, lowered the discount rate used to calculate CSRS and FERS unfunded retirement liabilities from 4.25% to 4.0%. The Postal Service has estimated that the impact of this change in discount rate on the annual CSRS and FERS amortization expense will result in revised projected amortization payments due September 30, 2020, of approximately $1.8 billion for the CSRS obligation and approximately $1.3 billion for the FERS obligation, increases of $181 million and $226 million, respectively.

Accordingly, the Postal Service accrued additional CSRS and FERS amortization expenses during the three months ended March 31, 2020, to reflect the proportional adjustment between the original OPM estimate and the updated Postal Service estimate as a result of these changes. The Postal Service expects to receive invoices from OPM for the actual amounts due September 30, 2020, during the fourth quarter of 2020, and these invoices may differ from the estimated projections due to further changes in experience, discount rates and/or actuarial assumptions as of the calculation date.
The amounts the Postal Service has accrued for CSRS and FERS unfunded retirement benefits but has not yet paid are recorded as a current liability within Retirement benefits in the accompanying Balance Sheets. Those accrued but unpaid amounts were approximately $9.8 billion and $8.2 billion at March 31, 2020, and September 30, 2019, respectively.

NOTE 10 - HEALTH BENEFITS PLANS
FEHB Program covers nearly all career employees and also covers non-career employees and retirees who meet certain eligibility requirements. OPM administers FEHB and allocates the cost of funding the program to participating U.S. government employers. Separate from FEHB, the Postal Service offers its own healthcare plan to certain non-career employees who are ineligible for FEHB.

Active Employees
The Postal Service paid 71.9% of healthcare premium costs during both the three months ended March 31, 2020, and 2019. The Postal Service paid 72.0% and 72.3% of healthcare premium costs during the six months ended March 31, 2020, and 2019, respectively. Although OPM determines the actual FEHB premium costs, the allocation of these costs between the Postal Service and most of its employees is determined through agreements with Postal Service labor unions.

Postal Service employee health benefits expense (which includes the employer portion of Medicare taxes) is most significantly impacted by the number of employees electing coverage and the premium costs of the selected plans. Postal Service employee health benefits expense was approximately $1.3 billion for each of the three-month periods ended March 31, 2020, and 2019. Postal Service employee health benefits expense was approximately $2.6 billion for each of the six-month periods ended March 31, 2020, and 2019. These expenses are included within Compensation and benefits in the accompanying unaudited Statements of Operations.

Retirees
Postal Service retirees who participated in FEHB for the five years immediately preceding their retirement may continue to participate in the plan during retirement. Qualifying survivors of retirees are also eligible to receive benefits. The Postal Service is required to contribute to the PSRHBF an amount estimated to be equal to the employer portion of FEHB insurance premiums for participating employees and their qualifying survivors, upon retirement, for each employee's current year of service (normal cost). The Postal Service is also required to contribute an amount sufficient to fully amortize the unfunded liability of the PSRHBF by 2056. These amounts are based, in part, on each current and prospective retiree's length of federal civilian service occurring on or after July 1, 1971. Each participant's share of premium costs is set by law and is not subject to negotiation with Postal Service labor unions. The Postal Service cannot direct the costs, benefits or funding requirements of the plans. Therefore, it accounts for program expenses using multiemployer plan accounting rules by recording contributions to the plans that will be required by OPM as an expense in the period in which the contributions are due.

The PAEA required the Postal Service to prefund retiree health benefits during years 2007 through 2016 by paying statutorily specified annual amounts ranging from $1.4 billion to $5.8 billion, totaling $54.8 billion, into the PSRHBF, which began paying the Postal Service's share of retiree health benefit premiums in 2017. The Postal Service remains obligated to fund the $33.9 billion in statutorily required PSRHBF prefunding payments that it defaulted on for the years 2012 through 2016, as well as the normal cost and amortization payments of $10.7 billion and $2.6 billion, respectively, that it did not pay for the years 2017 through 2019. As of the date of this report, the Postal Service has not been assessed any penalties associated with these non-payments. The cumulative amount of statutorily specified, normal cost and amortization PSRHBF obligations the Postal Service has accrued is $49.7 billion as of March 31, 2020, inclusive of the $47.2 billion that was unpaid as of September 30, 2019. Given that OPM considers these amounts to be due and payable, the Postal Service reflects the cumulative unpaid amount as a current liability within Retiree health benefits in the accompanying Balance Sheets.

As required by PAEA, OPM annually performs an actuarial valuation for the purpose of developing a payment schedule for the Postal Service to fund the remaining unfunded PSRHBF obligation in annual payments through the year 2056. Based on preliminary calculations provided by OPM, the amortization payment due September 30, 2020, is estimated to be $900 million.
Furthermore, the Postal Service is obligated to pay the estimated normal cost of retiree health benefits attributable to the service of its employees during the most recent year. Based on preliminary calculations provided by OPM, the Postal Service has estimated the normal cost payment, also due by September 30, 2020, to be $4.0 billion.

The Postal Service expects to receive the invoice from OPM for with the actual amounts due during the fourth quarter of 2020 and these may differ from the original projected amounts due to changes in discount rates, actuarial assumptions and experience as of the calculation date.

The following table details retiree health benefits expenses for the three and six months ended March 31, 2020, and 2019:

¹ Expense for the accrual for the annual payment due to OPM by September 30 of the respective year, as calculated by OPM, to amortize the unfunded PSRHBF retirement health benefit obligation. Payments are to be made through 2056 based on OPM invoices.

² Expense for the accrual for the annual payment due to the PSRHBF by September 30 of the respective year, based on information provided by OPM, for the actuarially determined normal cost of retiree health benefits for current employees.

**NOTE 11 - WORKERS’ COMPENSATION**

Postal Service employees injured on the job are covered by the Federal Employees’ Compensation Act ("FECA"), administered by the U.S. Department of Labor’s ("DOL") Office of Workers’ Compensation Programs, which makes all decisions regarding injured workers’ eligibility for benefits. The Postal Service reimburses DOL for all workers’ compensation benefits paid to or on behalf of Postal Service employees, plus an administrative fee.

**Workers’ Compensation Liability**

The Postal Service records a liability for its workers’ compensation obligations for employees who have been injured on the job and are eligible for benefits, or their qualified survivors. Both the current and noncurrent portions of the workers’ compensation liability are recorded in the accompanying Balance Sheets. The Postal Service uses an estimation model that utilizes four generally accepted actuarial valuation techniques based upon past claim-payment experience and exposure to claims as measured by total employee hours worked.

Changes in the liability are primarily attributable to the combined impacts of routine changes in actuarial assumptions, new compensation and medical cases, the progression of existing cases and changes in discount (interest) and inflation rates, including long-term COLA rates for compensation claims, and medical rates for medical claims. These rates are updated as of the balance sheet date and factored into the model.

To determine the fair value of the liability each quarter, the Postal Service first estimates the future total cost of workers’ compensation claims based on the dates of claim-related injuries, frequency or severity of the injuries, the pattern of historical payments to beneficiaries and the expected trend in future costs. The Postal Service then calculates the amount that would need to be invested at current discount (interest) rates to fully fund the future total cost of claims, and this calculated present value is the recorded value of the workers’ compensation liability.

This liability calculation is highly sensitive to changes in discount rates. For example, a 1% increase in the discount rate would decrease the March 31, 2020, liability and related expense by approximately $2.4 billion. Likewise, a 1% decrease in the discount rate would increase the March 31, 2020, liability and related expense by approximately $3.1 billion.
The following table details the applicable inflation and discount rates for compensation and medical claims used to estimate the workers' compensation liability as of March 31, 2020, and September 30, 2019:

<table>
<thead>
<tr>

<td>1.91%</td>
</tr>
<tr>
<td>Medical inflation rate</td>
<td>3.50%</td>
<td>2.50%</td>
</tr>
</tbody>
</table>

As of March 31, 2020, and September 30, 2019, the Postal Service's total liability for workers' compensation was approximately $20.0 billion and $18.5 billion, respectively. As of March 31, 2020, and September 30, 2019, the current portion of the liability was approximately $1.3 billion and $1.4 billion, respectively, and the noncurrent portion of the liability was approximately $18.7 billion and $17.1 billion, respectively, as reflected in the accompanying Balance Sheets.

**Workers' Compensation Expense**

The impacts of changes in discount rates and inflation rates, as well as the actuarial valuation of new cases and revaluation of existing cases, are components of total workers’ compensation expense as recorded in the accompanying unaudited Statements of Operations. In addition, the Postal Service pays an administrative fee to DOL, which is considered a component of workers’ compensation expense.

The following table presents the components of workers’ compensation expense for the three and six months ended March 31, 2020, and 2019:

**NOTE 12 - LEASES**

**Postal Service Leases**

The Postal Service holds lessee positions in real property leases as well as lessee positions embedded in service contracts involving rights to use transportation equipment and facilities.

Real property leases support retail, delivery, mail processing, maintenance, administrative and support activities. The non-cancellable base terms of these leases typically range from one to five years, with one or more options to renew for additional five-year terms. The lease terms for these arrangements generally range from one to thirty years including any renewal options that are reasonably certain to be exercised. Additionally, certain real property leases contain purchase and termination options. At the commencement of most real property lease arrangements, the Postal Service is not reasonably certain if it will exercise such options. Real property leases include certain variable lease payments associated with non-lease components, such as common area maintenance costs, and non-lease components such as real estate taxes, which are generally charged as a pass-through based on actual amounts incurred by the lessor. The Postal Service records costs associated with real property leases within Other operating expenses in the accompanying unaudited Statements of Operations.
Transportation equipment leases apply primarily to vehicles, trailers, and aircraft. The non-cancellable base terms of these leases typically range from two to five years, and may include one or more options to renew for an additional one or two years. The lease terms for these arrangements generally range from two to five years including any renewal options the Postal Service is reasonably certain to exercise. Transportation equipment leases do not contain purchase options, however certain of these leases contain termination options. At the commencement of most transportation lease arrangements, the Postal Service is not reasonably certain if it will exercise such termination options. Certain transportation leases contain variable lease payments based on the volume of activity under the contract. The Postal Service records costs associated with transportation leases within *Transportation* in the accompanying unaudited *Statements of Operations*.

Postal Service leases do not contain any material residual value guarantees or restrictive covenants.

Sublease income was not material to the financial statements for the three and six months ended March 31, 2020.

Balances disclosed herein include those pertaining to certain related-party transactions. See *Note 5 - Related Parties* for additional information on related party transactions.

The table below reconciles the undiscounted cash flows for the first five years and the total remaining finance lease liabilities and operating lease liabilities recorded in the accompanying unaudited *Balance Sheet* as of March 31, 2020:

</table>

Capital leases, recorded at historical cost within Property and equipment, net in the accompanying Balance Sheets, were $496 million as of September 30, 2019. Total accumulated amortization related to capital leases was $377 million at September 30, 2019. Amortization expense for capital leases was approximately $33 million and $37 million for the years ended September 30, 2019, and 2018, respectively, and is included within the Other operating expense in the respective Statements of Operations.

Lease Accounting Policies

**Lease Accounting Policy for Comparative Periods**

As the lessee, the Postal Service classifies leases which have original lease terms greater than one year and that transfer substantially all the risks and rewards of ownership to the Postal Service, as capital leases. These leases are capitalized on the lease commencement date at the lower of the fair value of the leased assets or the present value of the minimum lease payments. The discount rate used to determine the present value is based on average U.S. Treasury rates. Property acquired under a capital lease is amortized over the lease term. Capital leases are included within Property and equipment, net in the accompanying Balance Sheets.

The Postal Service classifies all other lease arrangements in which substantially all risks and rewards of ownership are retained by the lessor as operating leases. Rent expense for operating leases is included in Other operating expense.
expenses in the accompanying unaudited Statements of Operations on a straight-line basis over the term of the lease.

**Lease Accounting Policy for the Six Months Ended March 31, 2020**

The Postal Service determines at the inception of the contract if an arrangement represents a lease or contains lease components. A contract is deemed to represent or include a lease if it conveys the right to control the use of an identified asset for a period of time in exchange for consideration. The Postal Service is assumed to have the right to control the use of the underlying asset if the contract conveys the rights to obtain substantially all of the economic benefits of the underlying asset and the rights to direct how and for what purpose such asset is used during the contract term.

As the lessee, the Postal Service classifies all leases with original lease terms less than one year as short-term leases. The Postal Service classifies all other leases which transfer substantially all the risks and rewards of ownership to the Postal Service as finance leases. Finance lease right-of-use assets are included within Property and equipment, net in the accompanying Balance Sheets. The current and noncurrent portions of finance lease liabilities are included within Payables and accrued expenses and Other noncurrent liabilities, respectively, within the accompanying Balance Sheets. The Postal Service classifies the remaining leases, not classified as short-term leases or finance leases, as operating leases. The Postal Service considers a lease term to include all non-cancelable periods and renewal periods when the Postal Service is reasonably certain that it will exercise the related renewal option.

For short-term leases, the Postal Service records lease expenses in the statement of operations on a straight-line basis over the lease term.

Leases that do not qualify as short-term are recorded in the balance sheet on the lease commencement date, each as a right-of-use asset and a lease liability.

Lease liabilities are initially measured at the net present value of the lease payments due after the commencement date. For this purpose, lease payments include fixed and in-substance fixed rental payments, variable lease payments that depend on an index or rate, and the price of options that the Postal Service is, at the commencement of the lease, reasonably certain to exercise. Lease liabilities are subsequently increased to reflect the interest accrued and reduced when lease payments are made by the Postal Service.

Right-of-use assets are initially measured at the net present value of the lease payments (including amounts due prior to or on the commencement date), adjusted for the impact of initial direct costs and lease incentives. For finance leases, right-of-use assets are subsequently amortized on a straight-line basis over the shorter of the useful life of the underlying asset or the lease term. For operating leases, right-of-use assets are amortized in such a way that the combination of the interest expense accrued on the lease liability and the asset amortization results in a straight-line expense over the lease term.

Right-of-use assets for operating and finance leases are periodically reviewed for impairment losses, following the same process as for other long-lived assets. Impairment losses on long-lived assets are recorded when events or circumstances indicate that an asset's fair value is less than its carrying value. When such a determination is made, the carrying values of the assets are written down to fair value. The Postal Service uses the long-lived assets impairment guidance in ASC Subtopic 360-10, Property, Plant, and Equipment - Overall, to determine whether a right-of-use asset is impaired, and if so, the amount of the impairment loss to recognize. No impairment losses have been recognized to date.

The discount rates used in net present value calculations are determined based on the Postal Service’s incremental borrowing rates on debt outstanding with the FFB at the beginning of each year, which is approximated as the daily U.S. Treasury Yield Curve Rates for the five-year, 10-year, 20-year and 30-year periods, plus a 12.5 basis point spread.

Variable lease payments, except for those based on an index or rate, are recognized as variable lease expenses in the period in which the obligation for those payments are incurred.
NOTE 13 - FAIR VALUE MEASUREMENT

The Postal Service defines fair value as the price that would be received upon sale of an asset or the price that would be paid to transfer a liability between unrelated parties.

The carrying amounts of certain current assets and liabilities, including cash, accounts receivable, accounts payable and accrued expenses, approximate fair value due to their short-term nature. Assets within Property and equipment, net are recorded at cost and measured at fair value on a nonrecurring basis if they are determined to be impaired or classified as assets held for sale.

Noncurrent receivables and long-term debt are measured using a fair value hierarchy model. This model prioritizes observable and unobservable inputs used to measure fair value, and consists of three broad levels, as defined in authoritative literature.

For the three and six months ended March 31, 2020, no significant transfers between Level 1 and Level 2 assets or liabilities transpired. The carrying amount and fair value of the revenue forgone installment receivable and long-term debt are presented for disclosure purposes only in the following table:

<table>
<thead>
<tr>
<th></th>
<th>March 31, 2020</th>
<th>September 30, 2019</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Carrying Amount</td>
<td>Fair Value</td>
</tr>
<tr>
<td>Revenue forgone installment receivable*</td>
<td>$ 476</td>
<td>$ 584</td>
</tr>
<tr>
<td>Long-term debt</td>
<td>$ 11,000</td>
<td>$ 11,936</td>
</tr>
</tbody>
</table>

*The carrying amount is included within Other assets (which includes items in addition to the revenue forgone installment receivable) in the accompanying Balance Sheets.

The revenue forgone installment receivable qualifies as a financial instrument in accordance with authoritative literature. To calculate its fair value, the Postal Service recognizes the imputed interest it is owed as interest income and estimates the value of this receivable using the interest method, which converts future cash flows to a single discounted amount using interest rates for similar assets, which are considered Level 2 inputs. The Postal Service then calculates the net present value of anticipated annual installment payments to be received, discounted by the 20-year U.S. Treasury Constant Maturity Rate, which was 1.15% and 1.94% as of March 31, 2020, and September 30, 2019, respectively.

The long-term debt also qualifies as a financial instrument. Because no active market exists for its debt with the FFB, the Postal Service estimates the fair value of the long-term debt by imputing future payments at discount rates provided by the FFB, considered Level 3 inputs. The weighted averages of the FFB discount rates, based on U.S. Treasury Yield Curve Rates, were 0.36% and 1.79% as of March 31, 2020, and September 30, 2019, respectively.

ITEM 2. MANAGEMENT’S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

CAUTIONARY STATEMENTS

The following Management’s Discussion and Analysis of Financial Condition and Results of Operations and other parts of this report describe the principal factors affecting the financial results, liquidity, capital resources and critical accounting estimates of the United States Postal Service (“Postal Service,” “USPS,” “we,” “our” and “us”). Our results of operations may be impacted by risks and uncertainties discussed here and in our Annual Report on Form 10-K for the year ended September 30, 2019, (“Annual Report”) filed with the Postal Regulatory Commission (“PRC”) on November 14, 2019. Such factors, many of which we cannot control or influence, may cause actual results to differ materially from those currently contemplated.

Our operating results for the three and six months ended March 31, 2020, are presented in accordance with accounting principles generally accepted in the United States (“GAAP”). These results are not necessarily indicative of the results to be expected for the year ended September 30, 2020, and should be read in conjunction with our
Annual Report. All references to years in this report, unless otherwise stated, refer to fiscal years beginning October 1 and ending September 30. All references to quarters, unless otherwise stated, refer to quarters within fiscal years 2020 and 2019.

Forward-looking statements contained in this report represent our best estimates of known and anticipated trends believed relevant to future operations. However, actual results may differ significantly from current estimates. Certain forward-looking statements included in this report use such words as “may,” “will,” “could,” “expect,” “believe,” “plan,” “estimate,” “project” or other similar terminology. These forward-looking statements, which involve a number of risks and uncertainties, reflect current expectations regarding future events and operating performance as of the date of this report. These risks include, but are not limited to, the effects of the novel strain of coronavirus (“COVID-19”) on our business, financial condition and results of operations. We have no obligation to publicly update or revise any forward-looking statements, whether as a result of new information, future events or otherwise.

OVERVIEW

With our mandate to provide universal postal services to the nation, we serve retail and commercial customers in the U.S., as well as internationally. Our operations include an extensive and integrated retail, processing, distribution, transportation and delivery network, and we operate throughout the U.S., its possessions and territories. We operate as a single segment and report our performance as such.

The *Postal Accountability and Enhancement Act* (“PAEA”) classifies our products into two broad categories: Market-Dominant and Competitive “products,” however, we use the term “services” in this document for consistency with other descriptions of services offered. The statutes under which we operate also establish certain requirements that affect our financial results, including obligations for retirement benefits within the Civil Service Retirement System (“CSRS”) and the Federal Employee Retirement System (“FERS”), and obligations for retiree health benefits including funding of the Postal Service Retiree Health Benefits Fund (“PSRHBF”). We must coordinate with the U.S. Office of Personnel Management (“OPM”) to address these obligations.

We have successfully implemented initiatives that have reduced the growth in certain costs by billions of dollars while offering new features for customers such as *Informed Delivery*. However, legal restrictions on pricing, service diversification and operations restrict our ability to cover our costs to provide prompt, reliable and efficient postal services to the nation.

We have established a core set of goals that drive our strategic initiatives and continuous improvement efforts:

1. Deliver a world-class customer experience;
2. Equip, empower and engage employees;
3. Innovate faster to deliver value; and
4. Invest in our future platforms.

As part of these efforts, we aim to achieve long-term financial stability. Our focus on maintaining liquidity and reducing operating expenses reflects current trends, as well as projected future volume of mail and packages. We believe that financial stability is within reach with targeted legislative and regulatory reform to address our overall cost structure and enhance our revenue-generating opportunities as we continue to identify and create innovative and affordable services, and deliver high levels of performance and service. Such financial stability would continue to provide Congress and the executive branch with additional time to address the broader issues regarding our overall cost structure and revenue-generating opportunities.

RESULTS OF OPERATIONS

**SUMMARY**

The major factors that impact our operating results include overall customer demand, the mix of postal services and contribution associated with those services, volume of mail and packages processed through our network and our ability to manage our cost structure in line with declining levels of mail volume, increased competition in the more labor-intensive Shipping and Packages business and an increasing number of delivery points.
Effects of COVID-19
In March 2020, the World Health Organization ("WHO") declared COVID-19 a global pandemic, which has since spread throughout the U.S. Changing federal, state and local government actions to address the pandemic have been occurring on a daily basis, and government-imposed shelter-in-place and other movement restrictions designed to slow the pace of the outbreak have severely impacted the U.S. economy. We believe the severity and duration of the COVID-19 pandemic is uncertain, and such uncertainty may continue during the second half of 2020.

Our employees provide an essential public service and bind the nation together as a part of the country’s critical infrastructure. At least six days per week, and in some instances seven, our employees accept, process, transport, and deliver vital mail and packages like medicine, essential consumer staples, benefits checks, and important information, in every community, to every home and business, and we will continue to do so. As Americans are urged to stay home, the importance of the mail will only grow as our customers, including those in rural areas and senior citizens, will need access to vital communications, essential packages and other necessities.

Shortly after the WHO declaration, we created a dedicated COVID-19 response team to lead our response efforts. All of our employees are considered essential, and their safety is our highest priority. Following strategies recommended by the Centers for Disease Control and Prevention, we have implemented enhanced safety measures to protect the health of our employees.

In late March 2020, we restricted business travel and implemented remote work arrangements for certain of our office-based employees. We have also implemented new leave policies for employees who may be affected by illness, quarantines or childcare obligations. These arrangements have not materially affected our ability to maintain our business operations, including the operation of financial reporting systems, internal control over financial reporting, and disclosure controls and procedures.

While we have maintained full operations during the pandemic, travel and logistics restrictions have negatively affected our retail and commercial customers, as well as our suppliers and mail service providers. Many of our commercial customers, especially those with consumer-facing businesses, have been required to suspend their operations or operate at a lower capacity. As a result, our mail volumes began to decline significantly in March 2020. The sudden drop in mail volumes, our most profitable revenue stream, is steep and may never fully recover to levels prior to the pandemic.

Although the COVID-19 pandemic has caused a recent surge in the nation’s use of e-commerce, resulting in higher Shipping and Packages volumes, we do not expect the resulting increases in Shipping and Packages revenues to be sustainable or to offset losses in mail service revenue caused by COVID-19. While the future is uncertain, we believe that the nation’s increased use of e-commerce is likely to plateau in the short term as the effects of the pandemic begin to subside, followed by a longer-term regression of e-commerce caused by a weakened U.S. economy. Furthermore, this anticipated economic weakness has resulted in significant interest rate declines, which have caused an increase in certain of our workers’ compensation and retirement benefits expenses.

On March 27, 2020, the President signed the Coronavirus Aid, Relief, and Economic Security Act, enacted as Public Law 116-136 (the "CARES Act"). Notwithstanding our $15.0 billion statutory debt limit, and $3.0 billion annual limit on new borrowing, the CARES Act allows us to borrow up to an additional $10.0 billion in financing from the U.S. Treasury to fund operating expenses. The U.S. Treasury may lend up to this amount at our request, upon terms and conditions mutually agreed upon. However, we have no assurance that the U.S. Treasury will agree to provide such financing or if it will be provided upon favorable terms.

We estimate that the COVID-19 pandemic may increase our net operating loss by more than $22.0 billion over the next eighteen months, threatening our ability to operate. If we are able to borrow the $10.0 billion from the U.S. Treasury as provided by the CARES Act, we expect that we will have sufficient liquidity to continue to operate through April 2021. However, if we are unable to secure this $10.0 billion in financing, we expect to be able to continue to operate only through September 2020, unless we default on additional obligations.
Three Months Ended March 31, 2020
As more fully described below in Operating Revenue and Volume, our operating revenue for the three months ended March 31, 2020, increased $349 million, or 2.0%, compared to the same period last year. The increase in operating revenue was due to the following:

- Shipping and Packages revenue increase of $386 million, or 7.1%, with a volume growth of 12 million pieces, or 0.8%, driven largely by the January 2020 price increases applicable to certain Competitive services and the temporary surge in e-commerce resulting from the COVID-19 pandemic; and
- First-Class Mail revenue increase of $89 million, or 1.4%, despite a volume decline of 29 million pieces, or 0.2%. Revenue growth was the result of decennial mailings associated with the 2020 U.S. Census, otherwise revenue and volume would have each declined during the quarter.

The above increases in operating revenue were partially offset by a decrease in Marketing Mail revenue of $94 million, or 2.5%, with a volume decline of 604 million pieces, or 3.4%, largely the result of the COVID-19 pandemic, as many of our commercial customers, especially those with consumer-facing businesses, began to suspend their operations or operate at a lower capacity in March 2020. Political and election mail revenue and volumes increased by approximately $100 million and 500 million pieces, respectively, compared to the same period last year, resulting from the impact of the 2020 primary and general elections.

As more fully described below in Operating Expenses, our operating expenses for the three months ended March 31, 2020, increased approximately $2.8 billion, or 14.2%, compared to the same period last year. The increase in operating expenses was primarily due to the following:

- Workers’ compensation expense increase of approximately $2.2 billion, primarily due to declines in discount rates, outside of management’s control, as the COVID-19 pandemic weighed on the U.S. economy;
- Retirement benefits expense increase of $348 million, or 23.7%, due to revised actuarial assumptions for CSRS and FERS unfunded retirement benefits amortization, which are outside of management’s control, and to increased contribution rates for FERS normal costs, compared to the same period last year;
- Other operating expenses increase of $124 million, or 5.3%, due to spending increases in various categories including enhancements to cyber security and information technology;
- Compensation and benefits expense increase of $119 million, or 1.0%, due primarily to contractual wage increases.

The above increases were partially offset by a decrease in retiree health benefits expense of $50 million, or 3.9%, primarily due to the impact of discount rates in effect during October 2019 that were used in OPM’s preliminary annual estimates.

Overall, we reported a net loss of approximately $4.5 billion for the three months ended March 31, 2020, compared to a net loss of approximately $2.1 billion for the same period last year.

Six Months Ended March 31, 2020
As more fully described below in Operating Revenue and Volume, our operating revenue for the six months ended March 31, 2020, decreased $11 million, which was essentially flat, compared to the same period last year.

The decrease in operating revenue was largely due to the following:

- Marketing Mail revenue decrease of $347 million, or 4.1%, with a volume decline of approximately 2.3 billion pieces, or 5.9%, driven by decreases in revenue and volume from political and election mail in the first quarter. Political and election mail revenue and volumes decreased by approximately $140 million and 900 million pieces, respectively, compared to the same period last year, which benefited from the impact of the 2018 mid-term elections during the first quarter of 2019. Furthermore, volume declined due to the COVID-19 pandemic in the second quarter, as the pandemic affected many of our commercial customers;
- First-Class Mail revenue decrease of $79 million, or 0.6%, with a volume decline of 600 million pieces, or 2.1%, reflecting the continuing migration from mail to electronic communication and transaction alternatives; and
Periodicals revenue decrease of $57 million, or 9.4%, with a volume decline of 231 million pieces, or 9.8%, driven by the continuing migration to electronic communication and digital advertising.

The decrease in operating revenue was partially offset by an increase in Shipping and Packages revenue of $532 million, or 4.5%, despite a volume decline of 73 million pieces, or 2.2%, as we continued to see revenue growth in this service category during the six-month period driven largely by the January 2020 price increases applicable to certain Competitive services.

As more fully described below in Operating Expenses, our operating expenses for the six months ended March 31, 2020, increased approximately $1.6 billion, or 4.0%, compared to the same period last year. The increase in operating expenses was primarily due to the following:

- Workers’ compensation expense increase of approximately $1.1 billion, primarily due to declines in discount rates, outside of management’s control, as the COVID-19 pandemic weighed on the U.S. economy;
- Retirement benefits expense increase of $477 million, or 16.1%, due to revised actuarial assumptions for CSRS and FERS unfunded retirement benefits amortization, which are outside of management’s control, and to increased contribution rates for FERS normal costs, compared to the same period last year;
- Other operating expenses increase of $122 million, or 2.5%, due to spending increases in various categories including enhancements to cyber security and information technology; and
- Transportation expenses increase of $63 million, or 1.5%, primarily resulting from higher air transportation costs, but partially offset by lower international transportation costs. The increase in highway transportation costs was driven by a one-time adjustment for our adoption of Accounting Standards Update 2016-02 Leases, which has since been codified in Accounting Standards Codification (“ASC”) 842, Leases (“ASC 842”), but partially offset by a decrease in the number of miles driven and lower average diesel fuel prices. The decrease in international transportation costs was driven by lower International Mail volumes.

The above increases in operating expenses were partially offset by the following decreases in operating expenses:

- Retiree health benefits expense decrease of $100 million, or 3.9%, primarily due to the impact of discount rate changes in effect during October 2019 that were used in OPM’s preliminary annual estimates; and
- Compensation and benefits expense decrease of $71 million, or 0.3%, primarily due to management’s efforts to align work hours with volume workloads, but partially offset from increases due to contractual wage adjustments.

Overall, we reported a net loss of approximately $5.3 billion for the six months ended March 31, 2020, compared to a net loss of approximately $3.6 billion for the same period last year.

**Non-GAAP Controllable Loss**

In the day-to-day operation of our business, we focus on costs that can be managed in the course of normal business operations, such as salaries and transportation. We calculate controllable loss, a non-GAAP measure, by excluding items over which we have no control, such as PSRHBF actuarial revaluation and amortization expenses, workers’ compensation expenses caused by actuarial revaluation and discount rate changes, and retirement expenses caused by actuarial revaluation. Controllable loss should not be considered a substitute for net loss and other GAAP reporting measures.
The following table reconciles our GAAP net loss to controllable loss for the three and six months ended March 31, 2020, and 2019:

<table>
<thead>
<tr>
<th>(in millions)</th>

</table>

\(^1\) Expense for the accrual for the annual payment due to OPM by September 30 of the respective year, as calculated by OPM, to amortize the unfunded PSRHBF retirement health benefit obligation. Payments are to be made through 2056 based on OPM invoices.

\(^2\) Net amounts include changes in assumptions, valuation of new claims and revaluation of existing claims, less current year claim payments.

\(^3\) Expense for the accrual for the annual payment due to OPM by September 30 of the respective fiscal year, to amortize the unfunded CSRS retirement obligation. The 2020 amounts are based on updated Postal Service estimates resulting from revised actuarial assumptions. Payments are to be made through 2043 based on OPM invoices.

\(^4\) Expense for the accrual for the annual payment due to OPM by September 30 of the respective fiscal year, to amortize the unfunded FERS retirement obligation. The 2020 amounts are based on updated Postal Service estimates resulting from revised actuarial assumptions. Payments are to be made over a 30-year rolling period based on OPM invoices.

Our controllable loss decreased $14 million for the three months ended March 31, 2020, compared to the same period last year. This decrease was largely driven by the $349 million increase in operating revenue, offset by higher other operating expenses of $124 million, higher compensation and benefits expenses of $119 million, and higher FERS normal costs of $75 million.

Our controllable loss increased $270 million for the six months ended March 31, 2020, compared to the same period last year. This increase was largely driven by higher FERS normal costs of $134 million and higher transportation expenses of $63 million, partially offset by lower compensation and benefits expenses of $71 million.

These items are discussed in greater detail in Operating Revenue and Volume and Operating Expenses below.

**OPERATING REVENUE AND VOLUME**

The combined categories of First-Class Mail and Marketing Mail continued to provide the majority of our revenue, despite long-term trends away from traditional paper communication and correspondence to electronic media. Although this migration to electronic media has resulted in significant volume declines in First-Class Mail over the last decade, Marketing Mail volume remained relatively steady between 2009 and 2016. However, Marketing Mail volume began to decline at a greater rate beginning in 2017 and continued to decline through the first half of 2018. Aside from a volume rebound between the second half of 2018 through the first quarter of 2019 that was driven by increases in political and election mail associated with the 2018 mid-term elections, Marketing Mail resumed its volume decline through the remainder of 2019 and the first half of 2020.
The following table summarizes our operating revenue and volume for the three and six months ended March 31, 2020, and 2019, by each service category:

</table>

1 Excludes First-Class Package Service - Retail and First-Class Package Service - Commercial.
2 Excludes Marketing Mail Parcels.
3 Includes Priority Mail, USPS Retail Ground, Parcel Select Mail, Parcel Return Service Mail, Marketing Mail Parcels, Package Service Mail, First-Class Package Service - Retail, First-Class Package Service - Commercial and Priority Mail Express.

For the three months ended March 31, 2020, First-Class Mail generated approximately 36% of operating revenue, which was essentially unchanged compared to the same period last year, and approximately 42% of our volume, a 1% increase compared to the same period last year. Marketing Mail generated approximately 21% of operating revenue and 50% of our volume, both 1% decreases from the same period last year.

For the six months ended March 31, 2020, First-Class Mail generated approximately 35% of operating revenue, which is essentially unchanged compared to the same period last year, and approximately 40% of our volume, a 1% increase compared to the same period last year. Marketing Mail generated approximately 22% of operating revenue and 52% of our volume, both 1% decreases from the same period last year.

We continued to experience positive revenue results in our Shipping and Packages category, and it represented approximately 33% of our revenue for the three months ended March 31, 2020, which was a 2% increase from the same period last year, and approximately 33% of our revenue for the six months ended March 31, 2020, a 1% increase from the same period last year. Shipping and Packages generated approximately 4% of our volume for both the three and six months ended March 31, 2020, which was relatively unchanged compared to the same period last year.

Although revenue and volume are closely linked to the strength of the U.S. economy and changes in how our customers use the mail, we have proactively targeted opportunities to grow our business. We continue to focus on our customers' needs and have increased our investment in mail and package innovation. However, we also
recognize that revenue growth is constrained by laws and regulations restricting the types of products, services and pricing we may offer to our customers and the speed with which we can bring new products to market.

We anticipate that First-Class Mail will continue to lose volume in future years with the migration to electronic communication and transactional alternatives resulting from technological changes. To address the long-term trend that such changes have had on our First-Class Mail revenue and volume, we have been working with the mailing industry to slow the decline through mailing promotions and leveraging the high open-and-read rates of, for example, bills and statements for additional customer engagement and education.

Furthermore, due to the COVID-19 pandemic our First-Class Mail and Marketing Mail volumes began an accelerated decline in March 2020. The sudden drop in mail volumes, our most profitable revenue stream, is steep and may never fully recover to levels prior to the pandemic.

We have also focused on providing new services and innovating with Marketing Mail. We have expanded service offerings such as Informed Delivery, which enables customers to preview mail and manage packages scheduled to arrive as a means of merging digital and physical mail, as well as allowing mailers to launch interactive digital campaigns. Additionally, we are focusing on opportunities to pilot new products and innovate with customers and the mail industry to enhance the value of hard-copy communication. We believe these service offerings will further improve the value of both First-Class Mail and Marketing Mail.

Our Shipping and Packages category has historically experienced revenue and volume growth as a result of our successful efforts to compete in shipping services, including last-mile e-commerce fulfillment markets and Sunday delivery as well as end-to-end markets. We continue to focus on responding to customers’ needs by implementing solutions and maintaining strategic business partnerships that help us capitalize on the growing e-commerce business.

The COVID-19 pandemic has caused a recent surge in the nation’s use of e-commerce, resulting in higher Shipping and Packages volumes. However we do not expect the resulting increases in Shipping and Packages revenues to be sustainable or to offset losses in mail service revenue caused by COVID-19. Although the future is uncertain, we believe that the nation’s increased use of e-commerce is likely to plateau in the short term as the effects of the pandemic begin to subside, followed by a longer-term regression of e-commerce caused by a weakened U.S. economy.

Our Shipping and Packages category is subject to intense competition which significantly impacts both revenue and volume. Certain major customers continue to divert volume from our network by in-sourcing the last-mile delivery into their own networks. These customers are also aggressively pricing their products and services in order to fill their networks and grow package density.

We implemented price increases for certain Market-Dominant and Competitive services in January 2019 and 2020. Additionally, we implemented dimensional weighting provisions that amount to price increases for certain Shipping and Packages subcategories in June 2019.

First-Class Mail
First-Class Mail, presented in this report as a mail class and a Market-Dominant service category, includes cards, letters and flats. Prices of First-Class Mail, our most profitable service category, are the same regardless the geographic distance between the origination and delivery points. Because First-Class Mail is classified by law as Market-Dominant, price increases are currently generally subject to a price cap based on the Consumer Price Index for All Urban Consumers ("CPI-U").

For the three months ended March 31, 2020, First-Class Mail revenue increased $89 million, or 1.4%, despite a volume decline of 29 million pieces, or 0.2%, compared to the same period last year. Revenue growth was the result of decennial mailings associated with the 2020 U.S. Census, otherwise revenue and volume would have each declined during the quarter. For the six months ended March 31, 2020, First-Class Mail revenue decreased $79 million, or 0.6%, and volume declined 600 million pieces, or 2.1%, compared to the same period last year. The change in revenue for both periods was less than the corresponding volume declines due to the January 2020 price increase applicable to certain Market-Dominant services. The most significant factor contributing to the
declining trend in *First-Class Mail* volume has been the continuing migration from mail to electronic communication and transaction alternatives.

Due to the COVID-19 pandemic, our *First-Class Mail* volume began to decline significantly in late March 2020, and it may never fully recover to levels prior to the pandemic. A protracted loss in customer demand for our services will continue to have a material effect on *First-Class Mail* revenue and volume.

**Marketing Mail**

*USPS Marketing Mail* (more commonly, *Marketing Mail*), presented as a mail class and a Market-Dominant service category, generally consists of advertising, newsletters, catalogs, small marketing parcels and other printed matter not required to be processed and delivered as *First-Class Mail* or Periodicals.

Between 2009 and 2016, *Marketing Mail* experienced relatively flat volume. However, *Marketing Mail* volume began to decline at a greater rate beginning in 2017 and continued to decline through the first half of 2018. Aside from a volume rebound between the second half of 2018 through the first quarter of 2019 that was driven by increases in political and election mail associated with the 2018 mid-term elections, *Marketing Mail* continued its volume decline through the remainder of 2019 and the first half of 2020, exacerbated by the COVID-19 pandemic.

For the three months ended March 31, 2020, *Marketing Mail* revenue decreased $94 million, or 2.5%, and volume declined 604 million pieces, or 3.4%, compared to the same period last year. For the six months ended March 31, 2020, *Marketing Mail* revenue decreased $347 million, or 4.1%, and volume declined approximately 2.3 billion pieces, or 5.9%, compared to the same period last year. For the three months ended March 31, 2020, our revenue and volume from political and election mail increased by approximately $100 million and 500 million pieces, respectively, compared to the same period last year, as we began to benefit from the impact of the 2020 elections during the second quarter of 2020. For the six months ended March 31, 2020, our revenue and volume from political and election mail decreased by approximately $140 million and 900 million pieces, respectively, compared to the same period last year, which benefited from the impact of the 2018 mid-term elections during the first quarter of 2019.

Due to the COVID-19 pandemic, many of our commercial customers, especially those with consumer-facing businesses, have been required to suspend their operations or operate at a lower capacity. As a result, our *Marketing Mail* volume began to decline significantly in March 2020, and it may never fully recover to levels prior to the pandemic. A protracted loss in customer demand for our services will continue to have a material effect on our *Marketing Mail* revenue and volume.

*Marketing Mail* is subject to intense competition, and price increases are currently generally capped at the rate of inflation. *Marketing Mail* volume is somewhat reflective of the cyclical nature of the U.S. economy, although targeted advertising campaigns can stimulate demand for this service, and our customers have used *Marketing Mail* to mail to more targeted prospects.
**Shipping and Packages**

1 Includes *Priority Mail*, a 1-3 business day delivery service; *Priority Mail Express*, an overnight delivery service available 365 days per year; and *USPS Retail Ground*, a retail-only Competitive service priced identically and functionally equivalent to *Priority Mail for Zones* 1-4.

2 Includes *Parcel Select*, *Parcel Return*, and *Marketing Mail Parcels*.

3 Includes *First-Class Package Services - Retail* and *First-Class Package Services - Commercial*.

Our Shipping and Packages category has historically experienced revenue and volume growth as a result of our successful efforts to compete in shipping services, including last-mile e-commerce fulfillment markets and Sunday delivery as well as end-to-end markets. However, this service category is subject to intense competition which significantly impacts both our revenue and volume. Shipping and Packages revenue and volume are historically greatest in the first quarter of the year due to the holiday shipping season.

For the three months ended March 31, 2020, Shipping and Packages revenue increased 7.1%, with a volume growth of 0.8%, compared to the same period last year. The volume increased due to a temporary surge in e-commerce resulting from the COVID-19 pandemic, and revenue outpaced volume increases due to the January 2020 price increases associated with certain Competitive services.

For the six months ended March 31, 2020, Shipping and Packages revenue increased 4.5%, despite a volume decline of 2.2%, compared to the same period last year. The revenue increases were largely due to the January 2020 price increases associated with certain Competitive services. The volume declines largely resulted from intense competition and certain major commercial customers and competitors delivering more of their own packages, compared to the same period last year, offset by the temporary surge in e-commerce resulting from the COVID-19 pandemic.

**Priority Mail Services**

Priority Mail Services is our Shipping and Packages subcategory that includes *Priority Mail*, *Priority Mail Express* and *USPS Retail Ground*. *Priority Mail* and *Priority Mail Express* services allow customers the ability to send documents and packages requiring expedited transportation and handling. While Priority Mail Services revenue has historically grown year-over-year, its service offerings are price sensitive and its growth rate has been lower than other Shipping and Packages subcategories due to intense competition.

Priority Mail Services accounted for our largest portion of Shipping and Packages revenue, representing approximately 46% of the total for the three and six months ended March 31, 2020, and 2019. However, Priority
Mail Services accounted for approximately 19% and 18% of the total Shipping and Packages volume for three and six months ended March 31, 2020, respectively, essentially unchanged compared to the same periods last year.

For the three months ended March 31, 2020, Priority Mail Services revenue grew 7.0%, on volume growth of 2.2%, compared to the same period last year. For the six months ended March 31, 2020, Priority Mail Services revenue grew 3.4%, despite a volume decline of 1.9%, compared to the same period last year. Revenue grew at a greater rate than volume for the three-month period and despite the volume decline for the six-month period, largely due to the January 2020 price increases applicable to Competitive services.

**Parcel Services**

Our Parcel Services subcategory includes Competitive services Parcel Select and Parcel Return, as well as Market-Dominant USPS Marketing Mail Parcels (more commonly, Marketing Mail Parcels). Parcel Select and Parcel Return services largely consist of last-mile deliveries, offered to large bulk shippers that perform their own sorting before dropping parcels deeper into our network.

For the three months ended March 31, 2020, revenue from Parcel Services increased 9.6%, on volume growth of 3.4%, compared to the same period last year. For the six months ended March 31, 2020, revenue from Parcel Services increased 6.3%, despite a volume decline of 0.8%, compared to the same period last year. This subcategory is primarily a last-mile service that bypasses much of our infrastructure and therefore is one of our lowest-priced package services, and as a result, produces a lower contribution per piece when compared to many of our other services. For the six months ended March 31, 2020, volume declined due to certain major commercial customers delivering more of their own packages. However, for the three months ended March 31, 2020, volume increased due to the temporary surge in e-commerce from the COVID-19 pandemic. Revenue grew at a greater rate than volume for the three-month period and despite the volume decline for the six-month period, largely due to the January 2020 price increases applicable to Competitive services.

**First-Class Package Services**

Our First-Class Package Services subcategory includes the competitively priced First-Class Package Service - Retail, a Competitive service targeted to retail customers for packages weighing up to 13 ounces, and First-Class Package Service - Commercial, a Competitive service targeted to commercial customers for packages weighing up to 16 ounces. This subcategory offers commercial customers that ship primarily lightweight fulfillment parcels the lowest-priced expedited end-to-end tracked package option in the marketplace. First-Class Package Services revenue and volume performance has historically experienced strong increases for the past several years, particularly from our commercial customers. These increases are primarily attributable to growth in e-commerce.

For the three months ended March 31, 2020, First-Class Package Services revenue increased 5.9%, despite a volume decline of 0.3%, compared to the same period last year. For the six months ended March 31, 2020, First-Class Package Services revenue increased 6.0%, despite a volume decline of 1.7%, compared to the same period last year. Revenue grew despite the volume declines, largely due to the January 2020 price increases applicable to Competitive services.

**Package Services**

Our Package Services subcategory is a Market-Dominant service that includes both Bound Printed Matter for materials up to 15 pounds and Library and Media Mail for materials up to 70 pounds. For the three months ended March 31, 2020, Package Services revenue decreased 5.2% on a volume decline of 10.7%, compared to the same period last year. For the six months ended March 31, 2020, Package Services revenue decreased 5.3% on a volume decline of 11.1%, compared to the same period last year. Revenue declined at a slower rate than volume for the three and six months ended March 31, 2020, due to the January 2020 price increase applicable to Market-Dominant services.

**International Mail**

Our International Mail category includes several services that enable customers, both domestic and abroad, to send international mail, including postcards, envelopes, flats and packages with either standard or express delivery options. “Outbound” services, which allow customers in the U.S. to send mail and packages to other countries, generate approximately two thirds of International Mail revenue, but “inbound” services are the opposite, generating two thirds of volume but only a third of the revenue. This is primarily due to the smaller size and lower rates for inbound international e-commerce packages.
For the three months ended March 31, 2020, International Mail revenue increased 2.4%, despite a volume decline of 11.7%, compared to the same period last year. For the six months ended March 31, 2020, International Mail revenue increased 0.4%, despite a volume decline of 9.1%, compared to the same period last year. These revenue increases were largely due to the January 2020 price increases applicable to Competitive services. The declines in both inbound and outbound volume were due to various competitive pricing, political and economic factors.

The U.S. is a member of the Universal Postal Union ("UPU"), a specialized agency of the United Nations that facilitates the exchange of international mail. We are the designated postal operator for the U.S. under the UPU, and payments to the designated postal operator for the delivery of foreign origin letter-post mails are known as "terminal dues".

In September 2019, the UPU members had a special meeting -- known as the Extraordinary Congress -- to discuss the terminal dues system. During that meeting, UPU members agreed to establish a new remuneration system that will allow us to self-declare rates beginning in July 2020. Other foreign postal operators may also reciprocally apply rates at full-self-declared rates at that time.

In February 2020, we officially invoked our provision to self-declare rates beginning in July 2020.

**Periodicals**

Periodicals, also presented as a mail class and a Market-Dominant service category, includes services designed for publishers of newspapers, magazines and other periodical publications whose primary purpose is providing publications to subscribers or other users. For the three months ended March 31, 2020, Periodicals revenue decreased 11.1% and volume declined 12.2%, compared to the same period last year. For the six months ended March 31, 2020, Periodicals revenue decreased 9.4% and volume declined 9.8%, compared to the same period last year.

Periodicals revenue and volume have been in decline for more than a decade as trends in hard-copy reading behavior and shifts of advertising away from print have eroded this business. The Periodicals category is not expected to rebound as electronic content continues to grow in popularity with the public.

**Other**

Other services include ancillary services such as Certified Mail, PO Box services, and Return Receipt services. Also included in this category are money orders and passport services. Other services revenue decreased 1.2%, and 3.3% for the three and six months ended March 31, 2020, respectively, compared to the same periods last year.

**OPERATING EXPENSES**

In an effort to align our resources with anticipated future mail and package volume, we continue to aggressively manage operating expenditures under management's control.

We originally designed our mail processing and distribution network to provide overnight delivery service of First-Class Mail within specified delivery areas for a much higher volume of mail than we are required to process and deliver today, and the network's legacy capabilities are not completely aligned to today's mail mix and volumes. Consequently, certain of our processing and distribution facilities continue to operate at less than full capacity. Our challenge to contain costs is also compounded by the increasing number of delivery points, which, when combined with lower mail volume, has resulted in a drop in the average number of pieces delivered per delivery point per day from approximately 5.5 pieces in 2007 to 3.4 pieces in 2019, a reduction of approximately 39%, and a further significant decline is expected in 2020.

**Compensation and Benefits**

Compensation and benefits is our largest operating expense category. These expenses consist of costs related to our active career and non-career employees other than retirement costs associated with U.S. government defined benefit pension programs and retiree health costs which are further discussed in Retirement benefits and Retiree Health Benefits, respectively.
Overall, our compensation and benefits expenses increased 1.0% for the three months ended March 31, 2020, but decreased 0.3% for the six months ended March 31, 2020, compared to the same periods last year. The following table presents compensation and benefits expenses for the three and six months ended March 31, 2020, and 2019:

</tbody>
</table>

**Compensation**

Compensation expense increased 0.6% for the three months ended March 31, 2020, but decreased 0.5% for six months ended March 31, 2020, compared to the same periods last year. The activity in both periods represents increases due to contractual wage adjustments and approximately 3.6 million hours attributable to the extra work day due to the leap year, offset by management’s efforts to align work hours with volume workloads.

**Work Hours**

For the three months ended March 31, 2020, total work hours were approximately 286 million, essentially unchanged compared to the same period last year. However, approximately 3.6 million hours, or 1.3%, were attributable to the extra work day due to the leap year in 2020. Were it not for the extra work day due to the leap year, work hours would have declined for the period.

For the six months ended March 31, 2020, total work hours were approximately 592 million, a decrease of 1.0%, compared to approximately 598 million total work hours for the six months ended March 31, 2019. This decrease was the result of management’s efforts to reduce work hours in line with volume workloads.

As a result of the COVID-19 pandemic, work hours began to decline in late March 2020 due to lower mail volumes and workforce availability, and we expect this trend to continue for the duration of the pandemic.

**Workforce Composition**

The number of career employees at March 31, 2020, was approximately 496,000, a decrease of approximately 1,500 employees, or 0.3%, compared to the same date a year ago. This decrease primarily reflected natural attrition, continued efforts to align our workforce with declining mail volume, offset by conversions of non-career employees to career status, in accordance with our contractual agreements.

The number of non-career employees at March 31, 2020, was approximately 129,500, a decrease of approximately 10,500 employees, or 7.5%, compared to the same date a year ago. This decrease primarily reflected management’s continued efforts to align our workforce with declining mail volume, and the conversions of non-career employees to career status, in accordance with our contractual agreements.

**Collective Bargaining Agreements**

On January 22, 2020, we reached a tentative agreement with the National Postal Mail Handlers Union, AFL-CIO (“NPMHU”) on a new three-year collective bargaining agreement, which the union membership ratified on April 8, 2020. The new contract went into effect on April 25, 2020, and will expire on September 20, 2022.

On March 10, 2020, a three-member arbitration panel reached a decision in our legally mandated binding interest arbitration process with the American Postal Workers Union, AFL-CIO (“APWU”), establishing the terms of a new collective bargaining agreement. The new contract went into effect on March 10, 2020, and will expire on September 20, 2021.
In September 2019, we agreed to extend contract negotiations relating to a new collective bargaining agreement with the National Association of Letter Carriers, AFL-CIO ("NALC"). The previous contract with the NALC expired on September 20, 2019, and negotiations with the NALC are at an impasse. The parties will continue to follow the current agreement until a new contract is reached through the dispute resolution process.

**Employee Health Benefits**

Our expense for employee health benefits (which includes the employer portion of Medicare taxes) is most significantly impacted by the number of employees electing coverage and the premium costs of the selected plans. Our active employees may participate in the Federal Employees Health Benefits ("FEHB") Program, which OPM administers. Separate from FEHB, we offer our own self-insured healthcare plan to certain non-career employees who are ineligible for FEHB.

Employee health benefits expense increased 3.2% and 0.8% for the three and six months ended March 31, 2020, compared to the same periods last year, driven by average premium increases of 4.0% in calendar year 2020, and partially offset by the lower contribution rate of the employer portion of healthcare premiums that we paid, by management efforts to provide employees with information and tools for selecting the health benefit plans that best meet their needs, and by the small decrease in number of career employees, as previously discussed.

Our share of healthcare premiums for our employees represented 71.9% of the total healthcare premium costs for both the three months ended March 31, 2020, and 2019. Our share of healthcare premiums for our employees represented 72.0% and 72.3% of the total healthcare premium costs for the six months ended March 31, 2020, and 2019, respectively. This decrease in our share of healthcare premium costs for employees during the six-month period was consistent with the terms of our contractual agreements.

**Social Security**

For the three and six months ended March 31, 2020, our Social Security costs increased 1.0% for the three months ended March 31, 2020, but decreased 0.4% for the six months ended March 31, 2020, compared to the same periods last year. These fluctuations were consistent with the general changes in compensation for the period, as described above in Compensation.

The CARES Act offers certain employers the ability to defer payment of the employer’s share of the Social Security payroll tax on wages incurred from March 27, 2020, through December 31, 2020. In accordance with this provision, we began deferring these payments in April 2020, and intend to continue the deferral for the remainder of calendar year 2020 for an estimated total deferral amount of approximately $1.6 billion. One half of these deferred payments would be due by December 31, 2021, and the other half by December 31, 2022.

**Thrift Savings Plan**

Career employees may participate in the Thrift Savings Plan ("TSP"), a defined contribution retirement savings and investment plan administered by the Federal Retirement Thrift Investment Board. Our TSP expenses are related only to our contributions for FERS employees who participate in the TSP. For these employees, we contribute 1% of basic pay and match voluntary employee contributions up to an additional 4% of basic pay.

For the three and six months ended March 31, 2020, our TSP matching costs increased 3.9% and 2.8%, respectively, compared to the same periods last year. The increase in expenses correlates to the changing workforce composition of CSRS and FERS employees.

**Retirement Benefits**

The majority of our career employees participate in one of two U.S. government defined benefit pension programs, CSRS and FERS, based on the starting date of their employment with us or another U.S. government employer. We incur normal costs (the amount determined by OPM representing the employer portion of retirement benefits for participating employees and their qualifying survivors, upon retirement, for each employee’s current year of service) for FERS employees; however, by law we do not pay normal costs for CSRS retirement benefits. FERS employees are further categorized as either FERS, FERS - Revised Annuity Employees (FERS - RAE), or FERS - Further Revised Annuity Employees (FERS - FRAE) depending on whether their date of hire was before, during,
or after calendar year 2013, respectively. This categorization determines the percentage of basic pay that we are required to contribute for normal cost.

Our retirement benefits expenses consist of three components: 1) FERS normal costs, 2) CSRS unfunded retirement benefits amortization, and 3) FERS unfunded retirement benefits amortization. These retirement benefits expense components are further described in detail in the sections below. The following table presents the retirement benefits expenses for the three and six months ended March 31, 2020, and 2019:

<table>

</tbody>
</table>

¹ Expense for the accrual for the annual payment due to OPM by September 30 of the respective year, based on information provided by OPM, to amortize the unfunded CSRS retirement obligation. Payments are to be made through 2043 based on OPM invoices.

² Expense for the accrual for the annual payment due to OPM by September 30 of the respective year, based on information provided by OPM, to amortize the unfunded FERS retirement obligation. Payments are to be made over a 30-year rolling period based on OPM invoices.

Our retirement benefits expenses increased 23.7% and 16.1% for the three and six months ended March 31, 2020, respectively, compared to the same periods last year. This increase was due to rising employer contributions rates for FERS normal cost, as well as increases in the CSRS and FERS unfunded retirement benefits amortization, as discussed below.

For additional information, see Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 9 - Retirement Plans.

**FERS Normal Costs**
We record our contributions to FERS normal costs as they are incurred. Any unpaid employer amounts at the end of a period, along with any employee amounts withheld but not remitted at the end of a period, are recorded as a current liability within Retirement benefits in the accompanying Balance Sheets.

As determined by OPM, our FERS normal cost contribution rates increased from 13.7% to 14.7% of basic pay for 2020, an increase of 7.3% from the prior year, affecting most of our FERS participants. As a result of this contribution rate increase, FERS normal cost expenses increased 8.6% and 7.6% for the three and six months ended March 31, 2020, respectively, compared to the same periods last year.

**CSRS and FERS Unfunded Retirement Benefits**
OPM periodically notifies us regarding its revaluation of unfunded CSRS and FERS retirement benefits. The amounts we record as expenses for our unfunded CSRS and FERS liabilities may be significantly impacted by changes in actuarial assumptions used by OPM to revalue the unfunded liabilities.

In October 2019, OPM provided an actuarial report projecting the annual amortization payments due September 30, 2020, to be $1.6 billion for CSRS and $1.1 billion for FERS.

On April 2, 2020, the Board of Actuaries of the CSRS, which oversees OPM’s calculation of actuarial liabilities for CSRS and FERS, lowered the discount rate used to calculate CSRS and FERS unfunded retirement liabilities from 4.25% to 4.0%. We have estimated that the impact of this change in discount rate on the annual CSRS and FERS amortization expense, will result in revised projected amortization payments due September 30, 2020, of approximately $1.8 billion for the CSRS obligation and approximately $1.3 billion for the FERS obligation, increases of $181 million and $226 million, respectively.
Accordingly, we have accrued $495 million and $899 million for the three and six months ended March 31, 2020, for the CSRS amortization expense, reflecting an adjustment of approximately $91 million for the revised assumptions. Likewise, we have accrued $378 million and $643 million for the three and six months ended March 31, 2020, for the FERS amortization expense, reflecting an adjustment of approximately $113 million for the revised assumptions.

Our CSRS and FERS unfunded retirement benefits amortization expenses increased 45.5% and 28.6% for the three and six months ended March 31, 2020, respectively, compared to the same periods last year, due to higher estimated annual amortization payments resulting from revised actuarial assumptions and discount rate changes.

We expect to receive invoices from OPM for the actual amounts due September 30, 2020, for CSRS and FERS during the fourth quarter of 2020, and the amounts invoiced could differ from the projected amounts, due to further changes in experience, discount rates and/or actuarial assumptions as of the calculation date.

**Retiree Health Benefits**

We participate in federal employee benefit programs for retiree health benefits. Retirees who participated in FEHB for the five years immediately preceding their retirement may continue to participate in the plan during retirement. Qualifying survivors of retirees are also eligible to receive benefits.

In accordance with PAEA, since the beginning of 2017, the PSRHBF has funded our share of retiree health benefit premiums. Also since 2017, we have been obligated to pay into the PSRHBF the actuarially determined normal costs of retiree health benefits attributable to the service of our employees, as well as the amortization payment for the PSRHBF unfunded liability. Our total retiree health benefits expenses therefore consist of both the normal and the amortization costs. We record the required contributions to the plan as an expense in the period in which each contribution is due.

Based on preliminary calculations provided by OPM in October 2019, we have projected the PSRHBF amortization payment amount due September 30, 2020, to be $900 million, and therefore accrued expenses of $225 million and $450 million for the three and six months ended March 31, 2020, respectively. We expect to receive the invoice from OPM for the actual amount due during the fourth quarter of 2020 and this may differ from the original projected amount due to changes in discount rates, actuarial assumptions and experience as of the invoice calculation date.

Also, based on preliminary calculations provided by OPM in October 2019 using updated discount rate assumptions, we have estimated the amount of our PSRHBF normal cost payment due September 30, 2020, to be $4.0 billion, and therefore accrued expenses of $1.0 billion and $2.0 billion for the three and six months ended March 31, 2020, respectively. We expect to receive the invoice from OPM for the actual amount due during the fourth quarter of 2020 and this may differ from the original projected amount due to changes in discount rates, actuarial assumptions and experience as of the invoice calculation date.

For the three and six months ended March 31, 2020, our total retiree health benefits expenses decreased by $50 million, or 3.9%, and $100 million, or 3.9%, respectively, compared to the same periods last year, all of which was attributable to a decrease in the estimated amortization payment for the PSRHBF unfunded liability.

For additional information, see Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 10 - Health Benefits Plans, Retirees.

**Workers’ Compensation**

Our employees injured on the job are covered by the Federal Employees’ Compensation Act (“FECA”), administered by the U.S. Department of Labor’s (“DOL”) Office of Workers’ Compensation Programs, which makes all decisions regarding injured workers’ eligibility for benefits. We are legally mandated to participate in the federal workers’ compensation program. Our workers’ compensation expense reflects the impacts of changes in discount rates, as well as the actuarial valuation of new workers’ compensation cases and revaluation of existing ones. We reimburse the DOL for all workers’ compensation benefits paid to or on behalf of our employees, plus an administrative fee.
On a daily basis we focus on costs that can be managed in the course of normal business operations. Certain aspects of workers’ compensation can be managed through human resource initiatives, safety measures and training. Other workers’ compensation costs cannot be managed in the course of normal business operations and are less predictable, including expenses caused by actuarial revaluation and discount rate changes. We subtract the cash payments made by DOL on behalf of workers’ compensation obligations, which are relatively predictable, from total workers’ compensation expense in order to determine the non-cash component of workers' compensation expense, a non-GAAP financial measure.

The following table presents the components of workers’ compensation expense, including the cash payments made by DOL on behalf of workers’ compensation obligations, for the three and six months ended March 31, 2020, and 2019:

<table>
<thead>
<tr>
<th></th>
<th>Three Months Ended March 31, 2020</th>

<tr>
<td><strong>Total workers’ compensation non-cash expense</strong></td>
<td><strong>$2,625</strong>  <strong>$401</strong></td>
<td><strong>$2,092</strong>  <strong>$961</strong></td>
</tr>
</tbody>
</table>

For the three months ended March 31, 2020, the portion of workers’ compensation expense due to the impact of discount rate changes increased approximately $2.2 billion, compared to the same period last year. For the six months ended March 31, 2020, the portion of workers’ compensation expense due to the impact of discount rate changes increased approximately $1.1 billion, compared to the same period last year. These changes are the result of changes in interest rates, outside of management’s control.

The combined costs of new workers’ compensation cases and revaluation of existing workers’ compensation cases increased by $52 million and $14 million for the three and six months ended March 31, 2020, compared to the same periods last year. Changes in actuarial valuation are primarily attributable to the combined impacts of routine changes in actuarial estimation, the progression of existing cases and updated COLA assumptions, which are largely outside of management’s control.

Under FECA, workers’ compensation claims for many types of injuries cannot be settled through lump-sum payments, and in some instances with regard to those claims, compensation may be paid over many years. Federal law grants COLA rates to those claims, and these factors result in substantially higher costs to us than would likely result if we managed our own claims. Additionally, since we do not manage the FECA program, we have no ability to control the significant administrative costs associated with managing the claims and payments process.

For additional information, see Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 11 - Workers’ Compensation.

**Transportation**

Transportation expenses include the costs we incur to transport mail and packages between our facilities, comprising highway, air and international transportation contracts, plus contract delivery services.

With the exception of contract delivery services, our costs to deliver mail and other products to delivery points are not included within Transportation but in Compensation and benefits for employee costs and in Other operating expenses for fuel, vehicle maintenance and repair, and other costs. Furthermore, transportation expenses do not
include the compensation and related costs of employees responsible for transporting mail and packages between our facilities.

Variations in the volume and weight of mail transported, the mode of transportation used, and fuel prices have significant impact on transportation expenses.

The components of transportation expenses for the three and six months ended March 31, 2020, and 2019, are presented in the following table:

<table>
<thead>
<tr>
<th></th>
<th>Three Months Ended March 31,</th>
<th>Six Months Ended March 31,</th>
</tr>
</thead>
<tbody>
<tr>

<td><strong>$2,000</strong></td>
</tr>
<tr>
<td></td>
<td><strong>$4,405</strong></td>
<td><strong>$4,342</strong></td>
</tr>
</tbody>
</table>

Overall, transportation expenses increased 0.4% and 1.5% for the three and six months ended March 31, 2020, compared to the same periods last year.

Highway transportation expenses decreased 1.5% for the three months ended March 31, 2020, but increased 3.4% during the six months ended March 31, 2020, compared to the same periods in last year. For the three and six months ended March 31, 2020, highway contract expenses decreased, primarily due to a decrease in the number of miles driven and lower average diesel fuel prices. However, results for the six months ended March 31, 2020, include a one-time adjustment resulting from our adoption of ASC 842, whereby we recorded transportation expenses associated with embedded leases in certain of our transportation contracts during the first quarter of 2020 (see Note 2 - Recent Accounting Pronouncements for additional disclosures regarding our adoption of ASC 842).

Air transportation expenses increased 3.9% for the three months ended March 31, 2020, but decreased 0.6% during the six months ended March 31, 2020, compared to the same periods last year. For the six months ended March 31, 2020, the slight decrease was due primarily to lower volumes and lower average jet fuel prices. However, both volumes and average jet fuel prices rose in the three months ended March 31, 2020, leading to an increase in air transportation expenses for the period.

International transportation expenses are related only to outbound services that allow customers in the U.S. to send mail and packages to other countries. For the three and six months ended March 31, 2020, international transportation expenses decreased 1.4% and 2.9% compared to the same periods last year, primarily due to decreases in our international service volumes.
**Other Operating Expenses**

Other operating expenses for the three and six months ended March 31, 2020, and 2019, are detailed in the following table:

<table>
<thead>
<tr>
<th>(in millions)</th>
<th>Three Months Ended March 31,</th>

</table>

Other operating expenses increased by 5.3% and 2.5% for the three and six months ended March 31, 2020, compared to the same periods in the prior year. While these aggregate changes were relatively immaterial, the period-over-period changes in the various components of other operating expenses for the three and six months ended March 31, 2020, were also relatively immaterial.

**LIQUIDITY AND CAPITAL RESOURCES**

Our liquidity consists of unrestricted cash and cash equivalents plus available borrowing capacity. As of March 31, 2020, and September 30, 2019, we held unrestricted cash and cash equivalents of $9.0 billion and $8.8 billion, respectively. During the six months ended March 31, 2020, our average daily liquidity balance under our statutory borrowing capacity was $12.3 billion, representing approximately 56 days of liquidity available, which we define as liquidity divided by estimated average cash disbursements (including capital expenditures) per calendar day (365 days per year).

We face certain risks caused by the COVID-19 pandemic, including the disruptions to our revenue and business operations, which will have a material effect on our financial condition and results of operations. Quarantines, shelter-in-place orders, and travel and logistics restrictions in connection with the outbreak have affected our retail and commercial customers, as well as suppliers and mail service providers. While the disruption is expected to be temporary, its duration remains uncertain. A protracted loss in customer demand for our services is likely to have a material effect on our financial condition, results of operations and liquidity. The sudden drop in mail volumes, our most profitable revenue stream, is steep and may never fully recover to levels prior to the pandemic.

Notwithstanding our $15.0 billion statutory debt limit, and $3.0 billion annual limitation on new borrowing, the CARES Act allows us to borrow up to an additional $10.0 billion in financing from the U.S. Treasury to fund operating expenses. The U.S. Treasury may lend up to this amount at our request, upon terms and conditions mutually agreed upon. However we have no assurance that the U.S. Treasury will agree to provide such financing or if it will be provided upon favorable terms.

We estimate that the COVID-19 pandemic may increase our net operating loss by more than $22.0 billion over the next eighteen months, threatening our ability to operate. If we are able to borrow the $10.0 billion from the U.S. Treasury as provided by the CARES Act, we expect that we will have sufficient liquidity to continue to operate through April 2021. However, if we are unable to secure this $10.0 billion in financing, we expect to be able to continue to operate only through September 2020, absent additional defaults.

Although our liquidity has generally increased since 2012, it remains insufficient to support an organization with approximately $80 billion in annual operating expenses, to make capital investments necessary for continuity of
operations and to prepare for unexpected contingencies. Much of this liquidity improvement as of March 31, 2020, would not have occurred but for the temporary exigent surcharge, which allowed us to collect a total of $4.6 billion in incremental revenue between January 2014 and April 2016.

Aside from the temporary exigent surcharge, we defaulted on $33.9 billion of statutorily specified PSRHBF prefunding payments from 2012 through 2016, and did not make the approximately $495 million in payments due for FERS unfunded liabilities between 2014 and 2016, or the approximately $21.0 billion in payments due for PSRHBF normal cost and amortization on PSRHBF, CSRS and FERS unfunded liabilities between 2017 and 2019, in order to preserve liquidity, and to ensure that our ability to fulfill our primary universal service mission was not placed at undue risk. The combination of these defaults and non-payments, plus the incremental revenue associated with the temporary exigent surcharge referred to above, and the increased revenue from growth in our Shipping and Packages business, are the primary reasons why our cash and available liquidity has improved.

**CASH FLOW ANALYSIS**

**Operating Activities**
Cash provided by operating activities decreased $148 million for the six months ended March 31, 2020, compared to the same period last year, largely the result of timing differences in cash payments for compensation and benefits.

**Investing Activities**
We invested $741 million in the purchase of property and equipment for the six months ended March 31, 2020, which is an increase of $82 million, or 12.4%, compared to the same period last year. As of the date of this report, the amount of our full year projected capital expenditures is approximately **$2.0 billion**, which is approximately $300 million less than our original forecast of $2.3 billion. We anticipate that this may further decline if equipment and information technology investments and other programs are deferred to future years as a result of COVID-19.

**Financing Activities**
Except as described otherwise in this quarterly report, the nature and amounts of our payment obligations under our debt, capital and operating lease agreements, purchase commitments and other liabilities as of March 31, 2020, have not materially changed from those described in our Annual Report.

As of both March 31, 2020, and September 30, 2019, the aggregate principal balance of our outstanding debt was $11.0 billion, consisting of a combination of fixed-rate note and floating-rate notes, all of which we consider long-term debt.

**DEBT**
As of March 31, 2020, our statutory borrowing capacity was $4.0 billion, of which $1.0 billion would require repayment by September 30, 2020, to comply with our annual debt increase limits. Furthermore, notwithstanding our $15.0 billion statutory debt limit, and the $3.0 billion annual limitation on new borrowing, the CARES Act allows us to borrow up to an additional $10.0 billion in financing from the U.S. Treasury to fund operating expenses. The U.S. Treasury may lend up to this amount at our request, upon terms and conditions mutually agreed upon.

In 1974, we began issuing debt through individual debt agreements to the Federal Financing Bank ("FFB"), a government-owned corporation under the general supervision of the Secretary of the Treasury. In 1999, we entered into a Note Purchase Agreement ("NPA") with the FFB to establish standardized procedures for issuing debt. Under the NPA, we were able to issue a series of notes with established terms and conditions by providing two days prior notice. Also under the NPA, we could make borrowings against two annually renewable revolving credit line facilities. These note arrangements and credit line facilities provided the flexibility to borrow short or long-term, using floating or fixed-rate instruments.

The NPA was extended each year through September 30, 2018, and in shorter increments between that date and August 31, 2019, at which time the NPA expired. This expiration did not affect the terms of any of our outstanding debt as of March 31, 2020, all of which was issued under the NPA.
If we are unable to renew or replace the NPA with the FFB, we have no assurance that we could obtain alternative debt financing on comparable terms. However, we believe that we will be able to maintain adequate liquidity through existing and new financing arrangements, as necessary and allowed by statute, to fund our operations.

On April 1, 2020, we drew $3.4 billion on a revolving credit facility with the FFB that survived the expiration of the NPA. In order to comply with the annual net increase limit, we must repay $400 million from this credit facility by September 30, 2020. Given that the credit facility has a maximum term of up to one year, we must repay any outstanding balance of the credit facility by April 1, 2021. The credit facility’s interest rate was determined by the U.S. Treasury based on the market rates of similar instruments as of the day of the funding request.

**LIQUIDITY OUTLOOK**

We are constrained by laws and regulations, including the PAEA, which restrict revenue sources and mandates certain expenses. Statutorily mandated expenses include amortization payments to provide full funding of retirement benefits under the CSRS and the FERS, as well as FERS normal costs, described in greater detail in Note 9 - Retirement Plans. Additionally, the PAEA established the PSRHBF and mandated certain obligations for paying normal costs, the present value of the estimated retiree health benefits attributable to active employees’ current year of service, and amortization payments for full prefunding of retiree health benefits. These prefunding obligations, described in greater detail in Note 10 - Health Benefits Plans, are unlike expenses imposed on most other federal entities or private-sector businesses that offer such benefits.

We continue to face challenges from the ongoing migration of mail to electronic alternatives, and we are legally limited under current law in how we can price our products and streamline our legacy business model. Our operations will require significant capital investment over the next few years to modernize and improve our processing and delivery infrastructure and update our delivery fleet in order to continue to meet our primary statutory obligation to provide prompt, reliable and efficient postal services to the nation.

Irrespective of our challenges resulting from the COVID-19 pandemic, absent legislative and regulatory change, we project continuing annual net losses in the future. As a result of these losses and our liquidity concerns, we will unlikely have sufficient cash balances to meet all of our existing legal obligations and make all of the critical investments in our infrastructure that are necessary for operational continuity and that have been deferred in recent years.

In the event that circumstances leave us with insufficient liquidity to continue operating, we may deem it necessary to implement additional contingency plans to ensure that our primary mission is fulfilled and that mail deliveries continue. These measures may require us to prioritize payments to the FFB, our employees and suppliers ahead of some payments to fund retirement and retiree health benefits, as we have done in the past.

With the anticipated continued migration to electronic communication and transactional alternatives, we continue to pursue long-term financial sustainability by focusing on the following items:

1. Continued efforts to control costs and drive efficiencies, innovate to keep mail relevant and generate increased revenue;
2. Postal Service reform legislation that addresses our overall cost structure and enhances our revenue-generating opportunities; and
3. Favorable outcome of the PRC’s ten-year review (discussed below), which would allow additional pricing flexibility.

Although we continue to inform the executive branch, Congress, the PRC and other stakeholders of the immediate and long-term financial challenges we face, we have no assurances that our requests will result in meaningful reform in the foreseeable future.
**PRC Ten-year Review**

In December 2016, the PRC initiated its ten-year review of the system for regulating rates and classes for Market-Dominant products as required by the PAEA. The purpose of the ten-year review was to determine if the system for regulating such rates and classes has achieved the objectives Congress established in the PAEA. As part of this review, the PRC evaluated the CPI-U price cap for our Market-Dominant services.

On December 1, 2017, the PRC announced its initial decision in connection with its ten-year review. The PRC concluded that the rates system has not achieved its objectives and needs to be changed, primarily because it does not enable us to achieve our mission of providing prompt, reliable, and efficient universal postal services to the American people in a financially sustainable manner. The PRC’s proposed changes to the system do not include the elimination of the CPI-U price cap; however, its proposal does provide for some additional pricing authority within a price cap system.

On December 5, 2019, the PRC announced a revised decision in connection with its ten-year review. The PRC’s proposed changes to the system still do not include the elimination of the CPI-U price cap. Moreover, while the revised proposal does include adjustment factors as we had requested to provide more flexibility for the regulatory system to better deal with future exogenous changes, the new proposal no longer includes any “true-up” authority to provide us with a reasonable opportunity to cover all of our costs. We continue to assert that the price cap should be eliminated, and that if the PRC insists on maintaining a price cap that the system must include both a resetting of rates so they are compensable, as well as adjustment factors to ensure the system is sufficiently flexible going forward.

The PRC was expected to issue a final rule after considering the comments and reply comments of any interested stakeholders, which were due no later than February 3, 2020, and March 4, 2020, respectively. As of the date of this report, the PRC has not issued a final rule. Additional information regarding the ten-year review may be found at the PRC website: https://www.prc.gov/press-releases/prc-revises-proposals-second-rulemaking-modify-rate-system-classes-market-dominant.

**2020 and Beyond**

Irrespective of our challenges resulting from the COVID-19 pandemic, we anticipate that given our ongoing liquidity concerns, and without legislative action and regulatory reform, we may not be able to pay all legally required obligations and also invest in much-needed capital expenditures in 2020 and future years that are necessary to ensure our ability to fulfill our primary mission. Furthermore, we believe that continuing productivity improvements alone will not be sufficient to address the challenges presented by declining Market-Dominant volume and revenue, and any future growth in operating revenue would unlikely keep pace with increased costs.

**Legally Required Obligations**

In addition to our previously discussed obligations for unfunded retirement and retiree health benefits of approximately $8.0 billion due on September 30, 2020, we expect to pay the DOL approximately $1.3 billion in October 2020, representing the workers’ compensation claims paid by DOL for the chargeback year July 1, 2019, to June 30, 2020, plus the estimated administrative fee.

The CARES Act offers certain employers the ability to defer payment of the employer’s share of the Social Security payroll tax on wages incurred from March 27, 2020, through December 31, 2020. In accordance with this provision, we began deferring these payments in April 2020, and intend to continue the deferral for the remainder of calendar year 2020 for an estimated total deferral amount of approximately $1.6 billion. One half of these deferred payments would be due by December 31, 2021, and the other half by December 31, 2022.

**Capital Investments**

We currently estimate that our required cash outlays for capital investments necessary to ensure that we can continue to perform our universal service obligation will amount to approximately $1.3 billion for the remainder of 2020, and an additional $11.0 billion for years 2021 through 2024, as we plan to invest in a new fleet of delivery vehicles and other appropriate capital assets. Although our future projections include these capital cash outlays, future cash flow from operations alone may not generate the cash needed to enable us to fully fund such necessary capital investments.
**Mitigating Circumstances**

We continue to pursue strategies within our control to increase operational efficiency and improve liquidity. We have managed capital in recent years by spending only what we believed was essential to maintain our existing facilities and service levels, and to increase efficiencies. However, continued increases in capital investment are necessary to upgrade our facilities, fleet of vehicles and processing equipment in order to remain operationally viable. Aggressive management of the business operations, as well as legislative and regulatory reforms that will enable us to increase revenue and reduce costs, will all be necessary to restore our financial health.

Our status as an independent establishment of the executive branch that does not receive tax dollars for our operations presents unique requirements and restrictions, but also potentially mitigates some of the financial risk that would otherwise be associated with a cash shortfall. With annual total revenue in 2019 of approximately $71 billion, a financially sound Postal Service continues to be vital to U.S. commerce.

The U.S. economy benefits greatly from us and the many businesses that provide the printing and mailing services that we support. Disruption of the mail would cause undue hardship to businesses and consumers as it would significantly inhibit the remittance of payments through the mail, and in the event of a cash shortfall, the U.S. government would likely prevent us from significantly curtailing or ceasing operations. We continue to inform the executive branch, Congress, the PRC and other stakeholders of the immediate and long-term financial challenges we face and the legislative and regulatory changes that are required to restore our financial stability.

**LEGISLATIVE, REGULATORY AND RELATED MATTERS**

**TASK FORCE ON THE UNITED STATES POSTAL SYSTEM**

As previously reported, on April 12, 2018, the President issued Executive Order 13829 to establish a Task Force on the United States Postal Service ("Task Force"), to be chaired by the Secretary of the Treasury, as Secretary and as Chairman of the FFB, or his designee. In accordance with the Executive Order, the Task Force conducted an evaluation of our operations and finances, and submitted its report to the President in August 2018.

There has been no further congressional activity related to the President’s Task Force report on the Postal Service subsequent to the March 12, 2019, Senate Homeland Security and Governmental Affairs Committee hearing titled, "A Path to Sustainability: Recommendations from the President’s Task Force on the United States Postal Service."

**LEGISLATIVE UPDATE**

As a self-funded independent establishment of the executive branch, our business model and operations are significantly influenced by congressional oversight and legislation. Additionally, Congress intended for us to be governed by an eleven-member Board of Governors ("Board") which generally consists of our Postmaster General, Deputy Postmaster General and nine independent governors ("Governors"). The President appoints the Governors with the advice and consent of the Senate. We have five Senate-confirmed Governors currently in office.

**Legislation**

Several bills introduced in response to the COVID-19 pandemic have financial implications for us.

On March 18, 2020, the President signed the Families First Coronavirus Response Act, enacted as Public Law 116-127, which provides new paid sick leave that may be used by an employee in COVID-19 situations for themselves, or to care for sick family members, as well as Family and Medical Leave Act-protected unpaid and paid leave if a school/child care is closed.

On March 27, 2020, the President signed the CARES Act, which allows the Postal Service to borrow up to an additional $10.0 billion in financing from the U.S. Treasury to fund operating expenses. The law stipulates that the Secretary of Treasury may lend up to this amount at the request of the Postal Service, upon terms and conditions mutually agreed upon by the Secretary and the Postal Service.

H.R. 6425, the Protect our Post Offices Act, introduced on March 31, 2020, would also appropriate $25.0 billion for payment to the Postal Service Fund for revenue forgone due to the COVID-19 pandemic. The bill was referred to the House Committees on Appropriations and Budget.
Postal Service Reform
The 116th Congress has not introduced any major Postal Service reform bills to date. Legislative and regulatory reforms remain critical for us to meet the needs of the American public, and we will continue to work with Congress and all of our stakeholders to enact Postal Service reform legislation.

Board of Governors Nominations
On March 2, 2020, the President submitted to the Senate the nomination of Donald Lee Moak to serve on the Board for a term expiring December 8, 2022. The nomination was referred to the Senate Homeland Security and Governmental Affairs Committee for its consideration. The nomination of William Zollars to serve for a term expiring December 8, 2022, is also pending the committee’s consideration.

FAIR VALUE MEASUREMENTS
As required by authoritative accounting literature, certain fair value disclosures for the periods ended March 31, 2020, and September 30, 2019, are discussed in Item 1. Financial Statements, Notes to Unaudited Financial Statements. We did not recognize gains as a result of valuation measurements during the three and six months ended March 31, 2020. All recognized losses have been incorporated into our financial statements as of March 31, 2020. See Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 13 - Fair Value Measurement.

RELATED PARTY TRANSACTIONS
As disclosed throughout this quarterly report, we have significant transactions with other U.S. government entities, which are considered related parties for reporting purposes. For a more detailed description, see Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 5 - Related Parties.

CRITICAL ACCOUNTING POLICIES AND ESTIMATES
The preparation of financial statements in accordance with GAAP requires management to make significant judgments and estimates to develop certain amounts reflected and disclosed in the financial statements. In many cases, alternative policies or estimation techniques may be used.

We maintain a thorough process to review the application of accounting policies and to evaluate the appropriateness of the many estimates that are required to prepare the financial statements of a large organization. However, even under optimal circumstances, estimates routinely require adjustment based on changing circumstances and new or better information.

The accounting policies deemed either the most judgmental or which involve the selection or application of alternative accounting policies, and are material to the interim financial statements, are described in Critical Accounting Estimates contained in Management’s Discussion and Analysis of Financial Condition and Results of Operations of the Annual Report. Management normally discusses the development and selection of accounting policies and estimates with the Audit and Finance Committee of the Board.

RECENT ACCOUNTING STANDARDS
See Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 2 - Recent Accounting Pronouncements, for a description of recently announced accounting standards.

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK
In the normal course of business we are exposed to market risks from changes in commodity prices, certain foreign currency exchange rates and interest rates. Our commodity price risk consists primarily of exposure to changes in prices for diesel fuel, unleaded gasoline and aircraft fuel for transportation of the mail, and fuel for heating facilities. We have foreign currency risk related to the settlement of terminal dues and transit fees with foreign postal administrations for international mail.
We have not used derivative commodity or financial instruments to manage market risk related to commodities, foreign currency exchange or interest rate fluctuations for debt instruments. Additionally, we do not purchase or hold derivative financial instruments for speculative purposes.

We also have provisions in our debt agreements that allow us to prepay our $11.0 billion debt at any time at a price determined by the Secretary of the Treasury, based on prevailing interest rates in the U.S. Treasury market at the time of repayment.

See Item 7A. Quantitative and Qualitative Disclosures about Market Risk in the Annual Report for additional information.

ITEM 4. CONTROLS AND PROCEDURES

Management is responsible for the preparation, integrity and fair presentation of our financial statements.

DISCLOSURE CONTROLS

We maintain disclosure controls and procedures that are designed to ensure that information required to be disclosed in quarterly and annual reports is recorded, processed, summarized, and reported within the time frames specified by PAEA, and that this information is accumulated and communicated to our management, including the Postmaster General and Chief Financial Officer, as appropriate, to allow timely decisions regarding required disclosure.

We carried out an evaluation under the supervision and with the participation of management, including the Postmaster General and the Chief Financial Officer, of the effectiveness of the design and operation of disclosure controls and procedures as of March 31, 2020. Based upon and as of the date of the evaluation, the Postmaster General and the Chief Financial Officer concluded that our disclosure controls and procedures were effective.

INTERNAL CONTROLS

We have made no changes in our internal control over financial reporting during the three months ended March 31, 2020, that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.
PART II. OTHER INFORMATION

ITEM 1. LEGAL PROCEEDINGS

For a discussion of legal proceedings affecting us, please refer to Item 1. Financial Statements, Notes to Unaudited Financial Statements and Note 8 - Commitments and Contingencies, as well as our Annual Report.

ITEM 1A. RISK FACTORS

The following risk factor supplements Item 1A. Risk Factors of our Annual Report.

*The occurrence of a global pandemic or other adverse public health developments could have a material and adverse effect on our business operations, financial condition and results of operations.*

In March 2020, the World Health Organization declared COVID-19 a global pandemic, which has since spread throughout the U.S. Given our mandate to provide universal postal services to the nation, we provide an essential service and have continued to process and deliver mail and packages during the pandemic.

We expect the COVID-19 pandemic to have a material effect on our financial condition, results of operations and liquidity. Quarantines, shelter-in-place orders, and travel and logistics restrictions in connection with the outbreak have affected retail and commercial customers, as well as suppliers and mail service providers. The Postal Service relies on the sale of postal products and services to fund its operations, and these sales have declined significantly as a result of the pandemic. The sudden drop in mail volumes, the Postal Service’s most profitable revenue stream, has been steep and may never fully recover to levels prior to the pandemic.

Postmaster General and Chief Executive Officer
Date: May 7, 2020

/s/Joseph Corbett
Joseph Corbett
Chief Financial Officer and Executive Vice President
Date: May 7, 2020
CERTIFICATION PURSUANT TO RULES 13a-14(a) AND 15d-14(a) UNDER THE SECURITIES AND EXCHANGE ACT OF 1934, AS ADOPTED PURSUANT TO SECTION 302 OF THE SARBANES-OXLEY ACT OF 2002.

I, Megan J. Brennan, certify that:

1. I have reviewed this quarterly report on Form 10-Q of the United States Postal Service (“Postal Service”);

2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;

3. Based on my knowledge, the financial statements and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the Postal Service as of, and for, the periods presented in this report;

4. The Postal Service’s other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the Postal Service and have:
   a. Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the Postal Service, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
   b. Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
   c. Evaluated the effectiveness of the Postal Service’s disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
   d. Disclosed in this report any change in the Postal Service’s internal control over financial reporting that occurred during the Postal Service’s most recent fiscal quarter (the Postal Service’s fourth fiscal quarter in the case of an Annual Report) that has materially affected, or is reasonably likely to materially affect, the Postal Service’s internal control over financial reporting; and

5. The Postal Service’s other certifying officer and I have disclosed based on our most recent evaluation of internal control over financial reporting, to the Postal Service’s independent registered accounting firm and the Audit and Finance Committee of the Postal Service’s Board of Governors:
   a. All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the Postal Service’s ability to record, process, summarize and report financial information; and
   b. Any fraud, whether or not material, that involves management or other employees who have significant role in the Postal Service’s internal control over financial reporting.

Date: May 7, 2020

/s/Megan J. Brennan
Megan J. Brennan
Postmaster General and Chief Executive Officer
CERTIFICATION PURSUANT TO
RULES 13a-14(a) AND 15d-14(a) UNDER THE SECURITIES AND EXCHANGE ACT OF
1934, AS ADOPTED PURSUANT TO SECTION 302 OF THE SARBANES-OXLEY ACT OF
2002.

I, Joseph Corbett, certify that:

1. I have reviewed this quarterly report on Form 10-Q of the United States Postal Service (“Postal Service”);

2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;

3. Based on my knowledge, the financial statements and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the Postal Service as of, and for, the periods presented in this report;

4. The Postal Service’s other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the Postal Service and have:
   a. Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the Postal Service, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
   b. Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
   c. Evaluated the effectiveness of the Postal Service’s disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
   d. Disclosed in this report any change in the Postal Service’s internal control over financial reporting that occurred during the Postal Service’s most recent fiscal quarter (the Postal Service’s fourth fiscal quarter in the case of an Annual Report) that has materially affected, or is reasonably likely to materially affect, the Postal Service’s internal control over financial reporting; and

5. The Postal Service’s other certifying officer and I have disclosed based on our most recent evaluation of internal control over financial reporting, to the Postal Service’s independent registered accounting firm and the Audit and Finance Committee of the Postal Service’s Board of Governors:
   a. All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the Postal Service’s ability to record, process, summarize and report financial information; and
   b. Any fraud, whether or not material, that involves management or other employees who have significant role in the Postal Service’s internal control over financial reporting.

CERTIFICATION PURSUANT TO
18 U.S.C. SECTION 1350, AS ADOPTED PURSUANT TO

In connection with the Quarterly Report of the United States Postal Service (“Postal Service”) on Form 10-Q for the period ended March 31, 2020, (the “Report”), I, Megan J. Brennan, certify, pursuant to 18 U.S.C. Section 1350, as adopted pursuant to Section 906 of the Sarbanes-Oxley Act of 2002 that:

(1) The Report fully complies with the requirements of Section 13(a) or 15(d) of the Securities Exchange Act of 1934; and

(2) The information contained in the Report fairly presents, in all material respects, the financial condition and results of operations of the Postal Service.

Dated: May 7, 2020

- **Orange:** Entire section awaiting update or third-party deliverable
- **Purple:** Linked number or reference that requires confirmation of source data
- **Blue:** Section or paragraph selected for elimination or move to another section; or
- **Magenta:** Internal comment for reviewers (to be removed when resolved)
UNITED STATES POSTAL REGULATORY COMMISSION
Washington, D.C. 20268-0001

FORM 10-Q

QUARTERLY REPORT PURSUANT TO 39 U.S.C. § 3654 AND SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the Quarterly Period Ended March 31, 2020

UNITED STATES POSTAL SERVICE
(Exact name of registrant as specified in its charter)

Washington, D.C. 41-0760000
(State or other jurisdiction of incorporation or organization) (I.R.S. Employer Identification No.)

475 L’Enfant Plaza, S.W.
Washington, D.C. 20260
(Address of principal executive offices) (ZIP Code)

(202) 268-2000
(Registrant’s telephone number, including area code)

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes ☐ No ☐ Not Applicable ☑

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to rule 405 of Regulation S-T ($232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files). Yes ☐ No ☐ Not Applicable ☑

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, a smaller reporting company or an emerging growth company. See the definitions of "large accelerated filer," "accelerated filer," "smaller reporting company" and "emerging growth company" in Rule 12b-2 of the Exchange Act. (Check one):

☐ Large accelerated filer ☐ Accelerated filer ☐ Non-accelerated filer ☐
☐ Smaller reporting company ☐ Emerging growth company ☐ Not applicable ☑

If an emerging growth company, indicate by check mark if the registrant has elected not to use the extended transition period for complying with any new or revised financial accounting standards provided pursuant to Section 13(a) of the Exchange Act. ☐

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). Yes ☐ No ☑

NOTES TO UNAUDITED FINANCIAL STATEMENTS

NOTE 1 - BASIS OF PRESENTATION

Interim Financial Statements
The accompanying unaudited interim financial statements of the United States Postal Service (the “Postal Service”) have been prepared in accordance with accounting principles generally accepted in the United States (“GAAP”) for interim financial information and with the instructions to Form 10-Q and Rule 10-01 of the U.S. Securities and Exchange Commission Regulation S-X. These financial statements should be read in conjunction with the Postal Service’s financial statements for the year ended September 30, 2019, included in its Annual Report on Form 10-K (“Annual Report”) filed with the Postal Regulatory Commission (“PRC”) on November 14, 2019, and do not include all information and footnotes which are normally included in the Annual Report. Except as otherwise specified, all references to years are to fiscal years beginning October 1 and ending September 30, and quarters are quarters within fiscal years 2020 and 2019.

In the opinion of management, the accompanying unaudited interim financial statements reflect all material adjustments, including recurring adjustments, necessary to fairly present the financial position as of March 31, 2020, the results of operations for the three and six months ended March 31, 2020, and 2019, the changes in net deficiency for the six months ended March 31, 2020, and 2019, and cash flows for the six months ended March 31, 2020, and 2019. Operating results for the three and six months ended March 31, 2020, are not necessarily indicative of the results that may be expected for all of 2020. Mail volume and revenue are historically greatest in the first quarter of the year, which includes the holiday mailing season.

Reclassifications
Certain reclassifications have been made to the financial statements for the three and six months ended March 31, 2019, as well as subsequent footnotes, to conform to the current period presentation. Specifically, certain retirement benefit expenses have been reclassified from Compensation and benefits and separately identified as Retirement benefits within Operating expenses in the accompanying unaudited Statements of Operations. In addition, unfunded retirement benefits amortization expenses associated with the Civil Service Retirement System (“CSRS”) and the Federal Employee Retirement System (“FERS”) have been reclassified from Unfunded retirement benefits amortization to Retirement benefits within Operating expenses in the accompanying unaudited Statements of Operations.

The liabilities associated with these retirement benefits have also been reclassified from Compensation and benefits and separately identified as Retirement benefits within Current liabilities in the balance sheets. In addition, the unfunded retirement benefits liabilities associated with CSRS and FERS have been reclassified from Unfunded retirement benefits to Retirement benefits within Current liabilities in the balance sheets. Corresponding reclassifications have been made within Changes in current assets and liabilities in the accompanying unaudited Statements of Cash Flows.

These reclassifications had no effect on previously reported total operating expenses, loss from operations or net loss. See Note 9 - Retirement Plans for further disclosure pertaining to retirement benefits.

NOTE 2 - RECENT ACCOUNTING PRONOUNCEMENTS

Recently Adopted Accounting Pronouncement
In February 2016, the Financial Accounting Standards Board (“FASB”) issued Accounting Standards Update 2016-02 Leases, which has since been codified in Accounting Standards Codification (“ASC”) 842, Leases (“ASC 842”). The new standard requires an entity to record most leases in its balance sheets but continue to recognize expenses in its statements of operations in a manner similar to current accounting practices. The new standard requires a lessee to recognize a lease liability for the obligation to make lease payments and a right-of-use (“ROU”) asset for the right to use the underlying asset for the lease term. Expenses associated with operating leases are recognized on a straight-line basis and include embedded interest and amortization components. The Postal Service recognizes expenses associated with operating leases as rent expense or transportation expense within Other operating expenses or Transportation, respectively, in the statements of operations. The Postal Service recognizes expenses associated with finance leases (formerly capital leases under previous guidance) with both
interest and amortization expenses and presents these separately in the statements of operations. As such, finance leases generally have higher expenses in the earlier periods of the lease term.

The Postal Service adopted ASC 842 for its 2020 fiscal year (beginning October 1, 2019). In connection with the adoption of ASC 842, the Postal Service has made necessary changes to relevant policies, processes, information systems and internal controls. For transition purposes, the Postal Service has elected the option not to restate comparative financial statements under the modified retrospective transition model. This option allows the application of the standard to all leases in effect as of the effective date (October 1, 2019) or commencing thereafter, without any restatement impact on the comparative financial statement balances. Accordingly, all comparative financial statements enclosed herein are presented in accordance with the previous ASC 840, Leases (“ASC 840”), with related ASC 840 disclosures provided in Note 12 - Leases.

In implementing ASC 842, the Postal Service has elected the package of practical expedients which permits carrying forward historical accounting positions around lease identification, lease classification and initial direct costs for all leases commencing prior to October 1, 2019. The Postal Service has also made a policy election to not separate the lease and non-lease components for all types of underlying assets and to exclude its short-term leases from the ROU asset and lease liability balances.

The Postal Service adopted ASC 842 on October 1, 2019. The implementation of ASC 842 resulted in an opening balance sheet adjustment, as of October 1, 2019, to recognize $4.4 billion in right-of-use assets and lease liabilities relating to operating leases as follows:

<table>
<thead>
<tr>
<th>(in millions)</th>
<th>As reported on September 30, 2019</th>

</tr>
</tbody>
</table>

The implementation of ASC 842 did not have a material impact on the Postal Service’s Statement of Operations or Statement of Cash Flows and did not have any impact on the Postal Service’s Statement of Changes in Net Deficiency. See Note 12 - Leases and Item 4. Controls and Procedures for additional disclosures pertaining to ASC 842.

**Accounting Pronouncements Issued but not Adopted**

**Accounting Standards Update 2016-13 Financial Instruments - Credit Losses**

In June 2016, the FASB issued Accounting Standards Update 2016-13 Financial Instruments - Credit Losses, which has since been codified in ASC 326, Financial Instruments - Credit Losses (“ASC 326”). The new standard requires entities to measure expected credit losses on financial instruments and other commitments by replacing the incurred loss impairment methodology in current GAAP with a methodology that reflects expected credit losses and requires consideration of a broader range of reasonable and supportable information to inform credit loss estimates.

The Postal Service intends to adopt ASC 326 for its 2021 fiscal year (beginning October 1, 2020) and the quarters therein. The standard is applicable to the Postal Service’s valuation of its receivables. The Postal Service is currently evaluating the impact of adopting this standard on its financial statements and related disclosures.
Accounting Standards Update 2018-13 Fair Value Measurement

In August 2018, the FASB issued Accounting Standards Update 2018-13 Fair Value Measurement: Disclosure Framework - Changes to the Disclosure Requirements for Fair Value Measurement, which has since been codified in ASC 820, Fair Value Measurement ("ASC 820"). The new standard modifies the disclosure requirements for fair value measurements by adding, modifying or removing certain disclosures.

The Postal Service intends to adopt ASC 820 for its 2021 fiscal year (beginning October 1, 2020) and the quarters therein. The standard is applicable to the Postal Service's fair value measurements of its revenue forgone installment receivable and its long-term debt, as described further in Note 13 - Fair Value Measurement. Under ASC 820, certain disclosures are required to be applied on a retrospective basis and others on a prospective basis. The Postal Service is currently evaluating the impact of adopting this standard on its financial statements and related disclosures.

Accounting Standards Update 2018-15 Intangibles - Goodwill and Other - Internal-Use Software

In August 2018, the FASB issued Accounting Standards Update 2018-15 Intangibles - Goodwill and Other - Internal-Use Software (Subtopic 350-40) - Customer’s Accounting for Implementation Costs Incurred in a Cloud Computing Arrangement, which has since been codified in ASC Subtopic 350-40, Intangibles - Goodwill and Other - Internal-Use Software ("ASC 350-40"). This is an update to a standard the FASB issued in April 2015 for entities evaluating the accounting for fees paid by a customer in a cloud computing (hosting) arrangement by providing guidance for determining when such arrangement includes a software license.

If a cloud computing arrangement includes a license for internal-use software, then the software license is accounted for by the customer in accordance with ASC 350-40. This generally means that an intangible asset is recognized for the software license and, to the extent that the payments attributable to the software license are made over time, a liability also is recognized. If a cloud computing arrangement does not include a software license, the entity should account for the arrangement as a service contract. This generally means that the fees associated with the hosting element (service) of the arrangement are expensed as incurred.

The Postal Service intends to adopt ASC 350-40 for its 2021 fiscal year (beginning October 1, 2020) and the quarters therein. The Postal Service is currently evaluating the impact of adopting this standard on its financial statements and related disclosures.

NOTE 3 - LIQUIDITY

The Postal Service’s liquidity consists of unrestricted cash and cash equivalents plus available borrowing capacity.

Cash

The Postal Service generates its cash almost entirely through the sale of postal products and services. As of March 31, 2020, and September 30, 2019, the Postal Service held unrestricted cash and cash equivalents of $9.0 billion and $8.8 billion, respectively. See Note 6 - Cash, Cash Equivalents and Restricted Cash for further disclosures pertaining to cash.

The Postal Reorganization Act, as amended by Public Laws 101-227 and 109-435 (the "PRA"), authorizes the Postal Service to raise cash through the issuance of debt obligations. The Postal Service is limited by statute to annual net increases in debt of $3.0 billion calculated as of the end of each fiscal year, and total debt of $15.0 billion. In 1974, the Postal Service began issuing debt through individual debt agreements to the Federal Financing Bank ("FFB"), a government-owned corporation under the general supervision of the Secretary of the Treasury.

COVID-19 Considerations

In March 2020, the World Health Organization declared a novel strain of coronavirus ("COVID-19") a global pandemic, which has since spread throughout the U.S. Given its mandate to provide universal postal services to the nation, the Postal Service provides an essential service as part of the nation’s critical infrastructure and has continued to process and deliver mail and packages during the pandemic.

The Postal Service expects the COVID-19 pandemic to have a material effect on its financial condition, results of operations and liquidity. Quarantines, shelter-in-place orders and travel and logistics restrictions in connection with the outbreak have affected retail and commercial customers, as well as suppliers and mail service providers. The
Postal Service relies on the sale of postal products and services to fund its operations, and these sales declined significantly in late March 2020 as a result of the pandemic, and the impact has continued to worsen since then. The sudden drop in mail volumes, the Postal Service’s most profitable revenue stream, has been steep and may never fully recover to levels prior to the pandemic.

On March 27, 2020, the President signed the Coronavirus Aid, Relief, and Economic Security Act, enacted as Public Law 116-136 (the “CARES Act”). Notwithstanding the $15.0 billion statutory debt limit, and the $3.0 billion limit on annual borrowing, the CARES Act allows the Postal Service to borrow up to an additional $10.0 billion in financing from the U.S. Treasury to fund operating expenses. The U.S. Treasury may lend up to this amount at the request of the Postal Service, upon terms and conditions mutually agreed upon. However, the Postal Service has no assurance that the U.S. Treasury will agree to provide such financing or if it will be provided upon favorable terms.

The Postal Service estimates that the COVID-19 pandemic may increase its net operating loss by more than $22.0 billion over the next eighteen months, threatening its ability to operate. If the Postal Service is able to borrow the $10.0 billion from the U.S. Treasury as provided by the CARES Act, it expects that it will have sufficient liquidity to continue operations through April 2021. However, if the Postal Service is unable to secure this $10.0 billion in financing, it expects to be able to continue to operate only through September 2020.

Given these COVID-19 considerations, the Postal Service may require an additional injection of liquidity, provided by either the U.S. government or other sources, or through additional defaults, to remain a going concern. While the COVID-19 disruption is expected to be temporary, its duration remains uncertain, and the Postal Service expects that its liquidity may continue to worsen if the nation experiences a prolonged period of disruption.

Subsequent Events

The CARES Act offers certain employers the ability to defer payment of the employer’s share of the Social Security payroll tax on wages incurred from March 27, 2020, through December 31, 2020. In accordance with this provision, the Postal Service began deferring these payments in April 2020, and intends to continue the deferral for the remainder of calendar year 2020 for an estimated total deferral amount of approximately $1.6 billion. One half of these deferred payments would be due by December 31, 2021, and the other half by December 31, 2022.

On April 1, 2020, the Postal Service drew $3.4 billion on a revolving credit facility with the FFB that survived the expiration of the Note Purchase Agreement (“NPA”). In order to comply with the annual net increase limit, the Postal Service must repay $400 million from this credit facility by September 30, 2020. Given that the credit facility has a maximum term of up to one year, the Postal Service must repay any outstanding balance of the credit facility by April 1, 2021. The credit facility’s interest rate was determined by the U.S. Treasury based on the market rates of similar instruments as of the day of the funding request.

Debt

As of both March 31, 2020, and September 30, 2019, the Postal Service had a combination of fixed-rate and floating-rate notes outstanding with various maturities totaling $11.0 billion. As of March 31, 2020, the Postal Service’s statutory borrowing capacity was $4.0 billion, of which $1.0 billion would require repayment by September 30, 2020, to comply with the annual debt net increase limit.

In 1999, the Postal Service entered into the NPA with the FFB to establish standardized procedures for issuing debt. Under the NPA, the Postal Service was able to issue a series of notes and revolving credit line facilities with established terms and conditions by providing two days prior notice. These note arrangements and credit line facilities provided the flexibility to borrow short or long-term, using floating or fixed-rate instruments.

The NPA was extended each year through September 30, 2018, and in shorter increments between that date and August 31, 2019, at which time the NPA expired. This expiration did not affect the terms of any of the Postal Service's outstanding debt as of March 31, 2020, all of which was issued under the NPA. As a contractual matter, the FFB continued to lend to the Postal Service under each commitment and line of credit until it expired. If the Postal Service is unable to renew or replace the NPA with the FFB, it has no assurance that it could obtain alternative debt financing on comparable terms.
Liquidity Concerns
The Postal Service is constrained by laws and regulations, including the Postal Accountability and Enhancement Act ("PAEA"), which restrict revenue sources and mandate certain expenses.

The Postal Service is required, either by law or by union contract, to participate in U.S. government pension and health and benefits programs for employees and retirees, including the Federal Employees Health Benefit ("FEHB") program, CSRS and FERS, which the Office of Personnel Management ("OPM") administers. Statutorily mandated expenses include amortization payments to provide full funding of retirement benefits under CSRS and FERS, as well as FERS normal costs, described in greater detail below and in Note 9 - Retirement Plans. Additionally, the PAEA established the Postal Service Retiree Health Benefits Fund ("PSRHBF") and mandated certain obligations for paying normal costs, the present value of the estimated retiree health benefits attributable to active employees' current year of service, and amortization payments for full prefunding of retiree health benefits. These prefunding obligations, described in greater detail below and in Note 10 - Health Benefits Plans, are unlike expenses imposed on most other federal entities or private-sector businesses that offer such benefits.

The Postal Service reported operating expenses of approximately $80 billion in 2019 and has incurred cumulative net losses of $83.1 billion from 2007 through March 31, 2020.

Notwithstanding the challenges resulting from the COVID-19 pandemic, absent legislative and regulatory change, the Postal Service projects continuing annual net losses in the future. As a result of these losses and its liquidity concerns, the Postal Service will unlikely have sufficient liquidity to meet all of its existing legal obligations when due while also reducing its debt and making the critical infrastructure investments that have been deferred in recent years.

In the event that circumstances leave the Postal Service with insufficient liquidity, it would likely be required to implement additional contingency plans to ensure that its primary mission is fulfilled and that mail deliveries continue. These measures may require the Postal Service to prioritize payments to the FFB, employees and suppliers ahead of some payments to fund retirement and retiree health benefits, as has been done in the past.

Business Model Challenges and Constraints
Market-Dominant services, which accounted for approximately 66% of the Postal Service’s annual operating revenues in 2019, are currently subject to a price cap as measured by the Consumer Price Index for All Urban Consumers ("CPI-U"). However, the Postal Service’s costs are not similarly constrained. A large portion of its cost structure cannot be altered expeditiously due to the Postal Service’s universal service obligation. Further, the number of delivery points continues to grow by approximately one million per year, which drives up delivery costs. When combined with the impact of lower mail volume, the average number of pieces delivered per delivery point per day has decreased from approximately 5.5 pieces in 2007 to 3.4 pieces in 2019, a decline of approximately 39%, and a further significant decline is expected in 2020.

Many employee and retiree benefit costs are mandated by law and cannot be altered without legislative change. Under current law, the Postal Service is generally unable to increase prices sufficiently to offset increased costs, and is likewise constrained by law from reducing many of its costs or from pursuing many alternate sources of revenue.

Aside from its universal service obligation, a significant factor contributing to Postal Service losses is the ongoing decline in the volume of Market-Dominant products and services, and those declines are being exacerbated by the COVID-19 pandemic. Specifically, declines in First-Class Mail are largely the result of changes in consumers’ and businesses’ use of mail resulting from the continuing migration to electronic communication and transactional alternatives, which have taken place over the last decade and are expected to continue. After experiencing relatively flat volume between 2009 and 2016, beginning in 2017, Marketing Mail volume has generally been challenged by commercial mailers’ increasing use of digital and mobile advertising, and more recently by the COVID-19 pandemic, although this class has benefited from strong political and election mail volumes, particularly in the second half of 2018 and the first quarter of 2019.

The Postal Service’s Shipping and Packages category has historically provided revenue and volume growth as a result of its successful efforts to compete in shipping services, including last-mile e-commerce fulfillment markets
and Sunday delivery as well as end-to-end markets. However, this service category is subject to intense competition which significantly impacts both revenue and volume. Certain major customers of the Postal Service had begun diverting volume from the Postal Service’s network by in-sourcing last-mile delivery. Competitors in the package delivery market are aggressively pricing their products and services in order to fill their networks and grow package density. However, as a result of the temporary surge in e-commerce growth driven by the COVID-19 pandemic, some of these customers increased their volume to the Postal Service’s network during March 2020 due to their delivery capacity constraints.

Because the Postal Service provides its services primarily through its employees, its costs are heavily concentrated in wages and benefits for both current employees and retirees. These costs are significantly impacted by contractual wage increases, employee health benefit premium increases, and statutorily mandated retirement and workers’ compensation programs. Some of these costs have historically increased at a higher rate than inflation.

**Past Due Obligations**
The following table presents the total expenses accrued but unpaid by the Postal Service as of September 30, 2019, related to retiree health benefits, CSRS and FERS and the fiscal years in which the accruals were recorded:

² The 2012 to 2016 period amount includes $247.6 million for 2016, $240.9 million for 2015 and $6.7 million for 2014.

**Mitigating Circumstances**
The Postal Service continues to pursue strategies within its control to increase operational efficiency and improve liquidity. The Postal Service has managed capital in recent years by spending what it believed was essential to maintain its existing facilities and service levels, to ensure employee safety and to increase efficiencies. However, continued increases in capital investment are necessary to upgrade its facilities, fleet of vehicles and processing equipment in order to remain operationally viable. Irrespective of the challenges resulting from the COVID-19 pandemic, aggressive management of the business operations, as well as legislative and regulatory reforms that will enable it to increase revenue and reduce costs, will all be necessary to restore the Postal Service to financial health.

The Postal Service’s status as an independent establishment of the executive branch that does not receive tax dollars for its operations presents unique requirements and restrictions, but also potentially mitigates some of the financial risk that would otherwise be associated with a cash shortfall. With annual total revenue in 2019 of approximately $71 billion, a financially sound Postal Service continues to be vital to U.S. commerce.

The U.S. economy benefits greatly from the Postal Service and the many businesses that provide the printing and mailing services that it supports. Disruption of the mail would cause undue hardship to businesses and consumers as it would significantly inhibit the remittance of payments through the mail, and in the event of a cash shortfall, the U.S. government would likely prevent the Postal Service from significantly curtailing or ceasing operations. The Postal Service continues to inform the executive branch, Congress, the PRC and other stakeholders of the immediate and long-term financial challenges it faces and the legislative and regulatory changes that are required to restore its financial stability.
NOTE 4 - REVENUE RECOGNITION
The Postal Service generates the majority of its revenue from contracts associated with the processing and delivery of different types of mail and packages, both domestically and internationally, which generally occur over a relatively short period of time (e.g., several days).

Disaggregation of Revenue
The following table summarizes the Postal Service’s disaggregated operating revenue for the three and six months ended March 31, 2020, and 2019, by each service category:

* Prior period amounts for certain service categories include reclassifications of amounts amongst service categories to conform to current period presentation. These reclassifications are immaterial for each affected category, and had no effect on total operating revenue for the period.

Satisfaction of Performance Obligations
A performance obligation is a promise in a contract to transfer a distinct good or service to the customer. A contract’s transaction price is allocated to each distinct performance obligation and recognized as revenue when, or as, the performance obligation is satisfied.

First-Class Mail, Marketing Mail, Shipping and Packages, International Mail and Periodicals are categorized as Mailing and Shipping services for purposes of satisfying performance obligations. The Postal Service recognizes revenue for Mailing and Shipping services as it fulfills its obligation to process and deliver each mailpiece and the customer mail sender/recipient receives and consumes the benefits of these services.

Other revenue includes PO Box services, Return Receipts, Insurance, Other Ancillary Services, Shipping and Mailing Supplies, Collect on Delivery, Registered Mail, Stamped Envelopes and Cards, Money Orders and other goods and services. The Postal Service recognizes revenue for the majority of these services over time as the customer receives and consumes the benefits of the service. The revenue for a small portion of certain goods or services in this service category is recognized at a point in time when the goods or services are provided to the customer.

The vast majority of the Postal Service’s contracts include only one performance obligation. However, if a contract is separated into more than one performance obligation, the total transaction price for each performance obligation is allocated in an amount based on the estimated relative stand-alone selling prices of the promised goods or services underlying each performance obligation. The majority of the goods or services sold by the Postal Service have observable stand-alone sales prices. Further, payment for the majority of the goods and services is received up front.

If the Postal Service were unable to complete delivery to the destination point, another entity would not need to re-perform the entire portion of delivery already performed by the Postal Service. Accordingly, control from the Postal Service to the customer transfers over time for the vast majority of services the Postal Service offers, and revenue is recognized based on the progress of the completion of the performance obligations.
**Variable Consideration**
The Postal Service offers certain contracts to its customers that contain various types of customer incentives or other provisions that can either increase or decrease the transaction price. Customer incentives include discounts, money back guarantees, rebates, refunds or incentive payments. The other provisions include performance penalties. The Postal Service uses the expected value approach to estimate variable consideration to which it expects to be entitled.

**Contract Modifications**
The Postal Service considers contract modifications to exist when the modification either creates new enforceable rights and obligations or alters the existing arrangement. Contract modifications do not add distinct services; they are typically used to change the prices that the Postal Service charges its customer for existing services. These contract modifications are accounted for prospectively as the remaining performance obligations are executed.

**Principal vs. Agent Consideration**
The Postal Service utilizes third parties to assist with the transportation of mailpieces between different points as part of the delivery process. Based on its evaluation of the transfer of control model, the Postal Service has determined that it acts as the principal rather than the agent within these arrangements.

**Contract Liabilities**
The vast majority of the Postal Service’s contract liabilities consist of Deferred revenue-prepaid postage and prepaid PO Box and Caller Service fees. Deferred revenue-prepaid postage is an estimate of postage that has been sold, but not yet used by customers. The Postal Service recognizes revenue over time as the Postal Service delivers mailpieces. Because payments for postage are collected in advance of the satisfaction of related performance obligations, the Postal Service defers and reports this unearned revenue as Deferred revenue-prepaid postage in its balance sheet. Stamp sales and metered postage account for the majority of Deferred revenue-prepaid postage. The liability also includes an estimate for mail that is in-transit within the Postal Service network.

The prepaid PO Box and Caller Service fees consist of the payments received from customers for PO Box fees at the beginning of their contracts. The Postal Service defers and reflects this unearned revenue as prepaid PO Box and Caller Service fees within Other current liabilities in the accompanying Balance Sheets. Revenue is recognized over time as customers use the PO Box and Caller Services over the terms of their contracts.

The following table presents the balances of the Postal Service’s contract liabilities, including Deferred revenue-prepaid postage and prepaid PO Box and Caller Service fees, as of March 31, 2020, and September 30, 2019, respectively:

</table>

1 Included within Operating revenue in the accompanying unaudited Statements of Operations.
2 Included within Operating expenses in the accompanying unaudited Statements of Operations.
3 Represents interest imputed on the revenue forgone installment receivable as well as interest generated on U.S. Treasury instruments and other cash equivalents held with the Federal Reserve Bank of New York. Included within Interest and investment income in the accompanying unaudited Statements of Operations.
4 Incurred on debt issued to the FFB, and included within Interest expense in the accompanying unaudited Statements of Operations.

**NOTE 6 - CASH, CASH EQUIVALENTS AND RESTRICTED CASH**

The following table provides a reconciliation of Cash and cash equivalents and Restricted cash reported in the balance sheets as of March 31, 2020, and 2019, respectively, and as of September 30, 2019, and 2018, respectively (to disclose the opening balances), that sum to the totals of the same such amounts presented in the accompanying unaudited Statements of Cash Flows for the six months ended March 31, 2020, and 2019:

<table>
<thead>
<tr>
<th></th>
<th>March 31,</th>
<th>September 30,</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>2020</td>
<td>2019</td>
</tr>
<tr>
<td>Cash and cash equivalents</td>
<td>$ 8,987</td>
<td>$ 8,108</td>
</tr>
<tr>
<td>Restricted cash</td>
<td>$ 472</td>
<td>$ 546</td>
</tr>
<tr>
<td><strong>Total cash, cash equivalents</strong></td>
<td><strong>$ 9,459</strong></td>
<td><strong>$ 8,654</strong></td>
</tr>
</tbody>
</table>

Restricted cash represents Postal Service cash that is not available for general use. This includes cash originated from forfeitures or seizures related to consumer fraud or other criminal activity related to the mail and either held for third-party beneficiaries or awaiting disposition. Restricted cash also includes funds for use in restricted activities such as congressional appropriation for Postal Service obligations to the PRC and the United States Postal Service Office of Inspector General, or that are otherwise restricted.

The Postal Service holds its Cash and cash equivalents and Restricted cash with the Federal Reserve Bank of New York and invests its excess cash, when available, in highly-liquid, short-term investments issued by the U.S. Department of the Treasury.

**NOTE 7 - PROPERTY AND EQUIPMENT, NET**

Assets within Property and equipment, net in the accompanying Balance Sheets are recorded at cost, which includes the interest on borrowings used to finance construction of major capital additions, less allowances for depreciation and amortization. Interest capitalized during both the three and six months ended March 31, 2020, and 2019, was not significant. Fixed assets are depreciated over estimated useful lives ranging from 3 to 40 years using the straight-line method.

The net book values of assets classified as held for sale were approximately $6 million and $10 million as of March 31, 2020, and September 30, 2019, respectively, and are included within Property and equipment, net in the accompanying Balance Sheets.

For the three months ended March 31, 2020, and 2019, depreciation and amortization expense was $423 million and $424 million respectively, and impairment charges were de minimis. For the six months ended March 31, 2020, and 2019, depreciation and amortization expense was $854 million and $841 million respectively, and impairment charges were de minimis. These items are included within Other operating expenses in the accompanying unaudited Statements of Operations.
NOTE 8 - COMMITMENTS AND CONTINGENCIES

Collective Bargaining Agreements
On January 22, 2020, the Postal Service reached a tentative agreement with the National Postal Mail Handlers Union, AFL-CIO ("NPMHU") on a new three-year collective bargaining agreement, which the union membership ratified on April 8, 2020. The new contract went into effect on April 25, 2020, and will expire on September 20, 2022.

On March 10, 2020, a three-member arbitration panel reached a decision in the Postal Service’s legally mandated binding interest arbitration process with the American Postal Workers Union, AFL-CIO ("APWU"), which established the terms of a new collective bargaining agreement. The new contract went into effect on March 10, 2020, and will expire on September 20, 2021.

In September 2019, the Postal Service agreed to extend contract negotiations relating to a new collective bargaining agreement with the National Association of Letter Carriers, AFL-CIO ("NALC"). The previous contract with the NALC expired on September 20, 2019, and negotiations with the NALC are at an impasse. The Postal Service and the NALC will continue to follow the current agreement until a new contract is reached through the dispute resolution process.

Contingent Liabilities
The Postal Service’s contingent liabilities consist primarily of claims resulting from labor and employment matters; asset retirement obligations and environmental matters; property damage and injuries on Postal Service properties; and issues arising from Postal Service contracts, personal claims and traffic accidents. Each quarter, the Postal Service evaluates each claim to determine its potential liability. If the Postal Service determines that an unfavorable outcome from a new claim is both probable and reasonably estimable, it records a liability for the amount. Preexisting claims are also reviewed and adjusted quarterly for resolutions or revisions to prior estimates based on new facts and circumstances.

The Postal Service is from time to time involved in other litigation incidental to the conduct of its business, none of which is expected to be material to its financial condition or operations.

Provision for Losses
The Postal Service has made adequate provision for probable losses arising from all claims. The following table presents contingent liabilities by current and noncurrent portions and by category, as of March 31, 2020, and September 30, 2019:

<table>
<thead>
<tr>
<th>(in millions)</th>
<th>March 31, 2020</th>

1 Included within Payables and accrued expenses in the accompanying Balance Sheets.
2 Included within Other noncurrent liabilities in the accompanying Balance Sheets.
**Reasonably Possible Contingencies**

The Postal Service does not accrue for contingencies which it deems reasonably possible of an unfavorable outcome. These ranged in amount from approximately $175 million to $1.0 billion at March 31, 2020, and from approximately $150 million to $1.0 billion at September 30, 2019.

**Class Action Litigation**

As previously reported, on January 14, 2010, the Equal Employment Opportunity Commission’s (“EEOC”) Office of Federal Operations (“OFO”) certified the case McConnell v. Brennan (first instituted in 2006 as McConnell v. Potter) as a class action against the Postal Service, with the class consisting of permanent-rehabilitation and limited-duty Postal Service employees who the Postal Service assessed under the National Reassessment Process (“NRP”) between the dates of May 5, 2006, and July 1, 2011. The Postal Service utilized the NRP to ensure employees receiving workers’ compensation benefits were placed in jobs consistent with their abilities, and that records regarding employees injured on the job were correct.

The McConnell case alleges violations of the Rehabilitation Act of 1973 resulting from the NRP’s failure to provide a reasonable accommodation, the NRP’s wrongful disclosure of medical information, the NRP’s creation of a hostile work environment, and the NRP’s adverse impact on disabled employees. The class is seeking injunctive relief and damages of an uncertain amount.

In 2015, the Administrative Judge assigned to handle the McConnell case granted in-part both the Class Agent's and the Postal Service's motions for summary judgment. In her decision, the Administrative Judge found that the NRP violated the Rehabilitation Act. The Postal Service appealed this decision to the OFO, and the OFO denied this appeal in 2018. The Postal Service implemented the OFO’s order, and notified all class members of their right to file an individual claim for relief. Class members were allowed thirty days to submit claims to the Postal Service's National Equal Employment Opportunity Investigative Services Office. The claims submission deadline has now passed and the dispute process for individual claims is currently underway before a newly assigned EEOC Administrative Judge.

The class members have the right to pursue individual claims. Should they be successful in establishing liability and damages, the ultimate outcome in this case could have a material impact on the Postal Service’s financial results.

**Other**

The U.S. is a member of the Universal Postal Union (“UPU”), a specialized agency of the United Nations that facilitates the exchange of international mail. The Postal Service is the designated postal operator for the U.S. under the UPU, and payments to the designated postal operator for the delivery of foreign origin letter-post mails are known as “terminal dues”.

In September 2019, the UPU members had a special meeting -- known as the Extraordinary Congress -- to discuss the terminal dues system. During that meeting, UPU members agreed to establish a new remuneration system that will allow the Postal Service to self-declare rates beginning in July 2020. Other foreign postal operators may also reciprocally apply rates at full-self-declared rates at that time.

In February 2020, the Postal Service officially invoked its provision to self-declare rates beginning in July 2020, creating an obligation to pay the UPU the amount of 40 million Swiss Francs (“CHF”), or approximately $41 million, based on the prevailing exchange rate on March 31, 2020. This amount will be payable over five years in annual increments of 8 million CHF, with the first payment due between July and December 2020.

The Postal Service considers the right to self-declare rates as an intangible asset recorded in Other assets in the accompanying unaudited Balance Sheet at March 31, 2020, and its amortization starts in July 2020 when the self-declared rates are in effect. The current portion of the obligation is recorded in Payables and accrued expenses and the noncurrent portion of the obligation is recorded in Other noncurrent liabilities in the accompanying unaudited Balance Sheet at March 31, 2020, respectively.
NOTE 9 - RETIREMENT PLANS
The majority of career employees participate in one of two U.S. government defined benefit pension programs, CSRS and FERS, which OPM administers. These plans provide retirement, death and disability benefits for eligible employees based on specific eligibility and participation requirements, vesting periods and benefit formulas. Each employee’s participation in either plan is based on the starting date of employment with the Postal Service or another U.S. government entity.

As government-sponsored benefit plans, CSRS and FERS are not subject to the provisions of the Employee Retirement Income Security Act of 1974, as amended. Likewise, because the Postal Service cannot direct the costs, benefits or funding requirements of these plans, it accounts for program expenses under multiemployer plan accounting rules. As such, the Postal Service records required contributions to the plans as an expense in the period in which each contribution is due. For FERS, the Postal Service contributes to the plan an amount established by OPM as the employer portion of retirement benefits for participating employees and their qualifying survivors, upon retirement, for each employee’s current year of service, which is considered the FERS normal cost. As further discussed below, the Postal Service is not required to pay the normal cost for those employees who participate in CSRS.

Career employees may also participate in the Thrift Savings Plan (“TSP”), a defined contribution retirement savings and investment plan administered by the Federal Retirement Thrift Investment Board. The Postal Service’s TSP expenses relate only to its contributions for FERS employees who participate in the TSP.

CSRS provides a basic annuity plan benefit to employees hired before January 1, 1984. CSRS Offset provides Social Security benefits in addition to its basic annuity plan for employees hired between January 1, 1984, and January 1, 1987. CSRS and CSRS Offset employees may also participate in the TSP, although the Postal Service does not match contributions for these participants.

The PAEA suspended the Postal Service’s employer contributions to CSRS that would otherwise have been required under Title 5, Section 8334(a)(1) of the U.S. Code, although CSRS employees continue to contribute to the plan.

Effective January 1, 1987, FERS covers employees hired since December 31, 1983, and FERS employees are covered by an annuity, Social Security and TSP benefits. For FERS employees who participate in TSP, the Postal Service contributes 1% of basic pay and matches voluntary employee contributions up to an additional 4% of basic pay. The Postal Service recognizes Social Security and TSP expenses as they are incurred and records them within Compensation and benefits in the accompanying unaudited Statements of Operations. A liability is established for any contribution due and unpaid at the end of each reporting period and is included within Compensation and benefits in the accompanying Balance Sheets.

FERS employees are further categorized as either FERS, FERS - Revised Annuity Employees (“FERS-RAE”), or FERS - Further Revised Annuity Employees (“FERS-FRAE”) depending on whether their date of hire was before, during, or after calendar year 2013, respectively.

The following table presents the employee and employer contributions, as a percentage of employee basic pay, during the three and six months ended March 31, 2020, and 2019:

<table>
<thead>
<tr>
<th></th>
<th>March 31, 2020</th>

</tbody>
</table>

1 Expense for the accrual for the annual payment due to OPM by September 30 of the respective fiscal year, to amortize the unfunded CSRS retirement obligation. The 2020 amounts are based on updated Postal Service estimates resulting from revised actuarial assumptions. Payments are to be made through 2043 based on OPM invoices.

2 Expense for the accrual for the annual payment due to OPM by September 30 of the respective fiscal year, to amortize the unfunded FERS retirement obligation. The 2020 amounts are based on updated Postal Service estimates resulting from revised actuarial assumptions. Payments are to be made over a 30-year rolling period based on OPM invoices.

FERS Normal Costs

The Postal Service records expenses for FERS normal costs within Retirement benefits in the accompanying unaudited Statements of Operations.

The Postal Service makes payments for FERS normal costs in accordance with its bi-weekly payroll cycle. The employer contributions and employee withholdings not yet remitted to OPM were $209 million and $157 million at March 31, 2020, and September 30, 2019, respectively, and were recorded as a current liability within Retirement benefits in the accompanying Balance Sheets.

CSRS and FERS Unfunded Retirement Benefits

OPM periodically notifies the Postal Service regarding its revaluation of unfunded CSRS and FERS liabilities. OPM calculates these obligations using Postal Service-specific demographics data and government-wide economic assumptions. The Postal Service records these expenses as Retirement benefits in the accompanying unaudited Statements of Operations. These amounts may be significantly impacted by changes in actuarial assumptions used to revalue the unfunded liabilities.

In October 2019, OPM provided the Postal Service with an actuarial report indicating the projected annual amortization payments due September 30, 2020, would be $1.6 billion for the CSRS obligation and $1.1 billion for the FERS obligation.

On April 2, 2020, the Board of Actuaries of the CSRS, which oversees OPM’s calculation of actuarial liabilities for CSRS and FERS, lowered the discount rate used to calculate CSRS and FERS unfunded retirement liabilities from 4.25% to 4.0%. The Postal Service has estimated that the impact of this change in discount rate on the annual CSRS and FERS amortization expense will result in revised projected amortization payments due September 30, 2020, of approximately $1.8 billion for the CSRS obligation and approximately $1.3 billion for the FERS obligation, increases of $181 million and $226 million, respectively.

Accordingly, the Postal Service accrued additional CSRS and FERS amortization expenses during the three months ended March 31, 2020, to reflect the proportional adjustment between the original OPM estimate and the updated Postal Service estimate as a result of these changes. The Postal Service expects to receive invoices from OPM for the actual amounts due September 30, 2020, during the fourth quarter of 2020, and these invoices may differ from the estimated projections due to further changes in experience, discount rates and/or actuarial assumptions as of the calculation date.
The amounts the Postal Service has accrued for CSRS and FERS unfunded retirement benefits but has not yet paid are recorded as a current liability within Retirement benefits in the accompanying Balance Sheets. Those accrued but unpaid amounts were approximately $9.8 billion and $8.2 billion at March 31, 2020, and September 30, 2019, respectively.

**NOTE 10 - HEALTH BENEFITS PLANS**
FEHB Program covers nearly all career employees and also covers non-career employees and retirees who meet certain eligibility requirements. OPM administers FEHB and allocates the cost of funding the program to participating U.S. government employers. Separate from FEHB, the Postal Service offers its own healthcare plan to certain non-career employees who are ineligible for FEHB.

**Active Employees**
The Postal Service paid 71.9% of healthcare premium costs during both the three months ended March 31, 2020, and 2019. The Postal Service paid 72.0% and 72.3% of healthcare premium costs during the six months ended March 31, 2020, and 2019, respectively. Although OPM determines the actual FEHB premium costs, the allocation of these costs between the Postal Service and most of its employees is determined through agreements with Postal Service labor unions.

Postal Service employee health benefits expense (which includes the employer portion of Medicare taxes) is most significantly impacted by the number of employees electing coverage and the premium costs of the selected plans. Postal Service employee health benefits expense was approximately $1.3 billion for each of the three-month periods ended March 31, 2020, and 2019. Postal Service employee health benefits expense was approximately $2.6 billion for each of the six-month periods ended March 31, 2020, and 2019. These expenses are included within Compensation and benefits in the accompanying unaudited Statements of Operations.

**Retirees**
Postal Service retirees who participated in FEHB for the five years immediately preceding their retirement may continue to participate in the plan during retirement. Qualifying survivors of retirees are also eligible to receive benefits. The Postal Service is required to contribute to the PSRHBF an amount estimated to be equal to the employer portion of FEHB insurance premiums for participating employees and their qualifying survivors, upon retirement, for each employee’s current year of service (normal cost). The Postal Service is also required to contribute an amount sufficient to fully amortize the unfunded liability of the PSRHBF by 2056. These amounts are based, in part, on each current and prospective retiree’s length of federal civilian service occurring on or after July 1, 1971. Each participant’s share of premium costs is set by law and is not subject to negotiation with Postal Service labor unions. The Postal Service cannot direct the costs, benefits or funding requirements of the plans. Therefore, it accounts for program expenses using multiemployer plan accounting rules by recording contributions to the plans that will be required by OPM as an expense in the period in which the contributions are due.

The PAEA required the Postal Service to prefund retiree health benefits during years 2007 through 2016 by paying statutorily specified annual amounts ranging from $1.4 billion to $5.8 billion, totaling $54.8 billion, into the PSRHBF, which began paying the Postal Service’s share of retiree health benefit premiums in 2017. The Postal Service remains obligated to fund the $33.9 billion in statutorily required PSRHBF prefunding payments that it defaulted on for the years 2012 through 2016, as well as the normal cost and amortization payments of $10.7 billion and $2.6 billion, respectively, that it did not pay for the years 2017 through 2019. As of the date of this report, the Postal Service has not been assessed any penalties associated with these non-payments. The cumulative amount of statutorily specified, normal cost and amortization PSRHBF obligations the Postal Service has accrued is $49.7 billion as of March 31, 2020, inclusive of the $47.2 billion that was unpaid as of September 30, 2019. Given that OPM considers these amounts to be due and payable, the Postal Service reflects the cumulative unpaid amount as a current liability within Retiree health benefits in the accompanying Balance Sheets.

As required by PAEA, OPM annually performs an actuarial valuation for the purpose of developing a payment schedule for the Postal Service to fund the remaining unfunded PSRHBF obligation in annual payments through the year 2056. Based on preliminary calculations provided by OPM, the amortization payment due September 30, 2020, is estimated to be $900 million.
Furthermore, the Postal Service is obligated to pay the estimated normal cost of retiree health benefits attributable to the service of its employees during the most recent year. Based on preliminary calculations provided by OPM, the Postal Service has estimated the normal cost payment, also due by September 30, 2020, to be $4.0 billion.

The Postal Service expects to receive the invoice from OPM for with the actual amounts due during the fourth quarter of 2020 and these may differ from the original projected amounts due to changes in discount rates, actuarial assumptions and experience as of the calculation date.

The following table details retiree health benefits expenses for the three and six months ended March 31, 2020, and 2019:

<table>
<thead>

</tbody>
</table>

¹ Expense for the accrual for the annual payment due to OPM by September 30 of the respective year, as calculated by OPM, to amortize the unfunded PSRHBFB retirement health benefit obligation. Payments are to be made through 2056 based on OPM invoices.

² Expense for the accrual for the annual payment due to the PSRHBFB by September 30 of the respective year, based on information provided by OPM, for the actuarially determined normal cost of retiree health benefits for current employees.

**NOTE 11 - WORKERS’ COMPENSATION**

Postal Service employees injured on the job are covered by the Federal Employees’ Compensation Act (“FECA”), administered by the U.S. Department of Labor’s (“DOL”) Office of Workers’ Compensation Programs, which makes all decisions regarding injured workers’ eligibility for benefits. The Postal Service reimburses DOL for all workers’ compensation benefits paid to or on behalf of Postal Service employees, plus an administrative fee.

**Workers’ Compensation Liability**

The Postal Service records a liability for its workers’ compensation obligations for employees who have been injured on the job and are eligible for benefits, or their qualified survivors. Both the current and noncurrent portions of the workers’ compensation liability are recorded in the accompanying Balance Sheets. The Postal Service uses an estimation model that utilizes four generally accepted actuarial valuation techniques based upon past claim-payment experience and exposure to claims as measured by total employee hours worked.

Changes in the liability are primarily attributable to the combined impacts of routine changes in actuarial assumptions, new compensation and medical cases, the progression of existing cases and changes in discount (interest) and inflation rates, including long-term COLA rates for compensation claims, and medical rates for medical claims. These rates are updated as of the balance sheet date and factored into the model.

To determine the fair value of the liability each quarter, the Postal Service first estimates the future total cost of workers’ compensation claims based on the dates of claim-related injuries, frequency or severity of the injuries, the pattern of historical payments to beneficiaries and the expected trend in future costs. The Postal Service then calculates the amount that would need to be invested at current discount (interest) rates to fully fund the future total cost of claims, and this calculated present value is the recorded value of the workers’ compensation liability.

This liability calculation is highly sensitive to changes in discount rates. For example, a 1% increase in the discount rate would decrease the March 31, 2020, liability and related expense by approximately $2.4 billion. Likewise, a 1% decrease in the discount rate would increase the March 31, 2020, liability and related expense by approximately $3.1 billion.
The following table details the applicable inflation and discount rates for compensation and medical claims used to estimate the workers’ compensation liability as of March 31, 2020, and September 30, 2019:

<table>
<thead>
<tr>
<th></th>
<th>March 31, 2020</th>
<th>September 30, 2019</th>
</tr>
</thead>
<tbody>

<td>1.07%</td>
<td>1.91%</td>
</tr>
<tr>
<td>Medical inflation rate</td>
<td>3.50%</td>
<td>2.50%</td>
</tr>
</tbody>
</table>

As of March 31, 2020, and September 30, 2019, the Postal Service’s total liability for workers’ compensation was approximately $20.0 billion and $18.5 billion, respectively. As of March 31, 2020, and September 30, 2019, the current portion of the liability was approximately $1.3 billion and $1.4 billion, respectively, and the noncurrent portion of the liability was approximately $18.7 billion and $17.1 billion, respectively, as reflected in the accompanying Balance Sheets.

**Workers’ Compensation Expense**
The impacts of changes in discount rates and inflation rates, as well as the actuarial valuation of new cases and revaluation of existing cases, are components of total workers’ compensation expense as recorded in the accompanying unaudited Statements of Operations. In addition, the Postal Service pays an administrative fee to DOL, which is considered a component of workers’ compensation expense.

The following table presents the components of workers’ compensation expense for the three and six months ended March 31, 2020, and 2019:

**NOTE 12 - LEASES**

**Postal Service Leases**
The Postal Service holds lessee positions in real property leases as well as lessee positions embedded in service contracts involving rights to use transportation equipment and facilities.

Real property leases support retail, delivery, mail processing, maintenance, administrative and support activities. The non-cancellable base terms of these leases typically range from one to five years, with one or more options to renew for additional five-year terms. The lease terms for these arrangements generally range from one to thirty years including any renewal options that are reasonably certain to be exercised. Additionally, certain real property leases contain purchase and termination options. At the commencement of most real property lease arrangements, the Postal Service is not reasonably certain if it will exercise such options. Real property leases include certain variable lease payments associated with non-lease components, such as common area maintenance costs, and non-lease components such as real estate taxes, which are generally charged as a pass-through based on actual amounts incurred by the lessor. The Postal Service records costs associated with real property leases within Other operating expenses in the accompanying unaudited Statements of Operations.
Transportation equipment leases apply primarily to vehicles, trailers, and aircraft. The non-cancellable base terms of these leases typically range from two to five years, and may include one or more options to renew for an additional one or two years. The lease terms for these arrangements generally range from two to five years including any renewal options the Postal Service is reasonably certain to exercise. Transportation equipment leases do not contain purchase options, however certain of these leases contain termination options. At the commencement of most transportation lease arrangements, the Postal Service is not reasonably certain if it will exercise such termination options. Certain transportation leases contain variable lease payments based on the volume of activity under the contract. The Postal Service records costs associated with transportation leases within Transportation in the accompanying unaudited Statements of Operations.

Postal Service leases do not contain any material residual value guarantees or restrictive covenants.

Sublease income was not material to the financial statements for the three and six months ended March 31, 2020.

Balances disclosed herein include those pertaining to certain related-party transactions. See Note 5 - Related Parties for additional information on related party transactions.

The table below reconciles the undiscounted cash flows for the first five years and the total remaining finance lease liabilities and operating lease liabilities recorded in the accompanying unaudited Balance Sheet as of March 31, 2020:

Capital leases, recorded at historical cost within Property and equipment, net in the accompanying Balance Sheets, were $496 million as of September 30, 2019. Total accumulated amortization related to capital leases was $377 million at September 30, 2019. Amortization expense for capital leases was approximately $33 million and $37 million for the years ended September 30, 2019, and 2018, respectively, and is included within the Other operating expense in the respective Statements of Operations.

Lease Accounting Policies

Lease Accounting Policy for Comparative Periods
As the lessee, the Postal Service classifies leases which have original lease terms greater than one year and that transfer substantially all the risks and rewards of ownership to the Postal Service, as capital leases. These leases are capitalized on the lease commencement date at the lower of the fair value of the leased assets or the present value of the minimum lease payments. The discount rate used to determine the present value is based on average U.S. Treasury rates. Property acquired under a capital lease is amortized over the lease term. Capital leases are included within Property and equipment, net in the accompanying Balance Sheets.

The Postal Service classifies all other lease arrangements in which substantially all risks and rewards of ownership are retained by the lessor as operating leases. Rent expense for operating leases is included in Other operating...
expenses in the accompanying unaudited Statements of Operations on a straight-line basis over the term of the lease.

**Lease Accounting Policy for the Six Months Ended March 31, 2020**

The Postal Service determines at the inception of the contract if an arrangement represents a lease or contains lease components. A contract is deemed to represent or include a lease if it conveys the right to control the use of an identified asset for a period of time in exchange for consideration. The Postal Service is assumed to have the right to control the use of the underlying asset if the contract conveys the rights to obtain substantially all of the economic benefits of the underlying asset and the rights to direct how and for what purpose such asset is used during the contract term.

As the lessee, the Postal Service classifies all leases with original lease terms less than one year as short-term leases. The Postal Service classifies all other leases which transfer substantially all the risks and rewards of ownership to the Postal Service as finance leases. Finance lease right-of-use assets are included within Property and equipment, net in the accompanying Balance Sheets. The current and noncurrent portions of finance lease liabilities are included within Payables and accrued expenses and Other noncurrent liabilities, respectively, within the accompanying Balance Sheets. The Postal Service classifies the remaining leases, not classified as short-term leases or finance leases, as operating leases. The Postal Service considers a lease term to include all non-cancelable periods and renewal periods when the Postal Service is reasonably certain that it will exercise the related renewal option.

For short-term leases, the Postal Service records lease expenses in the statement of operations on a straight-line basis over the lease term.

Leases that do not qualify as short-term are recorded in the balance sheet on the lease commencement date, each as a right-of-use asset and a lease liability.

Lease liabilities are initially measured at the net present value of the lease payments due after the commencement date. For this purpose, lease payments include fixed and in-substance fixed rental payments, variable lease payments that depend on an index or rate, and the price of options that the Postal Service is, at the commencement of the lease, reasonably certain to exercise. Lease liabilities are subsequently increased to reflect the interest accrued and reduced when lease payments are made by the Postal Service.

Right-of-use assets are initially measured at the net present value of the lease payments (including amounts due prior to or on the commencement date), adjusted for the impact of initial direct costs and lease incentives. For finance leases, right-of-use assets are subsequently amortized on a straight-line basis over the shorter of the useful life of the underlying asset or the lease term. For operating leases, right-of-use assets are amortized in such a way that the combination of the interest expense accrued on the lease liability and the asset amortization results in a straight-line expense over the lease term.

Right-of-use assets for operating and finance leases are periodically reviewed for impairment losses, following the same process as for other long-lived assets. Impairment losses on long-lived assets are recorded when events or circumstances indicate that an asset's fair value is less than its carrying value. When such a determination is made, the carrying values of the assets are written down to fair value. The Postal Service uses the long-lived assets impairment guidance in ASC Subtopic 360-10, Property, Plant, and Equipment - Overall, to determine whether a right-of-use asset is impaired, and if so, the amount of the impairment loss to recognize. No impairment losses have been recognized to date.

The discount rates used in net present value calculations are determined based on the Postal Service’s incremental borrowing rates on debt outstanding with the FFB at the beginning of each year, which is approximated as the daily U.S. Treasury Yield Curve Rates for the five-year, 10-year, 20-year and 30-year periods, plus a 12.5 basis point spread.

Variable lease payments, except for those based on an index or rate, are recognized as variable lease expenses in the period in which the obligation for those payments are incurred.
NOTE 13 - FAIR VALUE MEASUREMENT
The Postal Service defines fair value as the price that would be received upon sale of an asset or the price that would be paid to transfer a liability between unrelated parties.

The carrying amounts of certain current assets and liabilities, including cash, accounts receivable, accounts payable and accrued expenses, approximate fair value due to their short-term nature. Assets within Property and equipment, net are recorded at cost and measured at fair value on a nonrecurring basis if they are determined to be impaired or classified as assets held for sale.

Noncurrent receivables and long-term debt are measured using a fair value hierarchy model. This model prioritizes observable and unobservable inputs used to measure fair value, and consists of three broad levels, as defined in authoritative literature.

For the three and six months ended March 31, 2020, no significant transfers between Level 1 and Level 2 assets or liabilities transpired. The carrying amount and fair value of the revenue forgone installment receivable and long-term debt are presented for disclosure purposes only in the following table:

<table>
<thead>
<tr>
<th></th>
<th>March 31, 2020</th>
<th>September 30, 2019</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Carrying Amount</td>
<td>Fair Value</td>
</tr>
<tr>
<td>Revenue forgone installment receivable</td>
<td>$ 476</td>
<td>$ 584</td>
</tr>
<tr>
<td>Long-term debt</td>
<td>$ 11,000</td>
<td>$ 11,936</td>
</tr>
</tbody>
</table>

*The carrying amount is included within Other assets (which includes items in addition to the revenue forgone installment receivable) in the accompanying Balance Sheets.

The revenue forgone installment receivable qualifies as a financial instrument in accordance with authoritative literature. To calculate its fair value, the Postal Service recognizes the imputed interest it is owed as interest income and estimates the value of this receivable using the interest method, which converts future cash flows to a single discounted amount using interest rates for similar assets, which are considered Level 2 inputs. The Postal Service then calculates the net present value of anticipated annual installment payments to be received, discounted by the 20-year U.S. Treasury Constant Maturity Rate, which was 1.15% and 1.94% as of March 31, 2020, and September 30, 2019, respectively.

The long-term debt also qualifies as a financial instrument. Because no active market exists for its debt with the FFB, the Postal Service estimates the fair value of the long-term debt by imputing future payments at discount rates provided by the FFB, considered Level 3 inputs. The weighted averages of the FFB discount rates, based on U.S. Treasury Yield Curve Rates, were 0.36% and 1.79% as of March 31, 2020, and September 30, 2019, respectively.

ITEM 2. MANAGEMENT’S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

CAUTIONARY STATEMENTS

The following Management’s Discussion and Analysis of Financial Condition and Results of Operations and other parts of this report describe the principal factors affecting the financial results, liquidity, capital resources and critical accounting estimates of the United States Postal Service (“Postal Service,” “USPS,” “we,” “our” and “us”). Our results of operations may be impacted by risks and uncertainties discussed here and in our Annual Report on Form 10-K for the year ended September 30, 2019, (“Annual Report”) filed with the Postal Regulatory Commission (“PRC”) on November 14, 2019. Such factors, many of which we cannot control or influence, may cause actual results to differ materially from those currently contemplated.

Our operating results for the three and six months ended March 31, 2020, are presented in accordance with accounting principles generally accepted in the United States (“GAAP”). These results are not necessarily indicative of the results to be expected for the year ended September 30, 2020, and should be read in conjunction with our
Annual Report. All references to years in this report, unless otherwise stated, refer to fiscal years beginning October 1 and ending September 30. All references to quarters, unless otherwise stated, refer to quarters within fiscal years 2020 and 2019.

Forward-looking statements contained in this report represent our best estimates of known and anticipated trends believed relevant to future operations. However, actual results may differ significantly from current estimates. Certain forward-looking statements included in this report use such words as “may,” “will,” “could,” “expect,” “believe,” “plan,” “estimate,” “project” or other similar terminology. These forward-looking statements, which involve a number of risks and uncertainties, reflect current expectations regarding future events and operating performance as of the date of this report. These risks include, but are not limited to, the effects of the novel strain of coronavirus (“COVID-19”) on our business, financial condition and results of operations. We have no obligation to publicly update or revise any forward-looking statements, whether as a result of new information, future events or otherwise.

OVERVIEW

With our mandate to provide universal postal services to the nation, we serve retail and commercial customers in the U.S., as well as internationally. Our operations include an extensive and integrated retail, processing, distribution, transportation and delivery network, and we operate throughout the U.S., its possessions and territories. We operate as a single segment and report our performance as such.

The Postal Accountability and Enhancement Act (“PAEA”) classifies our products into two broad categories: Market-Dominant and Competitive “products,” however, we use the term “services” in this document for consistency with other descriptions of services offered. The statutes under which we operate also establish certain requirements that affect our financial results, including obligations for retirement benefits within the Civil Service Retirement System (“CSRS”) and the Federal Employee Retirement System (“FERS”), and obligations for retiree health benefits including funding of the Postal Service Retiree Health Benefits Fund (“PSRHBF”). We must coordinate with the U.S. Office of Personnel Management (“OPM”) to address these obligations.

We have successfully implemented initiatives that have reduced the growth in certain costs by billions of dollars while offering new features for customers such as Informed Delivery. However, legal restrictions on pricing, service diversification and operations restrict our ability to cover our costs to provide prompt, reliable and efficient postal services to the nation.

We have established a core set of goals that drive our strategic initiatives and continuous improvement efforts:

1. Deliver a world-class customer experience;
2. Equip, empower and engage employees;
3. Innovate faster to deliver value; and
4. Invest in our future platforms.

As part of these efforts, we aim to achieve long-term financial stability. Our focus on maintaining liquidity and reducing operating expenses reflects current trends, as well as projected future volume of mail and packages. We believe that financial stability is within reach with targeted legislative and regulatory reform to address our overall cost structure and enhance our revenue-generating opportunities as we continue to identify and create innovative and affordable services, and deliver high levels of performance and service. Such financial stability would continue to provide Congress and the executive branch with additional time to address the broader issues regarding our overall cost structure and revenue-generating opportunities.

RESULTS OF OPERATIONS

SUMMARY

The major factors that impact our operating results include overall customer demand, the mix of postal services and contribution associated with those services, volume of mail and packages processed through our network and our ability to manage our cost structure in line with declining levels of mail volume, increased competition in the more labor-intensive Shipping and Packages business and an increasing number of delivery points.
Effects of COVID-19

In March 2020, the World Health Organization ("WHO") declared COVID-19 a global pandemic, which has since spread throughout the U.S. Changing federal, state and local government actions to address the pandemic have been occurring on a daily basis, and government-imposed shelter-in-place and other movement restrictions designed to slow the pace of the outbreak have severely impacted the U.S. economy. We believe the severity and duration of the COVID-19 pandemic is uncertain, and such uncertainty may continue during the second half of 2020.

Our employees provide an essential public service and bind the nation together as a part of the country’s critical infrastructure. At least six days per week, and in some instances seven, our employees accept, process, transport, and deliver vital mail and packages like medicine, essential consumer staples, benefits checks, and important information, in every community, to every home and business, and we will continue to do so. As Americans are urged to stay home, the importance of the mail will only grow as our customers, including those in rural areas and senior citizens, will need access to vital communications, essential packages and other necessities.

Shortly after the WHO declaration, we created a dedicated COVID-19 response team to lead our response efforts. All of our employees are considered essential, and their safety is our highest priority. Following strategies recommended by the Centers for Disease Control and Prevention, we have implemented enhanced safety measures to protect the health of our employees.

In late March 2020, we restricted business travel and implemented remote work arrangements for certain of our office-based employees. We have also implemented new leave policies for employees who may be affected by illness, quarantines or childcare obligations. These arrangements have not materially affected our ability to maintain our business operations, including the operation of financial reporting systems, internal control over financial reporting, and disclosure controls and procedures.

While we have maintained full operations during the pandemic, travel and logistics restrictions have negatively affected our retail and commercial customers, as well as our suppliers and mail service providers. Many of our commercial customers, especially those with consumer-facing businesses, have been required to suspend their operations or operate at a lower capacity. As a result, our mail volumes began to decline significantly in March 2020. The sudden drop in mail volumes, our most profitable revenue stream, is steep and may never fully recover to levels prior to the pandemic.

Although the COVID-19 pandemic has caused a recent surge in the nation’s use of e-commerce, resulting in higher Shipping and Packages volumes, we do not expect the resulting increases in Shipping and Packages revenues to be sustainable or to offset losses in mail service revenue caused by COVID-19. While the future is uncertain, we believe that the nation’s increased use of e-commerce is likely to plateau in the short term as the effects of the pandemic begin to subside, followed by a longer-term regression of e-commerce caused by a weakened U.S. economy. Furthermore, this anticipated economic weakness has resulted in significant interest rate declines, which have caused an increase in certain of our workers’ compensation and retirement benefits expenses.

On March 27, 2020, the President signed the Coronavirus Aid, Relief, and Economic Security Act, enacted as Public Law 116-136 (the "CARES Act"). Notwithstanding our $15.0 billion statutory debt limit, and $3.0 billion annual limit on new borrowing, the CARES Act allows us to borrow up to an additional $10.0 billion in financing from the U.S. Treasury to fund operating expenses. The U.S. Treasury may lend up to this amount at our request, upon terms and conditions mutually agreed upon. However, we have no assurance that the U.S. Treasury will agree to provide such financing or if it will be provided upon favorable terms.

We estimate that the COVID-19 pandemic may increase our net operating loss by more than $22.0 billion over the next eighteen months, threatening our ability to operate. If we are able to borrow the $10.0 billion from the U.S. Treasury as provided by the CARES Act, we expect that we will have sufficient liquidity to continue to operate through April 2021. However, if we are unable to secure this $10.0 billion in financing, we expect to be able to continue to operate only through September 2020, unless we default on additional obligations.
Three Months Ended March 31, 2020

As more fully described below in Operating Revenue and Volume, our operating revenue for the three months ended March 31, 2020, increased $349 million, or 2.0%, compared to the same period last year. The increase in operating revenue was due to the following:

- Shipping and Packages revenue increase of $386 million, or 7.1%, with a volume growth of 12 million pieces, or 0.8%, driven largely by the January 2020 price increases applicable to certain Competitive services and the temporary surge in e-commerce resulting from the COVID-19 pandemic; and
- First-Class Mail revenue increase of $89 million, or 1.4%, despite a volume decline of 29 million pieces, or 0.2%. Revenue growth was the result of decennial mailings associated with the 2020 U.S. Census, otherwise revenue and volume would have each declined during the quarter.

The above increases in operating revenue were partially offset by a decrease in Marketing Mail revenue of $94 million, or 2.5%, with a volume decline of 604 million pieces, or 3.4%, largely the result of the COVID-19 pandemic, as many of our commercial customers, especially those with consumer-facing businesses, began to suspend their operations or operate at a lower capacity in March 2020. Political and election mail revenue and volumes increased by approximately $100 million and 500 million pieces, respectively, compared to the same period last year, resulting from the impact of the 2020 primary and general elections.

As more fully described below in Operating Expenses, our operating expenses for the three months ended March 31, 2020, increased approximately $2.8 billion, or 14.2%, compared to the same period last year. The increase in operating expenses was primarily due to the following:

- Workers’ compensation expense increase of approximately $2.2 billion, primarily due to declines in discount rates, outside of management’s control, as the COVID-19 pandemic weighed on the U.S. economy;
- Retirement benefits expense increase of $348 million, or 23.7%, due to revised actuarial assumptions for CSRS and FERS unfunded retirement benefits amortization, which are outside of management’s control, and to increased contribution rates for FERS normal costs, compared to the same period last year;
- Other operating expenses increase of $124 million, or 5.3%, due to spending increases in various categories including enhancements to cyber security and information technology;
- Compensation and benefits expense increase of $119 million, or 1.0%, due primarily to contractual wage increases.

The above increases were partially offset by a decrease in retiree health benefits expense of $50 million, or 3.9%, primarily due to the impact of discount rates in effect during October 2019 that were used in OPM’s preliminary annual estimates.

Overall, we reported a net loss of approximately $4.5 billion for the three months ended March 31, 2020, compared to a net loss of approximately $2.1 billion for the same period last year.

Six Months Ended March 31, 2020

As more fully described below in Operating Revenue and Volume, our operating revenue for the six months ended March 31, 2020, decreased $11 million, which was essentially flat, compared to the same period last year.

The decrease in operating revenue was largely due to the following:

- Marketing Mail revenue decrease of $347 million, or 4.1%, with a volume decline of approximately 2.3 billion pieces, or 5.9%, driven by decreases in revenue and volume from political and election mail in the first quarter. Political and election mail revenue and volumes decreased by approximately $140 million and 900 million pieces, respectively, compared to the same period last year, which benefited from the impact of the 2018 mid-term elections during the first quarter of 2019. Furthermore, volume declined due to the COVID-19 pandemic in the second quarter, as the pandemic affected many of our commercial customers;
- First-Class Mail revenue decrease of $79 million, or 0.6%, with a volume decline of 600 million pieces, or 2.1%, reflecting the continuing migration from mail to electronic communication and transaction alternatives; and
• Periodicals revenue decrease of $57 million, or 9.4%, with a volume decline of 231 million pieces, or 9.8%, driven by the continuing migration to electronic communication and digital advertising.

The decrease in operating revenue was partially offset by an increase in Shipping and Packages revenue of $532 million, or 4.5%, despite a volume decline of 73 million pieces, or 2.2%, as we continued to see revenue growth in this service category during the six-month period driven largely by the January 2020 price increases applicable to certain Competitive services.

As more fully described below in Operating Expenses, our operating expenses for the six months ended March 31, 2020, increased approximately $1.6 billion, or 4.0%, compared to the same period last year. The increase in operating expenses was primarily due to the following:

• Workers’ compensation expense increase of approximately $1.1 billion, primarily due to declines in discount rates, outside of management’s control, as the COVID-19 pandemic weighed on the U.S. economy;
• Retirement benefits expense increase of $477 million, or 16.1%, due to revised actuarial assumptions for CSRS and FERS unfunded retirement benefits amortization, which are outside of management’s control, and to increased contribution rates for FERS normal costs, compared to the same period last year;
• Other operating expenses increase of $122 million, or 2.5%, due to spending increases in various categories including enhancements to cyber security and information technology; and
• Transportation expenses increase of $63 million, or 1.5%, primarily resulting from higher air transportation costs, but partially offset by lower international transportation costs. The increase in highway transportation costs was driven by a one-time adjustment for our adoption of Accounting Standards Update 2016-02 Leases, which has since been codified in Accounting Standards Codification (“ASC”) 842, Leases (“ASC 842”), but partially offset by a decrease in the number of miles driven and lower average diesel fuel prices. The decrease in international transportation costs was driven by lower International Mail volumes.

The above increases in operating expenses were partially offset by the following decreases in operating expenses:

• Retiree health benefits expense decrease of $100 million, or 3.9%, primarily due to the impact of discount rate changes in effect during October 2019 that were used in OPM’s preliminary annual estimates; and
• Compensation and benefits expense decrease of $71 million, or 0.3%, primarily due to management’s efforts to align work hours with volume workloads, but partially offset from increases due to contractual wage adjustments.

Overall, we reported a net loss of approximately $5.3 billion for the six months ended March 31, 2020, compared to a net loss of approximately $3.6 billion for the same period last year.

Non-GAAP Controllable Loss
In the day-to-day operation of our business, we focus on costs that can be managed in the course of normal business operations, such as salaries and transportation. We calculate controllable loss, a non-GAAP measure, by excluding items over which we have no control, such as PSRHB actuarial revaluation and amortization expenses, workers’ compensation expenses caused by actuarial revaluation and discount rate changes, and retirement expenses caused by actuarial revaluation. Controllable loss should not be considered a substitute for net loss and other GAAP reporting measures.
The following table reconciles our GAAP net loss to controllable loss for the three and six months ended March 31, 2020, and 2019:

<table>
<thead>

1 Expense for the accrual for the annual payment due to OPM by September 30 of the respective year, as calculated by OPM, to amortize the unfunded PSRHBf retirement health benefit obligation. Payments are to be made through 2056 based on OPM invoices.

2 Net amounts include changes in assumptions, valuation of new claims and revaluation of existing claims, less current year claim payments.

3 Expense for the accrual for the annual payment due to OPM by September 30 of the respective fiscal year, to amortize the unfunded CSRS retirement obligation. The 2020 amounts are based on updated Postal Service estimates resulting from revised actuarial assumptions. Payments are to be made through 2043 based on OPM invoices.

4 Expense for the accrual for the annual payment due to OPM by September 30 of the respective fiscal year, to amortize the unfunded FERS retirement obligation. The 2020 amounts are based on updated Postal Service estimates resulting from revised actuarial assumptions. Payments are to be made over a 30-year rolling period based on OPM invoices.

Our controllable loss decreased $14 million for the three months ended March 31, 2020, compared to the same period last year. This decrease was largely driven by the $349 million increase in operating revenue, offset by higher other operating expenses of $124 million, higher compensation and benefits expenses of $119 million, and higher FERS normal costs of $75 million.

Our controllable loss increased $270 million for the six months ended March 31, 2020, compared to the same period last year. This increase was largely driven by higher FERS normal costs of $134 million and higher transportation expenses of $63 million, partially offset by lower compensation and benefits expenses of $71 million.

These items are discussed in greater detail in Operating Revenue and Volume and Operating Expenses below.

**OPERATING REVENUE AND VOLUME**

The combined categories of First-Class Mail and Marketing Mail continued to provide the majority of our revenue, despite long-term trends away from traditional paper communication and correspondence to electronic media. Although this migration to electronic media has resulted in significant volume declines in First-Class Mail over the last decade, Marketing Mail volume remained relatively steady between 2009 and 2016. However, Marketing Mail volume began to decline at a greater rate beginning in 2017 and continued to decline through the first half of 2018. Aside from a volume rebound between the second half of 2018 through the first quarter of 2019 that was driven by increases in political and election mail associated with the 2018 mid-term elections, Marketing Mail resumed its volume decline through the remainder of 2019 and the first half of 2020.
The following table summarizes our operating revenue and volume for the three and six months ended March 31, 2020, and 2019, by each service category:

</table>

1 Excludes First-Class Package Service - Retail and First-Class Package Service - Commercial.
2 Excludes Marketing Mail Parcels.
3 Includes Priority Mail, USPS Retail Ground, Parcel Select Mail, Parcel Return Service Mail, Marketing Mail Parcels, Package Service Mail, First-Class Package Service - Retail, First-Class Package Service - Commercial and Priority Mail Express.
4 Revenue includes PO Box services, Certified Mail, Return Receipts, Insurance, Other Ancillary Services, Shipping and Mailing Supplies, Collect on Delivery, Registered Mail, Stamped Envelopes and Cards, Money Orders and Other services.
5 Volume includes Postal Service internal mail and free mail provided to certain congressionally mandated groups.

For the three months ended March 31, 2020, First-Class Mail generated approximately 36% of operating revenue, which was essentially unchanged compared to the same period last year, and approximately 42% of our volume, a 1% increase compared to the same period last year. Marketing Mail generated approximately 21% of operating revenue and 50% of our volume, both 1% decreases from the same period last year.

For the six months ended March 31, 2020, First-Class Mail generated approximately 35% of operating revenue, which is essentially unchanged compared to the same period last year, and approximately 40% of our volume, a 1% increase compared to the same period last year. Marketing Mail generated approximately 22% of operating revenue and 52% of our volume, both 1% decreases from the same period last year.

We continued to experience positive revenue results in our Shipping and Packages category, and it represented approximately 33% of our revenue for the three months ended March 31, 2020, which was a 2% increase from the same period last year, and approximately 33% of our revenue for the six months ended March 31, 2020, a 1% increase from the same period last year. Shipping and Packages generated approximately 4% of our volume for both the three and six months ended March 31, 2020, which was relatively unchanged compared to the same period last year.

Although revenue and volume are closely linked to the strength of the U.S. economy and changes in how our customers use the mail, we have proactively targeted opportunities to grow our business. We continue to focus on our customers' needs and have increased our investment in mail and package innovation. However, we also
recognize that revenue growth is constrained by laws and regulations restricting the types of products, services and pricing we may offer to our customers and the speed with which we can bring new products to market.

We anticipate that First-Class Mail will continue to lose volume in future years with the migration to electronic communication and transactional alternatives resulting from technological changes. To address the long-term trend that such changes have had on our First-Class Mail revenue and volume, we have been working with the mailing industry to slow the decline through mailing promotions and leveraging the high open-and-read rates of, for example, bills and statements for additional customer engagement and education.

Furthermore, due to the COVID-19 pandemic our First-Class Mail and Marketing Mail volumes began an accelerated decline in March 2020. The sudden drop in mail volumes, our most profitable revenue stream, is steep and may never fully recover to levels prior to the pandemic.

We have also focused on providing new services and innovating with Marketing Mail. We have expanded service offerings such as Informed Delivery, which enables customers to preview mail and manage packages scheduled to arrive as a means of merging digital and physical mail, as well as allowing mailers to launch interactive digital campaigns. Additionally, we are focusing on opportunities to pilot new products and innovate with customers and the mail industry to enhance the value of hard-copy communication. We believe these service offerings will further improve the value of both First-Class Mail and Marketing Mail.

Our Shipping and Packages category has historically experienced revenue and volume growth as a result of our successful efforts to compete in shipping services, including last-mile e-commerce fulfillment markets and Sunday delivery as well as end-to-end markets. We continue to focus on responding to customers’ needs by implementing solutions and maintaining strategic business partnerships that help us capitalize on the growing e-commerce business.

The COVID-19 pandemic has caused a recent surge in the nation’s use of e-commerce, resulting in higher Shipping and Packages volumes. However we do not expect the resulting increases in Shipping and Packages revenues to be sustainable or to offset losses in mail service revenue caused by COVID-19. Although the future is uncertain, we believe that the nation’s increased use of e-commerce is likely to plateau in the short term as the effects of the pandemic begin to subside, followed by a longer-term regression of e-commerce caused by a weakened U.S. economy.

Our Shipping and Packages category is subject to intense competition which significantly impacts both revenue and volume. Certain major customers continue to divert volume from our network by in-sourcing the last-mile delivery into their own networks. These customers are also aggressively pricing their products and services in order to fill their networks and grow package density.

We implemented price increases for certain Market-Dominant and Competitive services in January 2019 and 2020. Additionally, we implemented dimensional weighting provisions that amount to price increases for certain Shipping and Packages subcategories in June 2019.

First-Class Mail
First-Class Mail, presented in this report as a mail class and a Market-Dominant service category, includes cards, letters and flats. Prices of First-Class Mail, our most profitable service category, are the same regardless the geographic distance between the origination and delivery points. Because First-Class Mail is classified by law as Market-Dominant, price increases are currently generally subject to a price cap based on the Consumer Price Index for All Urban Consumers (“CPI-U”).

For the three months ended March 31, 2020, First-Class Mail revenue increased $89 million, or 1.4%, despite a volume decline of 29 million pieces, or 0.2%, compared to the same period last year. Revenue growth was the result of decennial mailings associated with the 2020 U.S. Census, otherwise revenue and volume would have each declined during the quarter. For the six months ended March 31, 2020, First-Class Mail revenue decreased $79 million, or 0.6%, and volume declined 600 million pieces, or 2.1%, compared to the same period last year. The change in revenue for both periods was less than the corresponding volume declines due to the January 2020 price increase applicable to certain Market-Dominant services. The most significant factor contributing to the
declining trend in First-Class Mail volume has been the continuing migration from mail to electronic communication and transaction alternatives.

Due to the COVID-19 pandemic, our First-Class Mail volume began to decline significantly in late March 2020, and it may never fully recover to levels prior to the pandemic. A protracted loss in customer demand for our services will continue to have a material effect on First-Class Mail revenue and volume.

**Marketing Mail**

*USPS Marketing Mail* (more commonly, *Marketing Mail*), presented as a mail class and a Market-Dominant service category, generally consists of advertising, newsletters, catalogs, small marketing parcels and other printed matter not required to be processed and delivered as First-Class Mail or Periodicals.

Between 2009 and 2016, Marketing Mail experienced relatively flat volume. However, Marketing Mail volume began to decline at a greater rate beginning in 2017 and continued to decline through the first half of 2018. Aside from a volume rebound between the second half of 2018 through the first quarter of 2019 that was driven by increases in political and election mail associated with the 2018 mid-term elections, Marketing Mail continued its volume decline through the remainder of 2019 and the first half of 2020, exacerbated by the COVID-19 pandemic.

For the three months ended March 31, 2020, Marketing Mail revenue decreased $94 million, or 2.5%, and volume declined 604 million pieces, or 3.4%, compared to the same period last year. For the six months ended March 31, 2020, Marketing Mail revenue decreased $347 million, or 4.1%, and volume declined approximately 2.3 billion pieces, or 5.9%, compared to the same period last year. For the three months ended March 31, 2020, our revenue and volume from political and election mail increased by approximately $100 million and 500 million pieces, respectively, compared to the same period last year, as we began to benefit from the impact of the 2020 elections during the second quarter of 2020. For the six months ended March 31, 2020, our revenue and volume from political and election mail decreased by approximately $140 million and 900 million pieces, respectively, compared to the same period last year, which benefited from the impact of the 2018 mid-term elections during the first quarter of 2019.

Due to the COVID-19 pandemic, many of our commercial customers, especially those with consumer-facing businesses, have been required to suspend their operations or operate at a lower capacity. As a result, our Marketing Mail volume began to decline significantly in March 2020, and it may never fully recover to levels prior to the pandemic. A protracted loss in customer demand for our services will continue to have a material effect on our Marketing Mail revenue and volume.

*Marketing Mail* is subject to intense competition, and price increases are currently generally capped at the rate of inflation. Marketing Mail volume is somewhat reflective of the cyclical nature of the U.S. economy, although targeted advertising campaigns can stimulate demand for this service, and our customers have used Marketing Mail to mail to more targeted prospects.
### Shipping and Packages

The following table summarizes our operating revenue and volume for Shipping and Packages for the three and six months ended March 31, 2020, and 2019, by each service subcategory:

\(^1\) Includes *Priority Mail*, a 1-3 business day delivery service; *Priority Mail Express*, an overnight delivery service available 365 days per year; and *USPS Retail Ground*, a retail-only Competitive service priced identically and functionally equivalent to *Priority Mail for Zones* \(^1\)-\(^4\).

\(^2\) Includes *Parcel Select*, *Parcel Return*, and *Marketing Mail Parcels*.

\(^3\) Includes *First-Class Package Services - Retail* and *First-Class Package Services - Commercial*.

Our Shipping and Packages category has historically experienced revenue and volume growth as a result of our successful efforts to compete in shipping services, including last-mile e-commerce fulfillment markets and Sunday delivery as well as end-to-end markets. However, this service category is subject to intense competition which significantly impacts both our revenue and volume. Shipping and Packages revenue and volume are historically greatest in the first quarter of the year due to the holiday shipping season.

For the three months ended March 31, 2020, Shipping and Packages revenue increased 7.1%, with a volume growth of 0.8%, compared to the same period last year. The volume increased due to a temporary surge in e-commerce resulting from the COVID-19 pandemic, and revenue outpaced volume increases due to the January 2020 price increases associated with certain Competitive services.

For the six months ended March 31, 2020, Shipping and Packages revenue increased 4.5%, despite a volume decline of 2.2%, compared to the same period last year. The revenue increases were largely due to the January 2020 price increases associated with certain Competitive services. The volume declines largely resulted from intense competition and certain major commercial customers and competitors delivering more of their own packages, compared to the same period last year, offset by the temporary surge in e-commerce resulting from the COVID-19 pandemic.

**Priority Mail Services**

Priority Mail Services is our Shipping and Packages subcategory that includes *Priority Mail*, *Priority Mail Express* and *USPS Retail Ground*. *Priority Mail* and *Priority Mail Express* services allow customers the ability to send documents and packages requiring expedited transportation and handling. While Priority Mail Services revenue has historically grown year-over-year, its service offerings are price sensitive and its growth rate has been lower than other Shipping and Packages subcategories due to intense competition.

Priority Mail Services accounted for our largest portion of Shipping and Packages revenue, representing approximately 46% of the total for the three and six months ended March 31, 2020, and 2019. However, Priority
Mail Services accounted for approximately 19% and 18% of the total Shipping and Packages volume for three and six months ended March 31, 2020, respectively, essentially unchanged compared to the same periods last year.

For the three months ended March 31, 2020, Priority Mail Services revenue grew 7.0%, on volume growth of 2.2%, compared to the same period last year. For the six months ended March 31, 2020, Priority Mail Services revenue grew 3.4%, despite a volume decline of 1.9%, compared to the same period last year. Revenue grew at a greater rate than volume for the three-month period and despite the volume decline for the six-month period, largely due to the January 2020 price increases applicable to Competitive services.

**Parcel Services**

Our Parcel Services subcategory includes Competitive services Parcel Select and Parcel Return, as well as Market-Dominant USPS Marketing Mail Parcels (more commonly, Marketing Mail Parcels). Parcel Select and Parcel Return services largely consist of last-mile deliveries, offered to large bulk shippers that perform their own sorting before dropping parcels deeper into our network.

For the three months ended March 31, 2020, revenue from Parcel Services increased 9.6%, on volume growth of 3.4%, compared to the same period last year. For the six months ended March 31, 2020, revenue from Parcel Services increased 6.3%, despite a volume decline of 0.8%, compared to the same period last year. This subcategory is primarily a last-mile service that bypasses much of our infrastructure and therefore is one of our lowest-priced package services, and as a result, produces a lower contribution per piece when compared to many of our other services. For the six months ended March 31, 2020, volume declined due to certain major commercial customers delivering more of their own packages. However, for the three months ended March 31, 2020, volume increased due to the temporary surge in e-commerce from the COVID-19 pandemic. Revenue grew at a greater rate than volume for the three-month period and despite the volume decline for the six-month period, largely due to the January 2020 price increases applicable to Competitive services.

**First-Class Package Services**

Our First-Class Package Services subcategory includes the competitively priced First-Class Package Service - Retail, a Competitive service targeted to retail customers for packages weighing up to 13 ounces, and First-Class Package Service - Commercial, a Competitive service targeted to commercial customers for packages weighing up to 16 ounces. This subcategory offers commercial customers that ship primarily lightweight fulfillment parcels the lowest-priced expedited end-to-end tracked package option in the marketplace. First-Class Package Services revenue and volume performance has historically experienced strong increases for the past several years, particularly from our commercial customers. These increases are primarily attributable to growth in e-commerce.

For the three months ended March 31, 2020, First-Class Package Services revenue increased 5.9%, despite a volume decline of 0.3%, compared to the same period last year. For the six months ended March 31, 2020, First-Class Package Services revenue increased 6.0%, despite a volume decline of 1.7%, compared to the same period last year. Revenue grew despite the volume declines, largely due to the January 2020 price increases applicable to Competitive services.

**Package Services**

Our Package Services subcategory is a Market-Dominant service that includes both Bound Printed Matter for materials up to 15 pounds and Library and Media Mail for materials up to 70 pounds. For the three months ended March 31, 2020, Package Services revenue decreased 5.2% on a volume decline of 10.7%, compared to the same period last year. For the six months ended March 31, 2020, Package Services revenue decreased 5.3% on a volume decline of 11.1%, compared to the same period last year. Revenue declined at a slower rate than volume for the three and six months ended March 31, 2020, due to the January 2020 price increase applicable to Market-Dominant services.

**International Mail**

Our International Mail category includes several services that enable customers, both domestic and abroad, to send international mail, including postcards, envelopes, flats and packages with either standard or express delivery options. “Outbound” services, which allow customers in the U.S. to send mail and packages to other countries, generate approximately two thirds of International Mail revenue, but “inbound” services are the opposite, generating two thirds of volume but only a third of the revenue. This is primarily due to the smaller size and lower rates for inbound international e-commerce packages.
For the three months ended March 31, 2020, *International Mail* revenue increased 2.4%, despite a volume decline of 11.7%, compared to the same period last year. For the six months ended March 31, 2020, *International Mail* revenue increased 0.4%, despite a volume decline of 9.1%, compared to the same period last year. These revenue increases were largely due to the January 2020 price increases applicable to Competitive services. The declines in both inbound and outbound volume were due to various competitive pricing, political and economic factors.

The U.S. is a member of the Universal Postal Union ("UPU"), a specialized agency of the United Nations that facilitates the exchange of international mail. We are the designated postal operator for the U.S. under the UPU, and payments to the designated postal operator for the delivery of foreign origin letter-post mails are known as "terminal dues".

In September 2019, the UPU members had a special meeting -- known as the Extraordinary Congress -- to discuss the terminal dues system. During that meeting, UPU members agreed to establish a new remuneration system that will allow us to self-declare rates beginning in July 2020. Other foreign postal operators may also reciprocally apply rates at full-self-declared rates at that time.

In February 2020, we officially invoked our provision to self-declare rates beginning in July 2020.

**Periodicals**

*Periodicals*, also presented as a mail class and a Market-Dominant service category, includes services designed for publishers of newspapers, magazines and other periodical publications whose primary purpose is providing publications to subscribers or other users. For the three months ended March 31, 2020, *Periodicals* revenue decreased 11.1% and volume declined 12.2%, compared to the same period last year. For the six months ended March 31, 2020, *Periodicals* revenue decreased 9.4% and volume declined 9.8%, compared to the same period last year.

*Periodicals* revenue and volume have been in decline for more than a decade as trends in hard-copy reading behavior and shifts of advertising away from print have eroded this business. The *Periodicals* category is not expected to rebound as electronic content continues to grow in popularity with the public.

**Other**

Other services include ancillary services such as *Certified Mail*, *PO Box* services, and *Return Receipt* services. Also included in this category are money orders and passport services. Other services revenue decreased 1.2%, and 3.3% for the three and six months ended March 31, 2020, respectively, compared to the same periods last year.

**OPERATING EXPENSES**

In an effort to align our resources with anticipated future mail and package volume, we continue to aggressively manage operating expenditures under management’s control.

We originally designed our mail processing and distribution network to provide overnight delivery service of *First-Class Mail* within specified delivery areas for a much higher volume of mail than we are required to process and deliver today, and the network’s legacy capabilities are not completely aligned to today’s mail mix and volumes. Consequently, certain of our processing and distribution facilities continue to operate at less than full capacity. Our challenge to contain costs is also compounded by the increasing number of delivery points, which, when combined with lower mail volume, has resulted in a drop in the average number of pieces delivered per delivery point per day from approximately 5.5 pieces in 2007 to 3.4 pieces in 2019, a reduction of approximately 39%, and a further significant decline is expected in 2020.

**Compensation and Benefits**

Compensation and benefits is our largest operating expense category. These expenses consist of costs related to our active career and non-career employees other than retirement costs associated with U.S. government defined benefit pension programs and retiree health costs which are further discussed in *Retirement benefits* and *Retiree Health Benefits*, respectively.
Overall, our compensation and benefits expenses increased 1.0% for the three months ended March 31, 2020, but decreased 0.3% for the six months ended March 31, 2020, compared to the same periods last year. The following table presents compensation and benefits expenses for the three and six months ended March 31, 2020, and 2019:

</tr>
</tbody>
</table>

**Compensation**

Compensation expense increased 0.6% for the three months ended March 31, 2020, but decreased 0.5% for six months ended March 31, 2020, compared to the same periods last year. The activity in both periods represents increases due to contractual wage adjustments and approximately 3.6 million hours attributable to the extra work day due to the leap year, offset by management’s efforts to align work hours with volume workloads.

**Work Hours**

For the three months ended March 31, 2020, total work hours were approximately 286 million, essentially unchanged compared to the same period last year. However, approximately 3.6 million hours, or 1.3%, were attributable to the extra work day due to the leap year in 2020. Were it not for the extra work day due to the leap year, work hours would have declined for the period.

For the six months ended March 31, 2020, total work hours were approximately 592 million, a decrease of 1.0%, compared to approximately 598 million total work hours for the six months ended March 31, 2019. This decrease was the result of management’s efforts to reduce work hours in line with volume workloads.

As a result of the COVID-19 pandemic, work hours began to decline in late March 2020 due to lower mail volumes and workforce availability, and we expect this trend to continue for the duration of the pandemic.

**Workforce Composition**

The number of career employees at March 31, 2020, was approximately 496,000, a decrease of approximately 1,500 employees, or 0.3%, compared to the same date a year ago. This decrease primarily reflected natural attrition, continued efforts to align our workforce with declining mail volume, offset by conversions of non-career employees to career status, in accordance with our contractual agreements.

The number of non-career employees at March 31, 2020, was approximately 129,500, a decrease of approximately 10,500 employees, or 7.5%, compared to the same date a year ago. This decrease primarily reflected management’s continued efforts to align our workforce with declining mail volume, and the conversions of non-career employees to career status, in accordance with our contractual agreements.

**Collective Bargaining Agreements**

On January 22, 2020, we reached a tentative agreement with the National Postal Mail Handlers Union, AFL-CIO (“NPMHU”) on a new three-year collective bargaining agreement, which the union membership ratified on April 8, 2020. The new contract went into effect on April 25, 2020, and will expire on September 20, 2022.

On March 10, 2020, a three-member arbitration panel reached a decision in our legally mandated binding interest arbitration process with the American Postal Workers Union, AFL-CIO (“APWU”), establishing the terms of a new collective bargaining agreement. The new contract went into effect on March 10, 2020, and will expire on September 20, 2021.
In September 2019, we agreed to extend contract negotiations relating to a new collective bargaining agreement with the National Association of Letter Carriers, AFL-CIO ("NALC"). The previous contract with the NALC expired on September 20, 2019, and negotiations with the NALC are at an impasse. The parties will continue to follow the current agreement until a new contract is reached through the dispute resolution process.

**Employee Health Benefits**

Our expense for employee health benefits (which includes the employer portion of Medicare taxes) is most significantly impacted by the number of employees electing coverage and the premium costs of the selected plans. Our active employees may participate in the Federal Employees Health Benefits ("FEHB") Program, which OPM administers. Separate from FEHB, we offer our own self-insured healthcare plan to certain non-career employees who are ineligible for FEHB.

Employee health benefits expense increased 3.2% and 0.8% for the three and six months ended March 31, 2020, compared to the same periods last year, driven by average premium increases of 4.0% in calendar year 2020, and partially offset by the lower contribution rate of the employer portion of healthcare premiums that we paid, by management efforts to provide employees with information and tools for selecting the health benefit plans that best meet their needs, and by the small decrease in number of career employees, as previously discussed.

Our share of healthcare premiums for our employees represented 71.9% of the total healthcare premium costs for both the three months ended March 31, 2020, and 2019. Our share of healthcare premiums for our employees represented 72.0% and 72.3% of the total healthcare premium costs for the six months ended March 31, 2020, and 2019, respectively. This decrease in our share of healthcare premium costs for employees during the six-month period was consistent with the terms of our contractual agreements.

**Social Security**

For the three and six months ended March 31, 2020, our Social Security costs increased 1.0% for the three months ended March 31, 2020, but decreased 0.4% for the six months ended March 31, 2020, compared to the same periods last year. These fluctuations were consistent with the general changes in compensation for the period, as described above in Compensation.

The CARES Act offers certain employers the ability to defer payment of the employer’s share of the Social Security payroll tax on wages incurred from March 27, 2020, through December 31, 2020. In accordance with this provision, we began deferring these payments in April 2020, and intend to continue the deferral for the remainder of calendar year 2020 for an estimated total deferral amount of approximately $1.6 billion. One half of these deferred payments would be due by December 31, 2021, and the other half by December 31, 2022.

**Thrift Savings Plan**

Career employees may participate in the Thrift Savings Plan ("TSP"), a defined contribution retirement savings and investment plan administered by the Federal Retirement Thrift Investment Board. Our TSP expenses are related only to our contributions for FERS employees who participate in the TSP. For these employees, we contribute 1% of basic pay and match voluntary employee contributions up to an additional 4% of basic pay.

For the three and six months ended March 31, 2020, our TSP matching costs increased 3.9% and 2.8%, respectively, compared to the same periods last year. The increase in expenses correlates to the changing workforce composition of CSRS and FERS employees.

**Retirement Benefits**

The majority of our career employees participate in one of two U.S. government defined benefit pension programs, CSRS and FERS, based on the starting date of their employment with us or another U.S. government employer. We incur normal costs (the amount determined by OPM representing the employer portion of retirement benefits for participating employees and their qualifying survivors, upon retirement, for each employee’s current year of service) for FERS employees; however, by law we do not pay normal costs for CSRS retirement benefits. FERS employees are further categorized as either FERS, FERS - Revised Annuity Employees (FERS - RAE), or FERS - Further Revised Annuity Employees (FERS - FRAE) depending on whether their date of hire was before, during,
or after calendar year 2013, respectively. This categorization determines the percentage of basic pay that we are required to contribute for normal cost.

Our retirement benefits expenses consist of three components: 1) FERS normal costs, 2) CSRS unfunded retirement benefits amortization, and 3) FERS unfunded retirement benefits amortization. These retirement benefits expense components are further described in detail in the sections below. The following table presents the retirement benefits expenses for the three and six months ended March 31, 2020, and 2019:

<table>
<thead>
<tr>
<th></th>
<th>Three Months Ended March 31, 2020</th>
<th>Six Months Ended March 31, 2020</th>
</tr>
</thead>
<tbody>

<tr>
<td><strong>Total retirement benefits</strong></td>
<td><strong>$1,818</strong></td>
<td><strong>$1,470</strong></td>
</tr>
</tbody>
</table>

1 Expense for the accrual for the annual payment due to OPM by September 30 of the respective year, based on information provided by OPM, to amortize the unfunded CSRS retirement obligation. Payments are to be made through 2043 based on OPM invoices.

2 Expense for the accrual for the annual payment due to OPM by September 30 of the respective year, based on information provided by OPM, to amortize the unfunded FERS retirement obligation. Payments are to be made over a 30-year rolling period based on OPM invoices.

Our retirement benefits expenses increased 23.7% and 16.1% for the three and six months ended March 31, 2020, respectively, compared to the same periods last year. This increase was due to rising employer contributions rates for FERS normal cost, as well as increases in the CSRS and FERS unfunded retirement benefits amortization, as discussed below.

For additional information, see Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 9 - Retirement Plans.

**FERS Normal Costs**

We record our contributions to FERS normal costs as they are incurred. Any unpaid employer amounts at the end of a period, along with any employee amounts withheld but not remitted at the end of a period, are recorded as a current liability within Retirement benefits in the accompanying Balance Sheets.

As determined by OPM, our FERS normal cost contribution rates increased from 13.7% to 14.7% of basic pay for 2020, an increase of 7.3% from the prior year, affecting most of our FERS participants. As a result of this contribution rate increase, FERS normal cost expenses increased 8.6% and 7.6% for the three and six months ended March 31, 2020, respectively, compared to the same periods last year.

**CSRS and FERS Unfunded Retirement Benefits**

OPM periodically notifies us regarding its revaluation of unfunded CSRS and FERS retirement benefits. The amounts we record as expenses for our unfunded CSRS and FERS liabilities may be significantly impacted by changes in actuarial assumptions used by OPM to revalue the unfunded liabilities.

In October 2019, OPM provided an actuarial report projecting the annual amortization payments due September 30, 2020, to be $1.6 billion for CSRS and $1.1 billion for FERS.

On April 2, 2020, the Board of Actuaries of the CSRS, which oversees OPM’s calculation of actuarial liabilities for CSRS and FERS, lowered the discount rate used to calculate CSRS and FERS unfunded retirement liabilities from 4.25% to 4.0%. We have estimated that the impact of this change in discount rate on the annual CSRS and FERS amortization expense, will result in revised projected amortization payments due September 30, 2020, of approximately $1.8 billion for the CSRS obligation and approximately $1.3 billion for the FERS obligation, increases of $181 million and $226 million, respectively.
Accordingly, we have accrued $495 million and $899 million for the three and six months ended March 31, 2020, for the CSRS amortization expense, reflecting an adjustment of approximately $91 million for the revised assumptions. Likewise, we have accrued $378 million and $643 million for the three and six months ended March 31, 2020, for the FERS amortization expense, reflecting an adjustment of approximately $113 million for the revised assumptions.

Our CSRS and FERS unfunded retirement benefits amortization expenses increased 45.5% and 28.6% for the three and six months ended March 31, 2020, respectively, compared to the same periods last year, due to higher estimated annual amortization payments resulting from revised actuarial assumptions and discount rate changes.

We expect to receive invoices from OPM for the actual amounts due September 30, 2020, for CSRS and FERS during the fourth quarter of 2020, and the amounts invoiced could differ from the projected amounts, due to further changes in experience, discount rates and/or actuarial assumptions as of the calculation date.

**Retiree Health Benefits**

We participate in federal employee benefit programs for retiree health benefits. Retirees who participated in FEHB for the five years immediately preceding their retirement may continue to participate in the plan during retirement. Qualifying survivors of retirees are also eligible to receive benefits.

In accordance with PAEA, since the beginning of 2017, the PSRHBF has funded our share of retiree health benefit premiums. Also since 2017, we have been obligated to pay into the PSRHBF the actuarially determined normal costs of retiree health benefits attributable to the service of our employees, as well as the amortization payment for the PSRHBF unfunded liability. Our total retiree health benefits expenses therefore consist of both the normal and the amortization costs. We record the required contributions to the plan as an expense in the period in which each contribution is due.

Based on preliminary calculations provided by OPM in October 2019, we have projected the PSRHBF amortization payment amount due September 30, 2020, to be $900 million, and therefore accrued expenses of $225 million and $450 million for the three and six months ended March 31, 2020, respectively. We expect to receive the invoice from OPM for the actual amount due during the fourth quarter of 2020 and this may differ from the original projected amount due to changes in discount rates, actuarial assumptions and experience as of the invoice calculation date.

Also, based on preliminary calculations provided by OPM in October 2019 using updated discount rate assumptions, we have estimated the amount of our PSRHBF normal cost payment due September 30, 2020, to be $4.0 billion, and therefore accrued expenses of $1.0 billion and $2.0 billion for the three and six months ended March 31, 2020, respectively. We expect to receive the invoice from OPM for the actual amount due during the fourth quarter of 2020 and this may differ from the original projected amount due to changes in discount rates, actuarial assumptions and experience as of the invoice calculation date.

For the three and six months ended March 31, 2020, our total retiree health benefits expenses decreased by $50 million, or 3.9%, and $100 million, or 3.9%, respectively, compared to the same periods last year, all of which was attributable to a decrease in the estimated amortization payment for the PSRHBF unfunded liability.

For additional information, see *Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 10 - Health Benefits Plans, Retirees*.

**Workers’ Compensation**

Our employees injured on the job are covered by the Federal Employees’ Compensation Act (“FECA”), administered by the U.S. Department of Labor’s (“DOL”) Office of Workers’ Compensation Programs, which makes all decisions regarding injured workers’ eligibility for benefits. We are legally mandated to participate in the federal workers’ compensation program. Our workers’ compensation expense reflects the impacts of changes in discount rates, as well as the actuarial valuation of new workers’ compensation cases and revaluation of existing ones. We reimburse the DOL for all workers’ compensation benefits paid to or on behalf of our employees, plus an administrative fee.
On a daily basis, we focus on costs that can be managed in the course of normal business operations. Certain aspects of workers' compensation can be managed through human resource initiatives, safety measures, and training. Other workers' compensation costs cannot be managed in the course of normal business operations and are less predictable, including expenses caused by actuarial revaluation and discount rate changes. We subtract the cash payments made by DOL on behalf of workers' compensation obligations, which are relatively predictable, from total workers' compensation expense in order to determine the non-cash component of workers' compensation expense, a non-GAAP financial measure.

The following table presents the components of workers' compensation expense, including the cash payments made by DOL on behalf of workers' compensation obligations, for the three and six months ended March 31, 2020, and 2019:

<table>
<thead>
<tr>
<th></th>
<th>Three Months Ended March 31</th>
<th>Six Months Ended March 31</th>
</tr>

<td>$401</td>
</tr>
</tbody>
</table>

For the three months ended March 31, 2020, the portion of workers’ compensation expense due to the impact of discount rate changes increased approximately $2.2 billion, compared to the same period last year. For the six months ended March 31, 2020, the portion of workers’ compensation expense due to the impact of discount rate changes increased approximately $1.1 billion, compared to the same period last year. These changes are the result of changes in interest rates, outside of management’s control.

The combined costs of new workers’ compensation cases and revaluation of existing workers’ compensation cases increased by $52 million and $14 million for the three and six months ended March 31, 2020, compared to the same periods last year. Changes in actuarial valuation are primarily attributable to the combined impacts of routine changes in actuarial estimation, the progression of existing cases and updated COLA assumptions, which are largely outside of management’s control.

Under FECA, workers’ compensation claims for many types of injuries cannot be settled through lump-sum payments, and in some instances with regard to those claims, compensation may be paid over many years. Federal law grants COLA rates to those claims, and these factors result in substantially higher costs to us than would likely result if we managed our own claims. Additionally, since we do not manage the FECA program, we have no ability to control the significant administrative costs associated with managing the claims and payments process.

For additional information, see Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 11 - Workers’ Compensation.

**Transportation**

Transportation expenses include the costs we incur to transport mail and packages between our facilities, comprising highway, air and international transportation contracts, plus contract delivery services.

With the exception of contract delivery services, our costs to deliver mail and other products to delivery points are not included within Transportation but in Compensation and benefits for employee costs and in Other operating expenses for fuel, vehicle maintenance and repair, and other costs. Furthermore, transportation expenses do not
include the compensation and related costs of employees responsible for transporting mail and packages between our facilities.

Variations in the volume and weight of mail transported, the mode of transportation used, and fuel prices have significant impact on transportation expenses.

The components of transportation expenses for the three and six months ended March 31, 2020, and 2019, are presented in the following table:

<table>
<thead>
<tr>
<th></th>
<th>Three Months Ended March 31,</th>
<th></th>
<th>Six Months Ended March 31,</th>

<td><strong>$ 4,405</strong></td>
<td><strong>$ 4,342</strong></td>
</tr>
</tbody>
</table>

Overall, transportation expenses increased 0.4% and 1.5% for the three and six months ended March 31, 2020, compared to the same periods last year.

Highway transportation expenses decreased 1.5% for the three months ended March 31, 2020, but increased 3.4% during the six months ended March 31, 2020, compared to the same periods in last year. For the three and six months ended March 31, 2020, highway contract expenses decreased, primarily due to a decrease in the number of miles driven and lower average diesel fuel prices. However, results for the six months ended March 31, 2020, include a one-time adjustment resulting from our adoption of ASC 842, whereby we recorded transportation expenses associated with embedded leases in certain of our transportation contracts during the first quarter of 2020 (see Note 2 - Recent Accounting Pronouncements for additional disclosures regarding our adoption of ASC 842).

Air transportation expenses increased 3.9% for the three months ended March 31, 2020, but decreased 0.6% during the six months ended March 31, 2020, compared to the same periods last year. For the six months ended March 31, 2020, the slight decrease was due primarily to lower volumes and lower average jet fuel prices. However, both volumes and average jet fuel prices rose in the three months ended March 31, 2020, leading to an increase in air transportation expenses for the period.

International transportation expenses are related only to outbound services that allow customers in the U.S. to send mail and packages to other countries. For the three and six months ended March 31, 2020, international transportation expenses decreased 1.4% and 2.9% compared to the same periods last year, primarily due to decreases in our international service volumes.
Other Operating Expenses

Other operating expenses for the three and six months ended March 31, 2020, and 2019, are detailed in the following table:

<table>
<thead>
<tr>
<th>(in millions)</th>

</tr>
</tbody>
</table>

Other operating expenses increased by 5.3% and 2.5% for the three and six months ended March 31, 2020, compared to the same periods in the prior year. While these aggregate changes were relatively immaterial, the period-over-period changes in the various components of other operating expenses for the three and six months ended March 31, 2020, were also relatively immaterial.

LIQUIDITY AND CAPITAL RESOURCES

Our liquidity consists of unrestricted cash and cash equivalents plus available borrowing capacity. As of March 31, 2020, and September 30, 2019, we held unrestricted cash and cash equivalents of $9.0 billion and $8.8 billion, respectively. During the six months ended March 31, 2020, our average daily liquidity balance under our statutory borrowing capacity was $12.3 billion, representing approximately 56 days of liquidity available, which we define as liquidity divided by estimated average cash disbursements (including capital expenditures) per calendar day (365 days per year).

We face certain risks caused by the COVID-19 pandemic, including the disruptions to our revenue and business operations, which will have a material effect on our financial condition and results of operations. Quarantines, shelter-in-place orders, and travel and logistics restrictions in connection with the outbreak have affected our retail and commercial customers, as well as suppliers and mail service providers. While the disruption is expected to be temporary, its duration remains uncertain. A protracted loss in customer demand for our services is likely to have a material effect on our financial condition, results of operations and liquidity. The sudden drop in mail volumes, our most profitable revenue stream, is steep and may never fully recover to levels prior to the pandemic.

Notwithstanding our $15.0 billion statutory debt limit, and $3.0 billion annual limitation on new borrowing, the CARES Act allows us to borrow up to an additional $10.0 billion in financing from the U.S. Treasury to fund operating expenses. The U.S. Treasury may lend up to this amount at our request, upon terms and conditions mutually agreed upon. However we have no assurance that the U.S. Treasury will agree to provide such financing or if it will be provided upon favorable terms.

We estimate that the COVID-19 pandemic may increase our net operating loss by more than $22.0 billion over the next eighteen months, threatening our ability to operate. If we are able to borrow the $10.0 billion from the U.S. Treasury as provided by the CARES Act, we expect that we will have sufficient liquidity to continue to operate through April 2021. However, if we are unable to secure this $10.0 billion in financing, we expect to be able to continue to operate only through September 2020, absent additional defaults.

Although our liquidity has generally increased since 2012, it remains insufficient to support an organization with approximately $80 billion in annual operating expenses, to make capital investments necessary for continuity of
operations and to prepare for unexpected contingencies. Much of this liquidity improvement as of March 31, 2020,
would not have occurred but for the temporary exigent surcharge, which allowed us to collect a total of $4.6 billion
in incremental revenue between January 2014 and April 2016.

Aside from the temporary exigent surcharge, we defaulted on $33.9 billion of statutorily specified PSRHBF
prefunding payments from 2012 through 2016, and did not make the approximately $495 million in payments due
for FERS unfunded liabilities between 2014 and 2016, or the approximately $21.0 billion in payments due for
PSRHBF normal cost and amortization on PSRHBF, CSRS and FERS unfunded liabilities between 2017 and 2019,
in order to preserve liquidity, and to ensure that our ability to fulfill our primary universal service mission was not
placed at undue risk. The combination of these defaults and non-payments, plus the incremental revenue associated
with the temporary exigent surcharge referred to above, and the increased revenue from growth in our Shipping
and Packages business, are the primary reasons why our cash and available liquidity has improved.

**CASH FLOW ANALYSIS**

**Operating Activities**
Cash provided by operating activities decreased $148 million for the six months ended March 31, 2020, compared
to the same period last year, largely the result of timing differences in cash payments for compensation and benefits.

**Investing Activities**
We invested $741 million in the purchase of property and equipment for the six months ended March 31, 2020,
which is an increase of $82 million, or 12.4%, compared to the same period last year. As of the date of this report,
the amount of our full year projected capital expenditures is approximately $2.0 billion, which is approximately
$300 million less than our original forecast of $2.3 billion. We anticipate that this may further decline if equipment
and information technology investments and other programs are deferred to future years as a result of COVID-19.

**Financing Activities**
Except as described otherwise in this quarterly report, the nature and amounts of our payment obligations under
our debt, capital and operating lease agreements, purchase commitments and other liabilities as of March 31,
2020, have not materially changed from those described in our Annual Report.

As of both March 31, 2020, and September 30, 2019, the aggregate principal balance of our outstanding debt was
$11.0 billion, consisting of a combination of fixed-rate note and floating-rate notes, all of which we consider long-
term debt.

**DEBT**
As of March 31, 2020, our statutory borrowing capacity was $4.0 billion, of which $1.0 billion would require
repayment by September 30, 2020, to comply with our annual debt increase limits. Furthermore, notwithstanding
our $15.0 billion statutory debt limit, and the $3.0 billion annual limitation on new borrowing, the CARES Act allows
us to borrow up to an additional $10.0 billion in financing from the U.S. Treasury to fund operating expenses. The
U.S. Treasury may lend up to this amount at our request, upon terms and conditions mutually agreed upon.

In 1974, we began issuing debt through individual debt agreements to the Federal Financing Bank (“FFB"), a
government-owned corporation under the general supervision of the Secretary of the Treasury. In 1999, we entered
into a Note Purchase Agreement (“NPA”) with the FFB to establish standardized procedures for issuing debt. Under
the NPA, we were able to issue a series of notes with established terms and conditions by providing two days prior
notice. Also under the NPA, we could make borrowings against two annually renewable revolving credit line facilities.
These note arrangements and credit line facilities provided the flexibility to borrow short or long-term, using floating
or fixed-rate instruments.

The NPA was extended each year through September 30, 2018, and in shorter increments between that date and
August 31, 2019, at which time the NPA expired. This expiration did not affect the terms of any of our outstanding
debt as of March 31, 2020, all of which was issued under the NPA.
If we are unable to renew or replace the NPA with the FFB, we have no assurance that we could obtain alternative debt financing on comparable terms. However, we believe that we will be able to maintain adequate liquidity through existing and new financing arrangements, as necessary and allowed by statute, to fund our operations.

On April 1, 2020, we drew $3.4 billion on a revolving credit facility with the FFB that survived the expiration of the NPA. In order to comply with the annual net increase limit, we must repay $400 million from this credit facility by September 30, 2020. Given that the credit facility has a maximum term of up to one year, we must repay any outstanding balance of the credit facility by April 1, 2021. The credit facility's interest rate was determined by the U.S. Treasury based on the market rates of similar instruments as of the day of the funding request.

LIQUIDITY OUTLOOK

We are constrained by laws and regulations, including the PAEA, which restrict revenue sources and mandates certain expenses. Statutorily mandated expenses include amortization payments to provide full funding of retirement benefits under the CSRS and the FERS, as well as FERS normal costs, described in greater detail in Note 9 - Retirement Plans. Additionally, the PAEA established the PSRHBF and mandated certain obligations for paying normal costs, the present value of the estimated retiree health benefits attributable to active employees' current year of service, and amortization payments for full prefunding of retiree health benefits. These prefunding obligations, described in greater detail in Note 10 - Health Benefits Plans, are unlike expenses imposed on most other federal entities or private-sector businesses that offer such benefits.

We continue to face challenges from the ongoing migration of mail to electronic alternatives, and we are legally limited under current law in how we can price our products and streamline our legacy business model. Our operations will require significant capital investment over the next few years to modernize and improve our processing and delivery infrastructure and update our delivery fleet in order to continue to meet our primary statutory obligation to provide prompt, reliable and efficient postal services to the nation.

Irrespective of our challenges resulting from the COVID-19 pandemic, absent legislative and regulatory change, we project continuing annual net losses in the future. As a result of these losses and our liquidity concerns, we will unlikely have sufficient cash balances to meet all of our existing legal obligations and make all of the critical investments in our infrastructure that are necessary for operational continuity and that have been deferred in recent years.

In the event that circumstances leave us with insufficient liquidity to continue operating, we may deem it necessary to implement additional contingency plans to ensure that our primary mission is fulfilled and that mail deliveries continue. These measures may require us to prioritize payments to the FFB, our employees and suppliers ahead of some payments to fund retirement and retiree health benefits, as we have done in the past.

With the anticipated continued migration to electronic communication and transactional alternatives, we continue to pursue long-term financial sustainability by focusing on the following items:

1. Continued efforts to control costs and drive efficiencies, innovate to keep mail relevant and generate increased revenue;
2. Postal Service reform legislation that addresses our overall cost structure and enhances our revenue-generating opportunities; and
3. Favorable outcome of the PRC’s ten-year review (discussed below), which would allow additional pricing flexibility.

Although we continue to inform the executive branch, Congress, the PRC and other stakeholders of the immediate and long-term financial challenges we face, we have no assurances that our requests will result in meaningful reform in the foreseeable future.
**PRC Ten-year Review**

In December 2016, the PRC initiated its ten-year review of the system for regulating rates and classes for Market-Dominant products as required by the PAEA. The purpose of the ten-year review was to determine if the system for regulating such rates and classes has achieved the objectives Congress established in the PAEA. As part of this review, the PRC evaluated the CPI-U price cap for our Market-Dominant services.

On December 1, 2017, the PRC announced its initial decision in connection with its ten-year review. The PRC concluded that the rates system has not achieved its objectives and needs to be changed, primarily because it does not enable us to achieve our mission of providing prompt, reliable, and efficient universal postal services to the American people in a financially sustainable manner. The PRC’s proposed changes to the system do not include the elimination of the CPI-U price cap; however, its proposal does provide for some additional pricing authority within a price cap system.

On December 5, 2019, the PRC announced a revised decision in connection with its ten-year review. The PRC’s proposed changes to the system still do not include the elimination of the CPI-U price cap. Moreover, while the revised proposal does include adjustment factors as we had requested to provide more flexibility for the regulatory system to better deal with future exogenous changes, the new proposal no longer includes any “true-up” authority to provide us with a reasonable opportunity to cover all of our costs. We continue to assert that the price cap should be eliminated, and that if the PRC insists on maintaining a price cap that the system must include both a resetting of rates so they are compensable, as well as adjustment factors to ensure the system is sufficiently flexible going forward.

The PRC was expected to issue a final rule after considering the comments and reply comments of any interested stakeholders, which were due no later than February 3, 2020, and March 4, 2020, respectively. As of the date of this report, the PRC has not issued a final rule. Additional information regarding the ten-year review may be found at the PRC website: https://www.prc.gov/press-releases/prc-revises-proposals-second-rulemaking-modify-rate-system-classes-market-dominant.

**2020 and Beyond**

Irrespective of our challenges resulting from the COVID-19 pandemic, we anticipate that given our ongoing liquidity concerns, and without legislative action and regulatory reform, we may not be able to pay all legally required obligations and also invest in much-needed capital expenditures in 2020 and future years that are necessary to ensure our ability to fulfill our primary mission. Furthermore, we believe that continuing productivity improvements alone will not be sufficient to address the challenges presented by declining Market-Dominant volume and revenue, and any future growth in operating revenue would unlikely keep pace with increased costs.

**Legally Required Obligations**

In addition to our previously discussed obligations for unfunded retirement and retiree health benefits of approximately $8.0 billion due on September 30, 2020, we expect to pay the DOL approximately $1.3 billion in October 2020, representing the workers’ compensation claims paid by DOL for the chargeback year July 1, 2019, to June 30, 2020, plus the estimated administrative fee.

The CARES Act offers certain employers the ability to defer payment of the employer’s share of the Social Security payroll tax on wages incurred from March 27, 2020, through December 31, 2020. In accordance with this provision, we began deferring these payments in April 2020, and intend to continue the deferral for the remainder of calendar year 2020 for an estimated total deferral amount of approximately $1.6 billion. One half of these deferred payments would be due by December 31, 2021, and the other half by December 31, 2022.

**Capital Investments**

We currently estimate that our required cash outlays for capital investments necessary to ensure that we can continue to perform our universal service obligation will amount to approximately $1.3 billion for the remainder of 2020, and an additional $11.0 billion for years 2021 through 2024, as we plan to invest in a new fleet of delivery vehicles and other appropriate capital assets. Although our future projections include these capital cash outlays, future cash flow from operations alone may not generate the cash needed to enable us to fully fund such necessary capital investments.
Mitigating Circumstances
We continue to pursue strategies within our control to increase operational efficiency and improve liquidity. We have managed capital in recent years by spending only what we believed was essential to maintain our existing facilities and service levels, and to increase efficiencies. However, continued increases in capital investment are necessary to upgrade our facilities, fleet of vehicles and processing equipment in order to remain operationally viable. Aggressive management of the business operations, as well as legislative and regulatory reforms that will enable us to increase revenue and reduce costs, will all be necessary to restore our financial health.

Our status as an independent establishment of the executive branch that does not receive tax dollars for our operations presents unique requirements and restrictions, but also potentially mitigates some of the financial risk that would otherwise be associated with a cash shortfall. With annual total revenue in 2019 of approximately $71 billion, a financially sound Postal Service continues to be vital to U.S. commerce.

The U.S. economy benefits greatly from us and the many businesses that provide the printing and mailing services that we support. Disruption of the mail would cause undue hardship to businesses and consumers as it would significantly inhibit the remittance of payments through the mail, and in the event of a cash shortfall, the U.S. government would likely prevent us from significantly curtailing or ceasing operations. We continue to inform the executive branch, Congress, the PRC and other stakeholders of the immediate and long-term financial challenges we face and the legislative and regulatory changes that are required to restore our financial stability.

LEGISLATIVE, REGULATORY AND RELATED MATTERS

TASK FORCE ON THE UNITED STATES POSTAL SYSTEM
As previously reported, on April 12, 2018, the President issued Executive Order 13829 to establish a Task Force on the United States Postal Service ("Task Force"), to be chaired by the Secretary of the Treasury, as Secretary and as Chairman of the FFB, or his designee. In accordance with the Executive Order, the Task Force conducted an evaluation of our operations and finances, and submitted its report to the President in August 2018.

There has been no further congressional activity related to the President’s Task Force report on the Postal Service subsequent to the March 12, 2019, Senate Homeland Security and Governmental Affairs Committee hearing titled, "A Path to Sustainability: Recommendations from the President’s Task Force on the United States Postal Service."

LEGISLATIVE UPDATE
As a self-funded independent establishment of the executive branch, our business model and operations are significantly influenced by congressional oversight and legislation. Additionally, Congress intended for us to be governed by an eleven-member Board of Governors ("Board") which generally consists of our Postmaster General, Deputy Postmaster General and nine independent governors ("Governors"). The President appoints the Governors with the advice and consent of the Senate. We have five Senate-confirmed Governors currently in office.

Legislation
Several bills introduced in response to the COVID-19 pandemic have financial implications for us.

On March 18, 2020, the President signed the Families First Coronavirus Response Act, enacted as Public Law 116-127, which provides new paid sick leave that may be used by an employee in COVID-19 situations for themselves, or to care for sick family members, as well as Family and Medical Leave Act-protected unpaid and paid leave if a school/child care is closed.

On March 27, 2020, the President signed the CARES Act, which allows the Postal Service to borrow up to an additional $10.0 billion in financing from the U.S. Treasury to fund operating expenses. The law stipulates that the Secretary of Treasury may lend up to this amount at the request of the Postal Service, upon terms and conditions mutually agreed upon by the Secretary and the Postal Service.

H.R. 6425, the Protect our Post Offices Act, introduced on March 31, 2020, would also appropriate $25.0 billion for payment to the Postal Service Fund for revenue forgone due to the COVID-19 pandemic. The bill was referred to the House Committees on Appropriations and Budget.
Postal Service Reform
The 116th Congress has not introduced any major Postal Service reform bills to date. Legislative and regulatory reforms remain critical for us to meet the needs of the American public, and we will continue to work with Congress and all of our stakeholders to enact Postal Service reform legislation.

Board of Governors Nominations
On March 2, 2020, the President submitted to the Senate the nomination of Donald Lee Moak to serve on the Board for a term expiring December 8, 2022. The nomination was referred to the Senate Homeland Security and Governmental Affairs Committee for its consideration. The nomination of William Zollars to serve for a term expiring December 8, 2022, is also pending the committee’s consideration.

FAIR VALUE MEASUREMENTS
As required by authoritative accounting literature, certain fair value disclosures for the periods ended March 31, 2020, and September 30, 2019, are discussed in Item 1. Financial Statements, Notes to Unaudited Financial Statements. We did not recognize gains as a result of valuation measurements during the three and six months ended March 31, 2020. All recognized losses have been incorporated into our financial statements as of March 31, 2020. See Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 13 - Fair Value Measurement.

RELATED PARTY TRANSACTIONS
As disclosed throughout this quarterly report, we have significant transactions with other U.S. government entities, which are considered related parties for reporting purposes. For a more detailed description, see Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 5 - Related Parties.

CRITICAL ACCOUNTING POLICIES AND ESTIMATES
The preparation of financial statements in accordance with GAAP requires management to make significant judgments and estimates to develop certain amounts reflected and disclosed in the financial statements. In many cases, alternative policies or estimation techniques may be used.

We maintain a thorough process to review the application of accounting policies and to evaluate the appropriateness of the many estimates that are required to prepare the financial statements of a large organization. However, even under optimal circumstances, estimates routinely require adjustment based on changing circumstances and new or better information.

The accounting policies deemed either the most judgmental or which involve the selection or application of alternative accounting policies, and are material to the interim financial statements, are described in Critical Accounting Estimates contained in Management’s Discussion and Analysis of Financial Condition and Results of Operations of the Annual Report. Management normally discusses the development and selection of accounting policies and estimates with the Audit and Finance Committee of the Board.

RECENT ACCOUNTING STANDARDS
See Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 2 - Recent Accounting Pronouncements, for a description of recently announced accounting standards.

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK
In the normal course of business we are exposed to market risks from changes in commodity prices, certain foreign currency exchange rates and interest rates. Our commodity price risk consists primarily of exposure to changes in prices for diesel fuel, unleaded gasoline and aircraft fuel for transportation of the mail, and fuel for heating facilities. We have foreign currency risk related to the settlement of terminal dues and transit fees with foreign postal administrations for international mail.
We have not used derivative commodity or financial instruments to manage market risk related to commodities, foreign currency exchange or interest rate fluctuations for debt instruments. Additionally, we do not purchase or hold derivative financial instruments for speculative purposes.

We also have provisions in our debt agreements that allow us to prepay our $11.0 billion debt at any time at a price determined by the Secretary of the Treasury, based on prevailing interest rates in the U.S. Treasury market at the time of repayment.

See Item 7A. Quantitative and Qualitative Disclosures about Market Risk in the Annual Report for additional information.

ITEM 4. CONTROLS AND PROCEDURES

Management is responsible for the preparation, integrity and fair presentation of our financial statements.

DISCLOSURE CONTROLS

We maintain disclosure controls and procedures that are designed to ensure that information required to be disclosed in quarterly and annual reports is recorded, processed, summarized, and reported within the time frames specified by PAEA, and that this information is accumulated and communicated to our management, including the Postmaster General and Chief Financial Officer, as appropriate, to allow timely decisions regarding required disclosure.

We carried out an evaluation under the supervision and with the participation of management, including the Postmaster General and the Chief Financial Officer, of the effectiveness of the design and operation of disclosure controls and procedures as of March 31, 2020. Based upon and as of the date of the evaluation, the Postmaster General and the Chief Financial Officer concluded that our disclosure controls and procedures were effective.

INTERNAL CONTROLS

We have made no changes in our internal control over financial reporting during the three months ended March 31, 2020, that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.
PART II. OTHER INFORMATION

ITEM 1. LEGAL PROCEEDINGS

For a discussion of legal proceedings affecting us, please refer to Item 1. Financial Statements, Notes to Unaudited Financial Statements and Note 8 - Commitments and Contingencies, as well as our Annual Report.

ITEM 1A. RISK FACTORS

The following risk factor supplements Item 1A. Risk Factors of our Annual Report.

**The occurrence of a global pandemic or other adverse public health developments could have a material and adverse effect on our business operations, financial condition and results of operations.**

In March 2020, the World Health Organization declared COVID-19 a global pandemic, which has since spread throughout the U.S. Given our mandate to provide universal postal services to the nation, we provide an essential service and have continued to process and deliver mail and packages during the pandemic.

We expect the COVID-19 pandemic to have a material effect on our financial condition, results of operations and liquidity. Quarantines, shelter-in-place orders, and travel and logistics restrictions in connection with the outbreak have affected retail and commercial customers, as well as suppliers and mail service providers. The Postal Service relies on the sale of postal products and services to fund its operations, and these sales have declined significantly as a result of the pandemic. The sudden drop in mail volumes, the Postal Service’s most profitable revenue stream, has been steep and may never fully recover to levels prior to the pandemic.

Megan J. Brennan
Postmaster General and Chief Executive Officer

Date: May 7, 2020

\[/s/Joseph Corbett\]
Joseph Corbett
Chief Financial Officer and Executive Vice President

Date: May 7, 2020
CERTIFICATION PURSUANT TO RULES 13a-14(a) AND 15d-14(a) UNDER THE SECURITIES AND EXCHANGE ACT OF 1934, AS ADOPTED PURSUANT TO SECTION 302 OF THE SARBANES-OXLEY ACT OF 2002.

I, Megan J. Brennan, certify that:

1. I have reviewed this quarterly report on Form 10-Q of the United States Postal Service (“Postal Service”);

2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;

3. Based on my knowledge, the financial statements and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the Postal Service as of, and for, the periods presented in this report;

4. The Postal Service’s other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the Postal Service and have:
   a. Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the Postal Service, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
   b. Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
   c. Evaluated the effectiveness of the Postal Service’s disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
   d. Disclosed in this report any change in the Postal Service’s internal control over financial reporting that occurred during the Postal Service’s most recent fiscal quarter (the Postal Service’s fourth fiscal quarter in the case of an Annual Report) that has materially affected, or is reasonably likely to materially affect, the Postal Service’s internal control over financial reporting;

5. The Postal Service’s other certifying officer and I have disclosed based on our most recent evaluation of internal control over financial reporting, to the Postal Service’s independent registered accounting firm and the Audit and Finance Committee of the Postal Service’s Board of Governors:
   a. All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the Postal Service’s ability to record, process, summarize and report financial information; and
   b. Any fraud, whether or not material, that involves management or other employees who have significant role in the Postal Service’s internal control over financial reporting.

• Magenta: Internal comment for reviewers (to be removed when resolved)
UNITED STATES POSTAL REGULATORY COMMISSION
Washington, D.C. 20268-0001

FORM 10-Q

QUARTERLY REPORT PURSUANT TO 39 U.S.C. § 3654 AND SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the Quarterly Period Ended March 31, 2020

UNITED STATES POSTAL SERVICE
(Exact name of registrant as specified in its charter)

Washington, D.C. 41-0760000
(State or other jurisdiction of incorporation or organization) (I.R.S. Employer Identification No.)

475 L’Enfant Plaza, S.W.
Washington, D.C. 20260
(Address of principal executive offices) (ZIP Code)

(202) 268-2000
(Registrant’s telephone number, including area code)

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes ☑ No ☐ Not Applicable ☑

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to rule 405 of Regulation S-T ($232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files). Yes ☑ No ☐ Not Applicable ☑

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, a smaller reporting company or an emerging growth company. See the definitions of "large accelerated filer," "accelerated filer," "smaller reporting company" and "emerging growth company" in Rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer ☑ Accelerated filer ☐ Non-accelerated filer ☐
Smaller reporting company ☐ Emerging growth company ☐ Not applicable ☑

If an emerging growth company, indicate by check mark if the registrant has elected not to use the extended transition period for complying with any new or revised financial accounting standards provided pursuant to Section 13(a) of the Exchange Act. ☐

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). Yes ☑ No ☐

Securities registered pursuant to Section 12(b) of the Act:

NOTES TO UNAUDITED FINANCIAL STATEMENTS

NOTE 1 - BASIS OF PRESENTATION

Interim Financial Statements
The accompanying unaudited interim financial statements of the United States Postal Service (the “Postal Service”) have been prepared in accordance with accounting principles generally accepted in the United States (“GAAP”) for interim financial information and with the instructions to Form 10-Q and Rule 10-01 of the U.S. Securities and Exchange Commission Regulation S-X. These financial statements should be read in conjunction with the Postal Service’s financial statements for the year ended September 30, 2019, included in its Annual Report on Form 10-K (“Annual Report”) filed with the Postal Regulatory Commission (“PRC”) on November 14, 2019, and do not include all information and footnotes which are normally included in the Annual Report. Except as otherwise specified, all references to years are to fiscal years beginning October 1 and ending September 30, and quarters are quarters within fiscal years 2020 and 2019.

In the opinion of management, the accompanying unaudited interim financial statements reflect all material adjustments, including recurring adjustments, necessary to fairly present the financial position as of March 31, 2020, the results of operations for the three and six months ended March 31, 2020, and 2019, the changes in net deficiency for the six months ended March 31, 2020, and 2019, and cash flows for the six months ended March 31, 2020, and 2019. Operating results for the three and six months ended March 31, 2020, are not necessarily indicative of the results that may be expected for all of 2020. Mail volume and revenue are historically greatest in the first quarter of the year, which includes the holiday mailing season.

Reclassifications
Certain reclassifications have been made to the financial statements for the three and six months ended March 31, 2019, as well as subsequent footnotes, to conform to the current period presentation. Specifically, certain retirement benefit expenses have been reclassified from Compensation and benefits and separately identified as Retirement benefits within Operating expenses in the accompanying unaudited Statements of Operations. In addition, unfunded retirement benefits amortization expenses associated with the Civil Service Retirement System (“CSRS”) and the Federal Employee Retirement System (“FERS”) have been reclassified from Unfunded retirement benefits amortization to Retirement benefits within Operating expenses in the accompanying unaudited Statements of Operations.

The liabilities associated with these retirement benefits have also been reclassified from Compensation and benefits and separately identified as Retirement benefits within Current liabilities in the balance sheets. In addition, the unfunded retirement benefits liabilities associated with CSRS and FERS have been reclassified from Unfunded retirement benefits to Retirement benefits within Current liabilities in the balance sheets. Corresponding reclassifications have been made within Changes in current assets and liabilities in the accompanying unaudited Statements of Cash Flows.

These reclassifications had no effect on previously reported total operating expenses, loss from operations or net loss. See Note 9 - Retirement Plans for further disclosure pertaining to retirement benefits.

NOTE 2 - RECENT ACCOUNTING PRONOUNCEMENTS

Recently Adopted Accounting Pronouncement
In February 2016, the Financial Accounting Standards Board (“FASB”) issued Accounting Standards Update 2016-02 Leases, which has since been codified in Accounting Standards Codification (“ASC”) 842, Leases (“ASC 842”). The new standard requires an entity to record most leases in its balance sheets but continue to recognize expenses in its statements of operations in a manner similar to current accounting practices. The new standard requires a lessee to recognize a lease liability for the obligation to make lease payments and a right-of-use (“ROU”) asset for the right to use the underlying asset for the lease term. Expenses associated with operating leases are recognized on a straight-line basis and include embedded interest and amortization components. The Postal Service recognizes expenses associated with operating leases as rent expense or transportation expense within Other operating expenses or Transportation, respectively, in the statements of operations. The Postal Service recognizes expenses associated with finance leases (formerly capital leases under previous guidance) with both...
interest and amortization expenses and presents these separately in the statements of operations. As such, finance leases generally have higher expenses in the earlier periods of the lease term.

The Postal Service adopted ASC 842 for its 2020 fiscal year (beginning October 1, 2019). In connection with the adoption of ASC 842, the Postal Service has made necessary changes to relevant policies, processes, information systems and internal controls. For transition purposes, the Postal Service has elected the option not to restate comparative financial statements under the modified retrospective transition model. This option allows the application of the standard to all leases in effect as of the effective date (October 1, 2019) or commencing thereafter, without any restatement impact on the comparative financial statement balances. Accordingly, all comparative financial statements enclosed herein are presented in accordance with the previous ASC 840, Leases (“ASC 840”), with related ASC 840 disclosures provided in Note 12 - Leases.

In implementing ASC 842, the Postal Service has elected the package of practical expedients which permits carrying forward historical accounting positions around lease identification, lease classification and initial direct costs for all leases commencing prior to October 1, 2019. The Postal Service has also made a policy election to not separate the lease and non-lease components for all types of underlying assets and to exclude its short-term leases from the ROU asset and lease liability balances.

The Postal Service adopted ASC 842 on October 1, 2019. The implementation of ASC 842 resulted in an opening balance sheet adjustment, as of October 1, 2019, to recognize $4.4 billion in right-of-use assets and lease liabilities relating to operating leases as follows:

<table>
<thead>
<tr>
<th>(in millions)</th>

</tbody>
</table>

The implementation of ASC 842 did not have a material impact on the Postal Service’s Statement of Operations or Statement of Cash Flows and did not have any impact on the Postal Service’s Statement of Changes in Net Deficiency. See Note 12 - Leases and Item 4. Controls and Procedures for additional disclosures pertaining to ASC 842.

**Accounting Pronouncements Issued but not Adopted**

**Accounting Standards Update 2016-13 Financial Instruments - Credit Losses**

In June 2016, the FASB issued Accounting Standards Update 2016-13 Financial Instruments - Credit Losses, which has since been codified in ASC 326, Financial Instruments - Credit Losses (“ASC 326”). The new standard requires entities to measure expected credit losses on financial instruments and other commitments by replacing the incurred loss impairment methodology in current GAAP with a methodology that reflects expected credit losses and requires consideration of a broader range of reasonable and supportable information to inform credit loss estimates.

The Postal Service intends to adopt ASC 326 for its 2021 fiscal year (beginning October 1, 2020) and the quarters therein. The standard is applicable to the Postal Service’s valuation of its receivables. The Postal Service is currently evaluating the impact of adopting this standard on its financial statements and related disclosures.
Accounting Standards Update 2018-13 Fair Value Measurement
In August 2018, the FASB issued Accounting Standards Update 2018-13 Fair Value Measurement: Disclosure Framework - Changes to the Disclosure Requirements for Fair Value Measurement, which has since been codified in ASC 820, Fair Value Measurement (“ASC 820”). The new standard modifies the disclosure requirements for fair value measurements by adding, modifying or removing certain disclosures.

The Postal Service intends to adopt ASC 820 for its 2021 fiscal year (beginning October 1, 2020) and the quarters therein. The standard is applicable to the Postal Service’s fair value measurements of its revenue forgone installment receivable and its long-term debt, as described further in Note 13 - Fair Value Measurement. Under ASC 820, certain disclosures are required to be applied on a retrospective basis and others on a prospective basis. The Postal Service is currently evaluating the impact of adopting this standard on its financial statements and related disclosures.

Accounting Standards Update 2018-15 Intangibles - Goodwill and Other - Internal-Use Software
In August 2018, the FASB issued Accounting Standards Update 2018-15 Intangibles - Goodwill and Other - Internal-Use Software (Subtopic 350-40) - Customer’s Accounting for Implementation Costs Incurred in a Cloud Computing Arrangement, which has since been codified in ASC Subtopic 350-40, Intangibles - Goodwill and Other - Internal-Use Software (“ASC 350-40”). This is an update to a standard the FASB issued in April 2015 for entities evaluating the accounting for fees paid by a customer in a cloud computing (hosting) arrangement by providing guidance for determining when such arrangement includes a software license.

If a cloud computing arrangement includes a license for internal-use software, then the software license is accounted for by the customer in accordance with ASC 350-40. This generally means that an intangible asset is recognized for the software license and, to the extent that the payments attributable to the software license are made over time, a liability also is recognized. If a cloud computing arrangement does not include a software license, the entity should account for the arrangement as a service contract. This generally means that the fees associated with the hosting element (service) of the arrangement are expensed as incurred.

The Postal Service intends to adopt ASC 350-40 for its 2021 fiscal year (beginning October 1, 2020) and the quarters therein. The Postal Service is currently evaluating the impact of adopting this standard on its financial statements and related disclosures.

NOTE 3 - LIQUIDITY
The Postal Service’s liquidity consists of unrestricted cash and cash equivalents plus available borrowing capacity.

Cash
The Postal Service generates its cash almost entirely through the sale of postal products and services. As of March 31, 2020, and September 30, 2019, the Postal Service held unrestricted cash and cash equivalents of $9.0 billion and $8.8 billion, respectively. See Note 6 - Cash, Cash Equivalents and Restricted Cash for further disclosures pertaining to cash.

The Postal Reorganization Act, as amended by Public Laws 101-227 and 109-435 (the "PRA"), authorizes the Postal Service to raise cash through the issuance of debt obligations. The Postal Service is limited by statute to annual net increases in debt of $3.0 billion calculated as of the end of each fiscal year, and total debt of $15.0 billion. In 1974, the Postal Service began issuing debt through individual debt agreements to the Federal Financing Bank (“FFB”), a government-owned corporation under the general supervision of the Secretary of the Treasury.

COVID-19 Considerations
In March 2020, the World Health Organization declared a novel strain of coronavirus (“COVID-19”) a global pandemic, which has since spread throughout the U.S. Given its mandate to provide universal postal services to the nation, the Postal Service provides an essential service as part of the nation’s critical infrastructure and has continued to process and deliver mail and packages during the pandemic.

The Postal Service expects the COVID-19 pandemic to have a material effect on its financial condition, results of operations and liquidity. Quarantines, shelter-in-place orders and travel and logistics restrictions in connection with the outbreak have affected retail and commercial customers, as well as suppliers and mail service providers. The
Postal Service relies on the sale of postal products and services to fund its operations, and these sales declined significantly in late March 2020 as a result of the pandemic, and the impact has continued to worsen since then. The sudden drop in mail volumes, the Postal Service’s most profitable revenue stream, has been steep and may never fully recover to levels prior to the pandemic.

On March 27, 2020, the President signed the Coronavirus Aid, Relief, and Economic Security Act, enacted as Public Law 116-136 (the “CARES Act”). Notwithstanding the $15.0 billion statutory debt limit, and the $3.0 billion limit on annual borrowing, the CARES Act allows the Postal Service to borrow up to an additional $10.0 billion in financing from the U.S. Treasury to fund operating expenses. The U.S. Treasury may lend up to this amount at the request of the Postal Service, upon terms and conditions mutually agreed upon. However, the Postal Service has no assurance that the U.S. Treasury will agree to provide such financing or if it will be provided upon favorable terms.

The Postal Service estimates that the COVID-19 pandemic may increase its net operating loss by more than $22.0 billion over the next eighteen months, threatening its ability to operate. If the Postal Service is able to borrow the $10.0 billion from the U.S. Treasury as provided by the CARES Act, it expects that it will have sufficient liquidity to continue operations through April 2021. However, if the Postal Service is unable to secure this $10.0 billion in financing, it expects to be able to continue to operate only through September 2020.

Subsequent Events

The CARES Act offers certain employers the ability to defer payment of the employer’s share of the Social Security payroll tax on wages incurred from March 27, 2020, through December 31, 2020. In accordance with this provision, the Postal Service began deferring these payments in April 2020, and intends to continue the deferral for the remainder of calendar year 2020 for an estimated total deferral amount of approximately $1.6 billion. One half of these deferred payments would be due by December 31, 2021, and the other half by December 31, 2022.

On April 1, 2020, the Postal Service drew $3.4 billion on a revolving credit facility with the FFB that survived the expiration of the Note Purchase Agreement ("NPA"). In order to comply with the annual net increase limit, the Postal Service must repay $400 million from this credit facility by September 30, 2020. Given that the credit facility has a maximum term of up to one year, the Postal Service must repay any outstanding balance of the credit facility by April 1, 2021. The credit facility’s interest rate was determined by the U.S. Treasury based on the market rates of similar instruments as of the day of the funding request.

Debt

As of both March 31, 2020, and September 30, 2019, the Postal Service had a combination of fixed-rate and floating-rate notes outstanding with various maturities totaling $11.0 billion. As of March 31, 2020, the Postal Service’s statutory borrowing capacity was $4.0 billion, of which $1.0 billion would require repayment by September 30, 2020, to comply with the annual debt net increase limit.

In 1999, the Postal Service entered into the NPA with the FFB to establish standardized procedures for issuing debt. Under the NPA, the Postal Service was able to issue a series of notes and revolving credit line facilities with established terms and conditions by providing two days prior notice. These note arrangements and credit line facilities provided the flexibility to borrow short or long-term, using floating or fixed-rate instruments.

The NPA was extended each year through September 30, 2018, and in shorter increments between that date and August 31, 2019, at which time the NPA expired. This expiration did not affect the terms of any of the Postal Service's outstanding debt as of March 31, 2020, all of which was issued under the NPA. As a contractual matter, the FFB continued to lend to the Postal Service under each commitment and line of credit until it expired. If the Postal Service is unable to renew or replace the NPA with the FFB, it has no assurance that it could obtain alternative debt financing on comparable terms.
**Liquidity Concerns**

The Postal Service is constrained by laws and regulations, including the *Postal Accountability and Enhancement Act* ("PAEA"), which restrict revenue sources and mandate certain expenses.

The Postal Service is required, either by law or by union contract, to participate in U.S. government pension and health and benefits programs for employees and retirees, including the Federal Employees Health Benefit ("FEHB") program, CSRS and FERS, which the Office of Personnel Management ("OPM") administers. Statutorily mandated expenses include amortization payments to provide full funding of retirement benefits under CSRS and FERS, as well as FERS normal costs, described in greater detail below and in **Note 9 - Retirement Plans**. Additionally, the PAEA established the Postal Service Retiree Health Benefits Fund ("PSRHBF") and mandated certain obligations for paying normal costs, the present value of the estimated retiree health benefits attributable to active employees' current year of service, and amortization payments for full prefunding of retiree health benefits. These prefunding obligations, described in greater detail below and in **Note 10 - Health Benefits Plans**, are unlike expenses imposed on most other federal entities or private-sector businesses that offer such benefits.

The Postal Service reported operating expenses of approximately $80 billion in 2019 and has incurred cumulative net losses of $83.1 billion from 2007 through March 31, 2020.

Notwithstanding the challenges resulting from the COVID-19 pandemic, absent legislative and regulatory change, the Postal Service projects continuing annual net losses in the future. As a result of these losses and its liquidity concerns, the Postal Service will unlikely have sufficient liquidity to meet all of its existing legal obligations when due while also reducing its debt and making the critical infrastructure investments that have been deferred in recent years.

In the event that circumstances leave the Postal Service with insufficient liquidity, it would likely be required to implement additional contingency plans to ensure that its primary mission is fulfilled and that mail deliveries continue. These measures may require the Postal Service to prioritize payments to the FFB, employees and suppliers ahead of some payments to fund retirement and retiree health benefits, as has been done in the past.

**Business Model Challenges and Constraints**

Market-Dominant services, which accounted for approximately 66% of the Postal Service’s annual operating revenues in 2019, are currently subject to a price cap as measured by the Consumer Price Index for All Urban Consumers ("CPI-U"). However, the Postal Service’s costs are not similarly constrained. A large portion of its cost structure cannot be altered expeditiously due to the Postal Service’s universal service obligation. Further, the number of delivery points continues to grow by approximately one million per year, which drives up delivery costs. When combined with the impact of lower mail volume, the average number of pieces delivered per delivery point per day has decreased from approximately 5.5 pieces in 2007 to 3.4 pieces in 2019, a decline of approximately 39%, and a further significant decline is expected in 2020.

Many employee and retiree benefit costs are mandated by law and cannot be altered without legislative change. Under current law, the Postal Service is generally unable to increase prices sufficiently to offset increased costs, and is likewise constrained by law from reducing many of its costs or from pursuing many alternate sources of revenue.

Aside from its universal service obligation, a significant factor contributing to Postal Service losses is the ongoing decline in the volume of Market-Dominant products and services, and those declines are being exacerbated by the COVID-19 pandemic. Specifically, declines in *First-Class Mail* are largely the result of changes in consumers' and businesses' use of mail resulting from the continuing migration to electronic communication and transactional alternatives, which have taken place over the last decade and are expected to continue. After experiencing relatively flat volume between 2009 and 2016, beginning in 2017, *Marketing Mail* volume has generally been challenged by commercial mailers' increasing use of digital and mobile advertising, and more recently by the COVID-19 pandemic, although this class has benefited from strong political and election mail volumes, particularly in the second half of 2018 and the first quarter of 2019.

The Postal Service’s Shipping and Packages category has historically provided revenue and volume growth as a result of its successful efforts to compete in shipping services, including last-mile e-commerce fulfillment markets.
and Sunday delivery as well as end-to-end markets. However, this service category is subject to intense competition which significantly impacts both revenue and volume. Certain major customers of the Postal Service had begun diverting volume from the Postal Service’s network by in-sourcing last-mile delivery. Competitors in the package delivery market are aggressively pricing their products and services in order to fill their networks and grow package density. However, as a result of the temporary surge in e-commerce growth driven by the COVID-19 pandemic, some of these customers increased their volume to the Postal Service’s network during March 2020 due to their delivery capacity constraints.

Because the Postal Service provides its services primarily through its employees, its costs are heavily concentrated in wages and benefits for both current employees and retirees. These costs are significantly impacted by contractual wage increases, employee health benefit premium increases, and statutorily mandated retirement and workers’ compensation programs. Some of these costs have historically increased at a higher rate than inflation.

**Past Due Obligations**
The following table presents the total expenses accrued but unpaid by the Postal Service as of September 30, 2019, related to retiree health benefits, CSRS and FERS and the fiscal years in which the accruals were recorded:

<table>

¹ The 2012 to 2016 period amount includes $5.8 billion for 2016, $5.7 billion for 2015, $5.7 billion for 2014, $5.6 billion for 2013 and $11.1 billion for 2012.
² The 2012 to 2016 period amount includes $247.6 million for 2016, $240.9 million for 2015 and $6.7 million for 2014.

**Mitigating Circumstances**
The Postal Service continues to pursue strategies within its control to increase operational efficiency and improve liquidity. The Postal Service has managed capital in recent years by spending what it believed was essential to maintain its existing facilities and service levels, to ensure employee safety and to increase efficiencies. However, continued increases in capital investment are necessary to upgrade its facilities, fleet of vehicles and processing equipment in order to remain operationally viable. Irrespective of the challenges resulting from the COVID-19 pandemic, aggressive management of the business operations, as well as legislative and regulatory reforms that will enable it to increase revenue and reduce costs, will all be necessary to restore the Postal Service to financial health.

The Postal Service’s status as an independent establishment of the executive branch that does not receive tax dollars for its operations presents unique requirements and restrictions, but also potentially mitigates some of the financial risk that would otherwise be associated with a cash shortfall. With annual total revenue in 2019 of approximately $71 billion, a financially sound Postal Service continues to be vital to U.S. commerce.

The U.S. economy benefits greatly from the Postal Service and the many businesses that provide the printing and mailing services that it supports. Disruption of the mail would cause undue hardship to businesses and consumers as it would significantly inhibit the remittance of payments through the mail, and in the event of a cash shortfall, the U.S. government would likely prevent the Postal Service from significantly curtailing or ceasing operations. The Postal Service continues to inform the executive branch, Congress, the PRC and other stakeholders of the immediate and long-term financial challenges it faces and the legislative and regulatory changes that are required to restore its financial stability.
NOTE 4 - REVENUE RECOGNITION

The Postal Service generates the majority of its revenue from contracts associated with the processing and delivery of different types of mail and packages, both domestically and internationally, which generally occur over a relatively short period of time (e.g., several days).

Disaggregation of Revenue

The following table summarizes the Postal Service’s disaggregated operating revenue for the three and six months ended March 31, 2020, and 2019, by each service category:

<table>
<thead>

</tr>
</tbody>
</table>

* Prior period amounts for certain service categories include reclassifications of amounts amongst service categories to conform to current period presentation. These reclassifications are immaterial for each affected category, and had no effect on total operating revenue for the period.

Satisfaction of Performance Obligations

A performance obligation is a promise in a contract to transfer a distinct good or service to the customer. A contract’s transaction price is allocated to each distinct performance obligation and recognized as revenue when, or as, the performance obligation is satisfied.

*First-Class Mail, Marketing Mail, Shipping and Packages, International Mail and Periodicals* are categorized as Mailing and Shipping services for purposes of satisfying performance obligations. The Postal Service recognizes revenue for Mailing and Shipping services as it fulfills its obligation to process and deliver each mailpiece and the customer mail sender/recipient receives and consumes the benefits of these services.

Other revenue includes *PO Box* services, Return Receipts, Insurance, Other Ancillary Services, Shipping and Mailing Supplies, Collect on Delivery, *Registered Mail*, Stamped Envelopes and Cards, Money Orders and other goods and services. The Postal Service recognizes revenue for the majority of these services over time as the customer receives and consumes the benefits of the service. The revenue for a small portion of certain goods or services in this service category is recognized at a point in time when the goods or services are provided to the customer.

The vast majority of the Postal Service’s contracts include only one performance obligation. However, if a contract is separated into more than one performance obligation, the total transaction price for each performance obligation is allocated in an amount based on the estimated relative stand-alone selling prices of the promised goods or services underlying each performance obligation. The majority of the goods or services sold by the Postal Service have observable stand-alone sales prices. Further, payment for the majority of the goods and services is received up front.

If the Postal Service were unable to complete delivery to the destination point, another entity would not need to re-perform the entire portion of delivery already performed by the Postal Service. Accordingly, control from the Postal Service to the customer transfers over time for the vast majority of services the Postal Service offers, and revenue is recognized based on the progress of the completion of the performance obligations.
Variable Consideration
The Postal Service offers certain contracts to its customers that contain various types of customer incentives or other provisions that can either increase or decrease the transaction price. Customer incentives include discounts, money back guarantees, rebates, refunds or incentive payments. The other provisions include performance penalties. The Postal Service uses the expected value approach to estimate variable consideration to which it expects to be entitled.

Contract Modifications
The Postal Service considers contract modifications to exist when the modification either creates new enforceable rights and obligations or alters the existing arrangement. Contract modifications do not add distinct services; they are typically used to change the prices that the Postal Service charges its customer for existing services. These contract modifications are accounted for prospectively as the remaining performance obligations are executed.

Principal vs. Agent Consideration
The Postal Service utilizes third parties to assist with the transportation of mailpieces between different points as part of the delivery process. Based on its evaluation of the transfer of control model, the Postal Service has determined that it acts as the principal rather than the agent within these arrangements.

Contract Liabilities
The vast majority of the Postal Service’s contract liabilities consist of Deferred revenue-prepaid postage and prepaid PO Box and Caller Service fees. Deferred revenue-prepaid postage is an estimate of postage that has been sold, but not yet used by customers. The Postal Service recognizes revenue over time as the Postal Service delivers mailpieces. Because payments for postage are collected in advance of the satisfaction of related performance obligations, the Postal Service defers and reports this unearned revenue as Deferred revenue-prepaid postage in its balance sheet. Stamp sales and metered postage account for the majority of Deferred revenue-prepaid postage. The liability also includes an estimate for mail that is in-transit within the Postal Service network.

The prepaid PO Box and Caller Service fees consist of the payments received from customers for PO Box fees at the beginning of their contracts. The Postal Service defers and reflects this unearned revenue as prepaid PO Box and Caller Service fees within Other current liabilities in the accompanying Balance Sheets. Revenue is recognized over time as customers use the PO Box and Caller Services over the terms of their contracts.

The following table presents the balances of the Postal Service’s contract liabilities, including Deferred revenue-prepaid postage and prepaid PO Box and Caller Service fees, as of March 31, 2020, and September 30, 2019, respectively:

**NOTE 5 - RELATED PARTIES**

As disclosed throughout this report, the Postal Service has significant transactions with other U.S. government entities, which are considered related parties for accounting purposes.

The following table presents related-party assets and liabilities as of March 31, 2020, and September 30, 2019:

<table>
<thead>
<tr>

</tbody>
</table>

¹ Included within Operating revenue in the accompanying unaudited Statements of Operations.
² Included within Operating expenses in the accompanying unaudited Statements of Operations.
³ Represents interest imputed on the revenue forgone installment receivable as well as interest generated on U.S. Treasury instruments and other cash equivalents held with the Federal Reserve Bank of New York. Included within Interest and investment income in the accompanying unaudited Statements of Operations.
⁴ Incurred on debt issued to the FFB, and included within Interest expense in the accompanying unaudited Statements of Operations.

**NOTE 6 - CASH, CASH EQUIVALENTS AND RESTRICTED CASH**

The following table provides a reconciliation of Cash and cash equivalents and Restricted cash reported in the balance sheets as of March 31, 2020, and 2019, respectively, and as of September 30, 2019, and 2018, respectively (to disclose the opening balances), that sum to the totals of the same such amounts presented in the accompanying unaudited Statements of Cash Flows for the six months ended March 31, 2020, and 2019:

<table>
<thead>
<tr>
<th></th>
<th>March 31,</th>
<th>September 30,</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>2020</td>
<td>2019</td>
</tr>
<tr>
<td>Cash and cash equivalents</td>
<td>$ 8,987</td>
<td>$ 8,108</td>
</tr>
<tr>
<td>Restricted cash</td>
<td>472</td>
<td>546</td>
</tr>
<tr>
<td>Total cash, cash equivalents and restricted cash</td>
<td>$ 9,459</td>
<td>$ 8,654</td>
</tr>
</tbody>
</table>

Restricted cash represents Postal Service cash that is not available for general use. This includes cash originated from forfeitures or seizures related to consumer fraud or other criminal activity related to the mail and either held for third-party beneficiaries or awaiting disposition. Restricted cash also includes funds for use in restricted activities such as congressional appropriation for Postal Service obligations to the PRC and the United States Postal Service Office of Inspector General, or that are otherwise restricted.

The Postal Service holds its Cash and cash equivalents and Restricted cash with the Federal Reserve Bank of New York and invests its excess cash, when available, in highly-liquid, short-term investments issued by the U.S. Department of the Treasury.

**NOTE 7 - PROPERTY AND EQUIPMENT, NET**

Assets within Property and equipment, net in the accompanying Balance Sheets are recorded at cost, which includes the interest on borrowings used to finance construction of major capital additions, less allowances for depreciation and amortization. Interest capitalized during both the three and six months ended March 31, 2020, and 2019, was not significant. Fixed assets are depreciated over estimated useful lives ranging from 3 to 40 years using the straight-line method.

The net book values of assets classified as held for sale were approximately $6 million and $10 million as of March 31, 2020, and September 30, 2019, respectively, and are included within Property and equipment, net in the accompanying Balance Sheets.

For the three months ended March 31, 2020, and 2019, depreciation and amortization expense was $423 million and $424 million respectively, and impairment charges were de minimis. For the six months ended March 31, 2020, and 2019, depreciation and amortization expense was $854 million and $841 million respectively, and impairment charges were de minimis. These items are included within Other operating expenses in the accompanying unaudited Statements of Operations.
NOTE 8 - COMMITMENTS AND CONTINGENCIES

Collective Bargaining Agreements
On January 22, 2020, the Postal Service reached a tentative agreement with the National Postal Mail Handlers Union, AFL-CIO (“NPMHU”) on a new three-year collective bargaining agreement, which the union membership ratified on April 8, 2020. The new contract went into effect on April 25, 2020, and will expire on September 20, 2022.

On March 10, 2020, a three-member arbitration panel reached a decision in the Postal Service’s legally mandated binding interest arbitration process with the American Postal Workers Union, AFL-CIO (“APWU”), which established the terms of a new collective bargaining agreement. The new contract went into effect on March 10, 2020, and will expire on September 20, 2021.

In September 2019, the Postal Service agreed to extend contract negotiations relating to a new collective bargaining agreement with the National Association of Letter Carriers, AFL-CIO (“NALC”). The previous contract with the NALC expired on September 20, 2019, and negotiations with the NALC are at an impasse. The Postal Service and the NALC will continue to follow the current agreement until a new contract is reached through the dispute resolution process.

Contingent Liabilities
The Postal Service’s contingent liabilities consist primarily of claims resulting from labor and employment matters; asset retirement obligations and environmental matters; property damage and injuries on Postal Service properties; and issues arising from Postal Service contracts, personal claims and traffic accidents. Each quarter, the Postal Service evaluates each claim to determine its potential liability. If the Postal Service determines that an unfavorable outcome from a new claim is both probable and reasonably estimable, it records a liability for the amount. Preexisting claims are also reviewed and adjusted quarterly for resolutions or revisions to prior estimates based on new facts and circumstances.

The Postal Service is from time to time involved in other litigation incidental to the conduct of its business, none of which is expected to be material to its financial condition or operations.

Provision for Losses
The Postal Service has made adequate provision for probable losses arising from all claims. The following table presents contingent liabilities by current and noncurrent portions and by category, as of March 31, 2020, and September 30, 2019:

<table>
<thead>
<tr>
<th>Current / noncurrent portions of contingent liabilities:</th>

<td><strong>$ 336</strong></td>
</tr>
</tbody>
</table>

\(^1\) Included within Payables and accrued expenses in the accompanying Balance Sheets.

\(^2\) Included within Other noncurrent liabilities in the accompanying Balance Sheets.
Reasonably Possible Contingencies
The Postal Service does not accrue for contingencies which it deems reasonably possible of an unfavorable outcome. These ranged in amount from approximately $175 million to $1.0 billion at March 31, 2020, and from approximately $150 million to $1.0 billion at September 30, 2019.

Class Action Litigation
As previously reported, on January 14, 2010, the Equal Employment Opportunity Commission’s (“EEOC”) Office of Federal Operations (“OFO”) certified the case McConnell v. Brennan (first instituted in 2006 as McConnell v. Potter) as a class action against the Postal Service, with the class consisting of permanent-rehabilitation and limited-duty Postal Service employees who the Postal Service assessed under the National Reassessment Process (“NRP”) between the dates of May 5, 2006, and July 1, 2011. The Postal Service utilized the NRP to ensure employees receiving workers’ compensation benefits were placed in jobs consistent with their abilities, and that records regarding employees injured on the job were correct.

The McConnell case alleges violations of the Rehabilitation Act of 1973 resulting from the NRP's failure to provide a reasonable accommodation, the NRP's wrongful disclosure of medical information, the NRP's creation of a hostile work environment, and the NRP’s adverse impact on disabled employees. The class is seeking injunctive relief and damages of an uncertain amount.

In 2015, the Administrative Judge assigned to handle the McConnell case granted in-part both the Class Agent's and the Postal Service's motions for summary judgment. In her decision, the Administrative Judge found that the NRP violated the Rehabilitation Act. The Postal Service appealed this decision to the OFO, and the OFO denied this appeal in 2018. The Postal Service implemented the OFO's order, and notified all class members of their right to file an individual claim for relief. Class members were allowed thirty days to submit claims to the Postal Service's National Equal Employment Opportunity Investigative Services Office. The claims submission deadline has now passed and the dispute process for individual claims is currently underway before a newly assigned EEOC Administrative Judge.

The class members have the right to pursue individual claims. Should they be successful in establishing liability and damages, the ultimate outcome in this case could have a material impact on the Postal Service's financial results.

Other
The U.S. is a member of the Universal Postal Union (“UPU”), a specialized agency of the United Nations that facilitates the exchange of international mail. The Postal Service is the designated postal operator for the U.S. under the UPU, and payments to the designated postal operator for the delivery of foreign origin letter-post mails are known as “terminal dues”.

In September 2019, the UPU members had a special meeting -- known as the Extraordinary Congress -- to discuss the terminal dues system. During that meeting, UPU members agreed to establish a new remuneration system that will allow the Postal Service to self-declare rates beginning in July 2020. Other foreign postal operators may also reciprocally apply rates at full-self-declared rates at that time.

In February 2020, the Postal Service officially invoked its provision to self-declare rates beginning in July 2020, creating an obligation to pay the UPU the amount of 40 million Swiss Francs (“CHF”), or approximately $41 million, based on the prevailing exchange rate on March 31, 2020. This amount will be payable over five years in annual increments of 8 million CHF, with the first payment due between July and December 2020.

The Postal Service considers the right to self-declare rates as an intangible asset recorded in Other assets in the accompanying unaudited Balance Sheet at March 31, 2020, and its amortization starts in July 2020 when the self-declared rates are in effect. The current portion of the obligation is recorded in Payables and accrued expenses and the noncurrent portion of the obligation is recorded in Other noncurrent liabilities in the accompanying unaudited Balance Sheet at March 31, 2020, respectively.
NOTE 9 - RETIREMENT PLANS

The majority of career employees participate in one of two U.S. government defined benefit pension programs, CSRS and FERS, which OPM administers. These plans provide retirement, death and disability benefits for eligible employees based on specific eligibility and participation requirements, vesting periods and benefit formulas. Each employee’s participation in either plan is based on the starting date of employment with the Postal Service or another U.S. government entity.

As government-sponsored benefit plans, CSRS and FERS are not subject to the provisions of the *Employee Retirement Income Security Act of 1974*, as amended. Likewise, because the Postal Service cannot direct the costs, benefits or funding requirements of these plans, it accounts for program expenses under multiemployer plan accounting rules. As such, the Postal Service records required contributions to the plans as an expense in the period in which each contribution is due. For FERS, the Postal Service contributes to the plan an amount established by OPM as the employer portion of retirement benefits for participating employees and their qualifying survivors, upon retirement, for each employee’s current year of service, which is considered the FERS normal cost. As further discussed below, the Postal Service is not required to pay the normal cost for those employees who participate in CSRS.

Career employees may also participate in the Thrift Savings Plan (“TSP”), a defined contribution retirement savings and investment plan administered by the Federal Retirement Thrift Investment Board. The Postal Service’s TSP expenses relate only to its contributions for FERS employees who participate in the TSP.

CSRS provides a basic annuity plan benefit to employees hired before January 1, 1984. CSRS Offset provides Social Security benefits in addition to its basic annuity plan for employees hired between January 1, 1984, and January 1, 1987. CSRS and CSRS Offset employees may also participate in the TSP, although the Postal Service does not match contributions for these participants.

The PAEA suspended the Postal Service’s employer contributions to CSRS that would otherwise have been required under *Title 5, Section 8334(a)(1)* of the U.S. Code, although CSRS employees continue to contribute to the plan.

Effective January 1, 1987, FERS covers employees hired since December 31, 1983, and FERS employees are covered by an annuity, Social Security and TSP benefits. For FERS employees who participate in TSP, the Postal Service contributes 1% of basic pay and matches voluntary employee contributions up to an additional 4% of basic pay. The Postal Service recognizes Social Security and TSP expenses as they are incurred and records them within Compensation and benefits in the accompanying unaudited Statements of Operations. A liability is established for any contribution due and unpaid at the end of each reporting period and is included within Compensation and benefits in the accompanying Balance Sheets.

FERS employees are further categorized as either FERS, FERS - Revised Annuity Employees (“FERS-RAE”), or FERS - Further Revised Annuity Employees (“FERS-FRAE”) depending on whether their date of hire was before, during, or after calendar year 2013, respectively.

The following table presents the employee and employer contributions, as a percentage of employee basic pay, during the three and six months ended March 31, 2020, and 2019:

<table>
<thead>
<tr>
<th></th>
<th>March 31, 2020</th>
<th>March 31, 2019</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
<tr>
<td><strong>Total retirement benefits</strong></td>
<td><strong>$ 1,818</strong></td>
<td><strong>$ 1,470</strong></td>
</tr>
</tbody>
</table>

1\(^1\) Expense for the accrual for the annual payment due to OPM by September 30 of the respective fiscal year, to amortize the unfunded CSRS retirement obligation. The 2020 amounts are based on updated Postal Service estimates resulting from revised actuarial assumptions. Payments are to be made through 2043 based on OPM invoices.

2\(^2\) Expense for the accrual for the annual payment due to OPM by September 30 of the respective fiscal year, to amortize the unfunded FERS retirement obligation. The 2020 amounts are based on updated Postal Service estimates resulting from revised actuarial assumptions. Payments are to be made over a 30-year rolling period based on OPM invoices.

**FERS Normal Costs**

The Postal Service records expenses for FERS normal costs within Retirement benefits in the accompanying unaudited Statements of Operations.

The Postal Service makes payments for FERS normal costs in accordance with its bi-weekly payroll cycle. The employer contributions and employee withholdings not yet remitted to OPM were $209 million and $157 million at March 31, 2020, and September 30, 2019, respectively, and were recorded as a current liability within Retirement benefits in the accompanying Balance Sheets.

**CSRS and FERS Unfunded Retirement Benefits**

OPM periodically notifies the Postal Service regarding its revaluation of unfunded CSRS and FERS liabilities. OPM calculates these obligations using Postal Service-specific demographics data and government-wide economic assumptions. The Postal Service records these expenses as Retirement benefits in the accompanying unaudited Statements of Operations. These amounts may be significantly impacted by changes in actuarial assumptions used to revalue the unfunded liabilities.

In October 2019, OPM provided the Postal Service with an actuarial report indicating the projected annual amortization payments due September 30, 2020, would be $1.6 billion for the CSRS obligation and $1.1 billion for the FERS obligation.

On April 2, 2020, the Board of Actuaries of the CSRS, which oversees OPM’s calculation of actuarial liabilities for CSRS and FERS, lowered the discount rate used to calculate CSRS and FERS unfunded retirement liabilities from 4.25\% to 4.0\%. The Postal Service has estimated that the impact of this change in discount rate on the annual CSRS and FERS amortization expense will result in revised projected amortization payments due September 30, 2020, of approximately $1.8 billion for the CSRS obligation and approximately $1.3 billion for the FERS obligation, increases of $181 million and $226 million, respectively.

Accordingly, the Postal Service accrued additional CSRS and FERS amortization expenses during the three months ended March 31, 2020, to reflect the proportional adjustment between the original OPM estimate and the updated Postal Service estimate as a result of these changes. The Postal Service expects to receive invoices from OPM for the actual amounts due September 30, 2020, during the fourth quarter of 2020, and these invoices may differ from the estimated projections due to further changes in experience, discount rates and/or actuarial assumptions as of the calculation date.
The amounts the Postal Service has accrued for CSRS and FERS unfunded retirement benefits but has not yet paid are recorded as a current liability within Retirement benefits in the accompanying Balance Sheets. Those accrued but unpaid amounts were approximately $9.8 billion and $8.2 billion at March 31, 2020, and September 30, 2019, respectively.

**NOTE 10 - HEALTH BENEFITS PLANS**

FEHB Program covers nearly all career employees and also covers non-career employees and retirees who meet certain eligibility requirements. OPM administers FEHB and allocates the cost of funding the program to participating U.S. government employers. Separate from FEHB, the Postal Service offers its own healthcare plan to certain non-career employees who are ineligible for FEHB.

**Active Employees**

The Postal Service paid 71.9% of healthcare premium costs during both the three months ended March 31, 2020, and 2019. The Postal Service paid 72.0% and 72.3% of healthcare premium costs during the six months ended March 31, 2020, and 2019, respectively. Although OPM determines the actual FEHB premium costs, the allocation of these costs between the Postal Service and most of its employees is determined through agreements with Postal Service labor unions.

Postal Service employee health benefits expense (which includes the employer portion of Medicare taxes) is most significantly impacted by the number of employees electing coverage and the premium costs of the selected plans. Postal Service employee health benefits expense was approximately $1.3 billion for each of the three-month periods ended March 31, 2020, and 2019. Postal Service employee health benefits expense was approximately $2.6 billion for each of the six-month periods ended March 31, 2020, and 2019. These expenses are included within Compensation and benefits in the accompanying unaudited Statements of Operations.

**Retirees**

Postal Service retirees who participated in FEHB for the five years immediately preceding their retirement may continue to participate in the plan during retirement. Qualifying survivors of retirees are also eligible to receive benefits. The Postal Service is required to contribute to the PSRHBF an amount estimated to be equal to the employer portion of FEHB insurance premiums for participating employees and their qualifying survivors, upon retirement, for each employee’s current year of service (normal cost). The Postal Service is also required to contribute an amount sufficient to fully amortize the unfunded liability of the PSRHBF by 2056. These amounts are based, in part, on each current and prospective retiree’s length of federal civilian service occurring on or after July 1, 1971. Each participant’s share of premium costs is set by law and is not subject to negotiation with Postal Service labor unions. The Postal Service cannot direct the costs, benefits or funding requirements of the plans. Therefore, it accounts for program expenses using multiemployer plan accounting rules by recording contributions to the plans that will be required by OPM as an expense in the period in which the contributions are due.

The PAEA required the Postal Service to prefund retiree health benefits during years 2007 through 2016 by paying statutorily specified annual amounts ranging from $1.4 billion to $5.8 billion, totaling $54.8 billion, into the PSRHBF, which began paying the Postal Service’s share of retiree health benefit premiums in 2017. The Postal Service remains obligated to fund the $33.9 billion in statutorily required PSRHBF prefunding payments that it defaulted on for the years 2012 through 2016, as well as the normal cost and amortization payments of $10.7 billion and $2.6 billion, respectively, that it did not pay for the years 2017 through 2019. As of the date of this report, the Postal Service has not been assessed any penalties associated with these non-payments. The cumulative amount of statutorily specified, normal cost and amortization PSRHBF obligations the Postal Service has accrued is $49.7 billion as of March 31, 2020, inclusive of the $47.2 billion that was unpaid as of September 30, 2019. Given that OPM considers these amounts to be due and payable, the Postal Service reflects the cumulative unpaid amount as a current liability within Retiree health benefits in the accompanying Balance Sheets.

As required by PAEA, OPM annually performs an actuarial valuation for the purpose of developing a payment schedule for the Postal Service to fund the remaining unfunded PSRHBF obligation in annual payments through the year 2056. Based on preliminary calculations provided by OPM, the amortization payment due September 30, 2020, is estimated to be $900 million.
Furthermore, the Postal Service is obligated to pay the estimated normal cost of retiree health benefits attributable to the service of its employees during the most recent year. Based on preliminary calculations provided by OPM, the Postal Service has estimated the normal cost payment, also due by September 30, 2020, to be $4.0 billion.

The Postal Service expects to receive the invoice from OPM for with the actual amounts due during the fourth quarter of 2020 and these may differ from the original projected amounts due to changes in discount rates, actuarial assumptions and experience as of the calculation date.

The following table details retiree health benefits expenses for the three and six months ended March 31, 2020, and 2019:

</tbody>
</table>

\(^1\) Expense for the accrual for the annual payment due to OPM by September 30 of the respective year, as calculated by OPM, to amortize the unfunded PSRHBF retirement health benefit obligation. Payments are to be made through 2056 based on OPM invoices.

\(^2\) Expense for the accrual for the annual payment due to the PSRHBF by September 30 of the respective year, based on information provided by OPM, for the actuarially determined normal cost of retiree health benefits for current employees.

**NOTE 11 - WORKERS’ COMPENSATION**

Postal Service employees injured on the job are covered by the Federal Employees’ Compensation Act (“FECA”), administered by the U.S. Department of Labor’s (“DOL”) Office of Workers’ Compensation Programs, which makes all decisions regarding injured workers’ eligibility for benefits. The Postal Service reimburses DOL for all workers’ compensation benefits paid to or on behalf of Postal Service employees, plus an administrative fee.

**Workers’ Compensation Liability**

The Postal Service records a liability for its workers’ compensation obligations for employees who have been injured on the job and are eligible for benefits, or their qualified survivors. Both the current and noncurrent portions of the workers’ compensation liability are recorded in the accompanying Balance Sheets. The Postal Service uses an estimation model that utilizes four generally accepted actuarial valuation techniques based upon past claim-payment experience and exposure to claims as measured by total employee hours worked.

Changes in the liability are primarily attributable to the combined impacts of routine changes in actuarial assumptions, new compensation and medical cases, the progression of existing cases and changes in discount (interest) and inflation rates, including long-term COLA rates for compensation claims, and medical rates for medical claims. These rates are updated as of the balance sheet date and factored into the model.

To determine the fair value of the liability each quarter, the Postal Service first estimates the future total cost of workers’ compensation claims based on the dates of claim-related injuries, frequency or severity of the injuries, the pattern of historical payments to beneficiaries and the expected trend in future costs. The Postal Service then calculates the amount that would need to be invested at current discount (interest) rates to fully fund the future total cost of claims, and this calculated present value is the recorded value of the workers’ compensation liability.

This liability calculation is highly sensitive to changes in discount rates. For example, a 1% increase in the discount rate would decrease the March 31, 2020, liability and related expense by approximately $2.4 billion. Likewise, a 1% decrease in the discount rate would increase the March 31, 2020, liability and related expense by approximately $3.1 billion.
The following table details the applicable inflation and discount rates for compensation and medical claims used to estimate the workers' compensation liability as of March 31, 2020, and September 30, 2019:

As of March 31, 2020, and September 30, 2019, the Postal Service’s total liability for workers’ compensation was approximately $20.0 billion and $18.5 billion, respectively. As of March 31, 2020, and September 30, 2019, the current portion of the liability was approximately $1.3 billion and $1.4 billion, respectively, and the noncurrent portion of the liability was approximately $18.7 billion and $17.1 billion, respectively, as reflected in the accompanying Balance Sheets.

**Workers’ Compensation Expense**

The impacts of changes in discount rates and inflation rates, as well as the actuarial valuation of new cases and revaluation of existing cases, are components of total workers’ compensation expense as recorded in the accompanying unaudited Statements of Operations. In addition, the Postal Service pays an administrative fee to DOL, which is considered a component of workers’ compensation expense.

The following table presents the components of workers’ compensation expense for the three and six months ended March 31, 2020, and 2019:

**NOTE 12 - LEASES**

**Postal Service Leases**

The Postal Service holds lessee positions in real property leases as well as lessee positions embedded in service contracts involving rights to use transportation equipment and facilities.

Real property leases support retail, delivery, mail processing, maintenance, administrative and support activities. The non-cancellable base terms of these leases typically range from one to five years, with one or more options to renew for additional five-year terms. The lease terms for these arrangements generally range from one to thirty years including any renewal options that are reasonably certain to be exercised. Additionally, certain real property leases contain purchase and termination options. At the commencement of most real property lease arrangements, the Postal Service is not reasonably certain if it will exercise such options. Real property leases include certain variable lease payments associated with non-lease components, such as common area maintenance costs, and non-lease components such as real estate taxes, which are generally charged as a pass-through based on actual amounts incurred by the lessor. The Postal Service records costs associated with real property leases within Other operating expenses in the accompanying unaudited Statements of Operations.
Transportation equipment leases apply primarily to vehicles, trailers, and aircraft. The non-cancellable base terms of these leases typically range from two to five years, and may include one or more options to renew for an additional one or two years. The lease terms for these arrangements generally range from two to five years including any renewal options the Postal Service is reasonably certain to exercise. Transportation equipment leases do not contain purchase options, however certain of these leases contain termination options. At the commencement of most transportation lease arrangements, the Postal Service is not reasonably certain if it will exercise such termination options. Certain transportation leases contain variable lease payments based on the volume of activity under the contract. The Postal Service records costs associated with transportation leases within *Transportation* in the accompanying unaudited *Statements of Operations*.

Postal Service leases do not contain any material residual value guarantees or restrictive covenants.

Sublease income was not material to the financial statements for the three and six months ended March 31, 2020.

Balances disclosed herein include those pertaining to certain related-party transactions. See *Note 5 - Related Parties* for additional information on related party transactions.

The table below reconciles the undiscounted cash flows for the first five years and the total remaining finance lease liabilities and operating lease liabilities recorded in the accompanying unaudited *Balance Sheet* as of March 31, 2020:

Capital leases, recorded at historical cost within Property and equipment, net in the accompanying Balance Sheets, were $496 million as of September 30, 2019. Total accumulated amortization related to capital leases was $377 million at September 30, 2019. Amortization expense for capital leases was approximately $33 million and $37 million for the years ended September 30, 2019, and 2018, respectively, and is included within the Other operating expense in the respective Statements of Operations.

Lease Accounting Policies

Lease Accounting Policy for Comparative Periods
As the lessee, the Postal Service classifies leases which have original lease terms greater than one year and that transfer substantially all the risks and rewards of ownership to the Postal Service, as capital leases. These leases are capitalized on the lease commencement date at the lower of the fair value of the leased assets or the present value of the minimum lease payments. The discount rate used to determine the present value is based on average U.S. Treasury rates. Property acquired under a capital lease is amortized over the lease term. Capital leases are included within Property and equipment, net in the accompanying Balance Sheets.

The Postal Service classifies all other lease arrangements in which substantially all risks and rewards of ownership are retained by the lessor as operating leases. Rent expense for operating leases is included in Other operating expense.
expenses in the accompanying unaudited Statements of Operations on a straight-line basis over the term of the lease.

Lease Accounting Policy for the Six Months Ended March 31, 2020
The Postal Service determines at the inception of the contract if an arrangement represents a lease or contains lease components. A contract is deemed to represent or include a lease if it conveys the right to control the use of an identified asset for a period of time in exchange for consideration. The Postal Service is assumed to have the right to control the use of the underlying asset if the contract conveys the rights to obtain substantially all of the economic benefits of the underlying asset and the rights to direct how and for what purpose such asset is used during the contract term.

As the lessee, the Postal Service classifies all leases with original lease terms less than one year as short-term leases. The Postal Service classifies all other leases which transfer substantially all the risks and rewards of ownership to the Postal Service as finance leases. Finance lease right-of-use assets are included within Property and equipment, net in the accompanying Balance Sheets. The current and noncurrent portions of finance lease liabilities are included within Payables and accrued expenses and Other noncurrent liabilities, respectively, within the accompanying Balance Sheets. The Postal Service classifies the remaining leases, not classified as short-term leases or finance leases, as operating leases. The Postal Service considers a lease term to include all non-cancelable periods and renewal periods when the Postal Service is reasonably certain that it will exercise the related renewal option.

For short-term leases, the Postal Service records lease expenses in the statement of operations on a straight-line basis over the lease term.

Leases that do not qualify as short-term are recorded in the balance sheet on the lease commencement date, each as a right-of-use asset and a lease liability.

Lease liabilities are initially measured at the net present value of the lease payments due after the commencement date. For this purpose, lease payments include fixed and in-substance fixed rental payments, variable lease payments that depend on an index or rate, and the price of options that the Postal Service is, at the commencement of the lease, reasonably certain to exercise. Lease liabilities are subsequently increased to reflect the interest accrued and reduced when lease payments are made by the Postal Service.

Right-of-use assets are initially measured at the net present value of the lease payments (including amounts due prior to or on the commencement date), adjusted for the impact of initial direct costs and lease incentives. For finance leases, right-of-use assets are subsequently amortized on a straight-line basis over the shorter of the useful life of the underlying asset or the lease term. For operating leases, right-of-use assets are amortized in such a way that the combination of the interest expense accrued on the lease liability and the asset amortization results in a straight-line expense over the lease term.

Right-of-use assets for operating and finance leases are periodically reviewed for impairment losses, following the same process as for other long-lived assets. Impairment losses on long-lived assets are recorded when events or circumstances indicate that an asset's fair value is less than its carrying value. When such a determination is made, the carrying values of the assets are written down to fair value. The Postal Service uses the long-lived assets impairment guidance in ASC Subtopic 360-10, Property, Plant, and Equipment - Overall, to determine whether a right-of-use asset is impaired, and if so, the amount of the impairment loss to recognize. No impairment losses have been recognized to date.

The discount rates used in net present value calculations are determined based on the Postal Service’s incremental borrowing rates on debt outstanding with the FFB at the beginning of each year, which is approximated as the daily U.S. Treasury Yield Curve Rates for the five-year, 10-year, 20-year and 30-year periods, plus a 12.5 basis point spread.

Variable lease payments, except for those based on an index or rate, are recognized as variable lease expenses in the period in which the obligation for those payments are incurred.
NOTE 13 - FAIR VALUE MEASUREMENT
The Postal Service defines fair value as the price that would be received upon sale of an asset or the price that would be paid to transfer a liability between unrelated parties.

The carrying amounts of certain current assets and liabilities, including cash, accounts receivable, accounts payable and accrued expenses, approximate fair value due to their short-term nature. Assets within Property and equipment, net are recorded at cost and measured at fair value on a nonrecurring basis if they are determined to be impaired or classified as assets held for sale.

Noncurrent receivables and long-term debt are measured using a fair value hierarchy model. This model prioritizes observable and unobservable inputs used to measure fair value, and consists of three broad levels, as defined in authoritative literature.

For the three and six months ended March 31, 2020, no significant transfers between Level 1 and Level 2 assets or liabilities transpired. The carrying amount and fair value of the revenue forgone installment receivable and long-term debt are presented for disclosure purposes only in the following table:

<table>
<thead>
<tr>
<th></th>
<th>March 31, 2020</th>
<th>September 30, 2019</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Carrying Amount</td>
<td>Fair Value</td>
</tr>
<tr>
<td>Revenue forgone installment receivable*</td>
<td>$476</td>
<td>$584</td>
</tr>
<tr>
<td>Long-term debt</td>
<td>$11,000</td>
<td>$11,936</td>
</tr>
</tbody>
</table>

*The carrying amount is included within Other assets (which includes items in addition to the revenue forgone installment receivable) in the accompanying Balance Sheets.

The revenue forgone installment receivable qualifies as a financial instrument in accordance with authoritative literature. To calculate its fair value, the Postal Service recognizes the imputed interest it is owed as interest income and estimates the value of this receivable using the interest method, which converts future cash flows to a single discounted amount using interest rates for similar assets, which are considered Level 2 inputs. The Postal Service then calculates the net present value of anticipated annual installment payments to be received, discounted by the 20-year U.S. Treasury Constant Maturity Rate, which was 1.15% and 1.94% as of March 31, 2020, and September 30, 2019, respectively.

The long-term debt also qualifies as a financial instrument. Because no active market exists for its debt with the FFB, the Postal Service estimates the fair value of the long-term debt by imputing future payments at discount rates provided by the FFB, considered Level 3 inputs. The weighted averages of the FFB discount rates, based on U.S. Treasury Yield Curve Rates, were 0.36% and 1.79% as of March 31, 2020, and September 30, 2019, respectively.

ITEM 2. MANAGEMENT’S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

CAUTIONARY STATEMENTS

The following Management’s Discussion and Analysis of Financial Condition and Results of Operations and other parts of this report describe the principal factors affecting the financial results, liquidity, capital resources and critical accounting estimates of the United States Postal Service (“Postal Service,” “USPS,” “we,” “our” and “us”). Our results of operations may be impacted by risks and uncertainties discussed here and in our Annual Report on Form 10-K for the year ended September 30, 2019, (“Annual Report”) filed with the Postal Regulatory Commission (“PRC”) on November 14, 2019. Such factors, many of which we cannot control or influence, may cause actual results to differ materially from those currently contemplated.

Our operating results for the three and six months ended March 31, 2020, are presented in accordance with accounting principles generally accepted in the United States (“GAAP”). These results are not necessarily indicative of the results to be expected for the year ended September 30, 2020, and should be read in conjunction with our
Annual Report. All references to years in this report, unless otherwise stated, refer to fiscal years beginning October 1 and ending September 30. All references to quarters, unless otherwise stated, refer to quarters within fiscal years 2020 and 2019.

Forward-looking statements contained in this report represent our best estimates of known and anticipated trends believed relevant to future operations. However, actual results may differ significantly from current estimates. Certain forward-looking statements included in this report use such words as “may,” “will,” “could,” “expect,” “believe,” “plan,” “estimate,” “project” or other similar terminology. These forward-looking statements, which involve a number of risks and uncertainties, reflect current expectations regarding future events and operating performance as of the date of this report. These risks include, but are not limited to, the effects of the novel strain of coronavirus (“COVID-19”) on our business, financial condition and results of operations. We have no obligation to publicly update or revise any forward-looking statements, whether as a result of new information, future events or otherwise.

OVERVIEW

With our mandate to provide universal postal services to the nation, we serve retail and commercial customers in the U.S., as well as internationally. Our operations include an extensive and integrated retail, processing, distribution, transportation and delivery network, and we operate throughout the U.S., its possessions and territories. We operate as a single segment and report our performance as such.

The Postal Accountability and Enhancement Act (“PAEA”) classifies our products into two broad categories: Market-Dominant and Competitive “products,” however, we use the term “services” in this document for consistency with other descriptions of services offered. The statutes under which we operate also establish certain requirements that affect our financial results, including obligations for retirement benefits within the Civil Service Retirement System (“CSRS”) and the Federal Employee Retirement System (“FERS”), and obligations for retiree health benefits including funding of the Postal Service Retiree Health Benefits Fund (“PSRHBF”). We must coordinate with the U.S. Office of Personnel Management (“OPM”) to address these obligations.

We have successfully implemented initiatives that have reduced the growth in certain costs by billions of dollars while offering new features for customers such as Informed Delivery. However, legal restrictions on pricing, service diversification and operations restrict our ability to cover our costs to provide prompt, reliable and efficient postal services to the nation.

We have established a core set of goals that drive our strategic initiatives and continuous improvement efforts:

1. Deliver a world-class customer experience;
2. Equip, empower and engage employees;
3. Innovate faster to deliver value; and
4. Invest in our future platforms.

As part of these efforts, we aim to achieve long-term financial stability. Our focus on maintaining liquidity and reducing operating expenses reflects current trends, as well as projected future volume of mail and packages. We believe that financial stability is within reach with targeted legislative and regulatory reform to address our overall cost structure and enhance our revenue-generating opportunities as we continue to identify and create innovative and affordable services, and deliver high levels of performance and service. Such financial stability would continue to provide Congress and the executive branch with additional time to address the broader issues regarding our overall cost structure and revenue-generating opportunities.

RESULTS OF OPERATIONS

SUMMARY

The major factors that impact our operating results include overall customer demand, the mix of postal services and contribution associated with those services, volume of mail and packages processed through our network and our ability to manage our cost structure in line with declining levels of mail volume, increased competition in the more labor-intensive Shipping and Packages business and an increasing number of delivery points.
Effects of COVID-19
In March 2020, the World Health Organization (“WHO”) declared COVID-19 a global pandemic, which has since spread throughout the U.S. Changing federal, state and local government actions to address the pandemic have been occurring on a daily basis, and government-imposed shelter-in-place and other movement restrictions designed to slow the pace of the outbreak have severely impacted the U.S. economy. We believe the severity and duration of the COVID-19 pandemic is uncertain, and such uncertainty may continue during the second half of 2020.

Our employees provide an essential public service and bind the nation together as a part of the country’s critical infrastructure. At least six days per week, and in some instances seven, our employees accept, process, transport, and deliver vital mail and packages like medicine, essential consumer staples, benefits checks, and important information, in every community, to every home and business, and we will continue to do so. As Americans are urged to stay home, the importance of the mail will only grow as our customers, including those in rural areas and senior citizens, will need access to vital communications, essential packages and other necessities.

Shortly after the WHO declaration, we created a dedicated COVID-19 response team to lead our response efforts. All of our employees are considered essential, and their safety is our highest priority. Following strategies recommended by the Centers for Disease Control and Prevention, we have implemented enhanced safety measures to protect the health of our employees.

In late March 2020, we restricted business travel and implemented remote work arrangements for certain of our office-based employees. We have also implemented new leave policies for employees who may be affected by illness, quarantines or childcare obligations. These arrangements have not materially affected our ability to maintain our business operations, including the operation of financial reporting systems, internal control over financial reporting, and disclosure controls and procedures.

While we have maintained full operations during the pandemic, travel and logistics restrictions have negatively affected our retail and commercial customers, as well as our suppliers and mail service providers. Many of our commercial customers, especially those with consumer-facing businesses, have been required to suspend their operations or operate at a lower capacity. As a result, our mail volumes began to decline significantly in March 2020. The sudden drop in mail volumes, our most profitable revenue stream, is steep and may never fully recover to levels prior to the pandemic.

Although the COVID-19 pandemic has caused a recent surge in the nation’s use of e-commerce, resulting in higher Shipping and Packages volumes, we do not expect the resulting increases in Shipping and Packages revenues to be sustainable or to offset losses in mail service revenue caused by COVID-19. While the future is uncertain, we believe that the nation’s increased use of e-commerce is likely to plateau in the short term as the effects of the pandemic begin to subside, followed by a longer-term regression of e-commerce caused by a weakened U.S. economy. Furthermore, this anticipated economic weakness has resulted in significant interest rate declines, which have caused an increase in certain of our workers’ compensation and retirement benefits expenses.

On March 27, 2020, the President signed the Coronavirus Aid, Relief, and Economic Security Act, enacted as Public Law 116-136 (the “CARES Act”). Notwithstanding our $15.0 billion statutory debt limit, and $3.0 billion annual limit on new borrowing, the CARES Act allows us to borrow up to an additional $10.0 billion in financing from the U.S. Treasury to fund operating expenses. The U.S. Treasury may lend up to this amount at our request, upon terms and conditions mutually agreed upon. However, we have no assurance that the U.S. Treasury will agree to provide such financing or if it will be provided upon favorable terms.

We estimate that the COVID-19 pandemic may increase our net operating loss by more than $22.0 billion over the next eighteen months, threatening our ability to operate. If we are able to borrow the $10.0 billion from the U.S. Treasury as provided by the CARES Act, we expect that we will have sufficient liquidity to continue to operate through April 2021. However, if we are unable to secure this $10.0 billion in financing, we expect to be able to continue to operate only through September 2020, unless we default on additional obligations.
Three Months Ended March 31, 2020
As more fully described below in Operating Revenue and Volume, our operating revenue for the three months ended March 31, 2020, increased $349 million, or 2.0%, compared to the same period last year. The increase in operating revenue was due to the following:

- Shipping and Packages revenue increase of $386 million, or 7.1%, with a volume growth of 12 million pieces, or 0.8%, driven largely by the January 2020 price increases applicable to certain Competitive services and the temporary surge in e-commerce resulting from the COVID-19 pandemic; and
- First-Class Mail revenue increase of $89 million, or 1.4%, despite a volume decline of 29 million pieces, or 0.2%. Revenue growth was the result of decennial mailings associated with the 2020 U.S. Census, otherwise revenue and volume would have each declined during the quarter.

The above increases in operating revenue were partially offset by a decrease in Marketing Mail revenue of $94 million, or 2.5%, with a volume decline of 604 million pieces, or 3.4%, largely the result of the COVID-19 pandemic, as many of our commercial customers, especially those with consumer-facing businesses, began to suspend their operations or operate at a lower capacity in March 2020. Political and election mail revenue and volumes increased by approximately $100 million and 500 million pieces, respectively, compared to the same period last year, resulting from the impact of the 2020 primary and general elections.

As more fully described below in Operating Expenses, our operating expenses for the three months ended March 31, 2020, increased approximately $2.8 billion, or 14.2%, compared to the same period last year. The increase in operating expenses was primarily due to the following:

- Workers’ compensation expense increase of approximately $2.2 billion, primarily due to declines in discount rates, outside of management’s control, as the COVID-19 pandemic weighed on the U.S. economy;
- Retirement benefits expense increase of $348 million, or 23.7%, due to revised actuarial assumptions for CSRS and FERS unfunded retirement benefits amortization, which are outside of management’s control, and to increased contribution rates for FERS normal costs, compared to the same period last year;
- Other operating expenses increase of $124 million, or 5.3%, due to spending increases in various categories including enhancements to cyber security and information technology;
- Compensation and benefits expense increase of $119 million, or 1.0%, due primarily to contractual wage increases.

The above increases were partially offset by a decrease in retiree health benefits expense of $50 million, or 3.9%, primarily due to the impact of discount rates in effect during October 2019 that were used in OPM’s preliminary annual estimates.

Overall, we reported a net loss of approximately $4.5 billion for the three months ended March 31, 2020, compared to a net loss of approximately $2.1 billion for the same period last year.

Six Months Ended March 31, 2020
As more fully described below in Operating Revenue and Volume, our operating revenue for the six months ended March 31, 2020, decreased $11 million, which was essentially flat, compared to the same period last year.

The decrease in operating revenue was largely due to the following:

- Marketing Mail revenue decrease of $347 million, or 4.1%, with a volume decline of approximately 2.3 billion pieces, or 5.9%, driven by decreases in revenue and volume from political and election mail in the first quarter. Political and election mail revenue and volumes decreased by approximately $140 million and 900 million pieces, respectively, compared to the same period last year, which benefited from the impact of the 2018 mid-term elections during the first quarter of 2019. Furthermore, volume declined due to the COVID-19 pandemic in the second quarter, as the pandemic affected many of our commercial customers;
- First-Class Mail revenue decrease of $79 million, or 0.6%, with a volume decline of 600 million pieces, or 2.1%, reflecting the continuing migration from mail to electronic communication and transaction alternatives; and
• Periodicals revenue decrease of $57 million, or 9.4%, with a volume decline of 231 million pieces, or 9.8%, driven by the continuing migration to electronic communication and digital advertising.

The decrease in operating revenue was partially offset by an increase in Shipping and Packages revenue of $532 million, or 4.5%, despite a volume decline of 73 million pieces, or 2.2%, as we continued to see revenue growth in this service category during the six-month period driven largely by the January 2020 price increases applicable to certain Competitive services.

As more fully described below in Operating Expenses, our operating expenses for the six months ended March 31, 2020, increased approximately $1.6 billion, or 4.0%, compared to the same period last year. The increase in operating expenses was primarily due to the following:

• Workers' compensation expense increase of approximately $1.1 billion, primarily due to declines in discount rates, outside of management’s control, as the COVID-19 pandemic weighed on the U.S. economy;
• Retirement benefits expense increase of $477 million, or 16.1%, due to revised actuarial assumptions for CSRS and FERS unfunded retirement benefits amortization, which are outside of management’s control, and to increased contribution rates for FERS normal costs, compared to the same period last year;
• Other operating expenses increase of $122 million, or 2.5%, due to spending increases in various categories including enhancements to cyber security and information technology; and
• Transportation expenses increase of $63 million, or 1.5%, primarily resulting from higher air transportation costs, but partially offset by lower international transportation costs. The increase in highway transportation costs was driven by a one-time adjustment for our adoption of Accounting Standards Update 2016-02 Leases, which has since been codified in Accounting Standards Codification (“ASC”) 842, Leases (“ASC 842”), but partially offset by a decrease in the number of miles driven and lower average diesel fuel prices. The decrease in international transportation costs was driven by lower International Mail volumes.

The above increases in operating expenses were partially offset by the following decreases in operating expenses:

• Retiree health benefits expense decrease of $100 million, or 3.9%, primarily due to the impact of discount rate changes in effect during October 2019 that were used in OPM’s preliminary annual estimates; and
• Compensation and benefits expense decrease of $71 million, or 0.3%, primarily due to management’s efforts to align work hours with volume workloads, but partially offset from increases due to contractual wage adjustments.

Overall, we reported a net loss of approximately $5.3 billion for the six months ended March 31, 2020, compared to a net loss of approximately $3.6 billion for the same period last year.

**Non-GAAP Controllable Loss**

In the day-to-day operation of our business, we focus on costs that can be managed in the course of normal business operations, such as salaries and transportation. We calculate controllable loss, a non-GAAP measure, by excluding items over which we have no control, such as PSRHB actuarial revaluation and amortization expenses, workers’ compensation expenses caused by actuarial revaluation and discount rate changes, and retirement expenses caused by actuarial revaluation. Controllable loss should not be considered a substitute for net loss and other GAAP reporting measures.
The following table reconciles our GAAP net loss to controllable loss for the three and six months ended March 31, 2020, and 2019:

1 Expense for the accrual for the annual payment due to OPM by September 30 of the respective year, as calculated by OPM, to amortize the unfunded PSRHBF retirement health benefit obligation. Payments are to be made through 2056 based on OPM invoices.

2 Net amounts include changes in assumptions, valuation of new claims and revaluation of existing claims, less current year claim payments.

3 Expense for the accrual for the annual payment due to OPM by September 30 of the respective fiscal year, to amortize the unfunded CSRS retirement obligation. The 2020 amounts are based on updated Postal Service estimates resulting from revised actuarial assumptions. Payments are to be made through 2043 based on OPM invoices.

4 Expense for the accrual for the annual payment due to OPM by September 30 of the respective fiscal year, to amortize the unfunded FERS retirement obligation. The 2020 amounts are based on updated Postal Service estimates resulting from revised actuarial assumptions. Payments are to be made over a 30-year rolling period based on OPM invoices.

Our controllable loss decreased $14 million for the three months ended March 31, 2020, compared to the same period last year. This decrease was largely driven by the $349 million increase in operating revenue, offset by higher other operating expenses of $124 million, higher compensation and benefits expenses of $119 million, and higher FERS normal costs of $75 million.

Our controllable loss increased $270 million for the six months ended March 31, 2020, compared to the same period last year. This increase was largely driven by higher FERS normal costs of $134 million and higher transportation expenses of $63 million, partially offset by lower compensation and benefits expenses of $71 million.

These items are discussed in greater detail in Operating Revenue and Volume and Operating Expenses below.

OPERATING REVENUE AND VOLUME
The combined categories of First-Class Mail and Marketing Mail continued to provide the majority of our revenue, despite long-term trends away from traditional paper communication and correspondence to electronic media. Although this migration to electronic media has resulted in significant volume declines in First-Class Mail over the last decade, Marketing Mail volume remained relatively steady between 2009 and 2016. However, Marketing Mail volume began to decline at a greater rate beginning in 2017 and continued to decline through the first half of 2018. Aside from a volume rebound between the second half of 2018 through the first quarter of 2019 that was driven by increases in political and election mail associated with the 2018 mid-term elections, Marketing Mail resumed its volume decline through the remainder of 2019 and the first half of 2020.
The following table summarizes our operating revenue and volume for the three and six months ended March 31, 2020, and 2019, by each service category:

---

For the three months ended March 31, 2020, *First-Class Mail* generated approximately 36% of operating revenue, which was essentially unchanged compared to the same period last year, and approximately 42% of our volume, a 1% increase compared to the same period last year. *Marketing Mail* generated approximately 21% of operating revenue and 50% of our volume, both 1% decreases from the same period last year.

For the six months ended March 31, 2020, *First-Class Mail* generated approximately 35% of operating revenue, which is essentially unchanged compared to the same period last year, and approximately 40% of our volume, a 1% increase compared to the same period last year. *Marketing Mail* generated approximately 22% of operating revenue and 52% of our volume, both 1% decreases from the same period last year.

We continued to experience positive revenue results in our Shipping and Packages category, and it represented approximately 33% of our revenue for the three months ended March 31, 2020, which was a 2% increase from the same period last year, and approximately 33% of our revenue for the six months ended March 31, 2020, a 1% increase from the same period last year. Shipping and Packages generated approximately 4% of our volume for both the three and six months ended March 31, 2020, which was relatively unchanged compared to the same period last year.

Although revenue and volume are closely linked to the strength of the U.S. economy and changes in how our customers use the mail, we have proactively targeted opportunities to grow our business. We continue to focus on our customers' needs and have increased our investment in mail and package innovation. However, we also
recognize that revenue growth is constrained by laws and regulations restricting the types of products, services and pricing we may offer to our customers and the speed with which we can bring new products to market.

We anticipate that First-Class Mail will continue to lose volume in future years with the migration to electronic communication and transactional alternatives resulting from technological changes. To address the long-term trend that such changes have had on our First-Class Mail revenue and volume, we have been working with the mailing industry to slow the decline through mailing promotions and leveraging the high open-and-read rates of, for example, bills and statements for additional customer engagement and education.

Furthermore, due to the COVID-19 pandemic our First-Class Mail and Marketing Mail volumes began an accelerated decline in March 2020. The sudden drop in mail volumes, our most profitable revenue stream, is steep and may never fully recover to levels prior to the pandemic.

We have also focused on providing new services and innovating with Marketing Mail. We have expanded service offerings such as Informed Delivery, which enables customers to preview mail and manage packages scheduled to arrive as a means of merging digital and physical mail, as well as allowing mailers to launch interactive digital campaigns. Additionally, we are focusing on opportunities to pilot new products and innovate with customers and the mail industry to enhance the value of hard-copy communication. We believe these service offerings will further improve the value of both First-Class Mail and Marketing Mail.

Our Shipping and Packages category has historically experienced revenue and volume growth as a result of our successful efforts to compete in shipping services, including last-mile e-commerce fulfillment markets and Sunday delivery as well as end-to-end markets. We continue to focus on responding to customers’ needs by implementing solutions and maintaining strategic business partnerships that help us capitalize on the growing e-commerce business.

The COVID-19 pandemic has caused a recent surge in the nation’s use of e-commerce, resulting in higher Shipping and Packages volumes. However we do not expect the resulting increases in Shipping and Packages revenues to be sustainable or to offset losses in mail service revenue caused by COVID-19. Although the future is uncertain, we believe that the nation’s increased use of e-commerce is likely to plateau in the short term as the effects of the pandemic begin to subside, followed by a longer-term regression of e-commerce caused by a weakened U.S. economy.

Our Shipping and Packages category is subject to intense competition which significantly impacts both revenue and volume. Certain major customers continue to divert volume from our network by in-sourcing the last-mile delivery into their own networks. These customers are also aggressively pricing their products and services in order to fill their networks and grow package density.

We implemented price increases for certain Market-Dominant and Competitive services in January 2019 and 2020. Additionally, we implemented dimensional weighting provisions that amount to price increases for certain Shipping and Packages subcategories in June 2019.

First-Class Mail
First-Class Mail, presented in this report as a mail class and a Market-Dominant service category, includes cards, letters and flats. Prices of First-Class Mail, our most profitable service category, are the same regardless the geographic distance between the origination and delivery points. Because First-Class Mail is classified by law as Market-Dominant, price increases are currently generally subject to a price cap based on the Consumer Price Index for All Urban Consumers (“CPI-U”).

For the three months ended March 31, 2020, First-Class Mail revenue increased $89 million, or 1.4%, despite a volume decline of 29 million pieces, or 0.2%, compared to the same period last year. Revenue growth was the result of decennial mailings associated with the 2020 U.S. Census, otherwise revenue and volume would have each declined during the quarter. For the six months ended March 31, 2020, First-Class Mail revenue decreased $79 million, or 0.6%, and volume declined 600 million pieces, or 2.1%, compared to the same period last year. The change in revenue for both periods was less than the corresponding volume declines due to the January 2020 price increase applicable to certain Market-Dominant services. The most significant factor contributing to the
declining trend in First-Class Mail volume has been the continuing migration from mail to electronic communication and transaction alternatives.

Due to the COVID-19 pandemic, our First-Class Mail volume began to decline significantly in late March 2020, and it may never fully recover to levels prior to the pandemic. A protracted loss in customer demand for our services will continue to have a material effect on First-Class Mail revenue and volume.

Marketing Mail

USPS Marketing Mail (more commonly, Marketing Mail), presented as a mail class and a Market-Dominant service category, generally consists of advertising, newsletters, catalogs, small marketing parcels and other printed matter not required to be processed and delivered as First-Class Mail or Periodicals.

Between 2009 and 2016, Marketing Mail experienced relatively flat volume. However, Marketing Mail volume began to decline at a greater rate beginning in 2017 and continued to decline through the first half of 2018. Aside from a volume rebound between the second half of 2018 through the first quarter of 2019 that was driven by increases in political and election mail associated with the 2018 mid-term elections, Marketing Mail continued its volume decline through the remainder of 2019 and the first half of 2020, exacerbated by the COVID-19 pandemic.

For the three months ended March 31, 2020, Marketing Mail revenue decreased $94 million, or 2.5%, and volume declined 604 million pieces, or 3.4%, compared to the same period last year. For the six months ended March 31, 2020, Marketing Mail revenue decreased $347 million, or 4.1%, and volume declined approximately 2.3 billion pieces, or 5.9%, compared to the same period last year. For the three months ended March 31, 2020, our revenue and volume from political and election mail increased by approximately $100 million and 500 million pieces, respectively, compared to the same period last year, as we began to benefit from the impact of the 2020 elections during the second quarter of 2020. For the six months ended March 31, 2020, our revenue and volume from political and election mail decreased by approximately $140 million and 900 million pieces, respectively, compared to the same period last year, which benefited from the impact of the 2018 mid-term elections during the first quarter of 2019.

Due to the COVID-19 pandemic, many of our commercial customers, especially those with consumer-facing businesses, have been required to suspend their operations or operate at a lower capacity. As a result, our Marketing Mail volume began to decline significantly in March 2020, and it may never fully recover to levels prior to the pandemic. A protracted loss in customer demand for our services will continue to have a material effect on our Marketing Mail revenue and volume.

Marketing Mail is subject to intense competition, and price increases are currently generally capped at the rate of inflation. Marketing Mail volume is somewhat reflective of the cyclical nature of the U.S. economy, although targeted advertising campaigns can stimulate demand for this service, and our customers have used Marketing Mail to mail to more targeted prospects.
### Shipping and Packages

The following table summarizes our operating revenue and volume for Shipping and Packages for the three and six months ended March 31, 2020, and 2019, by each service subcategory:

</table>

¹ Includes Priority Mail, a 1-3 business day delivery service; Priority Mail Express, an overnight delivery service available 365 days per year; and USPS Retail Ground, a retail-only Competitive service priced identically and functionally equivalent to Priority Mail for Zones 1-4.

² Includes Parcel Select, Parcel Return, and Marketing Mail Parcels.

³ Includes First-Class Package Services - Retail and First-Class Package Services - Commercial.

Our Shipping and Packages category has historically experienced revenue and volume growth as a result of our successful efforts to compete in shipping services, including last-mile e-commerce fulfillment markets and Sunday delivery as well as end-to-end markets. However, this service category is subject to intense competition which significantly impacts both our revenue and volume. Shipping and Packages revenue and volume are historically greatest in the first quarter of the year due to the holiday shipping season.

For the three months ended March 31, 2020, Shipping and Packages revenue increased 7.1%, with a volume growth of 0.8%, compared to the same period last year. The volume increased due to a temporary surge in e-commerce resulting from the COVID-19 pandemic, and revenue outpaced volume increases due to the January 2020 price increases associated with certain Competitive services.

For the six months ended March 31, 2020, Shipping and Packages revenue increased 4.5%, despite a volume decline of 2.2%, compared to the same period last year. The revenue increases were largely due to the January 2020 price increases associated with certain Competitive services. The volume declines largely resulted from intense competition and certain major commercial customers and competitors delivering more of their own packages, compared to the same period last year, offset by the temporary surge in e-commerce resulting from the COVID-19 pandemic.

**Priority Mail Services**

Priority Mail Services is our Shipping and Packages subcategory that includes Priority Mail, Priority Mail Express and USPS Retail Ground. Priority Mail and Priority Mail Express services allow customers the ability to send documents and packages requiring expedited transportation and handling. While Priority Mail Services revenue has historically grown year-over-year, its service offerings are price sensitive and its growth rate has been lower than other Shipping and Packages subcategories due to intense competition.

Priority Mail Services accounted for our largest portion of Shipping and Packages revenue, representing approximately 46% of the total for the three and six months ended March 31, 2020, and 2019. However, Priority
Mail Services accounted for approximately 19% and 18% of the total Shipping and Packages volume for three and six months ended March 31, 2020, respectively, essentially unchanged compared to the same periods last year.

For the three months ended March 31, 2020, Priority Mail Services revenue grew 7.0%, on volume growth of 2.2%, compared to the same period last year. For the six months ended March 31, 2020, Priority Mail Services revenue grew 3.4%, despite a volume decline of 1.9%, compared to the same period last year. Revenue grew at a greater rate than volume for the three-month period and despite the volume decline for the six-month period, largely due to the January 2020 price increases applicable to Competitive services.

Parcel Services
Our Parcel Services subcategory includes Competitive services Parcel Select and Parcel Return, as well as Market-Dominant USPS Marketing Mail Parcels (more commonly, Marketing Mail Parcels). Parcel Select and Parcel Return services largely consist of last-mile deliveries, offered to large bulk shippers that perform their own sorting before dropping parcels deeper into our network.

For the three months ended March 31, 2020, revenue from Parcel Services increased 9.6%, on volume growth of 3.4%, compared to the same period last year. For the six months ended March 31, 2020, revenue from Parcel Services increased 6.3%, despite a volume decline of 0.8%, compared to the same period last year. This subcategory is primarily a last-mile service that bypasses much of our infrastructure and therefore is one of our lowest-priced package services, and as a result, produces a lower contribution per piece when compared to many of our other services. For the six months ended March 31, 2020, volume declined due to certain major commercial customers delivering more of their own packages. However, for the three months ended March 31, 2020, volume increased due to the temporary surge in e-commerce from the COVID-19 pandemic. Revenue grew at a greater rate than volume for the three-month period and despite the volume decline for the six-month period, largely due to the January 2020 price increases applicable to Competitive services.

First-Class Package Services
Our First-Class Package Services subcategory includes the competitively priced First-Class Package Service - Retail, a Competitive service targeted to retail customers for packages weighing up to 13 ounces, and First-Class Package Service - Commercial, a Competitive service targeted to commercial customers for packages weighing up to 16 ounces. This subcategory offers commercial customers that ship primarily lightweight fulfillment parcels the lowest-priced expedited end-to-end tracked package option in the marketplace. First-Class Package Services revenue and volume performance has historically experienced strong increases for the past several years, particularly from our commercial customers. These increases are primarily attributable to growth in e-commerce.

For the three months ended March 31, 2020, First-Class Package Services revenue increased 5.9%, despite a volume decline of 0.3%, compared to the same period last year. For the six months ended March 31, 2020, First-Class Package Services revenue increased 6.0%, despite a volume decline of 1.7%, compared to the same period last year. Revenue grew despite the volume declines, largely due to the January 2020 price increases applicable to Competitive services.

Package Services
Our Package Services subcategory is a Market-Dominant service that includes both Bound Printed Matter for materials up to 15 pounds and Library and Media Mail for materials up to 70 pounds. For the three months ended March 31, 2020, Package Services revenue decreased 5.2% on a volume decline of 10.7%, compared to the same period last year. For the six months ended March 31, 2020, Package Services revenue decreased 5.3% on a volume decline of 11.1%, compared to the same period last year. Revenue declined at a slower rate than volume for the three and six months ended March 31, 2020, due to the January 2020 price increase applicable to Market-Dominant services.

International Mail
Our International Mail category includes several services that enable customers, both domestic and abroad, to send international mail, including postcards, envelopes, flats and packages with either standard or express delivery options. “Outbound” services, which allow customers in the U.S. to send mail and packages to other countries, generate approximately two thirds of International Mail revenue, but “inbound” services are the opposite, generating two thirds of volume but only a third of the revenue. This is primarily due to the smaller size and lower rates for inbound international e-commerce packages.
For the three months ended March 31, 2020, International Mail revenue increased 2.4%, despite a volume decline of 11.7%, compared to the same period last year. For the six months ended March 31, 2020, International Mail revenue increased 0.4%, despite a volume decline of 9.1%, compared to the same period last year. These revenue increases were largely due to the January 2020 price increases applicable to Competitive services. The declines in both inbound and outbound volume were due to various competitive pricing, political and economic factors.

The U.S. is a member of the Universal Postal Union ("UPU"), a specialized agency of the United Nations that facilitates the exchange of international mail. We are the designated postal operator for the U.S. under the UPU, and payments to the designated postal operator for the delivery of foreign origin letter-post mails are known as "terminal dues".

In September 2019, the UPU members had a special meeting -- known as the Extraordinary Congress -- to discuss the terminal dues system. During that meeting, UPU members agreed to establish a new remuneration system that will allow us to self-declare rates beginning in July 2020. Other foreign postal operators may also reciprocally apply rates at full-self-declared rates at that time.

In February 2020, we officially invoked our provision to self-declare rates beginning in July 2020.

**Periodicals**

Periodicals, also presented as a mail class and a Market-Dominant service category, includes services designed for publishers of newspapers, magazines and other periodical publications whose primary purpose is providing publications to subscribers or other users. For the three months ended March 31, 2020, Periodicals revenue decreased 11.1% and volume declined 12.2%, compared to the same period last year. For the six months ended March 31, 2020, Periodicals revenue decreased 9.4% and volume declined 9.8%, compared to the same period last year.

Periodicals revenue and volume have been in decline for more than a decade as trends in hard-copy reading behavior and shifts of advertising away from print have eroded this business. The Periodicals category is not expected to rebound as electronic content continues to grow in popularity with the public.

**Other**

Other services include ancillary services such as Certified Mail, PO Box services, and Return Receipt services. Also included in this category are money orders and passport services. Other services revenue decreased 1.2%, and 3.3% for the three and six months ended March 31, 2020, respectively, compared to the same periods last year.

**OPERATING EXPENSES**

In an effort to align our resources with anticipated future mail and package volume, we continue to aggressively manage operating expenditures under management's control.

We originally designed our mail processing and distribution network to provide overnight delivery service of First-Class Mail within specified delivery areas for a much higher volume of mail than we are required to process and deliver today, and the network's legacy capabilities are not completely aligned to today's mail mix and volumes. Consequently, certain of our processing and distribution facilities continue to operate at less than full capacity. Our challenge to contain costs is also compounded by the increasing number of delivery points, which, when combined with lower mail volume, has resulted in a drop in the average number of pieces delivered per delivery point per day from approximately 5.5 pieces in 2007 to 3.4 pieces in 2019, a reduction of approximately 39%, and a further significant decline is expected in 2020.

**Compensation and Benefits**

Compensation and benefits is our largest operating expense category. These expenses consist of costs related to our active career and non-career employees other than retirement costs associated with U.S. government defined benefit pension programs and retiree health costs which are further discussed in Retirement benefits and Retiree Health Benefits, respectively.
Overall, our compensation and benefits expenses increased 1.0% for the three months ended March 31, 2020, but decreased 0.3% for the six months ended March 31, 2020, compared to the same periods last year. The following table presents compensation and benefits expenses for the three and six months ended March 31, 2020, and 2019:

</tr>
</tbody>
</table>

**Compensation**

Compensation expense increased 0.6% for the three months ended March 31, 2020, but decreased 0.5% for six months ended March 31, 2020, compared to the same periods last year. The activity in both periods represents increases due to contractual wage adjustments and approximately 3.6 million hours attributable to the extra work day due to the leap year, offset by management’s efforts to align work hours with volume workloads.

**Work Hours**

For the three months ended March 31, 2020, total work hours were approximately 286 million, essentially unchanged compared to the same period last year. However, approximately 3.6 million hours, or 1.3%, were attributable to the extra work day due to the leap year in 2020. Were it not for the extra work day due to the leap year, work hours would have declined for the period.

For the six months ended March 31, 2020, total work hours were approximately 592 million, a decrease of 1.0%, compared to approximately 598 million total work hours for the six months ended March 31, 2019. This decrease was the result of management’s efforts to reduce work hours in line with volume workloads.

As a result of the COVID-19 pandemic, work hours began to decline in late March 2020 due to lower mail volumes and workforce availability, and we expect this trend to continue for the duration of the pandemic.

**Workforce Composition**

The number of career employees at March 31, 2020, was approximately 496,000, a decrease of approximately 1,500 employees, or 0.3%, compared to the same date a year ago. This decrease primarily reflected natural attrition, continued efforts to align our workforce with declining mail volume, offset by conversions of non-career employees to career status, in accordance with our contractual agreements.

The number of non-career employees at March 31, 2020, was approximately 129,500, a decrease of approximately 10,500 employees, or 7.5%, compared to the same date a year ago. This decrease primarily reflected management’s continued efforts to align our workforce with declining mail volume, and the conversions of non-career employees to career status, in accordance with our contractual agreements.

**Collective Bargaining Agreements**

On January 22, 2020, we reached a tentative agreement with the National Postal Mail Handlers Union, AFL-CIO (“NPMHU”) on a new three-year collective bargaining agreement, which the union membership ratified on April 8, 2020. The new contract went into effect on April 25, 2020, and will expire on September 20, 2022.

On March 10, 2020, a three-member arbitration panel reached a decision in our legally mandated binding interest arbitration process with the American Postal Workers Union, AFL-CIO (“APWU”), establishing the terms of a new collective bargaining agreement. The new contract went into effect on March 10, 2020, and will expire on September 20, 2021.
In September 2019, we agreed to extend contract negotiations relating to a new collective bargaining agreement with the National Association of Letter Carriers, AFL-CIO (“NALC”). The previous contract with the NALC expired on September 20, 2019, and negotiations with the NALC are at an impasse. The parties will continue to follow the current agreement until a new contract is reached through the dispute resolution process.

**Employee Health Benefits**

Our expense for employee health benefits (which includes the employer portion of Medicare taxes) is most significantly impacted by the number of employees electing coverage and the premium costs of the selected plans. Our active employees may participate in the Federal Employees Health Benefits (“FEHB”) Program, which OPM administers. Separate from FEHB, we offer our own self-insured healthcare plan to certain non-career employees who are ineligible for FEHB.

Employee health benefits expense increased 3.2% and 0.8% for the three and six months ended March 31, 2020, compared to the same periods last year, driven by average premium increases of 4.0% in calendar year 2020, and partially offset by the lower contribution rate of the employer portion of healthcare premiums that we paid, by management efforts to provide employees with information and tools for selecting the health benefit plans that best meet their needs, and by the small decrease in number of career employees, as previously discussed.

Our share of healthcare premiums for our employees represented 71.9% of the total healthcare premium costs for both the three months ended March 31, 2020, and 2019. Our share of healthcare premiums for our employees represented 72.0% and 72.3% of the total healthcare premium costs for the six months ended March 31, 2020, and 2019, respectively. This decrease in our share of healthcare premium costs for employees during the six-month period was consistent with the terms of our contractual agreements.

**Social Security**

For the three and six months ended March 31, 2020, our Social Security costs increased 1.0% for the three months ended March 31, 2020, but decreased 0.4% for the six months ended March 31, 2020, compared to the same periods last year. These fluctuations were consistent with the general changes in compensation for the period, as described above in Compensation.

The CARES Act offers certain employers the ability to defer payment of the employer’s share of the Social Security payroll tax on wages incurred from March 27, 2020, through December 31, 2020. In accordance with this provision, we began deferring these payments in April 2020, and intend to continue the deferral for the remainder of calendar year 2020 for an estimated total deferral amount of approximately $1.6 billion. One half of these deferred payments would be due by December 31, 2021, and the other half by December 31, 2022.

**Thrift Savings Plan**

Career employees may participate in the Thrift Savings Plan (“TSP”), a defined contribution retirement savings and investment plan administered by the Federal Retirement Thrift Investment Board. Our TSP expenses are related only to our contributions for FERS employees who participate in the TSP. For these employees, we contribute 1% of basic pay and match voluntary employee contributions up to an additional 4% of basic pay.

For the three and six months ended March 31, 2020, our TSP matching costs increased 3.9% and 2.8%, respectively, compared to the same periods last year. The increase in expenses correlates to the changing workforce composition of CSRS and FERS employees.

**Retirement Benefits**

The majority of our career employees participate in one of two U.S. government defined benefit pension programs, CSRS and FERS, based on the starting date of their employment with us or another U.S. government employer. We incur normal costs (the amount determined by OPM representing the employer portion of retirement benefits for participating employees and their qualifying survivors, upon retirement, for each employee’s current year of service) for FERS employees; however, by law we do not pay normal costs for CSRS retirement benefits. FERS employees are further categorized as either FERS, FERS - Revised Annuity Employees (FERS - RAE), or FERS - Further Revised Annuity Employees (FERS - FRAE) depending on whether their date of hire was before, during,
or after calendar year 2013, respectively. This categorization determines the percentage of basic pay that we are required to contribute for normal cost.

Our retirement benefits expenses consist of three components: 1) FERS normal costs, 2) CSRS unfunded retirement benefits amortization, and 3) FERS unfunded retirement benefits amortization. These retirement benefits expense components are further described in detail in the sections below. The following table presents the retirement benefits expenses for the three and six months ended March 31, 2020, and 2019:

<table>

</tbody>
</table>

\(^1\) Expense for the accrual for the annual payment due to OPM by September 30 of the respective year, based on information provided by OPM, to amortize the unfunded CSRS retirement obligation. Payments are to be made through 2043 based on OPM invoices.

\(^2\) Expense for the accrual for the annual payment due to OPM by September 30 of the respective year, based on information provided by OPM, to amortize the unfunded FERS retirement obligation. Payments are to be made over a 30-year rolling period based on OPM invoices.

Our retirement benefits expenses increased 23.7% and 16.1% for the three and six months ended March 31, 2020, respectively, compared to the same periods last year. This increase was due to rising employer contributions rates for FERS normal cost, as well as increases in the CSRS and FERS unfunded retirement benefits amortization, as discussed below.

For additional information, see Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 9 - Retirement Plans.

**FERS Normal Costs**
We record our contributions to FERS normal costs as they are incurred. Any unpaid employer amounts at the end of a period, along with any employee amounts withheld but not remitted at the end of a period, are recorded as a current liability within Retirement benefits in the accompanying Balance Sheets.

As determined by OPM, our FERS normal cost contribution rates increased from 13.7% to 14.7% of basic pay for 2020, an increase of 7.3% from the prior year, affecting most of our FERS participants. As a result of this contribution rate increase, FERS normal cost expenses increased 8.6% and 7.6% for the three and six months ended March 31, 2020, respectively, compared to the same periods last year.

**CSRS and FERS Unfunded Retirement Benefits**
OPM periodically notifies us regarding its revaluation of unfunded CSRS and FERS retirement benefits. The amounts we record as expenses for our unfunded CSRS and FERS liabilities may be significantly impacted by changes in actuarial assumptions used by OPM to revalue the unfunded liabilities.

In October 2019, OPM provided an actuarial report projecting the annual amortization payments due September 30, 2020, to be $1.6 billion for CSRS and $1.1 billion for FERS.

On April 2, 2020, the Board of Actuaries of the CSRS, which oversees OPM’s calculation of actuarial liabilities for CSRS and FERS, lowered the discount rate used to calculate CSRS and FERS unfunded retirement liabilities from 4.25% to 4.0%. We have estimated that the impact of this change in discount rate on the annual CSRS and FERS amortization expense, will result in revised projected amortization payments due September 30, 2020, of approximately $1.8 billion for the CSRS obligation and approximately $1.3 billion for the FERS obligation, increases of $181 million and $226 million, respectively.
Accordingly, we have accrued $495 million and $899 million for the three and six months ended March 31, 2020, for the CSRS amortization expense, reflecting an adjustment of approximately $91 million for the revised assumptions. Likewise, we have accrued $378 million and $643 million for the three and six months ended March 31, 2020, for the FERS amortization expense, reflecting an adjustment of approximately $113 million for the revised assumptions.

Our CSRS and FERS unfunded retirement benefits amortization expenses increased 45.5% and 28.6% for the three and six months ended March 31, 2020, respectively, compared to the same periods last year, due to higher estimated annual amortization payments resulting from revised actuarial assumptions and discount rate changes.

We expect to receive invoices from OPM for the actual amounts due September 30, 2020, for CSRS and FERS during the fourth quarter of 2020, and the amounts invoiced could differ from the projected amounts, due to further changes in experience, discount rates and/or actuarial assumptions as of the calculation date.

**Retiree Health Benefits**

We participate in federal employee benefit programs for retiree health benefits. Retirees who participated in FEHB for the five years immediately preceding their retirement may continue to participate in the plan during retirement. Qualifying survivors of retirees are also eligible to receive benefits.

In accordance with PAEA, since the beginning of 2017, the PSRHBF has funded our share of retiree health benefit premiums. Also since 2017, we have been obligated to pay into the PSRHBF the actuarially determined normal costs of retiree health benefits attributable to the service of our employees, as well as the amortization payment for the PSRHBF unfunded liability. Our total retiree health benefits expenses therefore consist of both the normal and the amortization costs. We record the required contributions to the plan as an expense in the period in which each contribution is due.

Based on preliminary calculations provided by OPM in October 2019, we have projected the PSRHBF amortization payment amount due September 30, 2020, to be $900 million, and therefore accrued expenses of $225 million and $450 million for the three and six months ended March 31, 2020, respectively. We expect to receive the invoice from OPM for the actual amount due during the fourth quarter of 2020 and this may differ from the original projected amount due to changes in discount rates, actuarial assumptions and experience as of the invoice calculation date.

Also, based on preliminary calculations provided by OPM in October 2019 using updated discount rate assumptions, we have estimated the amount of our PSRHBF normal cost payment due September 30, 2020, to be $4.0 billion, and therefore accrued expenses of $1.0 billion and $2.0 billion for the three and six months ended March 31, 2020, respectively. We expect to receive the invoice from OPM for the actual amount due during the fourth quarter of 2020 and this may differ from the original projected amount due to changes in discount rates, actuarial assumptions and experience as of the invoice calculation date.

For the three and six months ended March 31, 2020, our total retiree health benefits expenses decreased by $50 million, or 3.9%, and $100 million, or 3.9%, respectively, compared to the same periods last year, all of which was attributable to a decrease in the estimated amortization payment for the PSRHBF unfunded liability.

For additional information, see Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 10 - Health Benefits Plans, Retirees.

**Workers’ Compensation**

Our employees injured on the job are covered by the Federal Employees’ Compensation Act (“FECA”), administered by the U.S. Department of Labor’s (“DOL”) Office of Workers’ Compensation Programs, which makes all decisions regarding injured workers’ eligibility for benefits. We are legally mandated to participate in the federal workers’ compensation program. Our workers’ compensation expense reflects the impacts of changes in discount rates, as well as the actuarial valuation of new workers’ compensation cases and revaluation of existing ones. We reimburse the DOL for all workers’ compensation benefits paid to or on behalf of our employees, plus an administrative fee.
On a daily basis we focus on costs that can be managed in the course of normal business operations. Certain aspects of workers’ compensation can be managed through human resource initiatives, safety measures and training. Other workers’ compensation costs cannot be managed in the course of normal business operations and are less predictable, including expenses caused by actuarial revaluation and discount rate changes. We subtract the cash payments made by DOL on behalf of workers’ compensation obligations, which are relatively predictable, from total workers' compensation expense in order to determine the non-cash component of workers' compensation expense, a non-GAAP financial measure.

The following table presents the components of workers’ compensation expense, including the cash payments made by DOL on behalf of workers’ compensation obligations, for the three and six months ended March 31, 2020, and 2019:

<table>
<thead>
<tr>

<td><strong>$ 2,625</strong></td>
<td><strong>$ 401</strong></td>
<td><strong>$ 2,092</strong></td>
<td><strong>$ 961</strong></td>
</tr>
</tbody>
</table>

For the three months ended March 31, 2020, the portion of workers’ compensation expense due to the impact of discount rate changes increased approximately $2.2 billion, compared to the same period last year. For the six months ended March 31, 2020, the portion of workers’ compensation expense due to the impact of discount rate changes increased approximately $1.1 billion, compared to the same period last year. These changes are the result of changes in interest rates, outside of management’s control.

The combined costs of new workers’ compensation cases and revaluation of existing workers’ compensation cases increased by $52 million and $14 million for the three and six months ended March 31, 2020, compared to the same periods last year. Changes in actuarial valuation are primarily attributable to the combined impacts of routine changes in actuarial estimation, the progression of existing cases and updated COLA assumptions, which are largely outside of management’s control.

Under FECA, workers’ compensation claims for many types of injuries cannot be settled through lump-sum payments, and in some instances with regard to those claims, compensation may be paid over many years. Federal law grants COLA rates to those claims, and these factors result in substantially higher costs to us than would likely result if we managed our own claims. Additionally, since we do not manage the FECA program, we have no ability to control the significant administrative costs associated with managing the claims and payments process.

For additional information, see Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 11 - Workers’ Compensation.

**Transportation**

Transportation expenses include the costs we incur to transport mail and packages between our facilities, comprising highway, air and international transportation contracts, plus contract delivery services.

With the exception of contract delivery services, our costs to deliver mail and other products to delivery points are not included within Transportation but in Compensation and benefits for employee costs and in Other operating expenses for fuel, vehicle maintenance and repair, and other costs. Furthermore, transportation expenses do not
include the compensation and related costs of employees responsible for transporting mail and packages between our facilities.

Variations in the volume and weight of mail transported, the mode of transportation used, and fuel prices have significant impact on transportation expenses.

The components of transportation expenses for the three and six months ended March 31, 2020, and 2019, are presented in the following table:

<table>
<thead>
<tr>
<th></th>
<th>Three Months Ended March 31,</th>
<th>Six Months Ended March 31,</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>2020</td>
<td>2019</td>
</tr>
<tr>
<td>Highway</td>
<td>$1,083</td>

</tr>
<tr>
<td>Air</td>
<td>773</td>
<td>744</td>
</tr>
<tr>
<td>International</td>
<td>141</td>
<td>143</td>
</tr>
<tr>
<td>Other</td>
<td>11</td>
<td>13</td>
</tr>
<tr>
<td><strong>Total transportation expenses</strong></td>
<td><strong>$2,008</strong></td>
<td><strong>$2,000</strong></td>
</tr>
</tbody>
</table>

Overall, transportation expenses increased 0.4% and 1.5% for the three and six months ended March 31, 2020, compared to the same periods last year.

Highway transportation expenses decreased 1.5% for the three months ended March 31, 2020, but increased 3.4% during the six months ended March 31, 2020, compared to the same periods in last year. For the three and six months ended March 31, 2020, highway contract expenses decreased, primarily due to a decrease in the number of miles driven and lower average diesel fuel prices. However, results for the six months ended March 31, 2020, include a one-time adjustment resulting from our adoption of ASC 842, whereby we recorded transportation expenses associated with embedded leases in certain of our transportation contracts during the first quarter of 2020 (see Note 2 - Recent Accounting Pronouncements for additional disclosures regarding our adoption of ASC 842).

Air transportation expenses increased 3.9% for the three months ended March 31, 2020, but decreased 0.6% during the six months ended March 31, 2020, compared to the same periods last year. For the six months ended March 31, 2020, the slight decrease was due primarily to lower volumes and lower average jet fuel prices. However, both volumes and average jet fuel prices rose in the three months ended March 31, 2020, leading to an increase in air transportation expenses for the period.

International transportation expenses are related only to outbound services that allow customers in the U.S. to send mail and packages to other countries. For the three and six months ended March 31, 2020, international transportation expenses decreased 1.4% and 2.9% compared to the same periods last year, primarily due to decreases in our international service volumes.
**Other Operating Expenses**

Other operating expenses for the three and six months ended March 31, 2020, and 2019, are detailed in the following table:

<table>
<thead>
<tr>
<th>(in millions)</th>
<th>Three Months Ended March 31</th>
<th>Six Months Ended March 31</th>
</tr>
</thead>

<td><strong>$ 2,480</strong></td>
<td><strong>$ 2,356</strong></td>
</tr>
</tbody>
</table>

Other operating expenses increased by 5.3% and 2.5% for the three and six months ended March 31, 2020, compared to the same periods in the prior year. While these aggregate changes were relatively immaterial, the period-over-period changes in the various components of other operating expenses for the three and six months ended March 31, 2020, were also relatively immaterial.

**LIQUIDITY AND CAPITAL RESOURCES**

Our liquidity consists of unrestricted cash and cash equivalents plus available borrowing capacity. As of March 31, 2020, and September 30, 2019, we held unrestricted cash and cash equivalents of $9.0 billion and $8.8 billion, respectively. During the six months ended March 31, 2020, our average daily liquidity balance under our statutory borrowing capacity was $12.3 billion, representing approximately 56 days of liquidity available, which we define as liquidity divided by estimated average cash disbursements (including capital expenditures) per calendar day (365 days per year).

We face certain risks caused by the COVID-19 pandemic, including the disruptions to our revenue and business operations, which will have a material effect on our financial condition and results of operations. Quarantines, shelter-in-place orders, and travel and logistics restrictions in connection with the outbreak have affected our retail and commercial customers, as well as suppliers and mail service providers. While the disruption is expected to be temporary, its duration remains uncertain. A protracted loss in customer demand for our services is likely to have a material effect on our financial condition, results of operations and liquidity. The sudden drop in mail volumes, our most profitable revenue stream, is steep and may never fully recover to levels prior to the pandemic.

Notwithstanding our $15.0 billion statutory debt limit, and $3.0 billion annual limitation on new borrowing, the CARES Act allows us to borrow up to an additional $10.0 billion in financing from the U.S. Treasury to fund operating expenses. The U.S. Treasury may lend up to this amount at our request, upon terms and conditions mutually agreed upon. However we have no assurance that the U.S. Treasury will agree to provide such financing or if it will be provided upon favorable terms.

We estimate that the COVID-19 pandemic may increase our net operating loss by more than $22.0 billion over the next eighteen months, threatening our ability to operate. If we are able to borrow the $10.0 billion from the U.S. Treasury as provided by the CARES Act, we expect that we will have sufficient liquidity to continue to operate through April 2021. However, if we are unable to secure this $10.0 billion in financing, we expect to be able to continue to operate only through September 2020, absent additional defaults.

Although our liquidity has generally increased since 2012, it remains insufficient to support an organization with approximately $80 billion in annual operating expenses, to make capital investments necessary for continuity of service.
operations and to prepare for unexpected contingencies. Much of this liquidity improvement as of March 31, 2020, would not have occurred but for the temporary exigent surcharge, which allowed us to collect a total of $4.6 billion in incremental revenue between January 2014 and April 2016.

Aside from the temporary exigent surcharge, we defaulted on $33.9 billion of statutorily specified PSRHB prefunding payments from 2012 through 2016, and did not make the approximately $495 million in payments due for FERS unfunded liabilities between 2014 and 2016, or the approximately $21.0 billion in payments due for PSRHB normal cost and amortization on PSRHB, CSRS and FERS unfunded liabilities between 2017 and 2019, in order to preserve liquidity, and to ensure that our ability to fulfill our primary universal service mission was not placed at undue risk. The combination of these defaults and non-payments, plus the incremental revenue associated with the temporary exigent surcharge referred to above, and the increased revenue from growth in our Shipping and Packages business, are the primary reasons why our cash and available liquidity has improved.

**CASH FLOW ANALYSIS**

**Operating Activities**
Cash provided by operating activities decreased $148 million for the six months ended March 31, 2020, compared to the same period last year, largely the result of timing differences in cash payments for compensation and benefits.

**Investing Activities**
We invested $741 million in the purchase of property and equipment for the six months ended March 31, 2020, which is an increase of $82 million, or 12.4%, compared to the same period last year. As of the date of this report, the amount of our full year projected capital expenditures is approximately $2.0 billion, which is approximately $300 million less than our original forecast of $2.3 billion. We anticipate that this may further decline if equipment and information technology investments and other programs are deferred to future years as a result of COVID-19.

**Financing Activities**
Except as described otherwise in this quarterly report, the nature and amounts of our payment obligations under our debt, capital and operating lease agreements, purchase commitments and other liabilities as of March 31, 2020, have not materially changed from those described in our Annual Report.

As of both March 31, 2020, and September 30, 2019, the aggregate principal balance of our outstanding debt was $11.0 billion, consisting of a combination of fixed-rate note and floating-rate notes, all of which we consider long-term debt.

**DEBT**
As of March 31, 2020, our statutory borrowing capacity was $4.0 billion, of which $1.0 billion would require repayment by September 30, 2020, to comply with our annual debt increase limits. Furthermore, notwithstanding our $15.0 billion statutory debt limit, and the $3.0 billion annual limitation on new borrowing, the CARES Act allows us to borrow up to an additional $10.0 billion in financing from the U.S. Treasury to fund operating expenses. The U.S. Treasury may lend up to this amount at our request, upon terms and conditions mutually agreed upon.

In 1974, we began issuing debt through individual debt agreements to the Federal Financing Bank ("FFB"), a government-owned corporation under the general supervision of the Secretary of the Treasury. In 1999, we entered into a Note Purchase Agreement ("NPA") with the FFB to establish standardized procedures for issuing debt. Under the NPA, we were able to issue a series of notes with established terms and conditions by providing two days prior notice. Also under the NPA, we could make borrowings against two annually renewable revolving credit line facilities. These note arrangements and credit line facilities provided the flexibility to borrow short or long-term, using floating or fixed-rate instruments.

The NPA was extended each year through September 30, 2018, and in shorter increments between that date and August 31, 2019, at which time the NPA expired. This expiration did not affect the terms of any of our outstanding debt as of March 31, 2020, all of which was issued under the NPA.
If we are unable to renew or replace the NPA with the FFB, we have no assurance that we could obtain alternative debt financing on comparable terms. However, we believe that we will be able to maintain adequate liquidity through existing and new financing arrangements, as necessary and allowed by statute, to fund our operations.

On April 1, 2020, we drew $3.4 billion on a revolving credit facility with the FFB that survived the expiration of the NPA. In order to comply with the annual net increase limit, we must repay $400 million from this credit facility by September 30, 2020. Given that the credit facility has a maximum term of up to one year, we must repay any outstanding balance of the credit facility by April 1, 2021. The credit facility's interest rate was determined by the U.S. Treasury based on the market rates of similar instruments as of the day of the funding request.

**LIQUIDITY OUTLOOK**

We are constrained by laws and regulations, including the PAEA, which restrict revenue sources and mandates certain expenses. Statutorily mandated expenses include amortization payments to provide full funding of retirement benefits under the CSRS and the FERS, as well as FERS normal costs, described in greater detail in *Note 9 - Retirement Plans*. Additionally, the PAEA established the PSRHBF and mandated certain obligations for paying normal costs, the present value of the estimated retiree health benefits attributable to active employees' current year of service, and amortization payments for full prefunding of retiree health benefits. These prefunding obligations, described in greater detail in *Note 10 - Health Benefits Plans*, are unlike expenses imposed on most other federal entities or private-sector businesses that offer such benefits.

We continue to face challenges from the ongoing migration of mail to electronic alternatives, and we are legally limited under current law in how we can price our products and streamline our legacy business model. Our operations will require significant capital investment over the next few years to modernize and improve our processing and delivery infrastructure and update our delivery fleet in order to continue to meet our primary statutory obligation to provide prompt, reliable and efficient postal services to the nation.

Irrespective of our challenges resulting from the COVID-19 pandemic, absent legislative and regulatory change, we project continuing annual net losses in the future. As a result of these losses and our liquidity concerns, we will unlikely have sufficient cash balances to meet all of our existing legal obligations and make all of the critical investments in our infrastructure that are necessary for operational continuity and that have been deferred in recent years.

In the event that circumstances leave us with insufficient liquidity to continue operating, we may deem it necessary to implement additional contingency plans to ensure that our primary mission is fulfilled and that mail deliveries continue. These measures may require us to prioritize payments to the FFB, our employees and suppliers ahead of some payments to fund retirement and retiree health benefits, as we have done in the past.

With the anticipated continued migration to electronic communication and transactional alternatives, we continue to pursue long-term financial sustainability by focusing on the following items:

1. Continued efforts to control costs and drive efficiencies, innovate to keep mail relevant and generate increased revenue;
2. Postal Service reform legislation that addresses our overall cost structure and enhances our revenue-generating opportunities; and
3. Favorable outcome of the PRC’s ten-year review (discussed below), which would allow additional pricing flexibility.

Although we continue to inform the executive branch, Congress, the PRC and other stakeholders of the immediate and long-term financial challenges we face, we have no assurances that our requests will result in meaningful reform in the foreseeable future.
PRC Ten-year Review
In December 2016, the PRC initiated its ten-year review of the system for regulating rates and classes for Market-Dominant products as required by the PAEA. The purpose of the ten-year review was to determine if the system for regulating such rates and classes has achieved the objectives Congress established in the PAEA. As part of this review, the PRC evaluated the CPI-U price cap for our Market-Dominant services.

On December 1, 2017, the PRC announced its initial decision in connection with its ten-year review. The PRC concluded that the rates system has not achieved its objectives and needs to be changed, primarily because it does not enable us to achieve our mission of providing prompt, reliable, and efficient universal postal services to the American people in a financially sustainable manner. The PRC's proposed changes to the system do not include the elimination of the CPI-U price cap; however, its proposal does provide for some additional pricing authority within a price cap system.

On December 5, 2019, the PRC announced a revised decision in connection with its ten-year review. The PRC's proposed changes to the system still do not include the elimination of the CPI-U price cap. Moreover, while the revised proposal does include adjustment factors as we had requested to provide more flexibility for the regulatory system to better deal with future exogenous changes, the new proposal no longer includes any “true-up” authority to provide us with a reasonable opportunity to cover all of our costs. We continue to assert that the price cap should be eliminated, and that if the PRC insists on maintaining a price cap that the system must include both a resetting of rates so they are compensable, as well as adjustment factors to ensure the system is sufficiently flexible going forward.

The PRC was expected to issue a final rule after considering the comments and reply comments of any interested stakeholders, which were due no later than February 3, 2020, and March 4, 2020, respectively. As of the date of this report, the PRC has not issued a final rule. Additional information regarding the ten-year review may be found at the PRC website: https://www.prc.gov/press-releases/prc-revises-proposals-second-rulemaking-modify-rate-system-classes-market-dominant.

2020 and Beyond
Irrespective of our challenges resulting from the COVID-19 pandemic, we anticipate that given our ongoing liquidity concerns, and without legislative action and regulatory reform, we may not be able to pay all legally required obligations and also invest in much-needed capital expenditures in 2020 and future years that are necessary to ensure our ability to fulfill our primary mission. Furthermore, we believe that continuing productivity improvements alone will not be sufficient to address the challenges presented by declining Market-Dominant volume and revenue, and any future growth in operating revenue would unlikely keep pace with increased costs.

Legally Required Obligations
In addition to our previously discussed obligations for unfunded retirement and retiree health benefits of approximately $8.0 billion due on September 30, 2020, we expect to pay the DOL approximately $1.3 billion in October 2020, representing the workers’ compensation claims paid by DOL for the chargeback year July 1, 2019, to June 30, 2020, plus the estimated administrative fee.

The CARES Act offers certain employers the ability to defer payment of the employer’s share of the Social Security payroll tax on wages incurred from March 27, 2020, through December 31, 2020. In accordance with this provision, we began deferring these payments in April 2020, and intend to continue the deferral for the remainder of calendar year 2020 for an estimated total deferral amount of approximately $1.6 billion. One half of these deferred payments would be due by December 31, 2021, and the other half by December 31, 2022.

Capital Investments
We currently estimate that our required cash outlays for capital investments necessary to ensure that we can continue to perform our universal service obligation will amount to approximately $1.3 billion for the remainder of 2020, and an additional $11.0 billion for years 2021 through 2024, as we plan to invest in a new fleet of delivery vehicles and other appropriate capital assets. Although our future projections include these capital cash outlays, future cash flow from operations alone may not generate the cash needed to enable us to fully fund such necessary capital investments.
**Mitigating Circumstances**

We continue to pursue strategies within our control to increase operational efficiency and improve liquidity. We have managed capital in recent years by spending only what we believed was essential to maintain our existing facilities and service levels, and to increase efficiencies. However, continued increases in capital investment are necessary to upgrade our facilities, fleet of vehicles and processing equipment in order to remain operationally viable. Aggressive management of the business operations, as well as legislative and regulatory reforms that will enable us to increase revenue and reduce costs, will all be necessary to restore our financial health.

Our status as an independent establishment of the executive branch that does not receive tax dollars for our operations presents unique requirements and restrictions, but also potentially mitigates some of the financial risk that would otherwise be associated with a cash shortfall. With annual total revenue in 2019 of approximately $71 billion, a financially sound Postal Service continues to be vital to U.S. commerce.

The U.S. economy benefits greatly from us and the many businesses that provide the printing and mailing services that we support. Disruption of the mail would cause undue hardship to businesses and consumers as it would significantly inhibit the remittance of payments through the mail, and in the event of a cash shortfall, the U.S. government would likely prevent us from significantly curtailing or ceasing operations. We continue to inform the executive branch, Congress, the PRC and other stakeholders of the immediate and long-term financial challenges we face and the legislative and regulatory changes that are required to restore our financial stability.

**LEGISLATIVE, REGULATORY AND RELATED MATTERS**

**TASK FORCE ON THE UNITED STATES POSTAL SYSTEM**

As previously reported, on April 12, 2018, the President issued Executive Order 13829 to establish a Task Force on the United States Postal Service ("Task Force"), to be chaired by the Secretary of the Treasury, as Secretary and as Chairman of the FFB, or his designee. In accordance with the Executive Order, the Task Force conducted an evaluation of our operations and finances, and submitted its report to the President in August 2018.

There has been no further congressional activity related to the President’s Task Force report on the Postal Service subsequent to the March 12, 2019, Senate Homeland Security and Governmental Affairs Committee hearing titled, "A Path to Sustainability: Recommendations from the President’s Task Force on the United States Postal Service."

**LEGISLATIVE UPDATE**

As a self-funded independent establishment of the executive branch, our business model and operations are significantly influenced by congressional oversight and legislation. Additionally, Congress intended for us to be governed by an eleven-member Board of Governors ("Board") which generally consists of our Postmaster General, Deputy Postmaster General and nine independent governors ("Governors"). The President appoints the Governors with the advice and consent of the Senate. We have five Senate-confirmed Governors currently in office.

**Legislation**

Several bills introduced in response to the COVID-19 pandemic have financial implications for us.

On March 18, 2020, the President signed the Families First Coronavirus Response Act, enacted as Public Law 116-127, which provides new paid sick leave that may be used by an employee in COVID-19 situations for themselves, or to care for sick family members, as well as Family and Medical Leave Act-protected unpaid and paid leave if a school/child care is closed.

On March 27, 2020, the President signed the CARES Act, which allows the Postal Service to borrow up to an additional $10.0 billion in financing from the U.S. Treasury to fund operating expenses. The law stipulates that the Secretary of Treasury may lend up to this amount at the request of the Postal Service, upon terms and conditions mutually agreed upon by the Secretary and the Postal Service.

H.R. 6425, the Protect our Post Offices Act, introduced on March 31, 2020, would also appropriate $25.0 billion for payment to the Postal Service Fund for revenue forgone due to the COVID-19 pandemic. The bill was referred to the House Committees on Appropriations and Budget.
Postal Service Reform
The 116th Congress has not introduced any major Postal Service reform bills to date. Legislative and regulatory reforms remain critical for us to meet the needs of the American public, and we will continue to work with Congress and all of our stakeholders to enact Postal Service reform legislation.

Board of Governors Nominations
On March 2, 2020, the President submitted to the Senate the nomination of Donald Lee Moak to serve on the Board for a term expiring December 8, 2022. The nomination was referred to the Senate Homeland Security and Governmental Affairs Committee for its consideration. The nomination of William Zollars to serve for a term expiring December 8, 2022, is also pending the committee’s consideration.

FAIR VALUE MEASUREMENTS
As required by authoritative accounting literature, certain fair value disclosures for the periods ended March 31, 2020, and September 30, 2019, are discussed in Item 1. Financial Statements, Notes to Unaudited Financial Statements. We did not recognize gains as a result of valuation measurements during the three and six months ended March 31, 2020. All recognized losses have been incorporated into our financial statements as of March 31, 2020. See Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 13 - Fair Value Measurement.

RELATED PARTY TRANSACTIONS
As disclosed throughout this quarterly report, we have significant transactions with other U.S. government entities, which are considered related parties for reporting purposes. For a more detailed description, see Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 5 - Related Parties.

CRITICAL ACCOUNTING POLICIES AND ESTIMATES
The preparation of financial statements in accordance with GAAP requires management to make significant judgments and estimates to develop certain amounts reflected and disclosed in the financial statements. In many cases, alternative policies or estimation techniques may be used.

We maintain a thorough process to review the application of accounting policies and to evaluate the appropriateness of the many estimates that are required to prepare the financial statements of a large organization. However, even under optimal circumstances, estimates routinely require adjustment based on changing circumstances and new or better information.

The accounting policies deemed either the most judgmental or which involve the selection or application of alternative accounting policies, and are material to the interim financial statements, are described in Critical Accounting Estimates contained in Management’s Discussion and Analysis of Financial Condition and Results of Operations of the Annual Report. Management normally discusses the development and selection of accounting policies and estimates with the Audit and Finance Committee of the Board.

RECENT ACCOUNTING STANDARDS
See Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 2 - Recent Accounting Pronouncements, for a description of recently announced accounting standards.

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK
In the normal course of business we are exposed to market risks from changes in commodity prices, certain foreign currency exchange rates and interest rates. Our commodity price risk consists primarily of exposure to changes in prices for diesel fuel, unleaded gasoline and aircraft fuel for transportation of the mail, and fuel for heating facilities. We have foreign currency risk related to the settlement of terminal dues and transit fees with foreign postal administrations for international mail.
We have not used derivative commodity or financial instruments to manage market risk related to commodities, foreign currency exchange or interest rate fluctuations for debt instruments. Additionally, we do not purchase or hold derivative financial instruments for speculative purposes.

We also have provisions in our debt agreements that allow us to prepay our $11.0 billion debt at any time at a price determined by the Secretary of the Treasury, based on prevailing interest rates in the U.S. Treasury market at the time of repayment.

See Item 7A. Quantitative and Qualitative Disclosures about Market Risk in the Annual Report for additional information.

ITEM 4. CONTROLS AND PROCEDURES

Management is responsible for the preparation, integrity and fair presentation of our financial statements.

DISCLOSURE CONTROLS

We maintain disclosure controls and procedures that are designed to ensure that information required to be disclosed in quarterly and annual reports is recorded, processed, summarized, and reported within the time frames specified by PAEA, and that this information is accumulated and communicated to our management, including the Postmaster General and Chief Financial Officer, as appropriate, to allow timely decisions regarding required disclosure.

We carried out an evaluation under the supervision and with the participation of management, including the Postmaster General and the Chief Financial Officer, of the effectiveness of the design and operation of disclosure controls and procedures as of March 31, 2020. Based upon and as of the date of the evaluation, the Postmaster General and the Chief Financial Officer concluded that our disclosure controls and procedures were effective.

INTERNAL CONTROLS

We have made no changes in our internal control over financial reporting during the three months ended March 31, 2020, that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.
PART II. OTHER INFORMATION

ITEM 1. LEGAL PROCEEDINGS

For a discussion of legal proceedings affecting us, please refer to Item 1. Financial Statements, Notes to Unaudited Financial Statements and Note 8 - Commitments and Contingencies, as well as our Annual Report.

ITEM 1A. RISK FACTORS

The following risk factor supplements Item 1A. Risk Factors of our Annual Report.

The occurrence of a global pandemic or other adverse public health developments could have a material and adverse effect on our business operations, financial condition and results of operations.

In March 2020, the World Health Organization declared COVID-19 a global pandemic, which has since spread throughout the U.S. Given our mandate to provide universal postal services to the nation, we provide an essential service and have continued to process and deliver mail and packages during the pandemic.

We expect the COVID-19 pandemic to have a material effect on our financial condition, results of operations and liquidity. Quarantines, shelter-in-place orders, and travel and logistics restrictions in connection with the outbreak have affected retail and commercial customers, as well as suppliers and mail service providers. The Postal Service relies on the sale of postal products and services to fund its operations, and these sales have declined significantly as a result of the pandemic. The sudden drop in mail volumes, the Postal Service’s most profitable revenue stream, has been steep and may never fully recover to levels prior to the pandemic.

I, Megan J. Brennan, certify that:

1. I have reviewed this quarterly report on Form 10-Q of the United States Postal Service (“Postal Service”);
2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;
3. Based on my knowledge, the financial statements and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the Postal Service as of, and for, the periods presented in this report;
4. The Postal Service’s other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the Postal Service and have:
   a. Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the Postal Service, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
   b. Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
   c. Evaluated the effectiveness of the Postal Service’s disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
   d. Disclosed in this report any change in the Postal Service’s internal control over financial reporting that occurred during the Postal Service’s most recent fiscal quarter (the Postal Service’s fourth fiscal quarter in the case of an Annual Report) that has materially affected, or is reasonably likely to materially affect, the Postal Service’s internal control over financial reporting; and
5. The Postal Service’s other certifying officer and I have disclosed based on our most recent evaluation of internal control over financial reporting, to the Postal Service’s independent registered accounting firm and the Audit and Finance Committee of the Postal Service’s Board of Governors:
   a. All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the Postal Service’s ability to record, process, summarize and report financial information; and
   b. Any fraud, whether or not material, that involves management or other employees who have significant role in the Postal Service’s internal control over financial reporting.

UNITED STATES POSTAL REGULATORY COMMISSION
Washington, D.C. 20268-0001

FORM 10-Q

QUARTERLY REPORT PURSUANT TO 39 U.S.C. § 3654 AND SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the Quarterly Period Ended March 31, 2020

UNITED STATES POSTAL SERVICE
(Exact name of registrant as specified in its charter)

Washington, D.C. 41-0760000
(State or other jurisdiction of incorporation or organization) (I.R.S. Employer Identification No.)

475 L’Enfant Plaza, S.W.
Washington, D.C. 20260
(Address of principal executive offices) (ZIP Code)

(202) 268-2000
(Registrant’s telephone number, including area code)

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes ☐ No ☐ Not Applicable ☑

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to rule 405 of Regulation S-T ($232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files). Yes ☐ No ☐ Not Applicable ☑

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, a smaller reporting company or an emerging growth company. See the definitions of "large accelerated filer," "accelerated filer," "smaller reporting company" and "emerging growth company" in Rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer ☐ Accelerated filer ☐ Non-accelerated filer ☐
Smaller reporting company ☐ Emerging growth company ☐ Not applicable ☑

If an emerging growth company, indicate by check mark if the registrant has elected not to use the extended transition period for complying with any new or revised financial accounting standards provided pursuant to Section 13(a) of the Exchange Act. ☐

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). Yes ☐ No ☑

Securities registered pursuant to Section 12(b) of the Act:

NOTES TO UNAUDITED FINANCIAL STATEMENTS

NOTE 1 - BASIS OF PRESENTATION

Interim Financial Statements
The accompanying unaudited interim financial statements of the United States Postal Service (the “Postal Service”) have been prepared in accordance with accounting principles generally accepted in the United States (“GAAP”) for interim financial information and with the instructions to Form 10-Q and Rule 10-01 of the U.S. Securities and Exchange Commission Regulation S-X. These financial statements should be read in conjunction with the Postal Service’s financial statements for the year ended September 30, 2019, included in its Annual Report on Form 10-K (“Annual Report”) filed with the Postal Regulatory Commission (“PRC”) on November 14, 2019, and do not include all information and footnotes which are normally included in the Annual Report. Except as otherwise specified, all references to years are to fiscal years beginning October 1 and ending September 30, and quarters are quarters within fiscal years 2020 and 2019.

In the opinion of management, the accompanying unaudited interim financial statements reflect all material adjustments, including recurring adjustments, necessary to fairly present the financial position as of March 31, 2020, the results of operations for the three and six months ended March 31, 2020, and 2019, the changes in net deficiency for the six months ended March 31, 2020, and 2019, and cash flows for the six months ended March 31, 2020, and 2019. Operating results for the three and six months ended March 31, 2020, are not necessarily indicative of the results that may be expected for all of 2020. Mail volume and revenue are historically greatest in the first quarter of the year, which includes the holiday mailing season.

Reclassifications
Certain reclassifications have been made to the financial statements for the three and six months ended March 31, 2019, as well as subsequent footnotes, to conform to the current period presentation. Specifically, certain retirement benefit expenses have been reclassified from Compensation and benefits and separately identified as Retirement benefits within Operating expenses in the accompanying unaudited Statements of Operations. In addition, unfunded retirement benefits amortization expenses associated with the Civil Service Retirement System (“CSRS”) and the Federal Employee Retirement System (“FERS”) have been reclassified from Unfunded retirement benefits amortization to Retirement benefits within Operating expenses in the accompanying unaudited Statements of Operations.

The liabilities associated with these retirement benefits have also been reclassified from Compensation and benefits and separately identified as Retirement benefits within Current liabilities in the balance sheets. In addition, the unfunded retirement benefits liabilities associated with CSRS and FERS have been reclassified from Unfunded retirement benefits to Retirement benefits within Current liabilities in the balance sheets. Corresponding reclassifications have been made within Changes in current assets and liabilities in the accompanying unaudited Statements of Cash Flows.

These reclassifications had no effect on previously reported total operating expenses, loss from operations or net loss. See Note 9 - Retirement Plans for further disclosure pertaining to retirement benefits.

NOTE 2 - RECENT ACCOUNTING PRONOUNCEMENTS

Recently Adopted Accounting Pronouncement
In February 2016, the Financial Accounting Standards Board (“FASB”) issued Accounting Standards Update 2016-02 Leases, which has since been codified in Accounting Standards Codification (“ASC”) 842, Leases (“ASC 842”). The new standard requires an entity to record most leases in its balance sheets but continue to recognize expenses in its statements of operations in a manner similar to current accounting practices. The new standard requires a lessee to recognize a lease liability for the obligation to make lease payments and a right-of-use (“ROU”) asset for the right to use the underlying asset for the lease term. Expenses associated with operating leases are recognized on a straight-line basis and include embedded interest and amortization components. The Postal Service recognizes expenses associated with operating leases as rent expense or transportation expense within Other operating expenses or Transportation, respectively, in the statements of operations. The Postal Service recognizes expenses associated with finance leases (formerly capital leases under previous guidance) with both
interest and amortization expenses and presents these separately in the statements of operations. As such, finance leases generally have higher expenses in the earlier periods of the lease term.

The Postal Service adopted ASC 842 for its 2020 fiscal year (beginning October 1, 2019). In connection with the adoption of ASC 842, the Postal Service has made necessary changes to relevant policies, processes, information systems and internal controls. For transition purposes, the Postal Service has elected the option not to restate comparative financial statements under the modified retrospective transition model. This option allows the application of the standard to all leases in effect as of the effective date (October 1, 2019) or commencing thereafter, without any restatement impact on the comparative financial statement balances. Accordingly, all comparative financial statements enclosed herein are presented in accordance with the previous ASC 840, Leases (“ASC 840”), with related ASC 840 disclosures provided in Note 12 - Leases.

In implementing ASC 842, the Postal Service has elected the package of practical expedients which permits carrying forward historical accounting positions around lease identification, lease classification and initial direct costs for all leases commencing prior to October 1, 2019. The Postal Service has also made a policy election to not separate the lease and non-lease components for all types of underlying assets and to exclude its short-term leases from the ROU asset and lease liability balances.

The Postal Service adopted ASC 842 on October 1, 2019. The implementation of ASC 842 resulted in an opening balance sheet adjustment, as of October 1, 2019, to recognize $4.4 billion in right-of-use assets and lease liabilities relating to operating leases as follows:

<table>
<thead>
<tr>
<th></th>
<th>As reported on September 30, 2019</th>

</tr>
</tbody>
</table>

The implementation of ASC 842 did not have a material impact on the Postal Service’s Statement of Operations or Statement of Cash Flows and did not have any impact on the Postal Service’s Statement of Changes in Net Deficiency. See Note 12 - Leases and Item 4. Controls and Procedures for additional disclosures pertaining to ASC 842.

**Accounting Pronouncements Issued but not Adopted**

**Accounting Standards Update 2016-13 Financial Instruments - Credit Losses**

In June 2016, the FASB issued Accounting Standards Update 2016-13 Financial Instruments - Credit Losses, which has since been codified in ASC 326, Financial Instruments - Credit Losses (“ASC 326”). The new standard requires entities to measure expected credit losses on financial instruments and other commitments by replacing the incurred loss impairment methodology in current GAAP with a methodology that reflects expected credit losses and requires consideration of a broader range of reasonable and supportable information to inform credit loss estimates.

The Postal Service intends to adopt ASC 326 for its 2021 fiscal year (beginning October 1, 2020) and the quarters therein. The standard is applicable to the Postal Service’s valuation of its receivables. The Postal Service is currently evaluating the impact of adopting this standard on its financial statements and related disclosures.
Accounting Standards Update 2018-13 Fair Value Measurement

In August 2018, the FASB issued Accounting Standards Update 2018-13 Fair Value Measurement: Disclosure Framework - Changes to the Disclosure Requirements for Fair Value Measurement, which has since been codified in ASC 820, Fair Value Measurement (“ASC 820”). The new standard modifies the disclosure requirements for fair value measurements by adding, modifying or removing certain disclosures.

The Postal Service intends to adopt ASC 820 for its 2021 fiscal year (beginning October 1, 2020) and the quarters therein. The standard is applicable to the Postal Service’s fair value measurements of its revenue forgone installment receivable and its long-term debt, as described further in Note 13 - Fair Value Measurement. Under ASC 820, certain disclosures are required to be applied on a retrospective basis and others on a prospective basis. The Postal Service is currently evaluating the impact of adopting this standard on its financial statements and related disclosures.

Accounting Standards Update 2018-15 Intangibles - Goodwill and Other - Internal-Use Software

In August 2018, the FASB issued Accounting Standards Update 2018-15 Intangibles - Goodwill and Other - Internal-Use Software (Subtopic 350-40) - Customer’s Accounting for Implementation Costs Incurred in a Cloud Computing Arrangement, which has since been codified in ASC Subtopic 350-40, Intangibles - Goodwill and Other - Internal-Use Software (“ASC 350-40”). This is an update to a standard the FASB issued in April 2015 for entities evaluating the accounting for fees paid by a customer in a cloud computing (hosting) arrangement by providing guidance for determining when such arrangement includes a software license.

If a cloud computing arrangement includes a license for internal-use software, then the software license is accounted for by the customer in accordance with ASC 350-40. This generally means that an intangible asset is recognized for the software license and, to the extent that the payments attributable to the software license are made over time, a liability also is recognized. If a cloud computing arrangement does not include a software license, the entity should account for the arrangement as a service contract. This generally means that the fees associated with the hosting element (service) of the arrangement are expensed as incurred.

The Postal Service intends to adopt ASC 350-40 for its 2021 fiscal year (beginning October 1, 2020) and the quarters therein. The Postal Service is currently evaluating the impact of adopting this standard on its financial statements and related disclosures.

NOTE 3 - LIQUIDITY

The Postal Service’s liquidity consists of unrestricted cash and cash equivalents plus available borrowing capacity.

Cash

The Postal Service generates its cash almost entirely through the sale of postal products and services. As of March 31, 2020, and September 30, 2019, the Postal Service held unrestricted cash and cash equivalents of $9.0 billion and $8.8 billion, respectively. See Note 6 - Cash, Cash Equivalents and Restricted Cash for further disclosures pertaining to cash.

The Postal Reorganization Act, as amended by Public Laws 101-227 and 109-435 (the "PRA"), authorizes the Postal Service to raise cash through the issuance of debt obligations. The Postal Service is limited by statute to annual net increases in debt of $3.0 billion calculated as of the end of each fiscal year, and total debt of $15.0 billion. In 1974, the Postal Service began issuing debt through individual debt agreements to the Federal Financing Bank (“FFB”), a government-owned corporation under the general supervision of the Secretary of the Treasury.

COVID-19 Considerations

In March 2020, the World Health Organization declared a novel strain of coronavirus (“COVID-19”) a global pandemic, which has since spread throughout the U.S. Given its mandate to provide universal postal services to the nation, the Postal Service provides an essential service as part of the nation’s critical infrastructure and has continued to process and deliver mail and packages during the pandemic.

The Postal Service expects the COVID-19 pandemic to have a material effect on its financial condition, results of operations and liquidity. Quarantines, shelter-in-place orders and travel and logistics restrictions in connection with the outbreak have affected retail and commercial customers, as well as suppliers and mail service providers. The
Postal Service relies on the sale of postal products and services to fund its operations, and these sales declined significantly in late March 2020 as a result of the pandemic, and the impact has continued to worsen since then. The sudden drop in mail volumes, the Postal Service’s most profitable revenue stream, has been steep and may never fully recover to levels prior to the pandemic.

On March 27, 2020, the President signed the Coronavirus Aid, Relief, and Economic Security Act, enacted as Public Law 116-136 (the “CARES Act”). Notwithstanding the $15.0 billion statutory debt limit, and the $3.0 billion limit on annual borrowing, the CARES Act allows the Postal Service to borrow up to an additional $10.0 billion in financing from the U.S. Treasury to fund operating expenses. The U.S. Treasury may lend up to this amount at the request of the Postal Service, upon terms and conditions mutually agreed upon. However, the Postal Service has no assurance that the U.S. Treasury will agree to provide such financing or if it will be provided upon favorable terms.

The Postal Service estimates that the COVID-19 pandemic may increase its net operating loss by more than $22.0 billion over the next eighteen months, threatening its ability to operate. If the Postal Service is able to borrow the $10.0 billion from the U.S. Treasury as provided by the CARES Act, it expects that it will have sufficient liquidity to continue operations through April 2021. However, if the Postal Service is unable to secure this $10.0 billion in financing, it expects to be able to continue to operate only through September 2020.

Given these COVID-19 considerations, the Postal Service may require an additional injection of liquidity, provided by either the U.S. government or other sources, or through additional defaults, to remain a going concern. While the COVID-19 disruption is expected to be temporary, its duration remains uncertain, and the Postal Service expects that its liquidity may continue to worsen if the nation experiences a prolonged period of disruption.

**Subsequent Events**

The CARES Act offers certain employers the ability to defer payment of the employer’s share of the Social Security payroll tax on wages incurred from March 27, 2020, through December 31, 2020. In accordance with this provision, the Postal Service began deferring these payments in April 2020, and intends to continue the deferral for the remainder of calendar year 2020 for an estimated total deferral amount of approximately $1.6 billion. One half of these deferred payments would be due by December 31, 2021, and the other half by December 31, 2022.

On April 1, 2020, the Postal Service drew $3.4 billion on a revolving credit facility with the FFB that survived the expiration of the Note Purchase Agreement (“NPA”). In order to comply with the annual net increase limit, the Postal Service must repay $400 million from this credit facility by September 30, 2020. Given that the credit facility has a maximum term of up to one year, the Postal Service must repay any outstanding balance of the credit facility by April 1, 2021. The credit facility’s interest rate was determined by the U.S. Treasury based on the market rates of similar instruments as of the day of the funding request.

**Debt**

As of both March 31, 2020, and September 30, 2019, the Postal Service had a combination of fixed-rate and floating-rate notes outstanding with various maturities totaling $11.0 billion. As of March 31, 2020, the Postal Service’s statutory borrowing capacity was $4.0 billion, of which $1.0 billion would require repayment by September 30, 2020, to comply with the annual debt net increase limit.

In 1999, the Postal Service entered into the NPA with the FFB to establish standardized procedures for issuing debt. Under the NPA, the Postal Service was able to issue a series of notes and revolving credit line facilities with established terms and conditions by providing two days prior notice. These note arrangements and credit line facilities provided the flexibility to borrow short or long-term, using floating or fixed-rate instruments.

The NPA was extended each year through September 30, 2018, and in shorter increments between that date and August 31, 2019, at which time the NPA expired. This expiration did not affect the terms of any of the Postal Service's outstanding debt as of March 31, 2020, all of which was issued under the NPA. As a contractual matter, the FFB continued to lend to the Postal Service under each commitment and line of credit until it expired. If the Postal Service is unable to renew or replace the NPA with the FFB, it has no assurance that it could obtain alternative debt financing on comparable terms.
Liquidity Concerns
The Postal Service is constrained by laws and regulations, including the Postal Accountability and Enhancement Act ("PAEA"), which restrict revenue sources and mandate certain expenses.

The Postal Service is required, either by law or by union contract, to participate in U.S. government pension and health and benefits programs for employees and retirees, including the Federal Employees Health Benefit ("FEHB") program, CSRS and FERS, which the Office of Personnel Management ("OPM") administers. Statutorily mandated expenses include amortization payments to provide full funding of retirement benefits under CSRS and FERS, as well as FERS normal costs, described in greater detail below and in Note 9 - Retirement Plans. Additionally, the PAEA established the Postal Service Retiree Health Benefits Fund ("PSRHBF") and mandated certain obligations for paying normal costs, the present value of the estimated retiree health benefits attributable to active employees' current year of service, and amortization payments for full prefunding of retiree health benefits. These prefunding obligations, described in greater detail below and in Note 10 - Health Benefits Plans, are unlike expenses imposed on most other federal entities or private-sector businesses that offer such benefits.

The Postal Service reported operating expenses of approximately $80 billion in 2019 and has incurred cumulative net losses of $83.1 billion from 2007 through March 31, 2020.

Notwithstanding the challenges resulting from the COVID-19 pandemic, absent legislative and regulatory change, the Postal Service projects continuing annual net losses in the future. As a result of these losses and its liquidity concerns, the Postal Service will unlikely have sufficient liquidity to meet all of its existing legal obligations when due while also reducing its debt and making the critical infrastructure investments that have been deferred in recent years.

In the event that circumstances leave the Postal Service with insufficient liquidity, it would likely be required to implement additional contingency plans to ensure that its primary mission is fulfilled and that mail deliveries continue. These measures may require the Postal Service to prioritize payments to the FFB, employees and suppliers ahead of some payments to fund retirement and retiree health benefits, as has been done in the past.

Business Model Challenges and Constraints
Market-Dominant services, which accounted for approximately 66% of the Postal Service’s annual operating revenues in 2019, are currently subject to a price cap as measured by the Consumer Price Index for All Urban Consumers ("CPI-U"). However, the Postal Service’s costs are not similarly constrained. A large portion of its cost structure cannot be altered expeditiously due to the Postal Service’s universal service obligation. Further, the number of delivery points continues to grow by approximately one million per year, which drives up delivery costs. When combined with the impact of lower mail volume, the average number of pieces delivered per delivery point per day has decreased from approximately 5.5 pieces in 2007 to 3.4 pieces in 2019, a decline of approximately 39%, and a further significant decline is expected in 2020.

Many employee and retiree benefit costs are mandated by law and cannot be altered without legislative change. Under current law, the Postal Service is generally unable to increase prices sufficiently to offset increased costs, and is likewise constrained by law from reducing many of its costs or from pursuing many alternate sources of revenue.

Aside from its universal service obligation, a significant factor contributing to Postal Service losses is the ongoing decline in the volume of Market-Dominant products and services, and those declines are being exacerbated by the COVID-19 pandemic. Specifically, declines in First-Class Mail are largely the result of changes in consumers' and businesses' use of mail resulting from the continuing migration to electronic communication and transactional alternatives, which have taken place over the last decade and are expected to continue. After experiencing relatively flat volume between 2009 and 2016, beginning in 2017, Marketing Mail volume has generally been challenged by commercial mailers' increasing use of digital and mobile advertising, and more recently by the COVID-19 pandemic, although this class has benefited from strong political and election mail volumes, particularly in the second half of 2018 and the first quarter of 2019.

The Postal Service’s Shipping and Packages category has historically provided revenue and volume growth as a result of its successful efforts to compete in shipping services, including last-mile e-commerce fulfillment markets.
and Sunday delivery as well as end-to-end markets. However, this service category is subject to intense competition which significantly impacts both revenue and volume. Certain major customers of the Postal Service had begun diverting volume from the Postal Service’s network by in-sourcing last-mile delivery. Competitors in the package delivery market are aggressively pricing their products and services in order to fill their networks and grow package density. However, as a result of the temporary surge in e-commerce growth driven by the COVID-19 pandemic, some of these customers increased their volume to the Postal Service’s network during March 2020 due to their delivery capacity constraints.

Because the Postal Service provides its services primarily through its employees, its costs are heavily concentrated in wages and benefits for both current employees and retirees. These costs are significantly impacted by contractual wage increases, employee health benefit premium increases, and statutorily mandated retirement and workers’ compensation programs. Some of these costs have historically increased at a higher rate than inflation.

**Past Due Obligations**

The following table presents the total expenses accrued but unpaid by the Postal Service as of September 30, 2019, related to retiree health benefits, CSRS and FERS and the fiscal years in which the accruals were recorded:

^{2} The 2012 to 2016 period amount includes $247.6 million for 2016, $240.9 million for 2015 and $6.7 million for 2014.

**Mitigating Circumstances**

The Postal Service continues to pursue strategies within its control to increase operational efficiency and improve liquidity. The Postal Service has managed capital in recent years by spending what it believed was essential to maintain its existing facilities and service levels, to ensure employee safety and to increase efficiencies. However, continued increases in capital investment are necessary to upgrade its facilities, fleet of vehicles and processing equipment in order to remain operationally viable. Irrespective of the challenges resulting from the COVID-19 pandemic, aggressive management of the business operations, as well as legislative and regulatory reforms that will enable it to increase revenue and reduce costs, will all be necessary to restore the Postal Service to financial health.

The Postal Service’s status as an independent establishment of the executive branch that does not receive tax dollars for its operations presents unique requirements and restrictions, but also potentially mitigates some of the financial risk that would otherwise be associated with a cash shortfall. With annual total revenue in 2019 of approximately $71 billion, a financially sound Postal Service continues to be vital to U.S. commerce.

The U.S. economy benefits greatly from the Postal Service and the many businesses that provide the printing and mailing services that it supports. Disruption of the mail would cause undue hardship to businesses and consumers as it would significantly inhibit the remittance of payments through the mail, and in the event of a cash shortfall, the U.S. government would likely prevent the Postal Service from significantly curtailing or ceasing operations. The Postal Service continues to inform the executive branch, Congress, the PRC and other stakeholders of the immediate and long-term financial challenges it faces and the legislative and regulatory changes that are required to restore its financial stability.
NOTE 4 - REVENUE RECOGNITION
The Postal Service generates the majority of its revenue from contracts associated with the processing and delivery of different types of mail and packages, both domestically and internationally, which generally occur over a relatively short period of time (e.g., several days).

Disaggregation of Revenue
The following table summarizes the Postal Service’s disaggregated operating revenue for the three and six months ended March 31, 2020, and 2019, by each service category:

* Prior period amounts for certain service categories include reclassifications of amounts amongst service categories to conform to current period presentation. These reclassifications are immaterial for each affected category, and had no effect on total operating revenue for the period.

Satisfaction of Performance Obligations
A performance obligation is a promise in a contract to transfer a distinct good or service to the customer. A contract’s transaction price is allocated to each distinct performance obligation and recognized as revenue when, or as, the performance obligation is satisfied.

First-Class Mail, Marketing Mail, Shipping and Packages, International Mail and Periodicals are categorized as Mailing and Shipping services for purposes of satisfying performance obligations. The Postal Service recognizes revenue for Mailing and Shipping services as it fulfills its obligation to process and deliver each mailpiece and the customer mail sender/recipient receives and consumes the benefits of these services.

Other revenue includes PO Box services, Return Receipts, Insurance, Other Ancillary Services, Shipping and Mailing Supplies, Collect on Delivery, Registered Mail, Stamped Envelopes and Cards, Money Orders and other goods and services. The Postal Service recognizes revenue for the majority of these services over time as the customer receives and consumes the benefits of the service. The revenue for a small portion of certain goods or services in this service category is recognized at a point in time when the goods or services are provided to the customer.

The vast majority of the Postal Service’s contracts include only one performance obligation. However, if a contract is separated into more than one performance obligation, the total transaction price for each performance obligation is allocated in an amount based on the estimated relative stand-alone selling prices of the promised goods or services underlying each performance obligation. The majority of the goods or services sold by the Postal Service have observable stand-alone sales prices. Further, payment for the majority of the goods and services is received up front.

If the Postal Service were unable to complete delivery to the destination point, another entity would not need to re-perform the entire portion of delivery already performed by the Postal Service. Accordingly, control from the Postal Service to the customer transfers over time for the vast majority of services the Postal Service offers, and revenue is recognized based on the progress of the completion of the performance obligations.
**Variable Consideration**
The Postal Service offers certain contracts to its customers that contain various types of customer incentives or other provisions that can either increase or decrease the transaction price. Customer incentives include discounts, money back guarantees, rebates, refunds or incentive payments. The other provisions include performance penalties. The Postal Service uses the expected value approach to estimate variable consideration to which it expects to be entitled.

**Contract Modifications**
The Postal Service considers contract modifications to exist when the modification either creates new enforceable rights and obligations or alters the existing arrangement. Contract modifications do not add distinct services; they are typically used to change the prices that the Postal Service charges its customer for existing services. These contract modifications are accounted for prospectively as the remaining performance obligations are executed.

**Principal vs. Agent Consideration**
The Postal Service utilizes third parties to assist with the transportation of mailpieces between different points as part of the delivery process. Based on its evaluation of the transfer of control model, the Postal Service has determined that it acts as the principal rather than the agent within these arrangements.

**Contract Liabilities**
The vast majority of the Postal Service’s contract liabilities consist of Deferred revenue-prepaid postage and prepaid PO Box and Caller Service fees. Deferred revenue-prepaid postage is an estimate of postage that has been sold, but not yet used by customers. The Postal Service recognizes revenue over time as the Postal Service delivers mailpieces. Because payments for postage are collected in advance of the satisfaction of related performance obligations, the Postal Service defers and reports this unearned revenue as Deferred revenue-prepaid postage in its balance sheet. Stamp sales and metered postage account for the majority of Deferred revenue-prepaid postage. The liability also includes an estimate for mail that is in-transit within the Postal Service network.

The prepaid PO Box and Caller Service fees consist of the payments received from customers for PO Box fees at the beginning of their contracts. The Postal Service defers and reflects this unearned revenue as prepaid PO Box and Caller Service fees within Other current liabilities in the accompanying Balance Sheets. Revenue is recognized over time as customers use the PO Box and Caller Services over the terms of their contracts.

The following table presents the balances of the Postal Service’s contract liabilities, including Deferred revenue-prepaid postage and prepaid PO Box and Caller Service fees, as of March 31, 2020, and September 30, 2019, respectively:

</tbody>
</table>

¹ Included within Operating revenue in the accompanying unaudited Statements of Operations.
² Included within Operating expenses in the accompanying unaudited Statements of Operations.
³ Represents interest imputed on the revenue forgone installment receivable as well as interest generated on U.S. Treasury instruments and other cash equivalents held with the Federal Reserve Bank of New York. Included within Interest and investment income in the accompanying unaudited Statements of Operations.
⁴ Incurred on debt issued to the FFB, and included within Interest expense in the accompanying unaudited Statements of Operations.

**NOTE 6 - CASH, CASH EQUIVALENTS AND RESTRICTED CASH**

The following table provides a reconciliation of Cash and cash equivalents and Restricted cash reported in the balance sheets as of March 31, 2020, and 2019, respectively, and as of September 30, 2019, and 2018, respectively (to disclose the opening balances), that sum to the totals of the same such amounts presented in the accompanying unaudited Statements of Cash Flows for the six months ended March 31, 2020, and 2019:

<table>
<thead>
<tr>
<th>(in millions)</th>
<th>March 31,</th>
<th>September 30,</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>2020</td>
<td>2019</td>
</tr>
<tr>
<td>Cash and cash equivalents</td>
<td>$ 8,987</td>
<td>$ 8,108</td>
</tr>
<tr>
<td>Restricted cash</td>
<td>472</td>
<td>546</td>
</tr>
<tr>
<td><strong>Total cash, cash equivalents and restricted cash</strong></td>
<td><strong>$ 9,459</strong></td>
<td><strong>$ 8,654</strong></td>
</tr>
</tbody>
</table>

Restricted cash represents Postal Service cash that is not available for general use. This includes cash originated from forfeitures or seizures related to consumer fraud or other criminal activity related to the mail and either held for third-party beneficiaries or awaiting disposition. Restricted cash also includes funds for use in restricted activities such as congressional appropriation for Postal Service obligations to the PRC and the United States Postal Service Office of Inspector General, or that are otherwise restricted.

The Postal Service holds its Cash and cash equivalents and Restricted cash with the Federal Reserve Bank of New York and invests its excess cash, when available, in highly-liquid, short-term investments issued by the U.S. Department of the Treasury.

**NOTE 7 - PROPERTY AND EQUIPMENT, NET**

Assets within Property and equipment, net in the accompanying Balance Sheets are recorded at cost, which includes the interest on borrowings used to finance construction of major capital additions, less allowances for depreciation and amortization. Interest capitalized during both the three and six months ended March 31, 2020, and 2019, was not significant. Fixed assets are depreciated over estimated useful lives ranging from 3 to 40 years using the straight-line method.

The net book values of assets classified as held for sale were approximately $6 million and $10 million as of March 31, 2020, and September 30, 2019, respectively, and are included within Property and equipment, net in the accompanying Balance Sheets.

For the three months ended March 31, 2020, and 2019, depreciation and amortization expense was $423 million and $424 million respectively, and impairment charges were de minimis. For the six months ended March 31, 2020, and 2019, depreciation and amortization expense was $854 million and $841 million respectively, and impairment charges were de minimis. These items are included within Other operating expenses in the accompanying unaudited Statements of Operations.
NOTE 8 - COMMITMENTS AND CONTINGENCIES

Collective Bargaining Agreements
On January 22, 2020, the Postal Service reached a tentative agreement with the National Postal Mail Handlers Union, AFL-CIO (“NPMHU”) on a new three-year collective bargaining agreement, which the union membership ratified on April 8, 2020. The new contract went into effect on April 25, 2020, and will expire on September 20, 2022.

On March 10, 2020, a three-member arbitration panel reached a decision in the Postal Service’s legally mandated binding interest arbitration process with the American Postal Workers Union, AFL-CIO (“APWU”), which established the terms of a new collective bargaining agreement. The new contract went into effect on March 10, 2020, and will expire on September 20, 2021.

In September 2019, the Postal Service agreed to extend contract negotiations relating to a new collective bargaining agreement with the National Association of Letter Carriers, AFL-CIO (“NALC”). The previous contract with the NALC expired on September 20, 2019, and negotiations with the NALC are at an impasse. The Postal Service and the NALC will continue to follow the current agreement until a new contract is reached through the dispute resolution process.

Contingent Liabilities
The Postal Service’s contingent liabilities consist primarily of claims resulting from labor and employment matters; asset retirement obligations and environmental matters; property damage and injuries on Postal Service properties; and issues arising from Postal Service contracts, personal claims and traffic accidents. Each quarter, the Postal Service evaluates each claim to determine its potential liability. If the Postal Service determines that an unfavorable outcome from a new claim is both probable and reasonably estimable, it records a liability for the amount. Preexisting claims are also reviewed and adjusted quarterly for resolutions or revisions to prior estimates based on new facts and circumstances.

The Postal Service is from time to time involved in other litigation incidental to the conduct of its business, none of which is expected to be material to its financial condition or operations.

Provision for Losses
The Postal Service has made adequate provision for probable losses arising from all claims. The following table presents contingent liabilities by current and noncurrent portions and by category, as of March 31, 2020, and September 30, 2019:

<table>
<thead>
<tr>
<th>(in millions)</th>

<td>$321</td>
<td>$336</td>
</tr>
</tbody>
</table>

\(^1\) Included within Payables and accrued expenses in the accompanying Balance Sheets.
\(^2\) Included within Other noncurrent liabilities in the accompanying Balance Sheets.
Reasonably Possible Contingencies
The Postal Service does not accrue for contingencies which it deems reasonably possible of an unfavorable outcome. These ranged in amount from approximately $175 million to $1.0 billion at March 31, 2020, and from approximately $150 million to $1.0 billion at September 30, 2019.

Class Action Litigation
As previously reported, on January 14, 2010, the Equal Employment Opportunity Commission's ("EEOC") Office of Federal Operations ("OFO") certified the case McConnell v. Brennan (first instituted in 2006 as McConnell v. Potter) as a class action against the Postal Service, with the class consisting of permanent-rehabilitation and limited-duty Postal Service employees who the Postal Service assessed under the National Reassessment Process ("NRP") between the dates of May 5, 2006, and July 1, 2011. The Postal Service utilized the NRP to ensure employees receiving workers' compensation benefits were placed in jobs consistent with their abilities, and that records regarding employees injured on the job were correct.

The McConnell case alleges violations of the Rehabilitation Act of 1973 resulting from the NRP's failure to provide a reasonable accommodation, the NRP's wrongful disclosure of medical information, the NRP's creation of a hostile work environment, and the NRP's adverse impact on disabled employees. The class is seeking injunctive relief and damages of an uncertain amount.

In 2015, the Administrative Judge assigned to handle the McConnell case granted in-part both the Class Agent's and the Postal Service's motions for summary judgment. In her decision, the Administrative Judge found that the NRP violated the Rehabilitation Act. The Postal Service appealed this decision to the OFO, and the OFO denied this appeal in 2018. The Postal Service implemented the OFO's order, and notified all class members of their right to file an individual claim for relief. Class members were allowed thirty days to submit claims to the Postal Service's National Equal Employment Opportunity Investigative Services Office. The claims submission deadline has now passed and the dispute process for individual claims is currently underway before a newly assigned EEOC Administrative Judge.

The class members have the right to pursue individual claims. Should they be successful in establishing liability and damages, the ultimate outcome in this case could have a material impact on the Postal Service's financial results.

Other
The U.S. is a member of the Universal Postal Union ("UPU"), a specialized agency of the United Nations that facilitates the exchange of international mail. The Postal Service is the designated postal operator for the U.S. under the UPU, and payments to the designated postal operator for the delivery of foreign origin letter-post mails are known as "terminal dues".

In September 2019, the UPU members had a special meeting -- known as the Extraordinary Congress -- to discuss the terminal dues system. During that meeting, UPU members agreed to establish a new remuneration system that will allow the Postal Service to self-declare rates beginning in July 2020. Other foreign postal operators may also reciprocally apply rates at full-self-declared rates at that time.

In February 2020, the Postal Service officially invoked its provision to self-declare rates beginning in July 2020, creating an obligation to pay the UPU the amount of 40 million Swiss Francs ("CHF"), or approximately $41 million, based on the prevailing exchange rate on March 31, 2020. This amount will be payable over five years in annual increments of 8 million CHF, with the first payment due between July and December 2020.

The Postal Service considers the right to self-declare rates as an intangible asset recorded in Other assets in the accompanying unaudited Balance Sheet at March 31, 2020, and its amortization starts in July 2020 when the self-declared rates are in effect. The current portion of the obligation is recorded in Payables and accrued expenses and the noncurrent portion of the obligation is recorded in Other noncurrent liabilities in the accompanying unaudited Balance Sheet at March 31, 2020, respectively.
NOTE 9 - RETIREMENT PLANS

The majority of career employees participate in one of two U.S. government defined benefit pension programs, CSRS and FERS, which OPM administers. These plans provide retirement, death and disability benefits for eligible employees based on specific eligibility and participation requirements, vesting periods and benefit formulas. Each employee’s participation in either plan is based on the starting date of employment with the Postal Service or another U.S. government entity.

As government-sponsored benefit plans, CSRS and FERS are not subject to the provisions of the Employee Retirement Income Security Act of 1974, as amended. Likewise, because the Postal Service cannot direct the costs, benefits or funding requirements of these plans, it accounts for program expenses under multiemployer plan accounting rules. As such, the Postal Service records required contributions to the plans as an expense in the period in which each contribution is due. For FERS, the Postal Service contributes to the plan an amount established by OPM as the employer portion of retirement benefits for participating employees and their qualifying survivors, upon retirement, for each employee’s current year of service, which is considered the FERS normal cost. As further discussed below, the Postal Service is not required to pay the normal cost for those employees who participate in CSRS.

Career employees may also participate in the Thrift Savings Plan (“TSP”), a defined contribution retirement savings and investment plan administered by the Federal Retirement Thrift Investment Board. The Postal Service’s TSP expenses relate only to its contributions for FERS employees who participate in the TSP.

CSRS provides a basic annuity plan benefit to employees hired before January 1, 1984. CSRS Offset provides Social Security benefits in addition to its basic annuity plan for employees hired between January 1, 1984, and January 1, 1987. CSRS and CSRS Offset employees may also participate in the TSP, although the Postal Service does not match contributions for these participants.

The PAEA suspended the Postal Service’s employer contributions to CSRS that would otherwise have been required under Title 5, Section 8334(a)(1) of the U.S. Code, although CSRS employees continue to contribute to the plan.

Effective January 1, 1987, FERS covers employees hired since December 31, 1983, and FERS employees are covered by an annuity, Social Security and TSP benefits. For FERS employees who participate in TSP, the Postal Service contributes 1% of basic pay and matches voluntary employee contributions up to an additional 4% of basic pay. The Postal Service recognizes Social Security and TSP expenses as they are incurred and records them within Compensation and benefits in the accompanying unaudited Statements of Operations. A liability is established for any contribution due and unpaid at the end of each reporting period and is included within Compensation and benefits in the accompanying Balance Sheets.

FERS employees are further categorized as either FERS, FERS - Revised Annuity Employees (“FERS-RAE”), or FERS - Further Revised Annuity Employees (“FERS-FRAE”) depending on whether their date of hire was before, during, or after calendar year 2013, respectively.

The following table presents the employee and employer contributions, as a percentage of employee basic pay, during the three and six months ended March 31, 2020, and 2019:

</tbody>
</table>

¹ Expense for the accrual for the annual payment due to OPM by September 30 of the respective fiscal year, to amortize the unfunded CSRS retirement obligation. The 2020 amounts are based on updated Postal Service estimates resulting from revised actuarial assumptions. Payments are to be made through 2043 based on OPM invoices.

² Expense for the accrual for the annual payment due to OPM by September 30 of the respective fiscal year, to amortize the unfunded FERS retirement obligation. The 2020 amounts are based on updated Postal Service estimates resulting from revised actuarial assumptions. Payments are to be made over a 30-year rolling period based on OPM invoices.

**FERS Normal Costs**

The Postal Service records expenses for FERS normal costs within Retirement benefits in the accompanying unaudited Statements of Operations.

The Postal Service makes payments for FERS normal costs in accordance with its bi-weekly payroll cycle. The employer contributions and employee withholdings not yet remitted to OPM were $209 million and $157 million at March 31, 2020, and September 30, 2019, respectively, and were recorded as a current liability within Retirement benefits in the accompanying Balance Sheets.

**CSRS and FERS Unfunded Retirement Benefits**

OPM periodically notifies the Postal Service regarding its revaluation of unfunded CSRS and FERS liabilities. OPM calculates these obligations using Postal Service-specific demographics data and government-wide economic assumptions. The Postal Service records these expenses as Retirement benefits in the accompanying unaudited Statements of Operations. These amounts may be significantly impacted by changes in actuarial assumptions used to revalue the unfunded liabilities.

In October 2019, OPM provided the Postal Service with an actuarial report indicating the projected annual amortization payments due September 30, 2020, would be $1.6 billion for the CSRS obligation and $1.1 billion for the FERS obligation.

On April 2, 2020, the Board of Actuaries of the CSRS, which oversees OPM’s calculation of actuarial liabilities for CSRS and FERS, lowered the discount rate used to calculate CSRS and FERS unfunded retirement liabilities from 4.25% to 4.0%. The Postal Service has estimated that the impact of this change in discount rate on the annual CSRS and FERS amortization expense will result in revised projected amortization payments due September 30, 2020, of approximately $1.8 billion for the CSRS obligation and approximately $1.3 billion for the FERS obligation, increases of $181 million and $226 million, respectively.

Accordingly, the Postal Service accrued additional CSRS and FERS amortization expenses during the three months ended March 31, 2020, to reflect the proportional adjustment between the original OPM estimate and the updated Postal Service estimate as a result of these changes. The Postal Service expects to receive invoices from OPM for the actual amounts due September 30, 2020, during the fourth quarter of 2020, and these invoices may differ from the estimated projections due to further changes in experience, discount rates and/or actuarial assumptions as of the calculation date.
The amounts the Postal Service has accrued for CSRS and FERS unfunded retirement benefits but has not yet paid are recorded as a current liability within Retirement benefits in the accompanying Balance Sheets. Those accrued but unpaid amounts were approximately $9.8 billion and $8.2 billion at March 31, 2020, and September 30, 2019, respectively.

**NOTE 10 - HEALTH BENEFITS PLANS**

FEHB Program covers nearly all career employees and also covers non-career employees and retirees who meet certain eligibility requirements. OPM administers FEHB and allocates the cost of funding the program to participating U.S. government employers. Separate from FEHB, the Postal Service offers its own healthcare plan to certain non-career employees who are ineligible for FEHB.

**Active Employees**

The Postal Service paid 71.9% of healthcare premium costs during both the three months ended March 31, 2020, and 2019. The Postal Service paid 72.0% and 72.3% of healthcare premium costs during the six months ended March 31, 2020, and 2019, respectively. Although OPM determines the actual FEHB premium costs, the allocation of these costs between the Postal Service and most of its employees is determined through agreements with Postal Service labor unions.

Postal Service employee health benefits expense (which includes the employer portion of Medicare taxes) is most significantly impacted by the number of employees electing coverage and the premium costs of the selected plans. Postal Service employee health benefits expense was approximately $1.3 billion for each of the three-month periods ended March 31, 2020, and 2019. Postal Service employee health benefits expense was approximately $2.6 billion for each of the six-month periods ended March 31, 2020, and 2019. These expenses are included within Compensation and benefits in the accompanying unaudited Statements of Operations.

**Retirees**

Postal Service retirees who participated in FEHB for the five years immediately preceding their retirement may continue to participate in the plan during retirement. Qualifying survivors of retirees are also eligible to receive benefits. The Postal Service is required to contribute to the PSRHBF an amount estimated to be equal to the employer portion of FEHB insurance premiums for participating employees and their qualifying survivors, upon retirement, for each employee’s current year of service (normal cost). The Postal Service is also required to contribute an amount sufficient to fully amortize the unfunded liability of the PSRHBF by 2056. These amounts are based, in part, on each current and prospective retiree’s length of federal civilian service occurring on or after July 1, 1971. Each participant’s share of premium costs is set by law and is not subject to negotiation with Postal Service labor unions. The Postal Service cannot direct the costs, benefits or funding requirements of the plans. Therefore, it accounts for program expenses using multiemployer plan accounting rules by recording contributions to the plans that will be required by OPM as an expense in the period in which the contributions are due.

The PAEA required the Postal Service to prefund retiree health benefits during years 2007 through 2016 by paying statutorily specified annual amounts ranging from $1.4 billion to $5.8 billion, totaling $54.8 billion, into the PSRHBF, which began paying the Postal Service’s share of retiree health benefit premiums in 2017. The Postal Service remains obligated to fund the $33.9 billion in statutorily required PSRHBF prefunding payments that it defaulted on for the years 2012 through 2016, as well as the normal cost and amortization payments of $10.7 billion and $2.6 billion, respectively, that it did not pay for the years 2017 through 2019. As of the date of this report, the Postal Service has not been assessed any penalties associated with these non-payments. The cumulative amount of statutorily specified, normal cost and amortization PSRHBF obligations the Postal Service has accrued is $49.7 billion as of March 31, 2020, inclusive of the $47.2 billion that was unpaid as of September 30, 2019. Given that OPM considers these amounts to be due and payable, the Postal Service reflects the cumulative unpaid amount as a current liability within Retiree health benefits in the accompanying Balance Sheets.

As required by PAEA, OPM annually performs an actuarial valuation for the purpose of developing a payment schedule for the Postal Service to fund the remaining unfunded PSRHBF obligation in annual payments through the year 2056. Based on preliminary calculations provided by OPM, the amortization payment due September 30, 2020, is estimated to be $900 million.
Furthermore, the Postal Service is obligated to pay the estimated normal cost of retiree health benefits attributable to the service of its employees during the most recent year. Based on preliminary calculations provided by OPM, the Postal Service has estimated the normal cost payment, also due by September 30, 2020, to be $4.0 billion.

The Postal Service expects to receive the invoice from OPM for with the actual amounts due during the fourth quarter of 2020 and these may differ from the original projected amounts due to changes in discount rates, actuarial assumptions and experience as of the calculation date.

The following table details retiree health benefits expenses for the three and six months ended March 31, 2020, and 2019:

¹ Expense for the accrual for the annual payment due to OPM by September 30 of the respective year, as calculated by OPM, to amortize the unfunded PSRHBF retirement health benefit obligation. Payments are to be made through 2056 based on OPM invoices.

² Expense for the accrual for the annual payment due to the PSRHBF by September 30 of the respective year, based on information provided by OPM, for the actuarially determined normal cost of retiree health benefits for current employees.

NOTE 11 - WORKERS’ COMPENSATION
Postal Service employees injured on the job are covered by the Federal Employees’ Compensation Act (“FECA”), administered by the U.S. Department of Labor’s (“DOL”) Office of Workers’ Compensation Programs, which makes all decisions regarding injured workers’ eligibility for benefits. The Postal Service reimburses DOL for all workers’ compensation benefits paid to or on behalf of Postal Service employees, plus an administrative fee.

Workers’ Compensation Liability
The Postal Service records a liability for its workers’ compensation obligations for employees who have been injured on the job and are eligible for benefits, or their qualified survivors. Both the current and noncurrent portions of the workers’ compensation liability are recorded in the accompanying Balance Sheets. The Postal Service uses an estimation model that utilizes four generally accepted actuarial valuation techniques based upon past claim-payment experience and exposure to claims as measured by total employee hours worked.

Changes in the liability are primarily attributable to the combined impacts of routine changes in actuarial assumptions, new compensation and medical cases, the progression of existing cases and changes in discount (interest) and inflation rates, including long-term COLA rates for compensation claims, and medical rates for medical claims. These rates are updated as of the balance sheet date and factored into the model.

To determine the fair value of the liability each quarter, the Postal Service first estimates the future total cost of workers’ compensation claims based on the dates of claim-related injuries, frequency or severity of the injuries, the pattern of historical payments to beneficiaries and the expected trend in future costs. The Postal Service then calculates the amount that would need to be invested at current discount (interest) rates to fully fund the future total cost of claims, and this calculated present value is the recorded value of the workers’ compensation liability.

This liability calculation is highly sensitive to changes in discount rates. For example, a 1% increase in the discount rate would decrease the March 31, 2020, liability and related expense by approximately $2.4 billion. Likewise, a 1% decrease in the discount rate would increase the March 31, 2020, liability and related expense by approximately $3.1 billion.
The following table details the applicable inflation and discount rates for compensation and medical claims used to estimate the workers’ compensation liability as of March 31, 2020, and September 30, 2019:

<table>
<thead>
<tr>

<td>1.07%</td>
<td>1.91%</td>
</tr>
<tr>
<td>Medical inflation rate</td>
<td>3.50%</td>
<td>2.50%</td>
</tr>
</tbody>
</table>

As of March 31, 2020, and September 30, 2019, the Postal Service’s total liability for workers’ compensation was approximately $20.0 billion and $18.5 billion, respectively. As of March 31, 2020, and September 30, 2019, the current portion of the liability was approximately $1.3 billion and $1.4 billion, respectively, and the noncurrent portion of the liability was approximately $18.7 billion and $17.1 billion, respectively, as reflected in the accompanying Balance Sheets.

**Workers’ Compensation Expense**

The impacts of changes in discount rates and inflation rates, as well as the actuarial valuation of new cases and revaluation of existing cases, are components of total workers’ compensation expense as recorded in the accompanying unaudited Statements of Operations. In addition, the Postal Service pays an administrative fee to DOL, which is considered a component of workers’ compensation expense.

The following table presents the components of workers’ compensation expense for the three and six months ended March 31, 2020, and 2019:

**NOTE 12 - LEASES**

**Postal Service Leases**

The Postal Service holds lessee positions in real property leases as well as lessee positions embedded in service contracts involving rights to use transportation equipment and facilities.

Real property leases support retail, delivery, mail processing, maintenance, administrative and support activities. The non-cancellable base terms of these leases typically range from one to five years, with one or more options to renew for additional five-year terms. The lease terms for these arrangements generally range from one to thirty years including any renewal options that are reasonably certain to be exercised. Additionally, certain real property leases contain purchase and termination options. At the commencement of most real property lease arrangements, the Postal Service is not reasonably certain if it will exercise such options. Real property leases include certain variable lease payments associated with non-lease components, such as common area maintenance costs, and non-lease components such as real estate taxes, which are generally charged as a pass-through based on actual amounts incurred by the lessor. The Postal Service records costs associated with real property leases within *other operating expenses* in the accompanying unaudited *Statements of Operations*.
Transportation equipment leases apply primarily to vehicles, trailers, and aircraft. The non-cancellable base terms of these leases typically range from two to five years, and may include one or more options to renew for an additional one or two years. The lease terms for these arrangements generally range from two to five years including any renewal options the Postal Service is reasonably certain to exercise. Transportation equipment leases do not contain purchase options, however certain of these leases contain termination options. At the commencement of most transportation lease arrangements, the Postal Service is not reasonably certain if it will exercise such termination options. Certain transportation leases contain variable lease payments based on the volume of activity under the contract. The Postal Service records costs associated with transportation leases within Transportation in the accompanying unaudited Statements of Operations.

Postal Service leases do not contain any material residual value guarantees or restrictive covenants.

Sublease income was not material to the financial statements for the three and six months ended March 31, 2020.

Balances disclosed herein include those pertaining to certain related-party transactions. See Note 5 - Related Parties for additional information on related party transactions.

The table below reconciles the undiscounted cash flows for the first five years and the total remaining finance lease liabilities and operating lease liabilities recorded in the accompanying unaudited Balance Sheet as of March 31, 2020:

Capital leases, recorded at historical cost within Property and equipment, net in the accompanying Balance Sheets, were $496 million as of September 30, 2019. Total accumulated amortization related to capital leases was $377 million at September 30, 2019. Amortization expense for capital leases was approximately $33 million and $37 million for the years ended September 30, 2019, and 2018, respectively, and is included within the Other operating expense in the respective Statements of Operations.

Lease Accounting Policies

Lease Accounting Policy for Comparative Periods

As the lessee, the Postal Service classifies leases which have original lease terms greater than one year and that transfer substantially all the risks and rewards of ownership to the Postal Service, as capital leases. These leases are capitalized on the lease commencement date at the lower of the fair value of the leased assets or the present value of the minimum lease payments. The discount rate used to determine the present value is based on average U.S. Treasury rates. Property acquired under a capital lease is amortized over the lease term. Capital leases are included within Property and equipment, net in the accompanying Balance Sheets.

The Postal Service classifies all other lease arrangements in which substantially all risks and rewards of ownership are retained by the lessor as operating leases. Rent expense for operating leases is included in Other operating expense.
expenses in the accompanying unaudited Statements of Operations on a straight-line basis over the term of the lease.

**Lease Accounting Policy for the Six Months Ended March 31, 2020**

The Postal Service determines at the inception of the contract if an arrangement represents a lease or contains lease components. A contract is deemed to represent or include a lease if it conveys the right to control the use of an identified asset for a period of time in exchange for consideration. The Postal Service is assumed to have the right to control the use of the underlying asset if the contract conveys the rights to obtain substantially all of the economic benefits of the underlying asset and the rights to direct how and for what purpose such asset is used during the contract term.

As the lessee, the Postal Service classifies all leases with original lease terms less than one year as short-term leases. The Postal Service classifies all other leases which transfer substantially all the risks and rewards of ownership to the Postal Service as finance leases. Finance lease right-of-use assets are included within Property and equipment, net in the accompanying Balance Sheets. The current and noncurrent portions of finance lease liabilities are included within Payables and accrued expenses and Other noncurrent liabilities, respectively, within the accompanying Balance Sheets. The Postal Service classifies the remaining leases, not classified as short-term leases or finance leases, as operating leases. The Postal Service considers a lease term to include all non-cancelable periods and renewal periods when the Postal Service is reasonably certain that it will exercise the related renewal option.

For short-term leases, the Postal Service records lease expenses in the statement of operations on a straight-line basis over the lease term.

Leases that do not qualify as short-term are recorded in the balance sheet on the lease commencement date, each as a right-of-use asset and a lease liability.

Lease liabilities are initially measured at the net present value of the lease payments due after the commencement date. For this purpose, lease payments include fixed and in-substance fixed rental payments, variable lease payments that depend on an index or rate, and the price of options that the Postal Service is, at the commencement of the lease, reasonably certain to exercise. Lease liabilities are subsequently increased to reflect the interest accrued and reduced when lease payments are made by the Postal Service.

Right-of-use assets are initially measured at the net present value of the lease payments (including amounts due prior to or on the commencement date), adjusted for the impact of initial direct costs and lease incentives. For finance leases, right-of-use assets are subsequently amortized on a straight-line basis over the shorter of the useful life of the underlying asset or the lease term. For operating leases, right-of-use assets are amortized in such a way that the combination of the interest expense accrued on the lease liability and the asset amortization results in a straight-line expense over the lease term.

Right-of-use assets for operating and finance leases are periodically reviewed for impairment losses, following the same process as for other long-lived assets. Impairment losses on long-lived assets are recorded when events or circumstances indicate that an asset’s fair value is less than its carrying value. When such a determination is made, the carrying values of the assets are written down to fair value. The Postal Service uses the long-lived assets impairment guidance in ASC Subtopic 360-10, Property, Plant, and Equipment - Overall, to determine whether a right-of-use asset is impaired, and if so, the amount of the impairment loss to recognize. No impairment losses have been recognized to date.

The discount rates used in net present value calculations are determined based on the Postal Service’s incremental borrowing rates on debt outstanding with the FFB at the beginning of each year, which is approximated as the daily U.S. Treasury Yield Curve Rates for the five-year, 10-year, 20-year and 30-year periods, plus a 12.5 basis point spread.

Variable lease payments, except for those based on an index or rate, are recognized as variable lease expenses in the period in which the obligation for those payments are incurred.
NOTE 13 - FAIR VALUE MEASUREMENT

The Postal Service defines fair value as the price that would be received upon sale of an asset or the price that would be paid to transfer a liability between unrelated parties.

The carrying amounts of certain current assets and liabilities, including cash, accounts receivable, accounts payable and accrued expenses, approximate fair value due to their short-term nature. Assets within Property and equipment, net are recorded at cost and measured at fair value on a nonrecurring basis if they are determined to be impaired or classified as assets held for sale.

Noncurrent receivables and long-term debt are measured using a fair value hierarchy model. This model prioritizes observable and unobservable inputs used to measure fair value, and consists of three broad levels, as defined in authoritative literature.

For the three and six months ended March 31, 2020, no significant transfers between Level 1 and Level 2 assets or liabilities transpired. The carrying amount and fair value of the revenue forgone installment receivable and long-term debt are presented for disclosure purposes only in the following table:

<table>
<thead>
<tr>
<th></th>
<th>March 31, 2020</th>
<th>September 30, 2019</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Carrying Amount</td>
<td>Fair Value</td>
</tr>
<tr>
<td>Revenue forgone installment receivable*</td>
<td>$ 476</td>
<td>$ 584</td>
</tr>
<tr>
<td>Long-term debt</td>
<td>$ 11,000</td>
<td>$ 11,936</td>
</tr>
</tbody>
</table>

*The carrying amount is included within Other assets (which includes items in addition to the revenue forgone installment receivable) in the accompanying Balance Sheets.

The revenue forgone installment receivable qualifies as a financial instrument in accordance with authoritative literature. To calculate its fair value, the Postal Service recognizes the imputed interest it is owed as interest income and estimates the value of this receivable using the interest method, which converts future cash flows to a single discounted amount using interest rates for similar assets, which are considered Level 2 inputs. The Postal Service then calculates the net present value of anticipated annual installment payments to be received, discounted by the 20-year U.S. Treasury Constant Maturity Rate, which was 1.15% and 1.94% as of March 31, 2020, and September 30, 2019, respectively.

The long-term debt also qualifies as a financial instrument. Because no active market exists for its debt with the FFB, the Postal Service estimates the fair value of the long-term debt by imputing future payments at discount rates provided by the FFB, considered Level 3 inputs. The weighted averages of the FFB discount rates, based on U.S. Treasury Yield Curve Rates, were 0.36% and 1.79% as of March 31, 2020, and September 30, 2019, respectively.

ITEM 2. MANAGEMENT’S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

CAUTIONARY STATEMENTS

The following Management’s Discussion and Analysis of Financial Condition and Results of Operations and other parts of this report describe the principal factors affecting the financial results, liquidity, capital resources and critical accounting estimates of the United States Postal Service (“Postal Service,” “USPS,” “we,” “our” and “us”). Our results of operations may be impacted by risks and uncertainties discussed here and in our Annual Report on Form 10-K for the year ended September 30, 2019, (“Annual Report”) filed with the Postal Regulatory Commission (“PRC”) on November 14, 2019. Such factors, many of which we cannot control or influence, may cause actual results to differ materially from those currently contemplated.

Our operating results for the three and six months ended March 31, 2020, are presented in accordance with accounting principles generally accepted in the United States (“GAAP”). These results are not necessarily indicative of the results to be expected for the year ended September 30, 2020, and should be read in conjunction with our
Annual Report. All references to years in this report, unless otherwise stated, refer to fiscal years beginning October 1 and ending September 30. All references to quarters, unless otherwise stated, refer to quarters within fiscal years 2020 and 2019.

Forward-looking statements contained in this report represent our best estimates of known and anticipated trends believed relevant to future operations. However, actual results may differ significantly from current estimates. Certain forward-looking statements included in this report use such words as “may,” “will,” “could,” “expect,” “believe,” “plan,” “estimate,” “project” or other similar terminology. These forward-looking statements, which involve a number of risks and uncertainties, reflect current expectations regarding future events and operating performance as of the date of this report. These risks include, but are not limited to, the effects of the novel strain of coronavirus (“COVID-19”) on our business, financial condition and results of operations. We have no obligation to publicly update or revise any forward-looking statements, whether as a result of new information, future events or otherwise.

OVERVIEW

With our mandate to provide universal postal services to the nation, we serve retail and commercial customers in the U.S., as well as internationally. Our operations include an extensive and integrated retail, processing, distribution, transportation and delivery network, and we operate throughout the U.S., its possessions and territories. We operate as a single segment and report our performance as such.

The Postal Accountability and Enhancement Act (“PAEA”) classifies our products into two broad categories: Market-Dominant and Competitive “products,” however, we use the term “services” in this document for consistency with other descriptions of services offered. The statutes under which we operate also establish certain requirements that affect our financial results, including obligations for retirement benefits within the Civil Service Retirement System (“CSRS”) and the Federal Employee Retirement System (“FERS”), and obligations for retiree health benefits including funding of the Postal Service Retiree Health Benefits Fund (“PSRHB”). We must coordinate with the U.S. Office of Personnel Management (“OPM”) to address these obligations.

We have successfully implemented initiatives that have reduced the growth in certain costs by billions of dollars while offering new features for customers such as Informed Delivery. However, legal restrictions on pricing, service diversification and operations restrict our ability to cover our costs to provide prompt, reliable and efficient postal services to the nation.

We have established a core set of goals that drive our strategic initiatives and continuous improvement efforts:

1. Deliver a world-class customer experience;
2. Equip, empower and engage employees;
3. Innovate faster to deliver value; and
4. Invest in our future platforms.

As part of these efforts, we aim to achieve long-term financial stability. Our focus on maintaining liquidity and reducing operating expenses reflects current trends, as well as projected future volume of mail and packages. We believe that financial stability is within reach with targeted legislative and regulatory reform to address our overall cost structure and enhance our revenue-generating opportunities as we continue to identify and create innovative and affordable services, and deliver high levels of performance and service. Such financial stability would continue to provide Congress and the executive branch with additional time to address the broader issues regarding our overall cost structure and revenue-generating opportunities.

RESULTS OF OPERATIONS

SUMMARY

The major factors that impact our operating results include overall customer demand, the mix of postal services and contribution associated with those services, volume of mail and packages processed through our network and our ability to manage our cost structure in line with declining levels of mail volume, increased competition in the more labor-intensive Shipping and Packages business and an increasing number of delivery points.
**Effects of COVID-19**

In March 2020, the World Health Organization (“WHO”) declared COVID-19 a global pandemic, which has since spread throughout the U.S. Changing federal, state and local government actions to address the pandemic have been occurring on a daily basis, and government-imposed shelter-in-place and other movement restrictions designed to slow the pace of the outbreak have severely impacted the U.S. economy. We believe the severity and duration of the COVID-19 pandemic is uncertain, and such uncertainty may continue during the second half of 2020.

Our employees provide an essential public service and bind the nation together as a part of the country’s critical infrastructure. At least six days per week, and in some instances seven, our employees accept, process, transport, and deliver vital mail and packages like medicine, essential consumer staples, benefits checks, and important information, in every community, to every home and business, and we will continue to do so. As Americans are urged to stay home, the importance of the mail will only grow as our customers, including those in rural areas and senior citizens, will need access to vital communications, essential packages and other necessities.

Shortly after the WHO declaration, we created a dedicated COVID-19 response team to lead our response efforts. All of our employees are considered essential, and their safety is our highest priority. Following strategies recommended by the Centers for Disease Control and Prevention, we have implemented enhanced safety measures to protect the health of our employees.

In late March 2020, we restricted business travel and implemented remote work arrangements for certain of our office-based employees. We have also implemented new leave policies for employees who may be affected by illness, quarantines or childcare obligations. These arrangements have not materially affected our ability to maintain our business operations, including the operation of financial reporting systems, internal control over financial reporting, and disclosure controls and procedures.

While we have maintained full operations during the pandemic, travel and logistics restrictions have negatively affected our retail and commercial customers, as well as our suppliers and mail service providers. Many of our commercial customers, especially those with consumer-facing businesses, have been required to suspend their operations or operate at a lower capacity. As a result, our mail volumes began to decline significantly in March 2020. The sudden drop in mail volumes, our most profitable revenue stream, is steep and may never fully recover to levels prior to the pandemic.

Although the COVID-19 pandemic has caused a recent surge in the nation’s use of e-commerce, resulting in higher Shipping and Packages volumes, we do not expect the resulting increases in Shipping and Packages revenues to be sustainable or to offset losses in mail service revenue caused by COVID-19. While the future is uncertain, we believe that the nation’s increased use of e-commerce is likely to plateau in the short term as the effects of the pandemic begin to subside, followed by a longer-term regression of e-commerce caused by a weakened U.S. economy. Furthermore, this anticipated economic weakness has resulted in significant interest rate declines, which have caused an increase in certain of our workers’ compensation and retirement benefits expenses.

On March 27, 2020, the President signed the Coronavirus Aid, Relief, and Economic Security Act, enacted as Public Law 116-136 (the “CARES Act”). Notwithstanding our $15.0 billion statutory debt limit, and $3.0 billion annual limit on new borrowing, the CARES Act allows us to borrow up to an additional $10.0 billion in financing from the U.S. Treasury to fund operating expenses. The U.S. Treasury may lend up to this amount at our request, upon terms and conditions mutually agreed upon. However, we have no assurance that the U.S. Treasury will agree to provide such financing or if it will be provided upon favorable terms.

We estimate that the COVID-19 pandemic may increase our net operating loss by more than $22.0 billion over the next eighteen months, threatening our ability to operate. If we are able to borrow the $10.0 billion from the U.S. Treasury as provided by the CARES Act, we expect that we will have sufficient liquidity to continue to operate through April 2021. However, if we are unable to secure this $10.0 billion in financing, we expect to be able to continue to operate only through September 2020, unless we default on additional obligations.
Three Months Ended March 31, 2020

As more fully described below in Operating Revenue and Volume, our operating revenue for the three months ended March 31, 2020, increased $349 million, or 2.0%, compared to the same period last year. The increase in operating revenue was due to the following:

- Shipping and Packages revenue increase of $386 million, or 7.1%, with a volume growth of 12 million pieces, or 0.8%, driven largely by the January 2020 price increases applicable to certain Competitive services and the temporary surge in e-commerce resulting from the COVID-19 pandemic; and
- First-Class Mail revenue increase of $89 million, or 1.4%, despite a volume decline of 29 million pieces, or 0.2%. Revenue growth was the result of decennial mailings associated with the 2020 U.S. Census, otherwise revenue and volume would have each declined during the quarter.

The above increases in operating revenue were partially offset by a decrease in Marketing Mail revenue of $94 million, or 2.5%, with a volume decline of 604 million pieces, or 3.4%, largely the result of the COVID-19 pandemic, as many of our commercial customers, especially those with consumer-facing businesses, began to suspend their operations or operate at a lower capacity in March 2020. Political and election mail revenue and volumes increased by approximately $100 million and 500 million pieces, respectively, compared to the same period last year, resulting from the impact of the 2020 primary and general elections.

As more fully described below in Operating Expenses, our operating expenses for the three months ended March 31, 2020, increased approximately $2.8 billion, or 14.2%, compared to the same period last year. The increase in operating expenses was primarily due to the following:

- Workers’ compensation expense increase of approximately $2.2 billion, primarily due to declines in discount rates, outside of management’s control, as the COVID-19 pandemic weighed on the U.S. economy;
- Retirement benefits expense increase of $348 million, or 23.7%, due to revised actuarial assumptions for CSRS and FERS unfunded retirement benefits amortization, which are outside of management’s control, and to increased contribution rates for FERS normal costs, compared to the same period last year;
- Other operating expenses increase of $124 million, or 5.3%, due to spending increases in various categories including enhancements to cyber security and information technology;
- Compensation and benefits expense increase of $119 million, or 1.0%, due primarily to contractual wage increases.

The above increases were partially offset by a decrease in retiree health benefits expense of $50 million, or 3.9%, primarily due to the impact of discount rates in effect during October 2019 that were used in OPM’s preliminary annual estimates.

Overall, we reported a net loss of approximately $4.5 billion for the three months ended March 31, 2020, compared to a net loss of approximately $2.1 billion for the same period last year.

Six Months Ended March 31, 2020

As more fully described below in Operating Revenue and Volume, our operating revenue for the six months ended March 31, 2020, decreased $11 million, which was essentially flat, compared to the same period last year.

The decrease in operating revenue was largely due to the following:

- Marketing Mail revenue decrease of $347 million, or 4.1%, with a volume decline of approximately 2.3 billion pieces, or 5.9%, driven by decreases in revenue and volume from political and election mail in the first quarter. Political and election mail revenue and volumes decreased by approximately $140 million and 900 million pieces, respectively, compared to the same period last year, which benefited from the impact of the 2018 mid-term elections during the first quarter of 2019. Furthermore, volume declined due to the COVID-19 pandemic in the second quarter, as the pandemic affected many of our commercial customers;
- First-Class Mail revenue decrease of $79 million, or 0.6%, with a volume decline of 600 million pieces, or 2.1%, reflecting the continuing migration from mail to electronic communication and transaction alternatives; and
• *Periodicals* revenue decrease of $57 million, or 9.4%, with a volume decline of 231 million pieces, or 9.8%, driven by the continuing migration to electronic communication and digital advertising.

The decrease in operating revenue was partially offset by an increase in Shipping and Packages revenue of $532 million, or 4.5%, despite a volume decline of 73 million pieces, or 2.2%, as we continued to see revenue growth in this service category during the six-month period driven largely by the January 2020 price increases applicable to certain Competitive services.

As more fully described below in *Operating Expenses*, our operating expenses for the six months ended March 31, 2020, increased approximately $1.6 billion, or 4.0%, compared to the same period last year. The increase in operating expenses was primarily due to the following:

• Workers’ compensation expense increase of approximately $1.1 billion, primarily due to declines in discount rates, outside of management’s control, as the COVID-19 pandemic weighed on the U.S. economy;
• Retirement benefits expense increase of $477 million, or 16.1%, due to revised actuarial assumptions for CSRS and FERS unfunded retirement benefits amortization, which are outside of management’s control, and to increased contribution rates for FERS normal costs, compared to the same period last year;
• Other operating expenses increase of $122 million, or 2.5%, due to spending increases in various categories including enhancements to cyber security and information technology; and
• Transportation expenses increase of $63 million, or 1.5%, primarily resulting from higher air transportation costs, but partially offset by lower international transportation costs. The increase in highway transportation costs was driven by a one-time adjustment for our adoption of Accounting Standards Update 2016-02 *Leases*, which has since been codified in Accounting Standards Codification (“ASC”) 842, *Leases* (“ASC 842”), but partially offset by a decrease in the number of miles driven and lower average diesel fuel prices. The decrease in international transportation costs was driven by lower *International Mail* volumes.

The above increases in operating expenses were partially offset by the following decreases in operating expenses:

• Retiree health benefits expense decrease of $100 million, or 3.9%, primarily due to the impact of discount rate changes in effect during October 2019 that were used in OPM’s preliminary annual estimates; and
• Compensation and benefits expense decrease of $71 million, or 0.3%, primarily due to management’s efforts to align work hours with volume workloads, but partially offset from increases due to contractual wage adjustments.

Overall, we reported a net loss of approximately $5.3 billion for the six months ended March 31, 2020, compared to a net loss of approximately $3.6 billion for the same period last year.

**Non-GAAP Controllable Loss**

In the day-to-day operation of our business, we focus on costs that can be managed in the course of normal business operations, such as salaries and transportation. We calculate controllable loss, a non-GAAP measure, by excluding items over which we have no control, such as PSRHB actuarial revaluation and amortization expenses, workers’ compensation expenses caused by actuarial revaluation and discount rate changes, and retirement expenses caused by actuarial revaluation. Controllable loss should not be considered a substitute for net loss and other GAAP reporting measures.
The following table reconciles our GAAP net loss to controllable loss for the three and six months ended March 31, 2020, and 2019:

<table>
<thead>
<tr>

</table>

¹ Expense for the accrual for the annual payment due to OPM by September 30 of the respective year, as calculated by OPM, to amortize the unfunded PSRHBF retirement health benefit obligation. Payments are to be made through 2056 based on OPM invoices.

² Net amounts include changes in assumptions, valuation of new claims and revaluation of existing claims, less current year claim payments.

³ Expense for the accrual for the annual payment due to OPM by September 30 of the respective fiscal year, to amortize the unfunded CSRS retirement obligation. The 2020 amounts are based on updated Postal Service estimates resulting from revised actuarial assumptions. Payments are to be made through 2043 based on OPM invoices.

⁴ Expense for the accrual for the annual payment due to OPM by September 30 of the respective fiscal year, to amortize the unfunded FERS retirement obligation. The 2020 amounts are based on updated Postal Service estimates resulting from revised actuarial assumptions. Payments are to be made over a 30-year rolling period based on OPM invoices.

Our controllable loss decreased $14 million for the three months ended March 31, 2020, compared to the same period last year. This decrease was largely driven by the $349 million increase in operating revenue, offset by higher other operating expenses of $124 million, higher compensation and benefits expenses of $119 million, and higher FERS normal costs of $75 million.

Our controllable loss increased $270 million for the six months ended March 31, 2020, compared to the same period last year. This increase was largely driven by higher FERS normal costs of $134 million and higher transportation expenses of $63 million, partially offset by lower compensation and benefits expenses of $71 million.

These items are discussed in greater detail in Operating Revenue and Volume and Operating Expenses below.

**OPERATING REVENUE AND VOLUME**

The combined categories of *First-Class Mail* and *Marketing Mail* continued to provide the majority of our revenue, despite long-term trends away from traditional paper communication and correspondence to electronic media. Although this migration to electronic media has resulted in significant volume declines in *First-Class Mail* over the last decade, *Marketing Mail* volume remained relatively steady between 2009 and 2016. However, *Marketing Mail* volume began to decline at a greater rate beginning in 2017 and continued to decline through the first half of 2018. Aside from a volume rebound between the second half of 2018 through the first quarter of 2019 that was driven by increases in political and election mail associated with the 2018 mid-term elections, *Marketing Mail* resumed its volume decline through the remainder of 2019 and the first half of 2020.
The following table summarizes our operating revenue and volume for the three and six months ended March 31, 2020, and 2019, by each service category:

</table>

1 Excludes First-Class Package Service - Retail and First-Class Package Service - Commercial.
2 Excludes Marketing Mail Parcels.
3 Includes Priority Mail, USPS Retail Ground, Parcel Select Mail, Parcel Return Service Mail, Marketing Mail Parcels, Package Service Mail, First-Class Package Service - Retail, First-Class Package Service - Commercial and Priority Mail Express.
4 Revenue includes PO Box services, Certified Mail, Return Receipts, Insurance, Other Ancillary Services, Shipping and Mailing Supplies, Collect on Delivery, Registered Mail, Stamped Envelopes and Cards, Money Orders and Other services.
5 Volume includes Postal Service internal mail and free mail provided to certain congressionally mandated groups.

For the three months ended March 31, 2020, First-Class Mail generated approximately 36% of operating revenue, which was essentially unchanged compared to the same period last year, and approximately 42% of our volume, a 1% increase compared to the same period last year. Marketing Mail generated approximately 21% of operating revenue and 50% of our volume, both 1% decreases from the same period last year.

For the six months ended March 31, 2020, First-Class Mail generated approximately 35% of operating revenue, which is essentially unchanged compared to the same period last year, and approximately 40% of our volume, a 1% increase compared to the same period last year. Marketing Mail generated approximately 22% of operating revenue and 52% of our volume, both 1% decreases from the same period last year.

We continued to experience positive revenue results in our Shipping and Packages category, and it represented approximately 33% of our revenue for the three months ended March 31, 2020, which was a 2% increase from the same period last year, and approximately 33% of our revenue for the six months ended March 31, 2020, a 1% increase from the same period last year. Shipping and Packages generated approximately 4% of our volume for both the three and six months ended March 31, 2020, which was relatively unchanged compared to the same period last year.

Although revenue and volume are closely linked to the strength of the U.S. economy and changes in how our customers use the mail, we have proactively targeted opportunities to grow our business. We continue to focus on our customers’ needs and have increased our investment in mail and package innovation. However, we also
recognize that revenue growth is constrained by laws and regulations restricting the types of products, services and pricing we may offer to our customers and the speed with which we can bring new products to market.

We anticipate that First-Class Mail will continue to lose volume in future years with the migration to electronic communication and transactional alternatives resulting from technological changes. To address the long-term trend that such changes have had on our First-Class Mail revenue and volume, we have been working with the mailing industry to slow the decline through mailing promotions and leveraging the high open-and-read rates of, for example, bills and statements for additional customer engagement and education.

Furthermore, due to the COVID-19 pandemic our First-Class Mail and Marketing Mail volumes began an accelerated decline in March 2020. The sudden drop in mail volumes, our most profitable revenue stream, is steep and may never fully recover to levels prior to the pandemic.

We have also focused on providing new services and innovating with Marketing Mail. We have expanded service offerings such as Informed Delivery, which enables customers to preview mail and manage packages scheduled to arrive as a means of merging digital and physical mail, as well as allowing mailers to launch interactive digital campaigns. Additionally, we are focusing on opportunities to pilot new products and innovate with customers and the mail industry to enhance the value of hard-copy communication. We believe these service offerings will further improve the value of both First-Class Mail and Marketing Mail.

Our Shipping and Packages category has historically experienced revenue and volume growth as a result of our successful efforts to compete in shipping services, including last-mile e-commerce fulfillment markets and Sunday delivery as well as end-to-end markets. We continue to focus on responding to customers’ needs by implementing solutions and maintaining strategic business partnerships that help us capitalize on the growing e-commerce business.

The COVID-19 pandemic has caused a recent surge in the nation’s use of e-commerce, resulting in higher Shipping and Packages volumes. However we do not expect the resulting increases in Shipping and Packages revenues to be sustainable or to offset losses in mail service revenue caused by COVID-19. Although the future is uncertain, we believe that the nation’s increased use of e-commerce is likely to plateau in the short term as the effects of the pandemic begin to subside, followed by a longer-term regression of e-commerce caused by a weakened U.S. economy.

Our Shipping and Packages category is subject to intense competition which significantly impacts both revenue and volume. Certain major customers continue to divert volume from our network by in-sourcing the last-mile delivery into their own networks. These customers are also aggressively pricing their products and services in order to fill their networks and grow package density.

We implemented price increases for certain Market-Dominant and Competitive services in January 2019 and 2020. Additionally, we implemented dimensional weighting provisions that amount to price increases for certain Shipping and Packages subcategories in June 2019.

**First-Class Mail**

First-Class Mail, presented in this report as a mail class and a Market-Dominant service category, includes cards, letters and flats. Prices of First-Class Mail, our most profitable service category, are the same regardless the geographic distance between the origination and delivery points. Because First-Class Mail is classified by law as Market-Dominant, price increases are currently generally subject to a price cap based on the Consumer Price Index for All Urban Consumers ("CPI-U").

For the three months ended March 31, 2020, First-Class Mail revenue increased $89 million, or 1.4%, despite a volume decline of 29 million pieces, or 0.2%, compared to the same period last year. Revenue growth was the result of decennial mailings associated with the 2020 U.S. Census, otherwise revenue and volume would have each declined during the quarter. For the six months ended March 31, 2020, First-Class Mail revenue decreased $79 million, or 0.6%, and volume declined 600 million pieces, or 2.1%, compared to the same period last year. The change in revenue for both periods was less than the corresponding volume declines due to the January 2020 price increase applicable to certain Market-Dominant services. The most significant factor contributing to the
declining trend in First-Class Mail volume has been the continuing migration from mail to electronic communication and transaction alternatives.

Due to the COVID-19 pandemic, our First-Class Mail volume began to decline significantly in late March 2020, and it may never fully recover to levels prior to the pandemic. A protracted loss in customer demand for our services will continue to have a material effect on First-Class Mail revenue and volume.

**Marketing Mail**

USPS Marketing Mail (more commonly, Marketing Mail), presented as a mail class and a Market-Dominant service category, generally consists of advertising, newsletters, catalogs, small marketing parcels and other printed matter not required to be processed and delivered as First-Class Mail or Periodicals.

Between 2009 and 2016, Marketing Mail experienced relatively flat volume. However, Marketing Mail volume began to decline at a greater rate beginning in 2017 and continued to decline through the first half of 2018. Aside from a volume rebound between the second half of 2018 through the first quarter of 2019 that was driven by increases in political and election mail associated with the 2018 mid-term elections, Marketing Mail continued its volume decline through the remainder of 2019 and the first half of 2020, exacerbated by the COVID-19 pandemic.

For the three months ended March 31, 2020, Marketing Mail revenue decreased $94 million, or 2.5%, and volume declined 604 million pieces, or 3.4%, compared to the same period last year. For the six months ended March 31, 2020, Marketing Mail revenue decreased $347 million, or 4.1%, and volume declined approximately 2.3 billion pieces, or 5.9%, compared to the same period last year. For the three months ended March 31, 2020, our revenue and volume from political and election mail increased by approximately $100 million and 500 million pieces, respectively, compared to the same period last year, as we began to benefit from the impact of the 2020 elections during the second quarter of 2020. For the six months ended March 31, 2020, our revenue and volume from political and election mail decreased by approximately $140 million and 900 million pieces, respectively, compared to the same period last year, which benefited from the impact of the 2018 mid-term elections during the first quarter of 2019.

Due to the COVID-19 pandemic, many of our commercial customers, especially those with consumer-facing businesses, have been required to suspend their operations or operate at a lower capacity. As a result, our Marketing Mail volume began to decline significantly in March 2020, and it may never fully recover to levels prior to the pandemic. A protracted loss in customer demand for our services will continue to have a material effect on our Marketing Mail revenue and volume.

Marketing Mail is subject to intense competition, and price increases are currently generally capped at the rate of inflation. Marketing Mail volume is somewhat reflective of the cyclical nature of the U.S. economy, although targeted advertising campaigns can stimulate demand for this service, and our customers have used Marketing Mail to mail to more targeted prospects.
### Shipping and Packages

The following table summarizes our operating revenue and volume for Shipping and Packages for the three and six months ended March 31, 2020, and 2019, by each service subcategory:

| First-Class Package Services³ | 340 | 341 | 712 | 724 |
| Package Services | 142 | 159 | 296 | 333 |
| **Total Shipping and Packages volume** | **1,484** | **1,472** | **3,221** | **3,294** |

¹ Includes *Priority Mail*, a 1-3 business day delivery service; *Priority Mail Express*, an overnight delivery service available 365 days per year; and *USPS Retail Ground*, a retail-only Competitive service priced identically and functionally equivalent to *Priority Mail for Zones* 1-4.

² Includes *Parcel Select*, *Parcel Return*, and *Marketing Mail Parcels*.

³ Includes *First-Class Package Services - Retail* and *First-Class Package Services - Commercial*.

Our Shipping and Packages category has historically experienced revenue and volume growth as a result of our successful efforts to compete in shipping services, including last-mile e-commerce fulfillment markets and Sunday delivery as well as end-to-end markets. However, this service category is subject to intense competition which significantly impacts both our revenue and volume. Shipping and Packages revenue and volume are historically greatest in the first quarter of the year due to the holiday shipping season.

For the three months ended March 31, 2020, Shipping and Packages revenue increased 7.1%, with a volume growth of 0.8%, compared to the same period last year. The volume increased due to a temporary surge in e-commerce resulting from the COVID-19 pandemic, and revenue outpaced volume increases due to the January 2020 price increases associated with certain Competitive services.

For the six months ended March 31, 2020, Shipping and Packages revenue increased 4.5%, despite a volume decline of 2.2%, compared to the same period last year. The revenue increases were largely due to the January 2020 price increases associated with certain Competitive services. The volume declines largely resulted from intense competition and certain major commercial customers and competitors delivering more of their own packages, compared to the same period last year, offset by the temporary surge in e-commerce resulting from the COVID-19 pandemic.

**Priority Mail Services**

Priority Mail Services is our Shipping and Packages subcategory that includes *Priority Mail*, *Priority Mail Express* and *USPS Retail Ground*. *Priority Mail* and *Priority Mail Express* services allow customers the ability to send documents and packages requiring expedited transportation and handling. While Priority Mail Services revenue has historically grown year-over-year, its service offerings are price sensitive and its growth rate has been lower than other Shipping and Packages subcategories due to intense competition.

Priority Mail Services accounted for our largest portion of Shipping and Packages revenue, representing approximately 46% of the total for the three and six months ended March 31, 2020, and 2019. However, Priority
Mail Services accounted for approximately 19% and 18% of the total Shipping and Packages volume for three and six months ended March 31, 2020, respectively, essentially unchanged compared to the same periods last year.

For the three months ended March 31, 2020, Priority Mail Services revenue grew 7.0%, on volume growth of 2.2%, compared to the same period last year. For the six months ended March 31, 2020, Priority Mail Services revenue grew 3.4%, despite a volume decline of 1.9%, compared to the same period last year. Revenue grew at a greater rate than volume for the three-month period and despite the volume decline for the six-month period, largely due to the January 2020 price increases applicable to Competitive services.

**Parcel Services**

Our Parcel Services subcategory includes Competitive services Parcel Select and Parcel Return, as well as Market-Dominant USPS Marketing Mail Parcels (more commonly, Marketing Mail Parcels). Parcel Select and Parcel Return services largely consist of last-mile deliveries, offered to large bulk shippers that perform their own sorting before dropping parcels deeper into our network.

For the three months ended March 31, 2020, revenue from Parcel Services increased 9.6%, on volume growth of 3.4%, compared to the same period last year. For the six months ended March 31, 2020, revenue from Parcel Services increased 6.3%, despite a volume decline of 0.8%, compared to the same period last year. This subcategory is primarily a last-mile service that bypasses much of our infrastructure and therefore is one of our lowest-priced package services, and as a result, produces a lower contribution per piece when compared to many of our other services. For the six months ended March 31, 2020, volume declined due to certain major commercial customers delivering more of their own packages. However, for the three months ended March 31, 2020, volume increased due to the temporary surge in e-commerce from the COVID-19 pandemic. Revenue grew at a greater rate than volume for the three-month period and despite the volume decline for the six-month period, largely due to the January 2020 price increases applicable to Competitive services.

**First-Class Package Services**

Our First-Class Package Services subcategory includes the competitively priced First-Class Package Service - Retail, a Competitive service targeted to retail customers for packages weighing up to 13 ounces, and First-Class Package Service - Commercial, a Competitive service targeted to commercial customers for packages weighing up to 16 ounces. This subcategory offers commercial customers that ship primarily lightweight fulfillment parcels the lowest-priced expedited end-to-end tracked package option in the marketplace. First-Class Package Services revenue and volume performance has historically experienced strong increases for the past several years, particularly from our commercial customers. These increases are primarily attributable to growth in e-commerce.

For the three months ended March 31, 2020, First-Class Package Services revenue increased 5.9%, despite a volume decline of 0.3%, compared to the same period last year. For the six months ended March 31, 2020, First-Class Package Services revenue increased 6.0%, despite a volume decline of 1.7%, compared to the same period last year. Revenue grew despite the volume declines, largely due to the January 2020 price increases applicable to Competitive services.

**Package Services**

Our Package Services subcategory is a Market-Dominant service that includes both Bound Printed Matter for materials up to 15 pounds and Library and Media Mail for materials up to 70 pounds. For the three months ended March 31, 2020, Package Services revenue decreased 5.2% on a volume decline of 10.7%, compared to the same period last year. For the six months ended March 31, 2020, Package Services revenue decreased 5.3% on a volume decline of 11.1%, compared to the same period last year. Revenue declined at a slower rate than volume for the three and six months ended March 31, 2020, due to the January 2020 price increase applicable to Market-Dominant services.

**International Mail**

Our International Mail category includes several services that enable customers, both domestic and abroad, to send international mail, including postcards, envelopes, flats and packages with either standard or express delivery options. “Outbound” services, which allow customers in the U.S. to send mail and packages to other countries, generate approximately two thirds of International Mail revenue, but “inbound” services are the opposite, generating two thirds of volume but only a third of the revenue. This is primarily due to the smaller size and lower rates for inbound international e-commerce packages.
For the three months ended March 31, 2020, International Mail revenue increased 2.4%, despite a volume decline of 11.7%, compared to the same period last year. For the six months ended March 31, 2020, International Mail revenue increased 0.4%, despite a volume decline of 9.1%, compared to the same period last year. These revenue increases were largely due to the January 2020 price increases applicable to Competitive services. The declines in both inbound and outbound volume were due to various competitive pricing, political and economic factors.

The U.S. is a member of the Universal Postal Union ("UPU"), a specialized agency of the United Nations that facilitates the exchange of international mail. We are the designated postal operator for the U.S. under the UPU, and payments to the designated postal operator for the delivery of foreign origin letter-post mails are known as "terminal dues".

In September 2019, the UPU members had a special meeting -- known as the Extraordinary Congress -- to discuss the terminal dues system. During that meeting, UPU members agreed to establish a new remuneration system that will allow us to self-declare rates beginning in July 2020. Other foreign postal operators may also reciprocally apply rates at full-self-declared rates at that time.

In February 2020, we officially invoked our provision to self-declare rates beginning in July 2020.

**Periodicals**

Periodicals also presented as a mail class and a Market-Dominant service category, includes services designed for publishers of newspapers, magazines and other periodical publications whose primary purpose is providing publications to subscribers or other users. For the three months ended March 31, 2020, Periodicals revenue decreased 11.1% and volume declined 12.2%, compared to the same period last year. For the six months ended March 31, 2020, Periodicals revenue decreased 9.4% and volume declined 9.8%, compared to the same period last year.

Periodicals revenue and volume have been in decline for more than a decade as trends in hard-copy reading behavior and shifts of advertising away from print have eroded this business. The Periodicals category is not expected to rebound as electronic content continues to grow in popularity with the public.

**Other**

Other services include ancillary services such as Certified Mail, PO Box services, and Return Receipt services. Also included in this category are money orders and passport services. Other services revenue decreased 1.2%, and 3.3% for the three and six months ended March 31, 2020, respectively, compared to the same periods last year.

**OPERATING EXPENSES**

In an effort to align our resources with anticipated future mail and package volume, we continue to aggressively manage operating expenditures under management's control.

We originally designed our mail processing and distribution network to provide overnight delivery service of First-Class Mail within specified delivery areas for a much higher volume of mail than we are required to process and deliver today, and the network's legacy capabilities are not completely aligned to today's mail mix and volumes. Consequently, certain of our processing and distribution facilities continue to operate at less than full capacity. Our challenge to contain costs is also compounded by the increasing number of delivery points, which, when combined with lower mail volume, has resulted in a drop in the average number of pieces delivered per delivery point per day from approximately 5.5 pieces in 2007 to 3.4 pieces in 2019, a reduction of approximately 39%, and a further significant decline is expected in 2020.

**Compensation and Benefits**

Compensation and benefits is our largest operating expense category. These expenses consist of costs related to our active career and non-career employees other than retirement costs associated with U.S. government defined benefit pension programs and retiree health costs which are further discussed in Retirement benefits and Retiree Health Benefits, respectively.
Overall, our compensation and benefits expenses increased 1.0% for the three months ended March 31, 2020, but decreased 0.3% for the six months ended March 31, 2020, compared to the same periods last year. The following table presents compensation and benefits expenses for the three and six months ended March 31, 2020, and 2019:

</tbody>
</table>

**Compensation**

Compensation expense increased 0.6% for the three months ended March 31, 2020, but decreased 0.5% for six months ended March 31, 2020, compared to the same periods last year. The activity in both periods represents increases due to contractual wage adjustments and approximately 3.6 million hours attributable to the extra work day due to the leap year, offset by management’s efforts to align work hours with volume workloads.

**Work Hours**

For the three months ended March 31, 2020, total work hours were approximately 286 million, essentially unchanged compared to the same period last year. However, approximately 3.6 million hours, or 1.3%, were attributable to the extra work day due to the leap year in 2020. Were it not for the extra work day due to the leap year, work hours would have declined for the period.

For the six months ended March 31, 2020, total work hours were approximately 592 million, a decrease of 1.0%, compared to approximately 598 million total work hours for the six months ended March 31, 2019. This decrease was the result of management’s efforts to reduce work hours in line with volume workloads.

As a result of the COVID-19 pandemic, work hours began to decline in late March 2020 due to lower mail volumes and workforce availability, and we expect this trend to continue for the duration of the pandemic.

**Workforce Composition**

The number of career employees at March 31, 2020, was approximately 496,000, a decrease of approximately 1,500 employees, or 0.3%, compared to the same date a year ago. This decrease primarily reflected natural attrition, continued efforts to align our workforce with declining mail volume, offset by conversions of non-career employees to career status, in accordance with our contractual agreements.

The number of non-career employees at March 31, 2020, was approximately 129,500, a decrease of approximately 10,500 employees, or 7.5%, compared to the same date a year ago. This decrease primarily reflected management’s continued efforts to align our workforce with declining mail volume, and the conversions of non-career employees to career status, in accordance with our contractual agreements.

**Collective Bargaining Agreements**

On January 22, 2020, we reached a tentative agreement with the National Postal Mail Handlers Union, AFL-CIO ("NPMHU") on a new three-year collective bargaining agreement, which the union membership ratified on April 8, 2020. The new contract went into effect on April 25, 2020, and will expire on September 20, 2022.

On March 10, 2020, a three-member arbitration panel reached a decision in our legally mandated binding interest arbitration process with the American Postal Workers Union, AFL-CIO ("APWU"), establishing the terms of a new collective bargaining agreement. The new contract went into effect on March 10, 2020, and will expire on September 20, 2021.
In September 2019, we agreed to extend contract negotiations relating to a new collective bargaining agreement with the National Association of Letter Carriers, AFL-CIO (“NALC”). The previous contract with the NALC expired on September 20, 2019, and negotiations with the NALC are at an impasse. The parties will continue to follow the current agreement until a new contract is reached through the dispute resolution process.

**Employee Health Benefits**

Our expense for employee health benefits (which includes the employer portion of Medicare taxes) is most significantly impacted by the number of employees electing coverage and the premium costs of the selected plans. Our active employees may participate in the Federal Employees Health Benefits (“FEHB”) Program, which OPM administers. Separate from FEHB, we offer our own self-insured healthcare plan to certain non-career employees who are ineligible for FEHB.

Employee health benefits expense increased 3.2% and 0.8% for the three and six months ended March 31, 2020, compared to the same periods last year, driven by average premium increases of 4.0% in calendar year 2020, and partially offset by the lower contribution rate of the employer portion of healthcare premiums that we paid, by management efforts to provide employees with information and tools for selecting the health benefit plans that best meet their needs, and by the small decrease in number of career employees, as previously discussed.

Our share of healthcare premiums for our employees represented 71.9% of the total healthcare premium costs for both the three months ended March 31, 2020, and 2019. Our share of healthcare premiums for our employees represented 72.0% and 72.3% of the total healthcare premium costs for the six months ended March 31, 2020, and 2019, respectively. This decrease in our share of healthcare premium costs for employees during the six-month period was consistent with the terms of our contractual agreements.

**Social Security**

For the three and six months ended March 31, 2020, our Social Security costs increased 1.0% for the three months ended March 31, 2020, but decreased 0.4% for the six months ended March 31, 2020, compared to the same periods last year. These fluctuations were consistent with the general changes in compensation for the period, as described above in Compensation.

The CARES Act offers certain employers the ability to defer payment of the employer’s share of the Social Security payroll tax on wages incurred from March 27, 2020, through December 31, 2020. In accordance with this provision, we began deferring these payments in April 2020, and intend to continue the deferral for the remainder of calendar year 2020 for an estimated total deferral amount of approximately $1.6 billion. One half of these deferred payments would be due by December 31, 2021, and the other half by December 31, 2022.

**Thrift Savings Plan**

Career employees may participate in the Thrift Savings Plan (“TSP”), a defined contribution retirement savings and investment plan administered by the Federal Retirement Thrift Investment Board. Our TSP expenses are related only to our contributions for FERS employees who participate in the TSP. For these employees, we contribute 1% of basic pay and match voluntary employee contributions up to an additional 4% of basic pay.

For the three and six months ended March 31, 2020, our TSP matching costs increased 3.9% and 2.8%, respectively, compared to the same periods last year. The increase in expenses correlates to the changing workforce composition of CSRS and FERS employees.

**Retirement Benefits**

The majority of our career employees participate in one of two U.S. government defined benefit pension programs, CSRS and FERS, based on the starting date of their employment with us or another U.S. government employer. We incur normal costs (the amount determined by OPM representing the employer portion of retirement benefits for participating employees and their qualifying survivors, upon retirement, for each employee’s current year of service) for FERS employees; however, by law we do not pay normal costs for CSRS retirement benefits. FERS employees are further categorized as either FERS, FERS - Revised Annuity Employees (FERS - RAE), or FERS - Further Revised Annuity Employees (FERS - FRAE) depending on whether their date of hire was before, during,
or after calendar year 2013, respectively. This categorization determines the percentage of basic pay that we are required to contribute for normal cost.

Our retirement benefits expenses consist of three components: 1) FERS normal costs, 2) CSRS unfunded retirement benefits amortization, and 3) FERS unfunded retirement benefits amortization. These retirement benefits expense components are further described in detail in the sections below. The following table presents the retirement benefits expenses for the three and six months ended March 31, 2020, and 2019:

<table>

</tbody>
</table>

¹ Expense for the accrual for the annual payment due to OPM by September 30 of the respective year, based on information provided by OPM, to amortize the unfunded CSRS retirement obligation. Payments are to be made through 2043 based on OPM invoices.

² Expense for the accrual for the annual payment due to OPM by September 30 of the respective year, based on information provided by OPM, to amortize the unfunded FERS retirement obligation. Payments are to be made over a 30-year rolling period based on OPM invoices.

Our retirement benefits expenses increased 23.7% and 16.1% for the three and six months ended March 31, 2020, respectively, compared to the same periods last year. This increase was due to rising employer contributions rates for FERS normal cost, as well as increases in the CSRS and FERS unfunded retirement benefits amortization, as discussed below.

For additional information, see Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 9 - Retirement Plans.

**FERS Normal Costs**

We record our contributions to FERS normal costs as they are incurred. Any unpaid employer amounts at the end of a period, along with any employee amounts withheld but not remitted at the end of a period, are recorded as a current liability within Retirement benefits in the accompanying Balance Sheets.

As determined by OPM, our FERS normal cost contribution rates increased from 13.7% to 14.7% of basic pay for 2020, an increase of 7.3% from the prior year, affecting most of our FERS participants. As a result of this contribution rate increase, FERS normal cost expenses increased 8.6% and 7.6% for the three and six months ended March 31, 2020, respectively, compared to the same periods last year.

**CSRS and FERS Unfunded Retirement Benefits**

OPM periodically notifies us regarding its revaluation of unfunded CSRS and FERS retirement benefits. The amounts we record as expenses for our unfunded CSRS and FERS liabilities may be significantly impacted by changes in actuarial assumptions used by OPM to revalue the unfunded liabilities.

In October 2019, OPM provided an actuarial report projecting the annual amortization payments due September 30, 2020, to be $1.6 billion for CSRS and $1.1 billion for FERS.

On April 2, 2020, the Board of Actuaries of the CSRS, which oversees OPM’s calculation of actuarial liabilities for CSRS and FERS, lowered the discount rate used to calculate CSRS and FERS unfunded retirement liabilities from 4.25% to 4.0%. We have estimated that the impact of this change in discount rate on the annual CSRS and FERS amortization expense, will result in revised projected amortization payments due September 30, 2020, of approximately $1.8 billion for the CSRS obligation and approximately $1.3 billion for the FERS obligation, increases of $181 million and $226 million, respectively.
Accordingly, we have accrued $495 million and $899 million for the three and six months ended March 31, 2020, for the CSRS amortization expense, reflecting an adjustment of approximately $91 million for the revised assumptions. Likewise, we have accrued $378 million and $643 million for the three and six months ended March 31, 2020, for the FERS amortization expense, reflecting an adjustment of approximately $113 million for the revised assumptions.

Our CSRS and FERS unfunded retirement benefits amortization expenses increased 45.5% and 28.6% for the three and six months ended March 31, 2020, respectively, compared to the same periods last year, due to higher estimated annual amortization payments resulting from revised actuarial assumptions and discount rate changes.

We expect to receive invoices from OPM for the actual amounts due September 30, 2020, for CSRS and FERS during the fourth quarter of 2020, and the amounts invoiced could differ from the projected amounts, due to further changes in experience, discount rates and/or actuarial assumptions as of the calculation date.

Retiree Health Benefits
We participate in federal employee benefit programs for retiree health benefits. Retirees who participated in FEHB for the five years immediately preceding their retirement may continue to participate in the plan during retirement. Qualifying survivors of retirees are also eligible to receive benefits.

In accordance with PAEA, since the beginning of 2017, the PSRHBF has funded our share of retiree health benefit premiums. Also since 2017, we have been obligated to pay into the PSRHBF the actuarially determined normal costs of retiree health benefits attributable to the service of our employees, as well as the amortization payment for the PSRHBF unfunded liability. Our total retiree health benefits expenses therefore consist of both the normal and the amortization costs. We record the required contributions to the plan as an expense in the period in which each contribution is due.

Based on preliminary calculations provided by OPM in October 2019, we have projected the PSRHBF amortization payment amount due September 30, 2020, to be $900 million, and therefore accrued expenses of $225 million and $450 million for the three and six months ended March 31, 2020, respectively. We expect to receive the invoice from OPM for the actual amount due during the fourth quarter of 2020 and this may differ from the original projected amount due to changes in discount rates, actuarial assumptions and experience as of the invoice calculation date.

Also, based on preliminary calculations provided by OPM in October 2019 using updated discount rate assumptions, we have estimated the amount of our PSRHBF normal cost payment due September 30, 2020, to be $4.0 billion, and therefore accrued expenses of $1.0 billion and $2.0 billion for the three and six months ended March 31, 2020, respectively. We expect to receive the invoice from OPM for the actual amount due during the fourth quarter of 2020 and this may differ from the original projected amount due to changes in discount rates, actuarial assumptions and experience as of the invoice calculation date.

For the three and six months ended March 31, 2020, our total retiree health benefits expenses decreased by $50 million, or 3.9%, and $100 million, or 3.9%, respectively, compared to the same periods last year, all of which was attributable to a decrease in the estimated amortization payment for the PSRHBF unfunded liability.

For additional information, see Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 10 - Health Benefits Plans, Retirees.

Workers’ Compensation
Our employees injured on the job are covered by the Federal Employees’ Compensation Act (“FECA”), administered by the U.S. Department of Labor’s (“DOL”) Office of Workers’ Compensation Programs, which makes all decisions regarding injured workers’ eligibility for benefits. We are legally mandated to participate in the federal workers’ compensation program. Our workers’ compensation expense reflects the impacts of changes in discount rates, as well as the actuarial valuation of new workers’ compensation cases and revaluation of existing ones. We reimburse the DOL for all workers’ compensation benefits paid to or on behalf of our employees, plus an administrative fee.
On a daily basis we focus on costs that can be managed in the course of normal business operations. Certain aspects of workers’ compensation can be managed through human resource initiatives, safety measures and training. Other workers’ compensation costs cannot be managed in the course of normal business operations and are less predictable, including expenses caused by actuarial revaluation and discount rate changes. We subtract the cash payments made by DOL on behalf of workers’ compensation obligations, which are relatively predictable, from total workers’ compensation expense in order to determine the non-cash component of workers' compensation expense, a non-GAAP financial measure.

The following table presents the components of workers’ compensation expense, including the cash payments made by DOL on behalf of workers’ compensation obligations, for the three and six months ended March 31, 2020, and 2019:

<table>
<thead>

<td><strong>$2,625</strong></td>
<td><strong>$401</strong></td>
<td><strong>$2,092</strong></td>
<td><strong>$961</strong></td>
</tr>
</tbody>
</table>

For the three months ended March 31, 2020, the portion of workers’ compensation expense due to the impact of discount rate changes increased approximately $2.2 billion, compared to the same period last year. For the six months ended March 31, 2020, the portion of workers’ compensation expense due to the impact of discount rate changes increased approximately $1.1 billion, compared to the same period last year. These changes are the result of changes in interest rates, outside of management’s control.

The combined costs of new workers’ compensation cases and revaluation of existing workers’ compensation cases increased by $52 million and $14 million for the three and six months ended March 31, 2020, compared to the same periods last year. Changes in actuarial valuation are primarily attributable to the combined impacts of routine changes in actuarial estimation, the progression of existing cases and updated COLA assumptions, which are largely outside of management’s control.

Under FECA, workers’ compensation claims for many types of injuries cannot be settled through lump-sum payments, and in some instances with regard to those claims, compensation may be paid over many years. Federal law grants COLA rates to those claims, and these factors result in substantially higher costs to us than would likely result if we managed our own claims. Additionally, since we do not manage the FECA program, we have no ability to control the significant administrative costs associated with managing the claims and payments process.

For additional information, see Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 11 - Workers’ Compensation.

**Transportation**

Transportation expenses include the costs we incur to transport mail and packages between our facilities, comprising highway, air and international transportation contracts, plus contract delivery services.

With the exception of contract delivery services, our costs to deliver mail and other products to delivery points are not included within Transportation but in Compensation and benefits for employee costs and in Other operating expenses for fuel, vehicle maintenance and repair, and other costs. Furthermore, transportation expenses do not
include the compensation and related costs of employees responsible for transporting mail and packages between our facilities.

Variations in the volume and weight of mail transported, the mode of transportation used, and fuel prices have significant impact on transportation expenses.

The components of transportation expenses for the three and six months ended March 31, 2020, and 2019, are presented in the following table:

<table>

</tbody>
</table>

Overall, transportation expenses increased 0.4% and 1.5% for the three and six months ended March 31, 2020, compared to the same periods last year.

Highway transportation expenses decreased 1.5% for the three months ended March 31, 2020, but increased 3.4% during the six months ended March 31, 2020, compared to the same periods in last year. For the three and six months ended March 31, 2020, highway contract expenses decreased, primarily due to a decrease in the number of miles driven and lower average diesel fuel prices. However, results for the six months ended March 31, 2020, include a one-time adjustment resulting from our adoption of ASC 842, whereby we recorded transportation expenses associated with embedded leases in certain of our transportation contracts during the first quarter of 2020 (see Note 2 - Recent Accounting Pronouncements for additional disclosures regarding our adoption of ASC 842).

Air transportation expenses increased 3.9% for the three months ended March 31, 2020, but decreased 0.6% during the six months ended March 31, 2020, compared to the same periods last year. For the six months ended March 31, 2020, the slight decrease was due primarily to lower volumes and lower average jet fuel prices. However, both volumes and average jet fuel prices rose in the three months ended March 31, 2020, leading to an increase in air transportation expenses for the period.

International transportation expenses are related only to outbound services that allow customers in the U.S. to send mail and packages to other countries. For the three and six months ended March 31, 2020, international transportation expenses decreased 1.4% and 2.9% compared to the same periods last year, primarily due to decreases in our international service volumes.
Other Operating Expenses
Other operating expenses for the three and six months ended March 31, 2020, and 2019, are detailed in the following table:

Other operating expenses increased by 5.3% and 2.5% for the three and six months ended March 31, 2020, compared to the same periods in the prior year. While these aggregate changes were relatively immaterial, the period-over-period changes in the various components of other operating expenses for the three and six months ended March 31, 2020, were also relatively immaterial.

LIQUIDITY AND CAPITAL RESOURCES

Our liquidity consists of unrestricted cash and cash equivalents plus available borrowing capacity. As of March 31, 2020, and September 30, 2019, we held unrestricted cash and cash equivalents of $9.0 billion and $8.8 billion, respectively. During the six months ended March 31, 2020, our average daily liquidity balance under our statutory borrowing capacity was $12.3 billion, representing approximately 56 days of liquidity available, which we define as liquidity divided by estimated average cash disbursements (including capital expenditures) per calendar day (365 days per year).

We face certain risks caused by the COVID-19 pandemic, including the disruptions to our revenue and business operations, which will have a material effect on our financial condition and results of operations. Quarantines, shelter-in-place orders, and travel and logistics restrictions in connection with the outbreak have affected our retail and commercial customers, as well as suppliers and mail service providers. While the disruption is expected to be temporary, its duration remains uncertain. A protracted loss in customer demand for our services is likely to have a material effect on our financial condition, results of operations and liquidity. The sudden drop in mail volumes, our most profitable revenue stream, is steep and may never fully recover to levels prior to the pandemic.

Notwithstanding our $15.0 billion statutory debt limit, and $3.0 billion annual limitation on new borrowing, the CARES Act allows us to borrow up to an additional $10.0 billion in financing from the U.S. Treasury to fund operating expenses. The U.S. Treasury may lend up to this amount at our request, upon terms and conditions mutually agreed upon. However we have no assurance that the U.S. Treasury will agree to provide such financing or if it will be provided upon favorable terms.

We estimate that the COVID-19 pandemic may increase our net operating loss by more than $22.0 billion over the next eighteen months, threatening our ability to operate. If we are able to borrow the $10.0 billion from the U.S. Treasury as provided by the CARES Act, we expect that we will have sufficient liquidity to continue to operate through April 2021. However, if we are unable to secure this $10.0 billion in financing, we expect to be able to continue to operate only through September 2020, absent additional defaults.

Although our liquidity has generally increased since 2012, it remains insufficient to support an organization with approximately $80 billion in annual operating expenses, to make capital investments necessary for continuity of operations.
operations and to prepare for unexpected contingencies. Much of this liquidity improvement as of March 31, 2020, would not have occurred but for the temporary exigent surcharge, which allowed us to collect a total of $4.6 billion in incremental revenue between January 2014 and April 2016.

Aside from the temporary exigent surcharge, we defaulted on $33.9 billion of statutorily specified PSRHBF prefunding payments from 2012 through 2016, and did not make the approximately $495 million in payments due for FERS unfunded liabilities between 2014 and 2016, or the approximately $21.0 billion in payments due for PSRHBF normal cost and amortization on PSRHBF, CSRS and FERS unfunded liabilities between 2017 and 2019, in order to preserve liquidity, and to ensure that our ability to fulfill our primary universal service mission was not placed at undue risk. The combination of these defaults and non-payments, plus the incremental revenue associated with the temporary exigent surcharge referred to above, and the increased revenue from growth in our Shipping and Packages business, are the primary reasons why our cash and available liquidity has improved.

CASH FLOW ANALYSIS

Operating Activities
Cash provided by operating activities decreased $148 million for the six months ended March 31, 2020, compared to the same period last year, largely the result of timing differences in cash payments for compensation and benefits.

Investing Activities
We invested $741 million in the purchase of property and equipment for the six months ended March 31, 2020, which is an increase of $82 million, or 12.4%, compared to the same period last year. As of the date of this report, the amount of our full year projected capital expenditures is approximately $2.0 billion, which is approximately $300 million less than our original forecast of $2.3 billion. We anticipate that this may further decline if equipment and information technology investments and other programs are deferred to future years as a result of COVID-19.

Financing Activities
Except as described otherwise in this quarterly report, the nature and amounts of our payment obligations under our debt, capital and operating lease agreements, purchase commitments and other liabilities as of March 31, 2020, have not materially changed from those described in our Annual Report.

As of both March 31, 2020, and September 30, 2019, the aggregate principal balance of our outstanding debt was $11.0 billion, consisting of a combination of fixed-rate note and floating-rate notes, all of which we consider long-term debt.

DEBT
As of March 31, 2020, our statutory borrowing capacity was $4.0 billion, of which $1.0 billion would require repayment by September 30, 2020, to comply with our annual debt increase limits. Furthermore, notwithstanding our $15.0 billion statutory debt limit, and the $3.0 billion annual limitation on new borrowing, the CARES Act allows us to borrow up to an additional $10.0 billion in financing from the U.S. Treasury to fund operating expenses. The U.S. Treasury may lend up to this amount at our request, upon terms and conditions mutually agreed upon.

In 1974, we began issuing debt through individual debt agreements to the Federal Financing Bank (“FFB”), a government-owned corporation under the general supervision of the Secretary of the Treasury. In 1999, we entered into a Note Purchase Agreement (“NPA”) with the FFB to establish standardized procedures for issuing debt. Under the NPA, we were able to issue a series of notes with established terms and conditions by providing two days prior notice. Also under the NPA, we could make borrowings against two annually renewable revolving credit line facilities. These note arrangements and credit line facilities provided the flexibility to borrow short or long-term, using floating or fixed-rate instruments.

The NPA was extended each year through September 30, 2018, and in shorter increments between that date and August 31, 2019, at which time the NPA expired. This expiration did not affect the terms of any of our outstanding debt as of March 31, 2020, all of which was issued under the NPA.
If we are unable to renew or replace the NPA with the FFB, we have no assurance that we could obtain alternative debt financing on comparable terms. However, we believe that we will be able to maintain adequate liquidity through existing and new financing arrangements, as necessary and allowed by statute, to fund our operations.

On April 1, 2020, we drew $3.4 billion on a revolving credit facility with the FFB that survived the expiration of the NPA. In order to comply with the annual net increase limit, we must repay $400 million from this credit facility by September 30, 2020. Given that the credit facility has a maximum term of up to one year, we must repay any outstanding balance of the credit facility by April 1, 2021. The credit facility’s interest rate was determined by the U.S. Treasury based on the market rates of similar instruments as of the day of the funding request.

**LIQUIDITY OUTLOOK**

We are constrained by laws and regulations, including the PAEA, which restrict revenue sources and mandates certain expenses. Statutorily mandated expenses include amortization payments to provide full funding of retirement benefits under the CSRS and the FERS, as well as FERS normal costs, described in greater detail in Note 9 - Retirement Plans. Additionally, the PAEA established the PSRHBF and mandated certain obligations for paying normal costs, the present value of the estimated retiree health benefits attributable to active employees’ current year of service, and amortization payments for full prefunding of retiree health benefits. These prefunding obligations, described in greater detail in Note 10 - Health Benefits Plans, are unlike expenses imposed on most other federal entities or private-sector businesses that offer such benefits.

We continue to face challenges from the ongoing migration of mail to electronic alternatives, and we are legally limited under current law in how we can price our products and streamline our legacy business model. Our operations will require significant capital investment over the next few years to modernize and improve our processing and delivery infrastructure and update our delivery fleet in order to continue to meet our primary statutory obligation to provide prompt, reliable and efficient postal services to the nation.

Irrespective of our challenges resulting from the COVID-19 pandemic, absent legislative and regulatory change, we project continuing annual net losses in the future. As a result of these losses and our liquidity concerns, we will unlikely have sufficient cash balances to meet all of our existing legal obligations and make all of the critical investments in our infrastructure that are necessary for operational continuity and that have been deferred in recent years.

In the event that circumstances leave us with insufficient liquidity to continue operating, we may deem it necessary to implement additional contingency plans to ensure that our primary mission is fulfilled and that mail deliveries continue. These measures may require us to prioritize payments to the FFB, our employees and suppliers ahead of some payments to fund retirement and retiree health benefits, as we have done in the past.

With the anticipated continued migration to electronic communication and transactional alternatives, we continue to pursue long-term financial sustainability by focusing on the following items:

1. Continued efforts to control costs and drive efficiencies, innovate to keep mail relevant and generate increased revenue;
2. Postal Service reform legislation that addresses our overall cost structure and enhances our revenue-generating opportunities; and
3. Favorable outcome of the PRC’s ten-year review (discussed below), which would allow additional pricing flexibility.

Although we continue to inform the executive branch, Congress, the PRC and other stakeholders of the immediate and long-term financial challenges we face, we have no assurances that our requests will result in meaningful reform in the foreseeable future.
**PRC Ten-year Review**

In December 2016, the PRC initiated its ten-year review of the system for regulating rates and classes for Market-Dominant products as required by the PAEA. The purpose of the ten-year review was to determine if the system for regulating such rates and classes has achieved the objectives Congress established in the PAEA. As part of this review, the PRC evaluated the CPI-U price cap for our Market-Dominant services.

On December 1, 2017, the PRC announced its initial decision in connection with its ten-year review. The PRC concluded that the rates system has not achieved its objectives and needs to be changed, primarily because it does not enable us to achieve our mission of providing prompt, reliable, and efficient universal postal services to the American people in a financially sustainable manner. The PRC’s proposed changes to the system do not include the elimination of the CPI-U price cap; however, its proposal does provide for some additional pricing authority within a price cap system.

On December 5, 2019, the PRC announced a revised decision in connection with its ten-year review. The PRC’s proposed changes to the system still do not include the elimination of the CPI-U price cap. Moreover, while the revised proposal does include adjustment factors as we had requested to provide more flexibility for the regulatory system to better deal with future exogenous changes, the new proposal no longer includes any “true-up” authority to provide us with a reasonable opportunity to cover all of our costs. We continue to assert that the price cap should be eliminated, and that if the PRC insists on maintaining a price cap that the system must include both a resetting of rates so they are compensable, as well as adjustment factors to ensure the system is sufficiently flexible going forward.

The PRC was expected to issue a final rule after considering the comments and reply comments of any interested stakeholders, which were due no later than February 3, 2020, and March 4, 2020, respectively. As of the date of this report, the PRC has not issued a final rule. Additional information regarding the ten-year review may be found at the PRC website: https://www.prc.gov/press-releases/prc-revises-proposals-second-rulemaking-modify-rate-system-classes-market-dominant.

**2020 and Beyond**

Irrespective of our challenges resulting from the COVID-19 pandemic, we anticipate that given our ongoing liquidity concerns, and without legislative action and regulatory reform, we may not be able to pay all legally required obligations and also invest in much-needed capital expenditures in 2020 and future years that are necessary to ensure our ability to fulfill our primary mission. Furthermore, we believe that continuing productivity improvements alone will not be sufficient to address the challenges presented by declining Market-Dominant volume and revenue, and any future growth in operating revenue would unlikely keep pace with increased costs.

**Legally Required Obligations**

In addition to our previously discussed obligations for unfunded retirement and retiree health benefits of approximately $8.0 billion due on September 30, 2020, we expect to pay the DOL approximately $1.3 billion in October 2020, representing the workers’ compensation claims paid by DOL for the chargeback year July 1, 2019, to June 30, 2020, plus the estimated administrative fee.

The CARES Act offers certain employers the ability to defer payment of the employer’s share of the Social Security payroll tax on wages incurred from March 27, 2020, through December 31, 2020. In accordance with this provision, we began deferring these payments in April 2020, and intend to continue the deferral for the remainder of calendar year 2020 for an estimated total deferral amount of approximately $1.6 billion. One half of these deferred payments would be due by December 31, 2021, and the other half by December 31, 2022.

**Capital Investments**

We currently estimate that our required cash outlays for capital investments necessary to ensure that we can continue to perform our universal service obligation will amount to approximately $1.3 billion for the remainder of 2020, and an additional $11.0 billion for years 2021 through 2024, as we plan to invest in a new fleet of delivery vehicles and other appropriate capital assets. Although our future projections include these capital cash outlays, future cash flow from operations alone may not generate the cash needed to enable us to fully fund such necessary capital investments.
**Mitigating Circumstances**

We continue to pursue strategies within our control to increase operational efficiency and improve liquidity. We have managed capital in recent years by spending only what we believed was essential to maintain our existing facilities and service levels, and to increase efficiencies. However, continued increases in capital investment are necessary to upgrade our facilities, fleet of vehicles and processing equipment in order to remain operationally viable. Aggressive management of the business operations, as well as legislative and regulatory reforms that will enable us to increase revenue and reduce costs, will all be necessary to restore our financial health.

Our status as an independent establishment of the executive branch that does not receive tax dollars for our operations presents unique requirements and restrictions, but also potentially mitigates some of the financial risk that would otherwise be associated with a cash shortfall. With annual total revenue in 2019 of approximately $71 billion, a financially sound Postal Service continues to be vital to U.S. commerce.

The U.S. economy benefits greatly from us and the many businesses that provide the printing and mailing services that we support. Disruption of the mail would cause undue hardship to businesses and consumers as it would significantly inhibit the remittance of payments through the mail, and in the event of a cash shortfall, the U.S. government would likely prevent us from significantly curtailing or ceasing operations. We continue to inform the executive branch, Congress, the PRC and other stakeholders of the immediate and long-term financial challenges we face and the legislative and regulatory changes that are required to restore our financial stability.

**LEGISLATIVE, REGULATORY AND RELATED MATTERS**

**TASK FORCE ON THE UNITED STATES POSTAL SYSTEM**

As previously reported, on April 12, 2018, the President issued Executive Order 13829 to establish a Task Force on the United States Postal Service ("Task Force"), to be chaired by the Secretary of the Treasury, as Secretary and as Chairman of the FFB, or his designee. In accordance with the Executive Order, the Task Force conducted an evaluation of our operations and finances, and submitted its report to the President in August 2018.

There has been no further congressional activity related to the President’s Task Force report on the Postal Service subsequent to the March 12, 2019, Senate Homeland Security and Governmental Affairs Committee hearing titled, “A Path to Sustainability: Recommendations from the President’s Task Force on the United States Postal Service.”

**LEGISLATIVE UPDATE**

As a self-funded independent establishment of the executive branch, our business model and operations are significantly influenced by congressional oversight and legislation. Additionally, Congress intended for us to be governed by an eleven-member Board of Governors ("Board") which generally consists of our Postmaster General, Deputy Postmaster General and nine independent governors ("Governors"). The President appoints the Governors with the advice and consent of the Senate. We have five Senate-confirmed Governors currently in office.

**Legislation**

Several bills introduced in response to the COVID-19 pandemic have financial implications for us.

On March 18, 2020, the President signed the Families First Coronavirus Response Act, enacted as Public Law 116-127, which provides new paid sick leave that may be used by an employee in COVID-19 situations for themselves, or to care for sick family members, as well as Family and Medical Leave Act-protected unpaid and paid leave if a school/child care is closed.

On March 27, 2020, the President signed the CARES Act, which allows the Postal Service to borrow up to an additional $10.0 billion in financing from the U.S. Treasury to fund operating expenses. The law stipulates that the Secretary of Treasury may lend up to this amount at the request of the Postal Service, upon terms and conditions mutually agreed upon by the Secretary and the Postal Service.

H.R. 6425, the Protect our Post Offices Act, introduced on March 31, 2020, would also appropriate $25.0 billion for payment to the Postal Service Fund for revenue forgone due to the COVID-19 pandemic. The bill was referred to the House Committees on Appropriations and Budget.
Postal Service Reform
The 116th Congress has not introduced any major Postal Service reform bills to date. Legislative and regulatory reforms remain critical for us to meet the needs of the American public, and we will continue to work with Congress and all of our stakeholders to enact Postal Service reform legislation.

Board of Governors Nominations
On March 2, 2020, the President submitted to the Senate the nomination of Donald Lee Moak to serve on the Board for a term expiring December 8, 2022. The nomination was referred to the Senate Homeland Security and Governmental Affairs Committee for its consideration. The nomination of William Zollars to serve for a term expiring December 8, 2022, is also pending the committee’s consideration.

FAIR VALUE MEASUREMENTS
As required by authoritative accounting literature, certain fair value disclosures for the periods ended March 31, 2020, and September 30, 2019, are discussed in Item 1. Financial Statements, Notes to Unaudited Financial Statements. We did not recognize gains as a result of valuation measurements during the three and six months ended March 31, 2020. All recognized losses have been incorporated into our financial statements as of March 31, 2020. See Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 13 - Fair Value Measurement.

RELATED PARTY TRANSACTIONS
As disclosed throughout this quarterly report, we have significant transactions with other U.S. government entities, which are considered related parties for reporting purposes. For a more detailed description, see Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 5 - Related Parties.

CRITICAL ACCOUNTING POLICIES AND ESTIMATES
The preparation of financial statements in accordance with GAAP requires management to make significant judgments and estimates to develop certain amounts reflected and disclosed in the financial statements. In many cases, alternative policies or estimation techniques may be used.

We maintain a thorough process to review the application of accounting policies and to evaluate the appropriateness of the many estimates that are required to prepare the financial statements of a large organization. However, even under optimal circumstances, estimates routinely require adjustment based on changing circumstances and new or better information.

The accounting policies deemed either the most judgmental or which involve the selection or application of alternative accounting policies, and are material to the interim financial statements, are described in Critical Accounting Estimates contained in Management’s Discussion and Analysis of Financial Condition and Results of Operations of the Annual Report. Management normally discusses the development and selection of accounting policies and estimates with the Audit and Finance Committee of the Board.

RECENT ACCOUNTING STANDARDS
See Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 2 - Recent Accounting Pronouncements, for a description of recently announced accounting standards.

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK
In the normal course of business we are exposed to market risks from changes in commodity prices, certain foreign currency exchange rates and interest rates. Our commodity price risk consists primarily of exposure to changes in prices for diesel fuel, unleaded gasoline and aircraft fuel for transportation of the mail, and fuel for heating facilities. We have foreign currency risk related to the settlement of terminal dues and transit fees with foreign postal administrations for international mail.
We have not used derivative commodity or financial instruments to manage market risk related to commodities, foreign currency exchange or interest rate fluctuations for debt instruments. Additionally, we do not purchase or hold derivative financial instruments for speculative purposes.

We also have provisions in our debt agreements that allow us to prepay our $11.0 billion debt at any time at a price determined by the Secretary of the Treasury, based on prevailing interest rates in the U.S. Treasury market at the time of repayment.

See Item 7A. Quantitative and Qualitative Disclosures about Market Risk in the Annual Report for additional information.

ITEM 4. CONTROLS AND PROCEDURES

Management is responsible for the preparation, integrity and fair presentation of our financial statements.

DISCLOSURE CONTROLS

We maintain disclosure controls and procedures that are designed to ensure that information required to be disclosed in quarterly and annual reports is recorded, processed, summarized, and reported within the time frames specified by PAEA, and that this information is accumulated and communicated to our management, including the Postmaster General and Chief Financial Officer, as appropriate, to allow timely decisions regarding required disclosure.

We carried out an evaluation under the supervision and with the participation of management, including the Postmaster General and the Chief Financial Officer, of the effectiveness of the design and operation of disclosure controls and procedures as of March 31, 2020. Based upon and as of the date of the evaluation, the Postmaster General and the Chief Financial Officer concluded that our disclosure controls and procedures were effective.

INTERNAL CONTROLS

We have made no changes in our internal control over financial reporting during the three months ended March 31, 2020, that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.
PART II. OTHER INFORMATION

ITEM 1. LEGAL PROCEEDINGS

For a discussion of legal proceedings affecting us, please refer to Item 1. Financial Statements, Notes to Unaudited Financial Statements and Note 8 - Commitments and Contingencies, as well as our Annual Report.

ITEM 1A. RISK FACTORS

The following risk factor supplements Item 1A. Risk Factors of our Annual Report.

The occurrence of a global pandemic or other adverse public health developments could have a material and adverse effect on our business operations, financial condition and results of operations.

In March 2020, the World Health Organization declared COVID-19 a global pandemic, which has since spread throughout the U.S. Given our mandate to provide universal postal services to the nation, we provide an essential service and have continued to process and deliver mail and packages during the pandemic.

We expect the COVID-19 pandemic to have a material effect on our financial condition, results of operations and liquidity. Quarantines, shelter-in-place orders, and travel and logistics restrictions in connection with the outbreak have affected retail and commercial customers, as well as suppliers and mail service providers. The Postal Service relies on the sale of postal products and services to fund its operations, and these sales have declined significantly as a result of the pandemic. The sudden drop in mail volumes, the Postal Service’s most profitable revenue stream, has been steep and may never fully recover to levels prior to the pandemic.

Date: May 7, 2020

/s/Joseph Corbett  
Joseph Corbett  
Chief Financial Officer and Executive Vice President  
Date: May 7, 2020
CERTIFICATION PURSUANT TO
RULES 13a-14(a) AND 15d-14(a) UNDER THE SECURITIES AND EXCHANGE ACT OF
1934, AS ADOPTED PURSUANT TO SECTION 302 OF THE SARBANES-OXLEY ACT OF
2002.

I, Megan J. Brennan, certify that:

1. I have reviewed this quarterly report on Form 10-Q of the United States Postal Service (“Postal Service”);

2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;

3. Based on my knowledge, the financial statements and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the Postal Service as of, and for, the periods presented in this report;

4. The Postal Service’s other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the Postal Service and have:

   a. Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the Postal Service, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;

   b. Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;

   c. Evaluated the effectiveness of the Postal Service’s disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and

   d. Disclosed in this report any change in the Postal Service’s internal control over financial reporting that occurred during the Postal Service’s most recent fiscal quarter (the Postal Service’s fourth fiscal quarter in the case of an Annual Report) that has materially affected, or is reasonably likely to materially affect, the Postal Service’s internal control over financial reporting;

5. The Postal Service’s other certifying officer and I have disclosed based on our most recent evaluation of internal control over financial reporting, to the Postal Service’s independent registered accounting firm and the Audit and Finance Committee of the Postal Service’s Board of Governors:

   a. All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the Postal Service’s ability to record, process, summarize and report financial information; and

   b. Any fraud, whether or not material, that involves management or other employees who have significant role in the Postal Service’s internal control over financial reporting.

CERTIFICATION PURSUANT TO
RULES 13a-14(a) AND 15d-14(a) UNDER THE SECURITIES AND EXCHANGE ACT OF
1934, AS ADOPTED PURSUANT TO SECTION 302 OF THE SARBANES-OXLEY ACT OF
2002.

I, Joseph Corbett, certify that:

1. I have reviewed this quarterly report on Form 10-Q of the United States Postal Service (“Postal Service”);

2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;

3. Based on my knowledge, the financial statements and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the Postal Service as of, and for, the periods presented in this report;

4. The Postal Service’s other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the Postal Service and have:
   a. Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the Postal Service, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
   b. Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
   c. Evaluated the effectiveness of the Postal Service’s disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
   d. Disclosed in this report any change in the Postal Service’s internal control over financial reporting that occurred during the Postal Service’s most recent fiscal quarter (the Postal Service’s fourth fiscal quarter in the case of an Annual Report) that has materially affected, or is reasonably likely to materially affect, the Postal Service’s internal control over financial reporting; and

5. The Postal Service’s other certifying officer and I have disclosed based on our most recent evaluation of internal control over financial reporting, to the Postal Service’s independent registered accounting firm and the Audit and Finance Committee of the Postal Service’s Board of Governors:
   a. All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the Postal Service’s ability to record, process, summarize and report financial information; and
   b. Any fraud, whether or not material, that involves management or other employees who have significant role in the Postal Service’s internal control over financial reporting.

Date: May 7, 2020

CERTIFICATION PURSUANT TO
18 U.S.C. SECTION 1350, AS ADOPTED PURSUANT TO

In connection with the Quarterly Report of the United States Postal Service ("Postal Service") on Form 10-Q for the period ended March 31, 2020, (the "Report"), I, Megan J. Brennan, certify, pursuant to 18 U.S.C. Section 1350, as adopted pursuant to Section 906 of the Sarbanes-Oxley Act of 2002 that:

(1) The Report fully complies with the requirements of Section 13(a) or 15(d) of the Securities Exchange Act of 1934; and

(2) The information contained in the Report fairly presents, in all material respects, the financial condition and results of operations of the Postal Service.

Dated: May 7, 2020

NOTES TO UNAUDITED FINANCIAL STATEMENTS

NOTE 1 - BASIS OF PRESENTATION

Interim Financial Statements
The accompanying unaudited interim financial statements of the United States Postal Service (the “Postal Service”) have been prepared in accordance with accounting principles generally accepted in the United States (“GAAP”) for interim financial information and with the instructions to Form 10-Q and Rule 10-01 of the U.S. Securities and Exchange Commission Regulation S-X. These financial statements should be read in conjunction with the Postal Service’s financial statements for the year ended September 30, 2019, included in its Annual Report on Form 10-K (“Annual Report”) filed with the Postal Regulatory Commission (“PRC”) on November 14, 2019, and do not include all information and footnotes which are normally included in the Annual Report. Except as otherwise specified, all references to years are to fiscal years beginning October 1 and ending September 30, and quarters are quarters within fiscal years 2020 and 2019.

In the opinion of management, the accompanying unaudited interim financial statements reflect all material adjustments, including recurring adjustments, necessary to fairly present the financial position as of March 31, 2020, the results of operations for the three and six months ended March 31, 2020, and 2019, the changes in net deficiency for the six months ended March 31, 2020, and 2019, and cash flows for the six months ended March 31, 2020, and 2019. Operating results for the three and six months ended March 31, 2020, are not necessarily indicative of the results that may be expected for all of 2020. Mail volume and revenue are historically greatest in the first quarter of the year, which includes the holiday mailing season.

Reclassifications
Certain reclassifications have been made to the financial statements for the three and six months ended March 31, 2019, as well as subsequent footnotes, to conform to the current period presentation. Specifically, certain retirement benefit expenses have been reclassified from Compensation and benefits and separately identified as Retirement benefits within Operating expenses in the accompanying unaudited Statements of Operations. In addition, unfunded retirement benefits amortization expenses associated with the Civil Service Retirement System (“CSRS”) and the Federal Employee Retirement System (“FERS”) have been reclassified from Unfunded retirement benefits amortization to Retirement benefits within Operating expenses in the accompanying unaudited Statements of Operations.

The liabilities associated with these retirement benefits have also been reclassified from Compensation and benefits and separately identified as Retirement benefits within Current liabilities in the balance sheets. In addition, the unfunded retirement benefits liabilities associated with CSRS and FERS have been reclassified from Unfunded retirement benefits to Retirement benefits within Current liabilities in the balance sheets. Corresponding reclassifications have been made within Changes in current assets and liabilities in the accompanying unaudited Statements of Cash Flows.

These reclassifications had no effect on previously reported total operating expenses, loss from operations or net loss. See Note 9 - Retirement Plans for further disclosure pertaining to retirement benefits.

NOTE 2 - RECENT ACCOUNTING PRONOUNCEMENTS

Recently Adopted Accounting Pronouncement
In February 2016, the Financial Accounting Standards Board (“FASB”) issued Accounting Standards Update 2016-02 Leases, which has since been codified in Accounting Standards Codification (“ASC”) 842, Leases (“ASC 842”). The new standard requires an entity to record most leases in its balance sheets but continue to recognize expenses in its statements of operations in a manner similar to current accounting practices. The new standard requires a lessee to recognize a lease liability for the obligation to make lease payments and a right-of-use (“ROU”) asset for the right to use the underlying asset for the lease term. Expenses associated with operating leases are recognized on a straight-line basis and include embedded interest and amortization components. The Postal Service recognizes expenses associated with operating leases as rent expense or transportation expense within Other operating expenses or Transportation, respectively, in the statements of operations. The Postal Service recognizes expenses associated with finance leases (formerly capital leases under previous guidance) with both

Quarter II, 2020 Report on Form 10-Q - United States Postal Service-7

USPS-20-1215-A-003674
interest and amortization expenses and presents these separately in the statements of operations. As such, finance leases generally have higher expenses in the earlier periods of the lease term.

The Postal Service adopted ASC 842 for its 2020 fiscal year (beginning October 1, 2019). In connection with the adoption of ASC 842, the Postal Service has made necessary changes to relevant policies, processes, information systems and internal controls. For transition purposes, the Postal Service has elected the option not to restate comparative financial statements under the modified retrospective transition model. This option allows the application of the standard to all leases in effect as of the effective date (October 1, 2019) or commencing thereafter, without any restatement impact on the comparative financial statement balances. Accordingly, all comparative financial statements enclosed herein are presented in accordance with the previous ASC 840, Leases (“ASC 840”), with related ASC 840 disclosures provided in Note 12 - Leases.

In implementing ASC 842, the Postal Service has elected the package of practical expedients which permits carrying forward historical accounting positions around lease identification, lease classification and initial direct costs for all leases commencing prior to October 1, 2019. The Postal Service has also made a policy election to not separate the lease and non-lease components for all types of underlying assets and to exclude its short-term leases from the ROU asset and lease liability balances.

The Postal Service adopted ASC 842 on October 1, 2019. The implementation of ASC 842 resulted in an opening balance sheet adjustment, as of October 1, 2019, to recognize $4.4 billion in right-of-use assets and lease liabilities relating to operating leases as follows:

<table>
<thead>
<tr>
<th>(in millions)</th>

</tr>
</tbody>
</table>

The implementation of ASC 842 did not have a material impact on the Postal Service’s Statement of Operations or Statement of Cash Flows and did not have any impact on the Postal Service’s Statement of Changes in Net Deficiency. See Note 12 - Leases and Item 4. Controls and Procedures for additional disclosures pertaining to ASC 842.

**Accounting Pronouncements Issued but not Adopted**

**Accounting Standards Update 2016-13 Financial Instruments - Credit Losses**

In June 2016, the FASB issued Accounting Standards Update 2016-13 Financial Instruments - Credit Losses, which has since been codified in ASC 326, Financial Instruments - Credit Losses (“ASC 326”). The new standard requires entities to measure expected credit losses on financial instruments and other commitments by replacing the incurred loss impairment methodology in current GAAP with a methodology that reflects expected credit losses and requires consideration of a broader range of reasonable and supportable information to inform credit loss estimates.

The Postal Service intends to adopt ASC 326 for its 2021 fiscal year (beginning October 1, 2020) and the quarters therein. The standard is applicable to the Postal Service’s valuation of its receivables. The Postal Service is currently evaluating the impact of adopting this standard on its financial statements and related disclosures.
**Accounting Standards Update 2018-13 Fair Value Measurement**

In August 2018, the FASB issued Accounting Standards Update 2018-13 Fair Value Measurement: Disclosure Framework - Changes to the Disclosure Requirements for Fair Value Measurement, which has since been codified in ASC 820, *Fair Value Measurement* ("ASC 820"). The new standard modifies the disclosure requirements for fair value measurements by adding, modifying or removing certain disclosures.

The Postal Service intends to adopt ASC 820 for its 2021 fiscal year (beginning October 1, 2020) and the quarters therein. The standard is applicable to the Postal Service’s fair value measurements of its revenue forgone installment receivable and its long-term debt, as described further in Note 13 - Fair Value Measurement. Under ASC 820, certain disclosures are required to be applied on a retrospective basis and others on a prospective basis. The Postal Service is currently evaluating the impact of adopting this standard on its financial statements and related disclosures.

**Accounting Standards Update 2018-15 Intangibles - Goodwill and Other - Internal-Use Software**

In August 2018, the FASB issued Accounting Standards Update 2018-15 Intangibles - Goodwill and Other - Internal-Use Software (Subtopic 350-40) - Customer’s Accounting for Implementation Costs Incurred in a Cloud Computing Arrangement, which has since been codified in ASC Subtopic 350-40, Intangibles - Goodwill and Other - Internal-Use Software ("ASC 350-40"). This is an update to a standard the FASB issued in April 2015 for entities evaluating the accounting for fees paid by a customer in a cloud computing (hosting) arrangement by providing guidance for determining when such arrangement includes a software license.

If a cloud computing arrangement includes a license for internal-use software, then the software license is accounted for by the customer in accordance with ASC 350-40. This generally means that an intangible asset is recognized for the software license and, to the extent that the payments attributable to the software license are made over time, a liability also is recognized. If a cloud computing arrangement does not include a software license, the entity should account for the arrangement as a service contract. This generally means that the fees associated with the hosting element (service) of the arrangement are expensed as incurred.

The Postal Service intends to adopt ASC 350-40 for its 2021 fiscal year (beginning October 1, 2020) and the quarters therein. The Postal Service is currently evaluating the impact of adopting this standard on its financial statements and related disclosures.

**NOTE 3 - LIQUIDITY**

The Postal Service’s liquidity consists of unrestricted cash and cash equivalents plus available borrowing capacity.

**Cash**

The Postal Service generates its cash almost entirely through the sale of postal products and services. As of March 31, 2020, and September 30, 2019, the Postal Service held unrestricted cash and cash equivalents of $9.0 billion and $8.8 billion, respectively. See Note 6 - Cash, Cash Equivalents and Restricted Cash for further disclosures pertaining to cash.

The *Postal Reorganization Act*, as amended by Public Laws 101-227 and 109-435 (the "PRA"), authorizes the Postal Service to raise cash through the issuance of debt obligations. The Postal Service is limited by statute to annual net increases in debt of $3.0 billion calculated as of the end of each fiscal year, and total debt of $15.0 billion. In 1974, the Postal Service began issuing debt through individual debt agreements to the Federal Financing Bank ("FFB"), a government-owned corporation under the general supervision of the Secretary of the Treasury.

**COVID-19 Considerations**

In March 2020, the World Health Organization declared a novel strain of coronavirus ("COVID-19") a global pandemic, which has since spread throughout the U.S. Given its mandate to provide universal postal services to the nation, the Postal Service provides an essential service as part of the nation’s critical infrastructure and has continued to process and deliver mail and packages during the pandemic.

The Postal Service expects the COVID-19 pandemic to have a material effect on its financial condition, results of operations and liquidity. Quarantines, shelter-in-place orders and travel and logistics restrictions in connection with the outbreak have affected retail and commercial customers, as well as suppliers and mail service providers. The
Postal Service relies on the sale of postal products and services to fund its operations, and these sales declined significantly in late March 2020 as a result of the pandemic, and the impact has continued to worsen since then. The sudden drop in mail volumes, the Postal Service’s most profitable revenue stream, has been steep and may never fully recover to levels prior to the pandemic.

On March 27, 2020, the President signed the Coronavirus Aid, Relief, and Economic Security Act, enacted as Public Law 116-136 (the “CARES Act”). Notwithstanding the $15.0 billion statutory debt limit, and the $3.0 billion limit on annual borrowing, the CARES Act allows the Postal Service to borrow up to an additional $10.0 billion in financing from the U.S. Treasury to fund operating expenses. The U.S. Treasury may lend up to this amount at the request of the Postal Service, upon terms and conditions mutually agreed upon. However, the Postal Service has no assurance that the U.S. Treasury will agree to provide such financing or if it will be provided upon favorable terms.

The Postal Service estimates that the COVID-19 pandemic may increase its net operating loss by more than $22.0 billion over the next eighteen months, threatening its ability to operate. If the Postal Service is able to borrow the $10.0 billion from the U.S. Treasury as provided by the CARES Act, it expects that it will have sufficient liquidity to continue operations through April 2021. However, if the Postal Service is unable to secure this $10.0 billion in financing, it expects to be able to continue to operate only through September 2020.

Given these COVID-19 considerations, the Postal Service may require an additional injection of liquidity, provided by either the U.S. government or other sources, or through additional defaults, to remain a going concern. While the COVID-19 disruption is expected to be temporary, its duration remains uncertain, and the Postal Service expects that its liquidity may continue to worsen if the nation experiences a prolonged period of disruption.

**Subsequent Events**

The CARES Act offers certain employers the ability to defer payment of the employer’s share of the Social Security payroll tax on wages incurred from March 27, 2020, through December 31, 2020. In accordance with this provision, the Postal Service began deferring these payments in April 2020, and intends to continue the deferral for the remainder of calendar year 2020 for an estimated total deferral amount of approximately $1.6 billion. One half of these deferred payments would be due by December 31, 2021, and the other half by December 31, 2022.

On April 1, 2020, the Postal Service drew $3.4 billion on a revolving credit facility with the FFB that survived the expiration of the Note Purchase Agreement (“NPA”). In order to comply with the annual net increase limit, the Postal Service must repay $400 million from this credit facility by September 30, 2020. Given that the credit facility has a maximum term of up to one year, the Postal Service must repay any outstanding balance of the credit facility by April 1, 2021. The credit facility’s interest rate was determined by the U.S. Treasury based on the market rates of similar instruments as of the day of the funding request.

**Debt**

As of both March 31, 2020, and September 30, 2019, the Postal Service had a combination of fixed-rate and floating-rate notes outstanding with various maturities totaling $11.0 billion. As of March 31, 2020, the Postal Service’s statutory borrowing capacity was $4.0 billion, of which $1.0 billion would require repayment by September 30, 2020, to comply with the annual debt net increase limit.

In 1999, the Postal Service entered into the NPA with the FFB to establish standardized procedures for issuing debt. Under the NPA, the Postal Service was able to issue a series of notes and revolving credit line facilities with established terms and conditions by providing two days prior notice. These note arrangements and credit line facilities provided the flexibility to borrow short or long-term, using floating or fixed-rate instruments.

The NPA was extended each year through September 30, 2018, and in shorter increments between that date and August 31, 2019, at which time the NPA expired. This expiration did not affect the terms of any of the Postal Service's outstanding debt as of March 31, 2020, all of which was issued under the NPA. As a contractual matter, the FFB continued to lend to the Postal Service under each commitment and line of credit until it expired. If the Postal Service is unable to renew or replace the NPA with the FFB, it has no assurance that it could obtain alternative debt financing on comparable terms.
**Liquidity Concerns**

The Postal Service is constrained by laws and regulations, including the *Postal Accountability and Enhancement Act* ("PAEA"), which restrict revenue sources and mandate certain expenses.

The Postal Service is required, either by law or by union contract, to participate in U.S. government pension and health and benefits programs for employees and retirees, including the Federal Employees Health Benefit ("FEHB") program, CSRS and FERS, which the Office of Personnel Management ("OPM") administers. Statutorily mandated expenses include amortization payments to provide full funding of retirement benefits under CSRS and FERS, as well as FERS normal costs, described in greater detail below and in *Note 9 - Retirement Plans*. Additionally, the PAEA established the Postal Service Retiree Health Benefits Fund ("PSRHBF") and mandated certain obligations for paying normal costs, the present value of the estimated retiree health benefits attributable to active employees' current year of service, and amortization payments for full prefunding of retiree health benefits. These prefunding obligations, described in greater detail below and in *Note 10 - Health Benefits Plans*, are unlike expenses imposed on most other federal entities or private-sector businesses that offer such benefits.

The Postal Service reported operating expenses of approximately $80 billion in 2019 and has incurred cumulative net losses of $83.1 billion from 2007 through March 31, 2020.

Notwithstanding the challenges resulting from the COVID-19 pandemic, absent legislative and regulatory change, the Postal Service projects continuing annual net losses in the future. As a result of these losses and its liquidity concerns, the Postal Service will unlikely have sufficient liquidity to meet all of its existing legal obligations when due while also reducing its debt and making the critical infrastructure investments that have been deferred in recent years.

In the event that circumstances leave the Postal Service with insufficient liquidity, it would likely be required to implement additional contingency plans to ensure that its primary mission is fulfilled and that mail deliveries continue. These measures may require the Postal Service to prioritize payments to the FFB, employees and suppliers ahead of some payments to fund retirement and retiree health benefits, as has been done in the past.

**Business Model Challenges and Constraints**

Market-Dominant services, which accounted for approximately 66% of the Postal Service’s annual operating revenues in 2019, are currently subject to a price cap as measured by the Consumer Price Index for All Urban Consumers ("CPI-U"). However, the Postal Service’s costs are not similarly constrained. A large portion of its cost structure cannot be altered expeditiously due to the Postal Service’s universal service obligation. Further, the number of delivery points continues to grow by approximately one million per year, which drives up delivery costs. When combined with the impact of lower mail volume, the average number of pieces delivered per delivery point per day has decreased from approximately 5.5 pieces in 2007 to 3.4 pieces in 2019, a decline of approximately 39%, and a further significant decline is expected in 2020.

Many employee and retiree benefit costs are mandated by law and cannot be altered without legislative change. Under current law, the Postal Service is generally unable to increase prices sufficiently to offset increased costs, and is likewise constrained by law from reducing many of its costs or from pursuing many alternate sources of revenue.

Aside from its universal service obligation, a significant factor contributing to Postal Service losses is the ongoing decline in the volume of Market-Dominant products and services, and those declines are being exacerbated by the COVID-19 pandemic. Specifically, declines in *First-Class Mail* are largely the result of changes in consumers' and businesses' use of mail resulting from the continuing migration to electronic communication and transactional alternatives, which have taken place over the last decade and are expected to continue. After experiencing relatively flat volume between 2009 and 2016, beginning in 2017, *Marketing Mail* volume has generally been challenged by commercial mailers' increasing use of digital and mobile advertising, and more recently by the COVID-19 pandemic, although this class has benefited from strong political and election mail volumes, particularly in the second half of 2018 and the first quarter of 2019.

The Postal Service’s Shipping and Packages category has historically provided revenue and volume growth as a result of its successful efforts to compete in shipping services, including last-mile e-commerce fulfillment markets.
and Sunday delivery as well as end-to-end markets. However, this service category is subject to intense competition which significantly impacts both revenue and volume. Certain major customers of the Postal Service had begun diverting volume from the Postal Service’s network by in-sourcing last-mile delivery. Competitors in the package delivery market are aggressively pricing their products and services in order to fill their networks and grow package density. However, as a result of the temporary surge in e-commerce growth driven by the COVID-19 pandemic, some of these customers increased their volume to the Postal Service’s network during March 2020 due to their delivery capacity constraints.

Because the Postal Service provides its services primarily through its employees, its costs are heavily concentrated in wages and benefits for both current employees and retirees. These costs are significantly impacted by contractual wage increases, employee health benefit premium increases, and statutorily mandated retirement and workers’ compensation programs. Some of these costs have historically increased at a higher rate than inflation.

**Past Due Obligations**
The following table presents the total expenses accrued but unpaid by the Postal Service as of September 30, 2019, related to retiree health benefits, CSRS and FERS and the fiscal years in which the accruals were recorded:

\(^1\) The 2012 to 2016 period amount includes $5.8 billion for 2016, $5.7 billion for 2015, $5.7 billion for 2014, $5.6 billion for 2013 and $11.1 billion for 2012.

\(^2\) The 2012 to 2016 period amount includes $247.6 million for 2016, $240.9 million for 2015 and $6.7 million for 2014.

**Mitigating Circumstances**
The Postal Service continues to pursue strategies within its control to increase operational efficiency and improve liquidity. The Postal Service has managed capital in recent years by spending what it believed was essential to maintain its existing facilities and service levels, to ensure employee safety and to increase efficiencies. However, continued increases in capital investment are necessary to upgrade its facilities, fleet of vehicles and processing equipment in order to remain operationally viable. Irrespective of the challenges resulting from the COVID-19 pandemic, aggressive management of the business operations, as well as legislative and regulatory reforms that will enable it to increase revenue and reduce costs, will all be necessary to restore the Postal Service to financial health.

The Postal Service’s status as an independent establishment of the executive branch that does not receive tax dollars for its operations presents unique requirements and restrictions, but also potentially mitigates some of the financial risk that would otherwise be associated with a cash shortfall. With annual total revenue in 2019 of approximately $71 billion, a financially sound Postal Service continues to be vital to U.S. commerce.

The U.S. economy benefits greatly from the Postal Service and the many businesses that provide the printing and mailing services that it supports. Disruption of the mail would cause undue hardship to businesses and consumers as it would significantly inhibit the remittance of payments through the mail, and in the event of a cash shortfall, the U.S. government would likely prevent the Postal Service from significantly curtailing or ceasing operations. The Postal Service continues to inform the executive branch, Congress, the PRC and other stakeholders of the immediate and long-term financial challenges it faces and the legislative and regulatory changes that are required to restore its financial stability.
NOTE 4 - REVENUE RECOGNITION

The Postal Service generates the majority of its revenue from contracts associated with the processing and delivery of different types of mail and packages, both domestically and internationally, which generally occur over a relatively short period of time (e.g., several days).

Disaggregation of Revenue

The following table summarizes the Postal Service’s disaggregated operating revenue for the three and six months ended March 31, 2020, and 2019, by each service category:

<table>

</table>

* Prior period amounts for certain service categories include reclassifications of amounts amongst service categories to conform to current period presentation. These reclassifications are immaterial for each affected category, and had no effect on total operating revenue for the period.

Satisfaction of Performance Obligations

A performance obligation is a promise in a contract to transfer a distinct good or service to the customer. A contract’s transaction price is allocated to each distinct performance obligation and recognized as revenue when, or as, the performance obligation is satisfied.

First-Class Mail, Marketing Mail, Shipping and Packages, International Mail and Periodicals are categorized as Mailing and Shipping services for purposes of satisfying performance obligations. The Postal Service recognizes revenue for Mailing and Shipping services as it fulfills its obligation to process and deliver each mailpiece and the customer mail sender/recipient receives and consumes the benefits of these services.

Other revenue includes PO Box services, Return Receipts, Insurance, Other Ancillary Services, Shipping and Mailing Supplies, Collect on Delivery, Registered Mail, Stamped Envelopes and Cards, Money Orders and other goods and services. The Postal Service recognizes revenue for the majority of these services over time as the customer receives and consumes the benefits of the service. The revenue for a small portion of certain goods or services in this service category is recognized at a point in time when the goods or services are provided to the customer.

The vast majority of the Postal Service’s contracts include only one performance obligation. However, if a contract is separated into more than one performance obligation, the total transaction price for each performance obligation is allocated in an amount based on the estimated relative stand-alone selling prices of the promised goods or services underlying each performance obligation. The majority of the goods or services sold by the Postal Service have observable stand-alone sales prices. Further, payment for the majority of the goods and services is received up front.

If the Postal Service were unable to complete delivery to the destination point, another entity would not need to re-perform the entire portion of delivery already performed by the Postal Service. Accordingly, control from the Postal Service to the customer transfers over time for the vast majority of services the Postal Service offers, and revenue is recognized based on the progress of the completion of the performance obligations.
Variable Consideration
The Postal Service offers certain contracts to its customers that contain various types of customer incentives or other provisions that can either increase or decrease the transaction price. Customer incentives include discounts, money back guarantees, rebates, refunds or incentive payments. The other provisions include performance penalties. The Postal Service uses the expected value approach to estimate variable consideration to which it expects to be entitled.

Contract Modifications
The Postal Service considers contract modifications to exist when the modification either creates new enforceable rights and obligations or alters the existing arrangement. Contract modifications do not add distinct services; they are typically used to change the prices that the Postal Service charges its customer for existing services. These contract modifications are accounted for prospectively as the remaining performance obligations are executed.

Principal vs. Agent Consideration
The Postal Service utilizes third parties to assist with the transportation of mailpieces between different points as part of the delivery process. Based on its evaluation of the transfer of control model, the Postal Service has determined that it acts as the principal rather than the agent within these arrangements.

Contract Liabilities
The vast majority of the Postal Service’s contract liabilities consist of Deferred revenue-prepaid postage and prepaid PO Box and Caller Service fees. Deferred revenue-prepaid postage is an estimate of postage that has been sold, but not yet used by customers. The Postal Service recognizes revenue over time as the Postal Service delivers mailpieces. Because payments for postage are collected in advance of the satisfaction of related performance obligations, the Postal Service defers and reports this unearned revenue as Deferred revenue-prepaid postage in its balance sheet. Stamp sales and metered postage account for the majority of Deferred revenue-prepaid postage. The liability also includes an estimate for mail that is in-transit within the Postal Service network.

The prepaid PO Box and Caller Service fees consist of the payments received from customers for PO Box fees at the beginning of their contracts. The Postal Service defers and reflects this unearned revenue as prepaid PO Box and Caller Service fees within Other current liabilities in the accompanying Balance Sheets. Revenue is recognized over time as customers use the PO Box and Caller Services over the terms of their contracts.

The following table presents the balances of the Postal Service’s contract liabilities, including Deferred revenue-prepaid postage and prepaid PO Box and Caller Service fees, as of March 31, 2020, and September 30, 2019, respectively:

1 Included within Operating revenue in the accompanying unaudited Statements of Operations.
2 Included within Operating expenses in the accompanying unaudited Statements of Operations.
3 Represents interest imputed on the revenue forgone installment receivable as well as interest generated on U.S. Treasury instruments and other cash equivalents held with the Federal Reserve Bank of New York. Included within Interest and investment income in the accompanying unaudited Statements of Operations.
4 Incurred on debt issued to the FFB, and included within Interest expense in the accompanying unaudited Statements of Operations.

**NOTE 6 - CASH, CASH EQUIVALENTS AND RESTRICTED CASH**

The following table provides a reconciliation of Cash and cash equivalents and Restricted cash reported in the balance sheets as of March 31, 2020, and 2019, respectively, and as of September 30, 2019, and 2018, respectively (to disclose the opening balances), that sum to the totals of the same such amounts presented in the accompanying unaudited Statements of Cash Flows for the six months ended March 31, 2020, and 2019:

<table>
<thead>
<tr>
<th>(in millions)</th>
<th>March 31, 2020</th>
<th>March 31, 2019</th>
<th>September 30, 2019</th>
<th>September 30, 2018</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cash and cash equivalents</td>
<td>$ 8,987</td>
<td>$ 8,108</td>
<td>$ 8,795</td>
<td>$ 10,061</td>

<tr>
<td>Total cash, cash equivalents and restricted cash</td>
<td>$ 9,459</td>
<td>$ 8,654</td>
<td>$ 9,161</td>
<td>$ 10,336</td>
</tr>
</tbody>
</table>

Restricted cash represents Postal Service cash that is not available for general use. This includes cash originated from forfeitures or seizures related to consumer fraud or other criminal activity related to the mail and either held for third-party beneficiaries or awaiting disposition. Restricted cash also includes funds for use in restricted activities such as congressional appropriation for Postal Service obligations to the PRC and the United States Postal Service Office of Inspector General, or that are otherwise restricted.

The Postal Service holds its Cash and cash equivalents and Restricted cash with the Federal Reserve Bank of New York and invests its excess cash, when available, in highly-liquid, short-term investments issued by the U.S. Department of the Treasury.

**NOTE 7 - PROPERTY AND EQUIPMENT, NET**

Assets within Property and equipment, net in the accompanying Balance Sheets are recorded at cost, which includes the interest on borrowings used to finance construction of major capital additions, less allowances for depreciation and amortization. Interest capitalized during both the three and six months ended March 31, 2020, and 2019, was not significant. Fixed assets are depreciated over estimated useful lives ranging from 3 to 40 years using the straight-line method.

The net book values of assets classified as held for sale were approximately $6 million and $10 million as of March 31, 2020, and September 30, 2019, respectively, and are included within Property and equipment, net in the accompanying Balance Sheets.

For the three months ended March 31, 2020, and 2019, depreciation and amortization expense was $423 million and $424 million respectively, and impairment charges were de minimis. For the six months ended March 31, 2020, and 2019, depreciation and amortization expense was $854 million and $841 million respectively, and impairment charges were de minimis. These items are included within Other operating expenses in the accompanying unaudited Statements of Operations.
NOTE 8 - COMMITMENTS AND CONTINGENCIES

Collective Bargaining Agreements
On January 22, 2020, the Postal Service reached a tentative agreement with the National Postal Mail Handlers Union, AFL-CIO (“NPMHU”) on a new three-year collective bargaining agreement, which the union membership ratified on April 8, 2020. The new contract went into effect on April 25, 2020, and will expire on September 20, 2022.

On March 10, 2020, a three-member arbitration panel reached a decision in the Postal Service’s legally mandated binding interest arbitration process with the American Postal Workers Union, AFL-CIO (“APWU”), which established the terms of a new collective bargaining agreement. The new contract went into effect on March 10, 2020, and will expire on September 20, 2021.

In September 2019, the Postal Service agreed to extend contract negotiations relating to a new collective bargaining agreement with the National Association of Letter Carriers, AFL-CIO (“NALC”). The previous contract with the NALC expired on September 20, 2019, and negotiations with the NALC are at an impasse. The Postal Service and the NALC will continue to follow the current agreement until a new contract is reached through the dispute resolution process.

Contingent Liabilities
The Postal Service’s contingent liabilities consist primarily of claims resulting from labor and employment matters; asset retirement obligations and environmental matters; property damage and injuries on Postal Service properties; and issues arising from Postal Service contracts, personal claims and traffic accidents. Each quarter, the Postal Service evaluates each claim to determine its potential liability. If the Postal Service determines that an unfavorable outcome from a new claim is both probable and reasonably estimable, it records a liability for the amount. Preexisting claims are also reviewed and adjusted quarterly for resolutions or revisions to prior estimates based on new facts and circumstances.

The Postal Service is from time to time involved in other litigation incidental to the conduct of its business, none of which is expected to be material to its financial condition or operations.

Provision for Losses
The Postal Service has made adequate provision for probable losses arising from all claims. The following table presents contingent liabilities by current and noncurrent portions and by category, as of March 31, 2020, and September 30, 2019:

<table>
<thead>

1 Included within Payables and accrued expenses in the accompanying Balance Sheets.
2 Included within Other noncurrent liabilities in the accompanying Balance Sheets.
**Reasonably Possible Contingencies**
The Postal Service does not accrue for contingencies which it deems reasonably possible of an unfavorable outcome. These ranged in amount from approximately $175 million to $1.0 billion at March 31, 2020, and from approximately $150 million to $1.0 billion at September 30, 2019.

**Class Action Litigation**
As previously reported, on January 14, 2010, the Equal Employment Opportunity Commission's ("EEOC") Office of Federal Operations ("OFO") certified the case *McConnell v. Brennan* (first instituted in 2006 as *McConnell v. Potter*) as a class action against the Postal Service, with the class consisting of permanent-rehabilitation and limited-duty Postal Service employees who the Postal Service assessed under the National Reassessment Process ("NRP") between the dates of May 5, 2006, and July 1, 2011. The Postal Service utilized the NRP to ensure employees receiving workers' compensation benefits were placed in jobs consistent with their abilities, and that records regarding employees injured on the job were correct.

The *McConnell* case alleges violations of the Rehabilitation Act of 1973 resulting from the NRP's failure to provide a reasonable accommodation, the NRP's wrongful disclosure of medical information, the NRP's creation of a hostile work environment, and the NRP's adverse impact on disabled employees. The class is seeking injunctive relief and damages of an uncertain amount.

In 2015, the Administrative Judge assigned to handle the *McConnell* case granted in-part both the Class Agent's and the Postal Service's motions for summary judgment. In her decision, the Administrative Judge found that the NRP violated the Rehabilitation Act. The Postal Service appealed this decision to the OFO, and the OFO denied this appeal in 2018. The Postal Service implemented the OFO's order, and notified all class members of their right to file an individual claim for relief. Class members were allowed thirty days to submit claims to the Postal Service's National Equal Employment Opportunity Investigative Services Office. The claims submission deadline has now passed and the dispute process for individual claims is currently underway before a newly assigned EEOC Administrative Judge.

The class members have the right to pursue individual claims. Should they be successful in establishing liability and damages, the ultimate outcome in this case could have a material impact on the Postal Service's financial results.

**Other**
The U.S. is a member of the Universal Postal Union ("UPU"), a specialized agency of the United Nations that facilitates the exchange of international mail. The Postal Service is the designated postal operator for the U.S. under the UPU, and payments to the designated postal operator for the delivery of foreign origin letter-post mails are known as "terminal dues".

In September 2019, the UPU members had a special meeting -- known as the Extraordinary Congress -- to discuss the terminal dues system. During that meeting, UPU members agreed to establish a new remuneration system that will allow the Postal Service to self-declare rates beginning in July 2020. Other foreign postal operators may also reciprocally apply rates at full-self-declared rates at that time.

In February 2020, the Postal Service officially invoked its provision to self-declare rates beginning in July 2020, creating an obligation to pay the UPU the amount of 40 million Swiss Francs ("CHF"), or approximately $41 million, based on the prevailing exchange rate on March 31, 2020. This amount will be payable over five years in annual increments of 8 million CHF, with the first payment due between July and December 2020.

The Postal Service considers the right to self-declare rates as an intangible asset recorded in *Other assets* in the accompanying unaudited *Balance Sheet* at March 31, 2020, and its amortization starts in July 2020 when the self-declared rates are in effect. The current portion of the obligation is recorded in *Payables and accrued expenses* and the noncurrent portion of the obligation is recorded in *Other noncurrent liabilities* in the accompanying unaudited *Balance Sheet* at March 31, 2020, respectively.
NOTE 9 - RETIREMENT PLANS
The majority of career employees participate in one of two U.S. government defined benefit pension programs, CSRS and FERS, which OPM administers. These plans provide retirement, death and disability benefits for eligible employees based on specific eligibility and participation requirements, vesting periods and benefit formulas. Each employee’s participation in either plan is based on the starting date of employment with the Postal Service or another U.S. government entity.

As government-sponsored benefit plans, CSRS and FERS are not subject to the provisions of the Employee Retirement Income Security Act of 1974, as amended. Likewise, because the Postal Service cannot direct the costs, benefits or funding requirements of these plans, it accounts for program expenses under multiemployer plan accounting rules. As such, the Postal Service records required contributions to the plans as an expense in the period in which each contribution is due. For FERS, the Postal Service contributes to the plan an amount established by OPM as the employer portion of retirement benefits for participating employees and their qualifying survivors, upon retirement, for each employee’s current year of service, which is considered the FERS normal cost. As further discussed below, the Postal Service is not required to pay the normal cost for those employees who participate in CSRS.

Career employees may also participate in the Thrift Savings Plan (“TSP”), a defined contribution retirement savings and investment plan administered by the Federal Retirement Thrift Investment Board. The Postal Service’s TSP expenses relate only to its contributions for FERS employees who participate in the TSP.

CSRS provides a basic annuity plan benefit to employees hired before January 1, 1984. CSRS Offset provides Social Security benefits in addition to its basic annuity plan for employees hired between January 1, 1984, and January 1, 1987. CSRS and CSRS Offset employees may also participate in the TSP, although the Postal Service does not match contributions for these participants.

The PAEA suspended the Postal Service’s employer contributions to CSRS that would otherwise have been required under Title 5, Section 8334(a)(1) of the U.S. Code, although CSRS employees continue to contribute to the plan.

Effective January 1, 1987, FERS covers employees hired since December 31, 1983, and FERS employees are covered by an annuity, Social Security and TSP benefits. For FERS employees who participate in TSP, the Postal Service contributes 1% of basic pay and matches voluntary employee contributions up to an additional 4% of basic pay. The Postal Service recognizes Social Security and TSP expenses as they are incurred and records them within Compensation and benefits in the accompanying unaudited Statements of Operations. A liability is established for any contribution due and unpaid at the end of each reporting period and is included within Compensation and benefits in the accompanying Balance Sheets.

FERS employees are further categorized as either FERS, FERS - Revised Annuity Employees (“FERS-RAE”), or FERS - Further Revised Annuity Employees (“FERS-FRAE”) depending on whether their date of hire was before, during, or after calendar year 2013, respectively.

The following table presents the employee and employer contributions, as a percentage of employee basic pay, during the three and six months ended March 31, 2020, and 2019:

<table>
<thead>
<tr>
<th></th>
<th>March 31, 2020</th>
<th>March 31, 2019</th>
</tr>

</tbody>
</table>

\(^1\) Expense for the accrual for the annual payment due to OPM by September 30 of the respective fiscal year, to amortize the unfunded CSRS retirement obligation. The 2020 amounts are based on updated Postal Service estimates resulting from revised actuarial assumptions. Payments are to be made through 2043 based on OPM invoices.

\(^2\) Expense for the accrual for the annual payment due to OPM by September 30 of the respective fiscal year, to amortize the unfunded FERS retirement obligation. The 2020 amounts are based on updated Postal Service estimates resulting from revised actuarial assumptions. Payments are to be made over a 30-year rolling period based on OPM invoices.

**FERS Normal Costs**

The Postal Service records expenses for FERS normal costs within *Retirement benefits* in the accompanying unaudited *Statements of Operations*.

The Postal Service makes payments for FERS normal costs in accordance with its bi-weekly payroll cycle. The employer contributions and employee withholdings not yet remitted to OPM were $209 million and $157 million at March 31, 2020, and September 30, 2019, respectively, and were recorded as a current liability within *Retirement benefits* in the accompanying *Balance Sheets*.

**CSRS and FERS Unfunded Retirement Benefits**

OPM periodically notifies the Postal Service regarding its revaluation of unfunded CSRS and FERS liabilities. OPM calculates these obligations using Postal Service-specific demographics data and government-wide economic assumptions. The Postal Service records these expenses as *Retirement benefits* in the accompanying unaudited *Statements of Operations*. These amounts may be significantly impacted by changes in actuarial assumptions used to revalue the unfunded liabilities.

In October 2019, OPM provided the Postal Service with an actuarial report indicating the projected annual amortization payments due September 30, 2020, would be $1.6 billion for the CSRS obligation and $1.1 billion for the FERS obligation.

On April 2, 2020, the Board of Actuaries of the CSRS, which oversees OPM’s calculation of actuarial liabilities for CSRS and FERS, lowered the discount rate used to calculate CSRS and FERS unfunded retirement liabilities from 4.25% to 4.0%. The Postal Service has estimated that the impact of this change in discount rate on the annual CSRS and FERS amortization expense will result in revised projected amortization payments due September 30, 2020, of approximately $1.8 billion for the CSRS obligation and approximately $1.3 billion for the FERS obligation, increases of $181 million and $226 million, respectively.

Accordingly, the Postal Service accrued additional CSRS and FERS amortization expenses during the three months ended March 31, 2020, to reflect the proportional adjustment between the original OPM estimate and the updated Postal Service estimate as a result of these changes. The Postal Service expects to receive invoices from OPM for the actual amounts due September 30, 2020, during the fourth quarter of 2020, and these invoices may differ from the estimated projections due to further changes in experience, discount rates and/or actuarial assumptions as of the calculation date.
The amounts the Postal Service has accrued for CSRS and FERS unfunded retirement benefits but has not yet paid are recorded as a current liability within Retirement benefits in the accompanying Balance Sheets. Those accrued but unpaid amounts were approximately $9.8 billion and $8.2 billion at March 31, 2020, and September 30, 2019, respectively.

**NOTE 10 - HEALTH BENEFITS PLANS**

FEHB Program covers nearly all career employees and also covers non-career employees and retirees who meet certain eligibility requirements. OPM administers FEHB and allocates the cost of funding the program to participating U.S. government employers. Separate from FEHB, the Postal Service offers its own healthcare plan to certain non-career employees who are ineligible for FEHB.

**Active Employees**
The Postal Service paid 71.9% of healthcare premium costs during both the three months ended March 31, 2020, and 2019. The Postal Service paid 72.0% and 72.3% of healthcare premium costs during the six months ended March 31, 2020, and 2019, respectively. Although OPM determines the actual FEHB premium costs, the allocation of these costs between the Postal Service and most of its employees is determined through agreements with Postal Service labor unions.

Postal Service employee health benefits expense (which includes the employer portion of Medicare taxes) is most significantly impacted by the number of employees electing coverage and the premium costs of the selected plans. Postal Service employee health benefits expense was approximately $1.3 billion for each of the three-month periods ended March 31, 2020, and 2019. Postal Service employee health benefits expense was approximately $2.6 billion for each of the six-month periods ended March 31, 2020, and 2019. These expenses are included within Compensation and benefits in the accompanying unaudited Statements of Operations.

**Retirees**
Postal Service retirees who participated in FEHB for the five years immediately preceding their retirement may continue to participate in the plan during retirement. Qualifying survivors of retirees are also eligible to receive benefits. The Postal Service is required to contribute to the PSRHBF an amount estimated to be equal to the employer portion of FEHB insurance premiums for participating employees and their qualifying survivors, upon retirement, for each employee’s current year of service (normal cost). The Postal Service is also required to contribute an amount sufficient to fully amortize the unfunded liability of the PSRHBF by 2056. These amounts are based, in part, on each current and prospective retiree’s length of federal civilian service occurring on or after July 1, 1971. Each participant’s share of premium costs is set by law and is not subject to negotiation with Postal Service labor unions. The Postal Service cannot direct the costs, benefits or funding requirements of the plans. Therefore, it accounts for program expenses using multiemployer plan accounting rules by recording contributions to the plans that will be required by OPM as an expense in the period in which the contributions are due.

The PAEA required the Postal Service to prefund retiree health benefits during years 2007 through 2016 by paying statutorily specified annual amounts ranging from $1.4 billion to $5.8 billion, totaling $54.8 billion, into the PSRHBF, which began paying the Postal Service’s share of retiree health benefit premiums in 2017. The Postal Service remains obligated to fund the $33.9 billion in statutorily required PSRHBF prefunding payments that it defaulted on for the years 2012 through 2016, as well as the normal cost and amortization payments of $10.7 billion and $2.6 billion, respectively, that it did not pay for the years 2017 through 2019. As of the date of this report, the Postal Service has not been assessed any penalties associated with these non-payments. The cumulative amount of statutorily specified, normal cost and amortization PSRHBF obligations the Postal Service has accrued is $49.7 billion as of March 31, 2020, inclusive of the $47.2 billion that was unpaid as of September 30, 2019. Given that OPM considers these amounts to be due and payable, the Postal Service reflects the cumulative unpaid amount as a current liability within Retiree health benefits in the accompanying Balance Sheets.

As required by PAEA, OPM annually performs an actuarial valuation for the purpose of developing a payment schedule for the Postal Service to fund the remaining unfunded PSRHBF obligation in annual payments through the year 2056. Based on preliminary calculations provided by OPM, the amortization payment due September 30, 2020, is estimated to be $900 million.
Furthermore, the Postal Service is obligated to pay the estimated normal cost of retiree health benefits attributable to the service of its employees during the most recent year. Based on preliminary calculations provided by OPM, the Postal Service has estimated the normal cost payment, also due by September 30, 2020, to be $4.0 billion.

The Postal Service expects to receive the invoice from OPM for with the actual amounts due during the fourth quarter of 2020 and these may differ from the original projected amounts due to changes in discount rates, actuarial assumptions and experience as of the calculation date.

The following table details retiree health benefits expenses for the three and six months ended March 31, 2020, and 2019:

<table>
<thead>
<tr>
<th>(in millions)</th>
<th>Three Months Ended March 31,</th>
<th>Six Months Ended March 31,</th>

</tr>
</tbody>
</table>
| PSRHB
amortization | $225 | $275 | $450 | $550 |
| Normal cost of retiree health benefits | 1,000 | 1,000 | 2,000 | 2,000 |
| Total retiree health benefits expense | $1,225 | $1,275 | $2,450 | $2,550 |

1 Expense for the accrual for the annual payment due to OPM by September 30 of the respective year, as calculated by OPM, to amortize the unfunded PSRHB retirement health benefit obligation. Payments are to be made through 2056 based on OPM invoices.

2 Expense for the accrual for the annual payment due to the PSRHB by September 30 of the respective year, based on information provided by OPM, for the actuarially determined normal cost of retiree health benefits for current employees.

NOTE 11 - WORKERS’ COMPENSATION
Postal Service employees injured on the job are covered by the Federal Employees’ Compensation Act (“FECA”), administered by the U.S. Department of Labor’s (“DOL”) Office of Workers’ Compensation Programs, which makes all decisions regarding injured workers’ eligibility for benefits. The Postal Service reimburses DOL for all workers’ compensation benefits paid to or on behalf of Postal Service employees, plus an administrative fee.

Workers’ Compensation Liability
The Postal Service records a liability for its workers’ compensation obligations for employees who have been injured on the job and are eligible for benefits, or their qualified survivors. Both the current and noncurrent portions of the workers’ compensation liability are recorded in the accompanying Balance Sheets. The Postal Service uses an estimation model that utilizes four generally accepted actuarial valuation techniques based upon past claim-payment experience and exposure to claims as measured by total employee hours worked.

Changes in the liability are primarily attributable to the combined impacts of routine changes in actuarial assumptions, new compensation and medical cases, the progression of existing cases and changes in discount (interest) and inflation rates, including long-term COLA rates for compensation claims, and medical rates for medical claims. These rates are updated as of the balance sheet date and factored into the model.

To determine the fair value of the liability each quarter, the Postal Service first estimates the future total cost of workers’ compensation claims based on the dates of claim-related injuries, frequency or severity of the injuries, the pattern of historical payments to beneficiaries and the expected trend in future costs. The Postal Service then calculates the amount that would need to be invested at current discount (interest) rates to fully fund the future total cost of claims, and this calculated present value is the recorded value of the workers’ compensation liability.

This liability calculation is highly sensitive to changes in discount rates. For example, a 1% increase in the discount rate would decrease the March 31, 2020, liability and related expense by approximately $2.4 billion. Likewise, a 1% decrease in the discount rate would increase the March 31, 2020, liability and related expense by approximately $3.1 billion.
The following table details the applicable inflation and discount rates for compensation and medical claims used to estimate the workers' compensation liability as of March 31, 2020, and September 30, 2019:

<table>
<thead>
<tr>
<th></th>
<th>March 31, 2020</th>

<td>1.07%</td>
<td>1.91%</td>
</tr>
<tr>
<td>Medical inflation rate</td>
<td>3.50%</td>
<td>2.50%</td>
</tr>
</tbody>
</table>

As of March 31, 2020, and September 30, 2019, the Postal Service’s total liability for workers’ compensation was approximately $20.0 billion and $18.5 billion, respectively. As of March 31, 2020, and September 30, 2019, the current portion of the liability was approximately $1.3 billion and $1.4 billion, respectively, and the noncurrent portion of the liability was approximately $18.7 billion and $17.1 billion, respectively, as reflected in the accompanying Balance Sheets.

**Workers’ Compensation Expense**

The impacts of changes in discount rates and inflation rates, as well as the actuarial valuation of new cases and revaluation of existing cases, are components of total workers’ compensation expense as recorded in the accompanying unaudited Statements of Operations. In addition, the Postal Service pays an administrative fee to DOL, which is considered a component of workers’ compensation expense.

The following table presents the components of workers’ compensation expense for the three and six months ended March 31, 2020, and 2019:

**NOTE 12 - LEASES**

**Postal Service Leases**

The Postal Service holds lessee positions in real property leases as well as lessee positions embedded in service contracts involving rights to use transportation equipment and facilities.

Real property leases support retail, delivery, mail processing, maintenance, administrative and support activities. The non-cancellable base terms of these leases typically range from one to five years, with one or more options to renew for additional five-year terms. The lease terms for these arrangements generally range from one to thirty years including any renewal options that are reasonably certain to be exercised. Additionally, certain real property leases contain purchase and termination options. At the commencement of most real property lease arrangements, the Postal Service is not reasonably certain if it will exercise such options. Real property leases include certain variable lease payments associated with non-lease components, such as common area maintenance costs, and non-lease components such as real estate taxes, which are generally charged as a pass-through based on actual amounts incurred by the lessor. The Postal Service records costs associated with real property leases within Other operating expenses in the accompanying unaudited Statements of Operations.
Transportation equipment leases apply primarily to vehicles, trailers, and aircraft. The non-cancellable base terms of these leases typically range from two to five years, and may include one or more options to renew for an additional one or two years. The lease terms for these arrangements generally range from two to five years including any renewal options the Postal Service is reasonably certain to exercise. Transportation equipment leases do not contain purchase options, however certain of these leases contain termination options. At the commencement of most transportation lease arrangements, the Postal Service is not reasonably certain if it will exercise such termination options. Certain transportation leases contain variable lease payments based on the volume of activity under the contract. The Postal Service records costs associated with transportation leases within Transportation in the accompanying unaudited Statements of Operations.

Postal Service leases do not contain any material residual value guarantees or restrictive covenants.

Sublease income was not material to the financial statements for the three and six months ended March 31, 2020.

Balances disclosed herein include those pertaining to certain related-party transactions. See Note 5 - Related Parties for additional information on related party transactions.

The table below reconciles the undiscounted cash flows for the first five years and the total remaining finance lease liabilities and operating lease liabilities recorded in the accompanying unaudited Balance Sheet as of March 31, 2020:

Capital leases, recorded at historical cost within Property and equipment, net in the accompanying Balance Sheets, were $496 million as of September 30, 2019. Total accumulated amortization related to capital leases was $377 million at September 30, 2019. Amortization expense for capital leases was approximately $33 million and $37 million for the years ended September 30, 2019, and 2018, respectively, and is included within the Other operating expense in the respective Statements of Operations.

Lease Accounting Policies

Lease Accounting Policy for Comparative Periods
As the lessee, the Postal Service classifies leases which have original lease terms greater than one year and that transfer substantially all the risks and rewards of ownership to the Postal Service, as capital leases. These leases are capitalized on the lease commencement date at the lower of the fair value of the leased assets or the present value of the minimum lease payments. The discount rate used to determine the present value is based on average U.S. Treasury rates. Property acquired under a capital lease is amortized over the lease term. Capital leases are included within Property and equipment, net in the accompanying Balance Sheets.

The Postal Service classifies all other lease arrangements in which substantially all risks and rewards of ownership are retained by the lessor as operating leases. Rent expense for operating leases is included in Other operating expense.
expenses in the accompanying unaudited Statements of Operations on a straight-line basis over the term of the lease.

Lease Accounting Policy for the Six Months Ended March 31, 2020
The Postal Service determines at the inception of the contract if an arrangement represents a lease or contains lease components. A contract is deemed to represent or include a lease if it conveys the right to control the use of an identified asset for a period of time in exchange for consideration. The Postal Service is assumed to have the right to control the use of the underlying asset if the contract conveys the rights to obtain substantially all of the economic benefits of the underlying asset and the rights to direct how and for what purpose such asset is used during the contract term.

As the lessee, the Postal Service classifies all leases with original lease terms less than one year as short-term leases. The Postal Service classifies all other leases which transfer substantially all the risks and rewards of ownership to the Postal Service as finance leases. Finance lease right-of-use assets are included within Property and equipment, net in the accompanying Balance Sheets. The current and noncurrent portions of finance lease liabilities are included within Payables and accrued expenses and Other noncurrent liabilities, respectively, within the accompanying Balance Sheets. The Postal Service classifies the remaining leases, not classified as short-term leases or finance leases, as operating leases. The Postal Service considers a lease term to include all non-cancelable periods and renewal periods when the Postal Service is reasonably certain that it will exercise the related renewal option.

For short-term leases, the Postal Service records lease expenses in the statement of operations on a straight-line basis over the lease term.

Leases that do not qualify as short-term are recorded in the balance sheet on the lease commencement date, each as a right-of-use asset and a lease liability.

Lease liabilities are initially measured at the net present value of the lease payments due after the commencement date. For this purpose, lease payments include fixed and in-substance fixed rental payments, variable lease payments that depend on an index or rate, and the price of options that the Postal Service is, at the commencement of the lease, reasonably certain to exercise. Lease liabilities are subsequently increased to reflect the interest accrued and reduced when lease payments are made by the Postal Service.

Right-of-use assets are initially measured at the net present value of the lease payments (including amounts due prior to or on the commencement date), adjusted for the impact of initial direct costs and lease incentives. For finance leases, right-of-use assets are subsequently amortized on a straight-line basis over the shorter of the useful life of the underlying asset or the lease term. For operating leases, right-of-use assets are amortized in such a way that the combination of the interest expense accrued on the lease liability and the asset amortization results in a straight-line expense over the lease term.

Right-of-use assets for operating and finance leases are periodically reviewed for impairment losses, following the same process as for other long-lived assets. Impairment losses on long-lived assets are recorded when events or circumstances indicate that an asset's fair value is less than its carrying value. When such a determination is made, the carrying values of the assets are written down to fair value. The Postal Service uses the long-lived assets impairment guidance in ASC Subtopic 360-10, Property, Plant, and Equipment - Overall, to determine whether a right-of-use asset is impaired, and if so, the amount of the impairment loss to recognize. No impairment losses have been recognized to date.

The discount rates used in net present value calculations are determined based on the Postal Service’s incremental borrowing rates on debt outstanding with the FFB at the beginning of each year, which is approximated as the daily U.S. Treasury Yield Curve Rates for the five-year, 10-year, 20-year and 30-year periods, plus a 12.5 basis point spread.

Variable lease payments, except for those based on an index or rate, are recognized as variable lease expenses in the period in which the obligation for those payments are incurred.
NOTE 13 - FAIR VALUE MEASUREMENT

The Postal Service defines fair value as the price that would be received upon sale of an asset or the price that would be paid to transfer a liability between unrelated parties.

The carrying amounts of certain current assets and liabilities, including cash, accounts receivable, accounts payable and accrued expenses, approximate fair value due to their short-term nature. Assets within Property and equipment, net are recorded at cost and measured at fair value on a nonrecurring basis if they are determined to be impaired or classified as assets held for sale.

Noncurrent receivables and long-term debt are measured using a fair value hierarchy model. This model prioritizes observable and unobservable inputs used to measure fair value, and consists of three broad levels, as defined in authoritative literature.

For the three and six months ended March 31, 2020, no significant transfers between Level 1 and Level 2 assets or liabilities transpired. The carrying amount and fair value of the revenue forgone installment receivable and long-term debt are presented for disclosure purposes only in the following table:

<table>
<thead>
<tr>
<th></th>
<th>March 31, 2020</th>
<th>September 30, 2019</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Carrying Amount</td>
<td>Fair Value</td>
</tr>
<tr>
<td>Revenue forgone installment receivable</td>
<td>$ 476</td>
<td>$ 584</td>
</tr>
<tr>
<td>Long-term debt</td>
<td>$ 11,000</td>
<td>$ 11,936</td>
</tr>
</tbody>
</table>

*The carrying amount is included within Other assets (which includes items in addition to the revenue forgone installment receivable) in the accompanying Balance Sheets.

The revenue forgone installment receivable qualifies as a financial instrument in accordance with authoritative literature. To calculate its fair value, the Postal Service recognizes the imputed interest it is owed as interest income and estimates the value of this receivable using the interest method, which converts future cash flows to a single discounted amount using interest rates for similar assets, which are considered Level 2 inputs. The Postal Service then calculates the net present value of anticipated annual installment payments to be received, discounted by the 20-year U.S. Treasury Constant Maturity Rate, which was 1.15% and 1.94% as of March 31, 2020, and September 30, 2019, respectively.

The long-term debt also qualifies as a financial instrument. Because no active market exists for its debt with the FFB, the Postal Service estimates the fair value of the long-term debt by imputing future payments at discount rates provided by the FFB, considered Level 3 inputs. The weighted averages of the FFB discount rates, based on U.S. Treasury Yield Curve Rates, were 0.36% and 1.79% as of March 31, 2020, and September 30, 2019, respectively.

ITEM 2. MANAGEMENT’S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

CAUTIONARY STATEMENTS

The following Management’s Discussion and Analysis of Financial Condition and Results of Operations and other parts of this report describe the principal factors affecting the financial results, liquidity, capital resources and critical accounting estimates of the United States Postal Service (“Postal Service,” “USPS,” “we,” “our” and “us”). Our results of operations may be impacted by risks and uncertainties discussed here and in our Annual Report on Form 10-K for the year ended September 30, 2019, (“Annual Report”) filed with the Postal Regulatory Commission (“PRC”) on November 14, 2019. Such factors, many of which we cannot control or influence, may cause actual results to differ materially from those currently contemplated.

Our operating results for the three and six months ended March 31, 2020, are presented in accordance with accounting principles generally accepted in the United States (“GAAP”). These results are not necessarily indicative of the results to be expected for the year ended September 30, 2020, and should be read in conjunction with our
Annual Report. All references to years in this report, unless otherwise stated, refer to fiscal years beginning October 1 and ending September 30. All references to quarters, unless otherwise stated, refer to quarters within fiscal years 2020 and 2019.

Forward-looking statements contained in this report represent our best estimates of known and anticipated trends believed relevant to future operations. However, actual results may differ significantly from current estimates. Certain forward-looking statements included in this report use such words as “may,” “will,” “could,” “expect,” “believe,” “plan,” “estimate,” “project” or other similar terminology. These forward-looking statements, which involve a number of risks and uncertainties, reflect current expectations regarding future events and operating performance as of the date of this report. These risks include, but are not limited to, the effects of the novel strain of coronavirus (“COVID-19”) on our business, financial condition and results of operations. We have no obligation to publicly update or revise any forward-looking statements, whether as a result of new information, future events or otherwise.

OVERVIEW

With our mandate to provide universal postal services to the nation, we serve retail and commercial customers in the U.S., as well as internationally. Our operations include an extensive and integrated retail, processing, distribution, transportation and delivery network, and we operate throughout the U.S., its possessions and territories. We operate as a single segment and report our performance as such.

The Postal Accountability and Enhancement Act (“PAEA”) classifies our products into two broad categories: Market-Dominant and Competitive “products,” however, we use the term “services” in this document for consistency with other descriptions of services offered. The statutes under which we operate also establish certain requirements that affect our financial results, including obligations for retirement benefits within the Civil Service Retirement System (“CSRS”) and the Federal Employee Retirement System (“FERS”), and obligations for retiree health benefits including funding of the Postal Service Retiree Health Benefits Fund (“PSRHBF”). We must coordinate with the U.S. Office of Personnel Management (“OPM”) to address these obligations.

We have successfully implemented initiatives that have reduced the growth in certain costs by billions of dollars while offering new features for customers such as Informed Delivery. However, legal restrictions on pricing, service diversification and operations restrict our ability to cover our costs to provide prompt, reliable and efficient postal services to the nation.

We have established a core set of goals that drive our strategic initiatives and continuous improvement efforts:

1. Deliver a world-class customer experience;
2. Equip, empower and engage employees;
3. Innovate faster to deliver value; and
4. Invest in our future platforms.

As part of these efforts, we aim to achieve long-term financial stability. Our focus on maintaining liquidity and reducing operating expenses reflects current trends, as well as projected future volume of mail and packages. We believe that financial stability is within reach with targeted legislative and regulatory reform to address our overall cost structure and enhance our revenue-generating opportunities as we continue to identify and create innovative and affordable services, and deliver high levels of performance and service. Such financial stability would continue to provide Congress and the executive branch with additional time to address the broader issues regarding our overall cost structure and revenue-generating opportunities.

RESULTS OF OPERATIONS

SUMMARY

The major factors that impact our operating results include overall customer demand, the mix of postal services and contribution associated with those services, volume of mail and packages processed through our network and our ability to manage our cost structure in line with declining levels of mail volume, increased competition in the more labor-intensive Shipping and Packages business and an increasing number of delivery points.
**Effects of COVID-19**

In March 2020, the World Health Organization ("WHO") declared COVID-19 a global pandemic, which has since spread throughout the U.S. Changing federal, state and local government actions to address the pandemic have been occurring on a daily basis, and government-imposed shelter-in-place and other movement restrictions designed to slow the pace of the outbreak have severely impacted the U.S. economy. We believe the severity and duration of the COVID-19 pandemic is uncertain, and such uncertainty may continue during the second half of 2020.

Our employees provide an essential public service and bind the nation together as a part of the country's critical infrastructure. At least six days per week, and in some instances seven, our employees accept, process, transport, and deliver vital mail and packages like medicine, essential consumer staples, benefits checks, and important information, in every community, to every home and business, and we will continue to do so. As Americans are urged to stay home, the importance of the mail will only grow as our customers, including those in rural areas and senior citizens, will need access to vital communications, essential packages and other necessities.

Shortly after the WHO declaration, we created a dedicated COVID-19 response team to lead our response efforts. All of our employees are considered essential, and their safety is our highest priority. Following strategies recommended by the Centers for Disease Control and Prevention, we have implemented enhanced safety measures to protect the health of our employees.

In late March 2020, we restricted business travel and implemented remote work arrangements for certain of our office-based employees. We have also implemented new leave policies for employees who may be affected by illness, quarantines or childcare obligations. These arrangements have not materially affected our ability to maintain our business operations, including the operation of financial reporting systems, internal control over financial reporting, and disclosure controls and procedures.

While we have maintained full operations during the pandemic, travel and logistics restrictions have negatively affected our retail and commercial customers, as well as our suppliers and mail service providers. Many of our commercial customers, especially those with consumer-facing businesses, have been required to suspend their operations or operate at a lower capacity. As a result, our mail volumes began to decline significantly in March 2020. The sudden drop in mail volumes, our most profitable revenue stream, is steep and may never fully recover to levels prior to the pandemic.

Although the COVID-19 pandemic has caused a recent surge in the nation's use of e-commerce, resulting in higher Shipping and Packages volumes, we do not expect the resulting increases in Shipping and Packages revenues to be sustainable or to offset losses in mail service revenue caused by COVID-19. While the future is uncertain, we believe that the nation's increased use of e-commerce is likely to plateau in the short term as the effects of the pandemic begin to subside, followed by a longer-term regression of e-commerce caused by a weakened U.S. economy. Furthermore, this anticipated economic weakness has resulted in significant interest rate declines, which have caused an increase in certain of our workers' compensation and retirement benefits expenses.

On March 27, 2020, the President signed the *Coronavirus Aid, Relief, and Economic Security Act*, enacted as Public Law 116-136 (the "CARES Act"). Notwithstanding our $15.0 billion statutory debt limit, and $3.0 billion annual limit on new borrowing, the CARES Act allows us to borrow up to an additional $10.0 billion in financing from the U.S. Treasury to fund operating expenses. The U.S. Treasury may lend up to this amount at our request, upon terms and conditions mutually agreed upon. However, we have no assurance that the U.S. Treasury will agree to provide such financing or if it will be provided upon favorable terms.

We estimate that the COVID-19 pandemic may increase our net operating loss by more than $22.0 billion over the next eighteen months, threatening our ability to operate. If we are able to borrow the $10.0 billion from the U.S. Treasury as provided by the CARES Act, we expect that we will have sufficient liquidity to continue to operate through April 2021. However, if we are unable to secure this $10.0 billion in financing, we expect to be able to continue to operate only through September 2020, unless we default on additional obligations.
Three Months Ended March 31, 2020
As more fully described below in Operating Revenue and Volume, our operating revenue for the three months ended March 31, 2020, increased $349 million, or 2.0%, compared to the same period last year. The increase in operating revenue was due to the following:

- Shipping and Packages revenue increase of $386 million, or 7.1%, with a volume growth of 12 million pieces, or 0.8%, driven largely by the January 2020 price increases applicable to certain Competitive services and the temporary surge in e-commerce resulting from the COVID-19 pandemic; and
- First-Class Mail revenue increase of $89 million, or 1.4%, despite a volume decline of 29 million pieces, or 0.2%. Revenue growth was the result of decennial mailings associated with the 2020 U.S. Census, otherwise revenue and volume would have each declined during the quarter.

The above increases in operating revenue were partially offset by a decrease in Marketing Mail revenue of $94 million, or 2.5%, with a volume decline of 604 million pieces, or 3.4%, largely the result of the COVID-19 pandemic, as many of our commercial customers, especially those with consumer-facing businesses, began to suspend their operations or operate at a lower capacity in March 2020. Political and election mail revenue and volumes increased by approximately $100 million and 500 million pieces, respectively, compared to the same period last year, resulting from the impact of the 2020 primary and general elections.

As more fully described below in Operating Expenses, our operating expenses for the three months ended March 31, 2020, increased approximately $2.8 billion, or 14.2%, compared to the same period last year. The increase in operating expenses was primarily due to the following:

- Workers’ compensation expense increase of approximately $2.2 billion, primarily due to declines in discount rates, outside of management’s control, as the COVID-19 pandemic weighed on the U.S. economy;
- Retirement benefits expense increase of $348 million, or 23.7%, due to revised actuarial assumptions for CSRS and FERS unfunded retirement benefits amortization, which are outside of management’s control, and to increased contribution rates for FERS normal costs, compared to the same period last year;
- Other operating expenses increase of $124 million, or 5.3%, due to spending increases in various categories including enhancements to cyber security and information technology;
- Compensation and benefits expense increase of $119 million, or 1.0%, due primarily to contractual wage increases.

The above increases were partially offset by a decrease in retiree health benefits expense of $50 million, or 3.9%, primarily due to the impact of discount rates in effect during October 2019 that were used in OPM’s preliminary annual estimates.

Overall, we reported a net loss of approximately $4.5 billion for the three months ended March 31, 2020, compared to a net loss of approximately $2.1 billion for the same period last year.

Six Months Ended March 31, 2020
As more fully described below in Operating Revenue and Volume, our operating revenue for the six months ended March 31, 2020, decreased $11 million, which was essentially flat, compared to the same period last year.

The decrease in operating revenue was largely due to the following:

- Marketing Mail revenue decrease of $347 million, or 4.1%, with a volume decline of approximately 2.3 billion pieces, or 5.9%, driven by decreases in revenue and volume from political and election mail in the first quarter. Political and election mail revenue and volumes decreased by approximately $140 million and 900 million pieces, respectively, compared to the same period last year, which benefited from the impact of the 2018 mid-term elections during the first quarter of 2019. Furthermore, volume declined due to the COVID-19 pandemic in the second quarter, as the pandemic affected many of our commercial customers;
- First-Class Mail revenue decrease of $79 million, or 0.6%, with a volume decline of 600 million pieces, or 2.1%, reflecting the continuing migration from mail to electronic communication and transaction alternatives; and
• Periodicals revenue decrease of $57 million, or 9.4%, with a volume decline of 231 million pieces, or 9.8%, driven by the continuing migration to electronic communication and digital advertising.

The decrease in operating revenue was partially offset by an increase in Shipping and Packages revenue of $532 million, or 4.5%, despite a volume decline of 73 million pieces, or 2.2%, as we continued to see revenue growth in this service category during the six-month period driven largely by the January 2020 price increases applicable to certain Competitive services.

As more fully described below in Operating Expenses, our operating expenses for the six months ended March 31, 2020, increased approximately $1.6 billion, or 4.0%, compared to the same period last year. The increase in operating expenses was primarily due to the following:

• Workers’ compensation expense increase of approximately $1.1 billion, primarily due to declines in discount rates, outside of management’s control, as the COVID-19 pandemic weighed on the U.S. economy;
• Retirement benefits expense increase of $477 million, or 16.1%, due to revised actuarial assumptions for CSRS and FERS unfunded retirement benefits amortization, which are outside of management’s control, and to increased contribution rates for FERS normal costs, compared to the same period last year;
• Other operating expenses increase of $122 million, or 2.5%, due to spending increases in various categories including enhancements to cyber security and information technology; and
• Transportation expenses increase of $63 million, or 1.5%, primarily resulting from higher air transportation costs, but partially offset by lower international transportation costs. The increase in highway transportation costs was driven by a one-time adjustment for our adoption of Accounting Standards Update 2016-02 Leases, which has since been codified in Accounting Standards Codification (“ASC”) 842, Leases (“ASC 842”), but partially offset by a decrease in the number of miles driven and lower average diesel fuel prices. The decrease in international transportation costs was driven by lower International Mail volumes.

The above increases in operating expenses were partially offset by the following decreases in operating expenses:

• Retiree health benefits expense decrease of $100 million, or 3.9%, primarily due to the impact of discount rate changes in effect during October 2019 that were used in OPM’s preliminary annual estimates; and
• Compensation and benefits expense decrease of $71 million, or 0.3%, primarily due to management’s efforts to align work hours with volume workloads, but partially offset from increases due to contractual wage adjustments.

Overall, we reported a net loss of approximately $5.3 billion for the six months ended March 31, 2020, compared to a net loss of approximately $3.6 billion for the same period last year.

Non-GAAP Controllable Loss
In the day-to-day operation of our business, we focus on costs that can be managed in the course of normal business operations, such as salaries and transportation. We calculate controllable loss, a non-GAAP measure, by excluding items over which we have no control, such as PSRHB actuarial revaluation and amortization expenses, workers’ compensation expenses caused by actuarial revaluation and discount rate changes, and retirement expenses caused by actuarial revaluation. Controllable loss should not be considered a substitute for net loss and other GAAP reporting measures.
The following table reconciles our GAAP net loss to controllable loss for the three and six months ended March 31, 2020, and 2019:

<table>

\(^1\) Expense for the accrual for the annual payment due to OPM by September 30 of the respective year, as calculated by OPM, to amortize the unfunded PSRHBF retirement health benefit obligation. Payments are to be made through 2056 based on OPM invoices.

\(^2\) Net amounts include changes in assumptions, valuation of new claims and revaluation of existing claims, less current year claim payments.

\(^3\) Expense for the accrual for the annual payment due to OPM by September 30 of the respective fiscal year, to amortize the unfunded CSRS retirement obligation. The 2020 amounts are based on updated Postal Service estimates resulting from revised actuarial assumptions. Payments are to be made through 2043 based on OPM invoices.

\(^4\) Expense for the accrual for the annual payment due to OPM by September 30 of the respective fiscal year, to amortize the unfunded FERS retirement obligation. The 2020 amounts are based on updated Postal Service estimates resulting from revised actuarial assumptions. Payments are to be made over a 30-year rolling period based on OPM invoices.

Our controllable loss decreased $14 million for the three months ended March 31, 2020, compared to the same period last year. This decrease was largely driven by the $349 million increase in operating revenue, offset by higher other operating expenses of $124 million, higher compensation and benefits expenses of $119 million, and higher FERS normal costs of $75 million.

Our controllable loss increased $270 million for the six months ended March 31, 2020, compared to the same period last year. This increase was largely driven by higher FERS normal costs of $134 million and higher transportation expenses of $63 million, partially offset by lower compensation and benefits expenses of $71 million.

These items are discussed in greater detail in Operating Revenue and Volume and Operating Expenses below.

**OPERATING REVENUE AND VOLUME**

The combined categories of First-Class Mail and Marketing Mail continued to provide the majority of our revenue, despite long-term trends away from traditional paper communication and correspondence to electronic media. Although this migration to electronic media has resulted in significant volume declines in First-Class Mail over the last decade, Marketing Mail volume remained relatively steady between 2009 and 2016. However, Marketing Mail volume began to decline at a greater rate beginning in 2017 and continued to decline through the first half of 2018. Aside from a volume rebound between the second half of 2018 through the first quarter of 2019 that was driven by increases in political and election mail associated with the 2018 mid-term elections, Marketing Mail resumed its volume decline through the remainder of 2019 and the first half of 2020.
The following table summarizes our operating revenue and volume for the three and six months ended March 31, 2020, and 2019, by each service category:

¹ Excludes First-Class Package Service - Retail and First-Class Package Service - Commercial.
² Excludes Marketing Mail Parcels.
³ Includes Priority Mail, USPS Retail Ground, Parcel Select Mail, Parcel Return Service Mail, Marketing Mail Parcels, Package Service Mail, First-Class Package Service - Retail, First-Class Package Service - Commercial and Priority Mail Express.
⁴ Revenue includes PO Box services, Certified Mail, Return Receipts, Insurance, Other Ancillary Services, Shipping and Mailing Supplies, Collect on Delivery, Registered Mail, Stamped Envelopes and Cards, Money Orders and Other services.
⁵ Volume includes Postal Service internal mail and free mail provided to certain congressionally mandated groups.

For the three months ended March 31, 2020, First-Class Mail generated approximately 36% of operating revenue, which was essentially unchanged compared to the same period last year, and approximately 42% of our volume, a 1% increase compared to the same period last year. Marketing Mail generated approximately 21% of operating revenue and 50% of our volume, both 1% decreases from the same period last year.

For the six months ended March 31, 2020, First-Class Mail generated approximately 35% of operating revenue, which is essentially unchanged compared to the same period last year, and approximately 40% of our volume, a 1% increase compared to the same period last year. Marketing Mail generated approximately 22% of operating revenue and 52% of our volume, both 1% decreases from the same period last year.

We continued to experience positive revenue results in our Shipping and Packages category, and it represented approximately 33% of our revenue for the three months ended March 31, 2020, which was a 2% increase from the same period last year, and approximately 33% of our revenue for the six months ended March 31, 2020, a 1% increase from the same period last year. Shipping and Packages generated approximately 4% of our volume for both the three and six months ended March 31, 2020, which was relatively unchanged compared to the same period last year.

Although revenue and volume are closely linked to the strength of the U.S. economy and changes in how our customers use the mail, we have proactively targeted opportunities to grow our business. We continue to focus on our customers' needs and have increased our investment in mail and package innovation. However, we also...
recognize that revenue growth is constrained by laws and regulations restricting the types of products, services and pricing we may offer to our customers and the speed with which we can bring new products to market.

We anticipate that First-Class Mail will continue to lose volume in future years with the migration to electronic communication and transactional alternatives resulting from technological changes. To address the long-term trend that such changes have had on our First-Class Mail revenue and volume, we have been working with the mailing industry to slow the decline through mailing promotions and leveraging the high open-and-read rates of, for example, bills and statements for additional customer engagement and education.

Furthermore, due to the COVID-19 pandemic our First-Class Mail and Marketing Mail volumes began an accelerated decline in March 2020. The sudden drop in mail volumes, our most profitable revenue stream, is steep and may never fully recover to levels prior to the pandemic.

We have also focused on providing new services and innovating with Marketing Mail. We have expanded service offerings such as Informed Delivery, which enables customers to preview mail and manage packages scheduled to arrive as a means of merging digital and physical mail, as well as allowing mailers to launch interactive digital campaigns. Additionally, we are focusing on opportunities to pilot new products and innovate with customers and the mail industry to enhance the value of hard-copy communication. We believe these service offerings will further improve the value of both First-Class Mail and Marketing Mail.

Our Shipping and Packages category has historically experienced revenue and volume growth as a result of our successful efforts to compete in shipping services, including last-mile e-commerce fulfillment markets and Sunday delivery as well as end-to-end markets. We continue to focus on responding to customers’ needs by implementing solutions and maintaining strategic business partnerships that help us capitalize on the growing e-commerce business.

The COVID-19 pandemic has caused a recent surge in the nation’s use of e-commerce, resulting in higher Shipping and Packages volumes. However we do not expect the resulting increases in Shipping and Packages revenues to be sustainable or to offset losses in mail service revenue caused by COVID-19. Although the future is uncertain, we believe that the nation’s increased use of e-commerce is likely to plateau in the short term as the effects of the pandemic begin to subside, followed by a longer-term regression of e-commerce caused by a weakened U.S. economy.

Our Shipping and Packages category is subject to intense competition which significantly impacts both revenue and volume. Certain major customers continue to divert volume from our network by in-sourcing the last-mile delivery into their own networks. These customers are also aggressively pricing their products and services in order to fill their networks and grow package density.

We implemented price increases for certain Market-Dominant and Competitive services in January 2019 and 2020. Additionally, we implemented dimensional weighting provisions that amount to price increases for certain Shipping and Packages subcategories in June 2019.

First-Class Mail
First-Class Mail, presented in this report as a mail class and a Market-Dominant service category, includes cards, letters and flats. Prices of First-Class Mail, our most profitable service category, are the same regardless the geographic distance between the origination and delivery points. Because First-Class Mail is classified by law as Market-Dominant, price increases are currently generally subject to a price cap based on the Consumer Price Index for All Urban Consumers (“CPI-U”).

For the three months ended March 31, 2020, First-Class Mail revenue increased $89 million, or 1.4%, despite a volume decline of 29 million pieces, or 0.2%, compared to the same period last year. Revenue growth was the result of decennial mailings associated with the 2020 U.S. Census, otherwise revenue and volume would have each declined during the quarter. For the six months ended March 31, 2020, First-Class Mail revenue decreased $79 million, or 0.6%, and volume declined 600 million pieces, or 2.1%, compared to the same period last year. The change in revenue for both periods was less than the corresponding volume declines due to the January 2020 price increase applicable to certain Market-Dominant services. The most significant factor contributing to the
declining trend in First-Class Mail volume has been the continuing migration from mail to electronic communication and transaction alternatives.

Due to the COVID-19 pandemic, our First-Class Mail volume began to decline significantly in late March 2020, and it may never fully recover to levels prior to the pandemic. A protracted loss in customer demand for our services will continue to have a material effect on First-Class Mail revenue and volume.

**Marketing Mail**

*USPS Marketing Mail* (more commonly, *Marketing Mail*), presented as a mail class and a Market-Dominant service category, generally consists of advertising, newsletters, catalogs, small marketing parcels and other printed matter not required to be processed and delivered as First-Class Mail or Periodicals.

Between 2009 and 2016, Marketing Mail experienced relatively flat volume. However, Marketing Mail volume began to decline at a greater rate beginning in 2017 and continued to decline through the first half of 2018. Aside from a volume rebound between the second half of 2018 through the first quarter of 2019 that was driven by increases in political and election mail associated with the 2018 mid-term elections, Marketing Mail continued its volume decline through the remainder of 2019 and the first half of 2020, exacerbated by the COVID-19 pandemic.

For the three months ended March 31, 2020, Marketing Mail revenue decreased $94 million, or 2.5%, and volume declined 604 million pieces, or 3.4%, compared to the same period last year. For the six months ended March 31, 2020, Marketing Mail revenue decreased $347 million, or 4.1%, and volume declined approximately 2.3 billion pieces, or 5.9%, compared to the same period last year. For the three months ended March 31, 2020, our revenue and volume from political and election mail increased by approximately $100 million and 500 million pieces, respectively, compared to the same period last year, as we began to benefit from the impact of the 2020 elections during the second quarter of 2020. For the six months ended March 31, 2020, our revenue and volume from political and election mail decreased by approximately $140 million and 900 million pieces, respectively, compared to the same period last year, which benefited from the impact of the 2018 mid-term elections during the first quarter of 2019.

Due to the COVID-19 pandemic, many of our commercial customers, especially those with consumer-facing businesses, have been required to suspend their operations or operate at a lower capacity. As a result, our Marketing Mail volume began to decline significantly in March 2020, and it may never fully recover to levels prior to the pandemic. A protracted loss in customer demand for our services will continue to have a material effect on our Marketing Mail revenue and volume.

*Marketing Mail* is subject to intense competition, and price increases are currently generally capped at the rate of inflation. Marketing Mail volume is somewhat reflective of the cyclical nature of the U.S. economy, although targeted advertising campaigns can stimulate demand for this service, and our customers have used Marketing Mail to mail to more targeted prospects.
**Shipping and Packages**

The following table summarizes our operating revenue and volume for Shipping and Packages for the three and six months ended March 31, 2020, and 2019, by each service subcategory:

1. Includes Priority Mail, a 1-3 business day delivery service; Priority Mail Express, an overnight delivery service available 365 days per year; and USPS Retail Ground, a retail-only Competitive service priced identically and functionally equivalent to Priority Mail for Zones 1-4.
2. Includes Parcel Select, Parcel Return, and Marketing Mail Parcels.
3. Includes First-Class Package Services - Retail and First-Class Package Services - Commercial.

Our Shipping and Packages category has historically experienced revenue and volume growth as a result of our successful efforts to compete in shipping services, including last-mile e-commerce fulfillment markets and Sunday delivery as well as end-to-end markets. However, this service category is subject to intense competition which significantly impacts both our revenue and volume. Shipping and Packages revenue and volume are historically greatest in the first quarter of the year due to the holiday shipping season.

For the three months ended March 31, 2020, Shipping and Packages revenue increased 7.1%, with a volume growth of 0.8%, compared to the same period last year. The volume increased due to a temporary surge in e-commerce resulting from the COVID-19 pandemic, and revenue outpaced volume increases due to the January 2020 price increases associated with certain Competitive services.

For the six months ended March 31, 2020, Shipping and Packages revenue increased 4.5%, despite a volume decline of 2.2%, compared to the same period last year. The revenue increases were largely due to the January 2020 price increases associated with certain Competitive services. The volume declines largely resulted from intense competition and certain major commercial customers and competitors delivering more of their own packages, compared to the same period last year, offset by the temporary surge in e-commerce resulting from the COVID-19 pandemic.

**Priority Mail Services**

Priority Mail Services is our Shipping and Packages subcategory that includes Priority Mail, Priority Mail Express and USPS Retail Ground. Priority Mail and Priority Mail Express services allow customers the ability to send documents and packages requiring expedited transportation and handling. While Priority Mail Services revenue has historically grown year-over-year, its service offerings are price sensitive and its growth rate has been lower than other Shipping and Packages subcategories due to intense competition.

Priority Mail Services accounted for our largest portion of Shipping and Packages revenue, representing approximately 46% of the total for the three and six months ended March 31, 2020, and 2019. However, Priority
Mail Services accounted for approximately 19% and 18% of the total Shipping and Packages volume for three and six months ended March 31, 2020, respectively, essentially unchanged compared to the same periods last year.

For the three months ended March 31, 2020, Priority Mail Services revenue grew 7.0%, on volume growth of 2.2%, compared to the same period last year. For the six months ended March 31, 2020, Priority Mail Services revenue grew 3.4%, despite a volume decline of 1.9%, compared to the same period last year. Revenue grew at a greater rate than volume for the three-month period and despite the volume decline for the six-month period, largely due to the January 2020 price increases applicable to Competitive services.

**Parcel Services**

Our Parcel Services subcategory includes Competitive services Parcel Select and Parcel Return, as well as Market-Dominant USPS Marketing Mail Parcels (more commonly, Marketing Mail Parcels). Parcel Select and Parcel Return services largely consist of last-mile deliveries, offered to large bulk shippers that perform their own sorting before dropping parcels deeper into our network.

For the three months ended March 31, 2020, revenue from Parcel Services increased 9.6%, on volume growth of 3.4%, compared to the same period last year. For the six months ended March 31, 2020, revenue from Parcel Services increased 6.3%, despite a volume decline of 0.8%, compared to the same period last year. This subcategory is primarily a last-mile service that bypasses much of our infrastructure and therefore is one of our lowest-priced package services, and as a result, produces a lower contribution per piece when compared to many of our other services. For the six months ended March 31, 2020, volume declined due to certain major commercial customers delivering more of their own packages. However, for the three months ended March 31, 2020, volume increased due to the temporary surge in e-commerce from the COVID-19 pandemic. Revenue grew at a greater rate than volume for the three-month period and despite the volume decline for the six-month period, largely due to the January 2020 price increases applicable to Competitive services.

**First-Class Package Services**

Our First-Class Package Services subcategory includes the competitively priced First-Class Package Service - Retail, a Competitive service targeted to retail customers for packages weighing up to 13 ounces, and First-Class Package Service - Commercial, a Competitive service targeted to commercial customers for packages weighing up to 16 ounces. This subcategory offers commercial customers that ship primarily lightweight fulfillment parcels the lowest-priced expedited end-to-end tracked package option in the marketplace. First-Class Package Services revenue and volume performance has historically experienced strong increases for the past several years, particularly from our commercial customers. These increases are primarily attributable to growth in e-commerce.

For the three months ended March 31, 2020, First-Class Package Services revenue increased 5.9%, despite a volume decline of 0.3%, compared to the same period last year. For the six months ended March 31, 2020, First-Class Package Services revenue increased 6.0%, despite a volume decline of 1.7%, compared to the same period last year. Revenue grew despite the volume declines, largely due to the January 2020 price increases applicable to Competitive services.

**Package Services**

Our Package Services subcategory is a Market-Dominant service that includes both Bound Printed Matter for materials up to 15 pounds and Library and Media Mail for materials up to 70 pounds. For the three months ended March 31, 2020, Package Services revenue decreased 5.2% on a volume decline of 10.7%, compared to the same period last year. For the six months ended March 31, 2020, Package Services revenue decreased 5.3% on a volume decline of 11.1%, compared to the same period last year. Revenue declined at a slower rate than volume for the three and six months ended March 31, 2020, due to the January 2020 price increase applicable to Market-Dominant services.

**International Mail**

Our International Mail category includes several services that enable customers, both domestic and abroad, to send international mail, including postcards, envelopes, flats and packages with either standard or express delivery options. “Outbound” services, which allow customers in the U.S. to send mail and packages to other countries, generate approximately two thirds of International Mail revenue, but “inbound” services are the opposite, generating two thirds of volume but only a third of the revenue. This is primarily due to the smaller size and lower rates for inbound international e-commerce packages.
For the three months ended March 31, 2020, *International Mail* revenue increased 2.4%, despite a volume decline of 11.7%, compared to the same period last year. For the six months ended March 31, 2020, *International Mail* revenue increased 0.4%, despite a volume decline of 9.1%, compared to the same period last year. These revenue increases were largely due to the January 2020 price increases applicable to Competitive services. The declines in both inbound and outbound volume were due to various competitive pricing, political and economic factors.

The U.S. is a member of the Universal Postal Union ("UPU"), a specialized agency of the United Nations that facilitates the exchange of international mail. We are the designated postal operator for the U.S. under the UPU, and payments to the designated postal operator for the delivery of foreign origin letter-post mails are known as "terminal dues".

In September 2019, the UPU members had a special meeting -- known as the Extraordinary Congress -- to discuss the terminal dues system. During that meeting, UPU members agreed to establish a new remuneration system that will allow us to self-declare rates beginning in July 2020. Other foreign postal operators may also reciprocally apply rates at full-self-declared rates at that time.

In February 2020, we officially invoked our provision to self-declare rates beginning in July 2020.

**Periodicals**

*Periodicals*, also presented as a mail class and a Market-Dominant service category, includes services designed for publishers of newspapers, magazines and other periodical publications whose primary purpose is providing publications to subscribers or other users. For the three months ended March 31, 2020, *Periodicals* revenue decreased 11.1% and volume declined 12.2%, compared to the same period last year. For the six months ended March 31, 2020, *Periodicals* revenue decreased 9.4% and volume declined 9.8%, compared to the same period last year.

*Periodicals* revenue and volume have been in decline for more than a decade as trends in hard-copy reading behavior and shifts of advertising away from print have eroded this business. The *Periodicals* category is not expected to rebound as electronic content continues to grow in popularity with the public.

**Other**

Other services include ancillary services such as *Certified Mail*, *PO Box* services, and *Return Receipt* services. Also included in this category are money orders and passport services. Other services revenue decreased 1.2%, and 3.3% for the three and six months ended March 31, 2020, respectively, compared to the same periods last year.

**OPERATING EXPENSES**

In an effort to align our resources with anticipated future mail and package volume, we continue to aggressively manage operating expenditures under management’s control.

We originally designed our mail processing and distribution network to provide overnight delivery service of *First-Class Mail* within specified delivery areas for a much higher volume of mail than we are required to process and deliver today, and the network’s legacy capabilities are not completely aligned to today’s mail mix and volumes. Consequently, certain of our processing and distribution facilities continue to operate at less than full capacity. Our challenge to contain costs is also compounded by the increasing number of delivery points, which, when combined with lower mail volume, has resulted in a drop in the average number of pieces delivered per delivery point per day from approximately 5.5 pieces in 2007 to 3.4 pieces in 2019, a reduction of approximately 39%, and a further significant decline is expected in 2020.

**Compensation and Benefits**

Compensation and benefits is our largest operating expense category. These expenses consist of costs related to our active career and non-career employees other than retirement costs associated with U.S. government defined benefit pension programs and retiree health costs which are further discussed in *Retirement benefits* and *Retiree Health Benefits*, respectively.
Overall, our compensation and benefits expenses increased 1.0% for the three months ended March 31, 2020, but decreased 0.3% for the six months ended March 31, 2020, compared to the same periods last year. The following table presents compensation and benefits expenses for the three and six months ended March 31, 2020, and 2019:

<table>

<td>74</td>
</tr>
<tr>
<td><strong>Total compensation and benefits</strong></td>
<td><strong>$ 11,804</strong></td>
<td><strong>$ 11,685</strong></td>
</tr>
</tbody>
</table>

**Compensation**

Compensation expense increased 0.6% for the three months ended March 31, 2020, but decreased 0.5% for six months ended March 31, 2020, compared to the same periods last year. The activity in both periods represents increases due to contractual wage adjustments and approximately 3.6 million hours attributable to the extra work day due to the leap year, offset by management’s efforts to align work hours with volume workloads.

**Work Hours**

For the three months ended March 31, 2020, total work hours were approximately 286 million, essentially unchanged compared to the same period last year. However, approximately 3.6 million hours, or 1.3%, were attributable to the extra work day due to the leap year in 2020. Were it not for the extra work day due to the leap year, work hours would have declined for the period.

For the six months ended March 31, 2020, total work hours were approximately 592 million, a decrease of 1.0%, compared to approximately 598 million total work hours for the six months ended March 31, 2019. This decrease was the result of management’s efforts to reduce work hours in line with volume workloads.

As a result of the COVID-19 pandemic, work hours began to decline in late March 2020 due to lower mail volumes and workforce availability, and we expect this trend to continue for the duration of the pandemic.

**Workforce Composition**

The number of career employees at March 31, 2020, was approximately 496,000, a decrease of approximately 1,500 employees, or 0.3%, compared to the same date a year ago. This decrease primarily reflected natural attrition, continued efforts to align our workforce with declining mail volume, offset by conversions of non-career employees to career status, in accordance with our contractual agreements.

The number of non-career employees at March 31, 2020, was approximately 129,500, a decrease of approximately 10,500 employees, or 7.5%, compared to the same date a year ago. This decrease primarily reflected management’s continued efforts to align our workforce with declining mail volume, and the conversions of non-career employees to career status, in accordance with our contractual agreements.

**Collective Bargaining Agreements**

On January 22, 2020, we reached a tentative agreement with the National Postal Mail Handlers Union, AFL-CIO (“NPMHU”) on a new three-year collective bargaining agreement, which the union membership ratified on April 8, 2020. The new contract went into effect on April 25, 2020, and will expire on September 20, 2022.

On March 10, 2020, a three-member arbitration panel reached a decision in our legally mandated binding interest arbitration process with the American Postal Workers Union, AFL-CIO (“APWU”), establishing the terms of a new collective bargaining agreement. The new contract went into effect on March 10, 2020, and will expire on September 20, 2021.
In September 2019, we agreed to extend contract negotiations relating to a new collective bargaining agreement with the National Association of Letter Carriers, AFL-CIO ("NALC"). The previous contract with the NALC expired on September 20, 2019, and negotiations with the NALC are at an impasse. The parties will continue to follow the current agreement until a new contract is reached through the dispute resolution process.

**Employee Health Benefits**

Our expense for employee health benefits (which includes the employer portion of Medicare taxes) is most significantly impacted by the number of employees electing coverage and the premium costs of the selected plans. Our active employees may participate in the Federal Employees Health Benefits ("FEHB") Program, which OPM administers. Separate from FEHB, we offer our own self-insured healthcare plan to certain non-career employees who are ineligible for FEHB.

Employee health benefits expense increased 3.2% and 0.8% for the three and six months ended March 31, 2020, compared to the same periods last year, driven by average premium increases of 4.0% in calendar year 2020, and partially offset by the lower contribution rate of the employer portion of healthcare premiums that we paid, by management efforts to provide employees with information and tools for selecting the health benefit plans that best meet their needs, and by the small decrease in number of career employees, as previously discussed.

Our share of healthcare premiums for our employees represented 71.9% of the total healthcare premium costs for both the three months ended March 31, 2020, and 2019. Our share of healthcare premiums for our employees represented 72.0% and 72.3% of the total healthcare premium costs for the six months ended March 31, 2020, and 2019, respectively. This decrease in our share of healthcare premium costs for employees during the six-month period was consistent with the terms of our contractual agreements.

**Social Security**

For the three and six months ended March 31, 2020, our Social Security costs increased 1.0% for the three months ended March 31, 2020, but decreased 0.4% for the six months ended March 31, 2020, compared to the same periods last year. These fluctuations were consistent with the general changes in compensation for the period, as described above in Compensation.

The CARES Act offers certain employers the ability to defer payment of the employer’s share of the Social Security payroll tax on wages incurred from March 27, 2020, through December 31, 2020. In accordance with this provision, we began deferring these payments in April 2020, and intend to continue the deferral for the remainder of calendar year 2020 for an estimated total deferral amount of approximately $1.6 billion. One half of these deferred payments would be due by December 31, 2021, and the other half by December 31, 2022.

**Thrift Savings Plan**

Career employees may participate in the Thrift Savings Plan ("TSP"), a defined contribution retirement savings and investment plan administered by the Federal Retirement Thrift Investment Board. Our TSP expenses are related only to our contributions for FERS employees who participate in the TSP. For these employees, we contribute 1% of basic pay and match voluntary employee contributions up to an additional 4% of basic pay.

For the three and six months ended March 31, 2020, our TSP matching costs increased 3.9% and 2.8%, respectively, compared to the same periods last year. The increase in expenses correlates to the changing workforce composition of CSRS and FERS employees.

**Retirement Benefits**

The majority of our career employees participate in one of two U.S. government defined benefit pension programs, CSRS and FERS, based on the starting date of their employment with us or another U.S. government employer. We incur normal costs (the amount determined by OPM representing the employer portion of retirement benefits for participating employees and their qualifying survivors, upon retirement, for each employee’s current year of service) for FERS employees; however, by law we do not pay normal costs for CSRS retirement benefits. FERS employees are further categorized as either FERS, FERS - Revised Annuity Employees (FERS - RAE), or FERS - Further Revised Annuity Employees (FERS - FRAE) depending on whether their date of hire was before, during,
or after calendar year 2013, respectively. This categorization determines the percentage of basic pay that we are required to contribute for normal cost.

Our retirement benefits expenses consist of three components: 1) FERS normal costs, 2) CSRS unfunded retirement benefits amortization, and 3) FERS unfunded retirement benefits amortization. These retirement benefits expense components are further described in detail in the sections below. The following table presents the retirement benefits expenses for the three and six months ended March 31, 2020, and 2019:

1 Expense for the accrual for the annual payment due to OPM by September 30 of the respective year, based on information provided by OPM, to amortize the unfunded CSRS retirement obligation. Payments are to be made through 2043 based on OPM invoices.

2 Expense for the accrual for the annual payment due to OPM by September 30 of the respective year, based on information provided by OPM, to amortize the unfunded FERS retirement obligation. Payments are to be made over a 30-year rolling period based on OPM invoices.

Our retirement benefits expenses increased 23.7% and 16.1% for the three and six months ended March 31, 2020, respectively, compared to the same periods last year. This increase was due to rising employer contributions rates for FERS normal cost, as well as increases in the CSRS and FERS unfunded retirement benefits amortization, as discussed below.

For additional information, see Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 9 - Retirement Plans.

**FERS Normal Costs**
We record our contributions to FERS normal costs as they are incurred. Any unpaid employer amounts at the end of a period, along with any employee amounts withheld but not remitted at the end of a period, are recorded as a current liability within Retirement benefits in the accompanying Balance Sheets.

As determined by OPM, our FERS normal cost contribution rates increased from 13.7% to 14.7% of basic pay for 2020, an increase of 7.3% from the prior year, affecting most of our FERS participants. As a result of this contribution rate increase, FERS normal cost expenses increased 8.6% and 7.6% for the three and six months ended March 31, 2020, respectively, compared to the same periods last year.

**CSRS and FERS Unfunded Retirement Benefits**
OPM periodically notifies us regarding its revaluation of unfunded CSRS and FERS retirement benefits. The amounts we record as expenses for our unfunded CSRS and FERS liabilities may be significantly impacted by changes in actuarial assumptions used by OPM to revalue the unfunded liabilities.

In October 2019, OPM provided an actuarial report projecting the annual amortization payments due September 30, 2020, to be $1.6 billion for CSRS and $1.1 billion for FERS.

On April 2, 2020, the Board of Actuaries of the CSRS, which oversees OPM’s calculation of actuarial liabilities for CSRS and FERS, lowered the discount rate used to calculate CSRS and FERS unfunded retirement liabilities from 4.25% to 4.0%. We have estimated that the impact of this change in discount rate on the annual CSRS and FERS amortization expense, will result in revised projected amortization payments due September 30, 2020, of approximately $1.8 billion for the CSRS obligation and approximately $1.3 billion for the FERS obligation, increases of $181 million and $226 million, respectively.
Accordingly, we have accrued $495 million and $899 million for the three and six months ended March 31, 2020, for the CSRS amortization expense, reflecting an adjustment of approximately $91 million for the revised assumptions. Likewise, we have accrued $378 million and $643 million for the three and six months ended March 31, 2020, for the FERS amortization expense, reflecting an adjustment of approximately $113 million for the revised assumptions.

Our CSRS and FERS unfunded retirement benefits amortization expenses increased 45.5% and 28.6% for the three and six months ended March 31, 2020, respectively, compared to the same periods last year, due to higher estimated annual amortization payments resulting from revised actuarial assumptions and discount rate changes.

We expect to receive invoices from OPM for the actual amounts due September 30, 2020, for CSRS and FERS during the fourth quarter of 2020, and the amounts invoiced could differ from the projected amounts, due to further changes in experience, discount rates and/or actuarial assumptions as of the calculation date.

Retiree Health Benefits
We participate in federal employee benefit programs for retiree health benefits. Retirees who participated in FEHB for the five years immediately preceding their retirement may continue to participate in the plan during retirement. Qualifying survivors of retirees are also eligible to receive benefits.

In accordance with PAEA, since the beginning of 2017, the PSRHBF has funded our share of retiree health benefit premiums. Also since 2017, we have been obligated to pay into the PSRHBF the actuarially determined normal costs of retiree health benefits attributable to the service of our employees, as well as the amortization payment for the PSRHBF unfunded liability. Our total retiree health benefits expenses therefore consist of both the normal and the amortization costs. We record the required contributions to the plan as an expense in the period in which each contribution is due.

Based on preliminary calculations provided by OPM in October 2019, we have projected the PSRHBF amortization payment amount due September 30, 2020, to be $900 million, and therefore accrued expenses of $225 million and $450 million for the three and six months ended March 31, 2020, respectively. We expect to receive the invoice from OPM for the actual amount due during the fourth quarter of 2020 and this may differ from the original projected amount due to changes in discount rates, actuarial assumptions and experience as of the invoice calculation date.

Also, based on preliminary calculations provided by OPM in October 2019 using updated discount rate assumptions, we have estimated the amount of our PSRHBF normal cost payment due September 30, 2020, to be $4.0 billion, and therefore accrued expenses of $1.0 billion and $2.0 billion for the three and six months ended March 31, 2020, respectively. We expect to receive the invoice from OPM for the actual amount due during the fourth quarter of 2020 and this may differ from the original projected amount due to changes in discount rates, actuarial assumptions and experience as of the invoice calculation date.

For the three and six months ended March 31, 2020, our total retiree health benefits expenses decreased by $50 million, or 3.9%, and $100 million, or 3.9%, respectively, compared to the same periods last year, all of which was attributable to a decrease in the estimated amortization payment for the PSRHBF unfunded liability.

For additional information, see Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 10 - Health Benefits Plans, Retirees.

Workers' Compensation
Our employees injured on the job are covered by the Federal Employees' Compensation Act ("FECA"), administered by the U.S. Department of Labor’s (“DOL”) Office of Workers’ Compensation Programs, which makes all decisions regarding injured workers’ eligibility for benefits. We are legally mandated to participate in the federal workers’ compensation program. Our workers’ compensation expense reflects the impacts of changes in discount rates, as well as the actuarial valuation of new workers’ compensation cases and revaluation of existing ones. We reimburse the DOL for all workers’ compensation benefits paid to or on behalf of our employees, plus an administrative fee.
On a daily basis we focus on costs that can be managed in the course of normal business operations. Certain aspects of workers’ compensation can be managed through human resource initiatives, safety measures and training. Other workers’ compensation costs cannot be managed in the course of normal business operations and are less predictable, including expenses caused by actuarial revaluation and discount rate changes. We subtract the cash payments made by DOL on behalf of workers' compensation obligations, which are relatively predictable, from total workers' compensation expense in order to determine the non-cash component of workers' compensation expense, a non-GAAP financial measure.

The following table presents the components of workers’ compensation expense, including the cash payments made by DOL on behalf of workers’ compensation obligations, for the three and six months ended March 31, 2020, and 2019:

<table>
<thead>
<tr>
<th></th>
<th>Three Months Ended March 31,</th>
<th>Six Months Ended March 31,</th>
</tr>
</thead>
<tbody>
<tr>

<td>(370)</td>
</tr>
<tr>
<td><strong>Total workers’ compensation non-cash expense</strong></td>
<td><strong>$2,625</strong></td>
<td><strong>$401</strong></td>
</tr>
</tbody>
</table>

For the three months ended March 31, 2020, the portion of workers’ compensation expense due to the impact of discount rate changes increased approximately $2.2 billion, compared to the same period last year. For the six months ended March 31, 2020, the portion of workers’ compensation expense due to the impact of discount rate changes increased approximately $1.1 billion, compared to the same period last year. These changes are the result of changes in interest rates, outside of management’s control.

The combined costs of new workers’ compensation cases and revaluation of existing workers’ compensation cases increased by $52 million and $14 million for the three and six months ended March 31, 2020, compared to the same periods last year. Changes in actuarial valuation are primarily attributable to the combined impacts of routine changes in actuarial estimation, the progression of existing cases and updated COLA assumptions, which are largely outside of management’s control.

Under FECA, workers’ compensation claims for many types of injuries cannot be settled through lump-sum payments, and in some instances with regard to those claims, compensation may be paid over many years. Federal law grants COLA rates to those claims, and these factors result in substantially higher costs to us than would likely result if we managed our own claims. Additionally, since we do not manage the FECA program, we have no ability to control the significant administrative costs associated with managing the claims and payments process.

For additional information, see Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 11 - Workers’ Compensation.

**Transportation**

Transportation expenses include the costs we incur to transport mail and packages between our facilities, comprising highway, air and international transportation contracts, plus contract delivery services.

With the exception of contract delivery services, our costs to deliver mail and other products to delivery points are not included within Transportation but in Compensation and benefits for employee costs and in Other operating expenses for fuel, vehicle maintenance and repair, and other costs. Furthermore, transportation expenses do not
include the compensation and related costs of employees responsible for transporting mail and packages between our facilities.

Variations in the volume and weight of mail transported, the mode of transportation used, and fuel prices have significant impact on transportation expenses.

The components of transportation expenses for the three and six months ended March 31, 2020, and 2019, are presented in the following table:

<table>
<thead>
<tr>
<th>(in millions)</th>
<th>Three Months Ended March 31,</th>
<th>Six Months Ended March 31,</th>
</tr>
</thead>
<tbody>
<tr>

<td>$2,000</td>
</tr>
</tbody>
</table>

Overall, transportation expenses increased 0.4% and 1.5% for the three and six months ended March 31, 2020, compared to the same periods last year.

Highway transportation expenses decreased 1.5% for the three months ended March 31, 2020, but increased 3.4% during the six months ended March 31, 2020, compared to the same periods in last year. For the three and six months ended March 31, 2020, highway contract expenses decreased, primarily due to a decrease in the number of miles driven and lower average diesel fuel prices. However, results for the six months ended March 31, 2020, include a one-time adjustment resulting from our adoption of ASC 842, whereby we recorded transportation expenses associated with embedded leases in certain of our transportation contracts during the first quarter of 2020 (see Note 2 - Recent Accounting Pronouncements for additional disclosures regarding our adoption of ASC 842).

Air transportation expenses increased 3.9% for the three months ended March 31, 2020, but decreased 0.6% during the six months ended March 31, 2020, compared to the same periods last year. For the six months ended March 31, 2020, the slight decrease was due primarily to lower volumes and lower average jet fuel prices. However, both volumes and average jet fuel prices rose in the three months ended March 31, 2020, leading to an increase in air transportation expenses for the period.

International transportation expenses are related only to outbound services that allow customers in the U.S. to send mail and packages to other countries. For the three and six months ended March 31, 2020, international transportation expenses decreased 1.4% and 2.9% compared to the same periods last year, primarily due to decreases in our international service volumes.
Other Operating Expenses

Other operating expenses for the three and six months ended March 31, 2020, and 2019, are detailed in the following table:

<table>

</tr>
</tbody>
</table>

Other operating expenses increased by 5.3% and 2.5% for the three and six months ended March 31, 2020, compared to the same periods in the prior year. While these aggregate changes were relatively immaterial, the period-over-period changes in the various components of other operating expenses for the three and six months ended March 31, 2020, were also relatively immaterial.

LIQUIDITY AND CAPITAL RESOURCES

Our liquidity consists of unrestricted cash and cash equivalents plus available borrowing capacity. As of March 31, 2020, and September 30, 2019, we held unrestricted cash and cash equivalents of $9.0 billion and $8.8 billion, respectively. During the six months ended March 31, 2020, our average daily liquidity balance under our statutory borrowing capacity was $12.3 billion, representing approximately 56 days of liquidity available, which we define as liquidity divided by estimated average cash disbursements (including capital expenditures) per calendar day (365 days per year).

We face certain risks caused by the COVID-19 pandemic, including the disruptions to our revenue and business operations, which will have a material effect on our financial condition and results of operations. Quarantines, shelter-in-place orders, and travel and logistics restrictions in connection with the outbreak have affected our retail and commercial customers, as well as suppliers and mail service providers. While the disruption is expected to be temporary, its duration remains uncertain. A protracted loss in customer demand for our services is likely to have a material effect on our financial condition, results of operations and liquidity. The sudden drop in mail volumes, our most profitable revenue stream, is steep and may never fully recover to levels prior to the pandemic.

Notwithstanding our $15.0 billion statutory debt limit, and $3.0 billion annual limitation on new borrowing, the CARES Act allows us to borrow up to an additional $10.0 billion in financing from the U.S. Treasury to fund operating expenses. The U.S. Treasury may lend up to this amount at our request, upon terms and conditions mutually agreed upon. However we have no assurance that the U.S. Treasury will agree to provide such financing or if it will be provided upon favorable terms.

We estimate that the COVID-19 pandemic may increase our net operating loss by more than $22.0 billion over the next eighteen months, threatening our ability to operate. If we are able to borrow the $10.0 billion from the U.S. Treasury as provided by the CARES Act, we expect that we will have sufficient liquidity to continue to operate through April 2021. However, if we are unable to secure this $10.0 billion in financing, we expect to be able to continue to operate only through September 2020, absent additional defaults.

Although our liquidity has generally increased since 2012, it remains insufficient to support an organization with approximately $80 billion in annual operating expenses, to make capital investments necessary for continuity of operations.
operations and to prepare for unexpected contingencies. Much of this liquidity improvement as of March 31, 2020, would not have occurred but for the temporary exigent surcharge, which allowed us to collect a total of $4.6 billion in incremental revenue between January 2014 and April 2016.

Aside from the temporary exigent surcharge, we defaulted on $33.9 billion of statutorily specified PSRHBF prefunding payments from 2012 through 2016, and did not make the approximately $495 million in payments due for FERS unfunded liabilities between 2014 and 2016, or the approximately $21.0 billion in payments due for PSRHBF normal cost and amortization on PSRHBF, CSRS and FERS unfunded liabilities between 2017 and 2019, in order to preserve liquidity, and to ensure that our ability to fulfill our primary universal service mission was not placed at undue risk. The combination of these defaults and non-payments, plus the incremental revenue associated with the temporary exigent surcharge referred to above, and the increased revenue from growth in our Shipping and Packages business, are the primary reasons why our cash and available liquidity has improved.

**CASH FLOW ANALYSIS**

**Operating Activities**
Cash provided by operating activities decreased $148 million for the six months ended March 31, 2020, compared to the same period last year, largely the result of timing differences in cash payments for compensation and benefits.

**Investing Activities**
We invested $741 million in the purchase of property and equipment for the six months ended March 31, 2020, which is an increase of $82 million, or 12.4%, compared to the same period last year. As of the date of this report, the amount of our full year projected capital expenditures is approximately $2.0 billion, which is approximately $300 million less than our original forecast of $2.3 billion. We anticipate that this may further decline if equipment and information technology investments and other programs are deferred to future years as a result of COVID-19.

**Financing Activities**
Except as described otherwise in this quarterly report, the nature and amounts of our payment obligations under our debt, capital and operating lease agreements, purchase commitments and other liabilities as of March 31, 2020, have not materially changed from those described in our Annual Report.

As of both March 31, 2020, and September 30, 2019, the aggregate principal balance of our outstanding debt was $11.0 billion, consisting of a combination of fixed-rate note and floating-rate notes, all of which we consider long-term debt.

**DEBT**
As of March 31, 2020, our statutory borrowing capacity was $4.0 billion, of which $1.0 billion would require repayment by September 30, 2020, to comply with our annual debt increase limits. Furthermore, notwithstanding our $15.0 billion statutory debt limit, and the $3.0 billion annual limitation on new borrowing, the CARES Act allows us to borrow up to an additional $10.0 billion in financing from the U.S. Treasury to fund operating expenses. The U.S. Treasury may lend up to this amount at our request, upon terms and conditions mutually agreed upon.

In 1974, we began issuing debt through individual debt agreements to the Federal Financing Bank (“FFB”), a government-owned corporation under the general supervision of the Secretary of the Treasury. In 1999, we entered into a Note Purchase Agreement (“NPA”) with the FFB to establish standardized procedures for issuing debt. Under the NPA, we were able to issue a series of notes with established terms and conditions by providing two days prior notice. Also under the NPA, we could make borrowings against two annually renewable revolving credit line facilities. These note arrangements and credit line facilities provided the flexibility to borrow short or long-term, using floating or fixed-rate instruments.

The NPA was extended each year through September 30, 2018, and in shorter increments between that date and August 31, 2019, at which time the NPA expired. This expiration did not affect the terms of any of our outstanding debt as of March 31, 2020, all of which was issued under the NPA.
If we are unable to renew or replace the NPA with the FFB, we have no assurance that we could obtain alternative debt financing on comparable terms. However, we believe that we will be able to maintain adequate liquidity through existing and new financing arrangements, as necessary and allowed by statute, to fund our operations.

On April 1, 2020, we drew $3.4 billion on a revolving credit facility with the FFB that survived the expiration of the NPA. In order to comply with the annual net increase limit, we must repay $400 million from this credit facility by September 30, 2020. Given that the credit facility has a maximum term of up to one year, we must repay any outstanding balance of the credit facility by April 1, 2021. The credit facility’s interest rate was determined by the U.S. Treasury based on the market rates of similar instruments as of the day of the funding request.

LIQUIDITY OUTLOOK
We are constrained by laws and regulations, including the PAEA, which restrict revenue sources and mandates certain expenses. Statutorily mandated expenses include amortization payments to provide full funding of retirement benefits under the CSRS and the FERS, as well as FERS normal costs, described in greater detail in Note 9 - Retirement Plans. Additionally, the PAEA established the PSRHBF and mandated certain obligations for paying normal costs, the present value of the estimated retiree health benefits attributable to active employees’ current year of service, and amortization payments for full prefunding of retiree health benefits. These prefunding obligations, described in greater detail in Note 10 - Health Benefits Plans, are unlike expenses imposed on most other federal entities or private-sector businesses that offer such benefits.

We continue to face challenges from the ongoing migration of mail to electronic alternatives, and we are legally limited under current law in how we can price our products and streamline our legacy business model. Our operations will require significant capital investment over the next few years to modernize and improve our processing and delivery infrastructure and update our delivery fleet in order to continue to meet our primary statutory obligation to provide prompt, reliable and efficient postal services to the nation.

Irrespective of our challenges resulting from the COVID-19 pandemic, absent legislative and regulatory change, we project continuing annual net losses in the future. As a result of these losses and our liquidity concerns, we will unlikely have sufficient cash balances to meet all of our existing legal obligations and make all of the critical investments in our infrastructure that are necessary for operational continuity and that have been deferred in recent years.

In the event that circumstances leave us with insufficient liquidity to continue operating, we may deem it necessary to implement additional contingency plans to ensure that our primary mission is fulfilled and that mail deliveries continue. These measures may require us to prioritize payments to the FFB, our employees and suppliers ahead of some payments to fund retirement and retiree health benefits, as we have done in the past.

With the anticipated continued migration to electronic communication and transactional alternatives, we continue to pursue long-term financial sustainability by focusing on the following items:

1. Continued efforts to control costs and drive efficiencies, innovate to keep mail relevant and generate increased revenue;
2. Postal Service reform legislation that addresses our overall cost structure and enhances our revenue-generating opportunities; and
3. Favorable outcome of the PRC’s ten-year review (discussed below), which would allow additional pricing flexibility.

Although we continue to inform the executive branch, Congress, the PRC and other stakeholders of the immediate and long-term financial challenges we face, we have no assurances that our requests will result in meaningful reform in the foreseeable future.
PRC Ten-year Review
In December 2016, the PRC initiated its ten-year review of the system for regulating rates and classes for Market-Dominant products as required by the PAEA. The purpose of the ten-year review was to determine if the system for regulating such rates and classes has achieved the objectives Congress established in the PAEA. As part of this review, the PRC evaluated the CPI-U price cap for our Market-Dominant services.

On December 1, 2017, the PRC announced its initial decision in connection with its ten-year review. The PRC concluded that the rates system has not achieved its objectives and needs to be changed, primarily because it does not enable us to achieve our mission of providing prompt, reliable, and efficient universal postal services to the American people in a financially sustainable manner. The PRC’s proposed changes to the system do not include the elimination of the CPI-U price cap; however, its proposal does provide for some additional pricing authority within a price cap system.

On December 5, 2019, the PRC announced a revised decision in connection with its ten-year review. The PRC’s proposed changes to the system still do not include the elimination of the CPI-U price cap. Moreover, while the revised proposal does include adjustment factors as we had requested to provide more flexibility for the regulatory system to better deal with future exogenous changes, the new proposal no longer includes any “true-up” authority to provide us with a reasonable opportunity to cover all of our costs. We continue to assert that the price cap should be eliminated, and that if the PRC insists on maintaining a price cap that the system must include both a resetting of rates so they are compensable, as well as adjustment factors to ensure the system is sufficiently flexible going forward.

The PRC was expected to issue a final rule after considering the comments and reply comments of any interested stakeholders, which were due no later than February 3, 2020, and March 4, 2020, respectively. As of the date of this report, the PRC has not issued a final rule. Additional information regarding the ten-year review may be found at the PRC website: https://www.prc.gov/press-releases/prc-revises-proposals-second-rulemaking-modify-rate-system-classes-market-dominant.

2020 and Beyond
Irrespective of our challenges resulting from the COVID-19 pandemic, we anticipate that given our ongoing liquidity concerns, and without legislative action and regulatory reform, we may not be able to pay all legally required obligations and also invest in much-needed capital expenditures in 2020 and future years that are necessary to ensure our ability to fulfill our primary mission. Furthermore, we believe that continuing productivity improvements alone will not be sufficient to address the challenges presented by declining Market-Dominant volume and revenue, and any future growth in operating revenue would unlikely keep pace with increased costs.

Legally Required Obligations
In addition to our previously discussed obligations for unfunded retirement and retiree health benefits of approximately $8.0 billion due on September 30, 2020, we expect to pay the DOL approximately $1.3 billion in October 2020, representing the workers’ compensation claims paid by DOL for the chargeback year July 1, 2019, to June 30, 2020, plus the estimated administrative fee.

The CARES Act offers certain employers the ability to defer payment of the employer’s share of the Social Security payroll tax on wages incurred from March 27, 2020, through December 31, 2020. In accordance with this provision, we began deferring these payments in April 2020, and intend to continue the deferral for the remainder of calendar year 2020 for an estimated total deferral amount of approximately $1.6 billion. One half of these deferred payments would be due by December 31, 2021, and the other half by December 31, 2022.

Capital Investments
We currently estimate that our required cash outlays for capital investments necessary to ensure that we can continue to perform our universal service obligation will amount to approximately $1.3 billion for the remainder of 2020, and an additional $11.0 billion for years 2021 through 2024, as we plan to invest in a new fleet of delivery vehicles and other appropriate capital assets. Although our future projections include these capital cash outlays, future cash flow from operations alone may not generate the cash needed to enable us to fully fund such necessary capital investments.
Mitigating Circumstances
We continue to pursue strategies within our control to increase operational efficiency and improve liquidity. We have managed capital in recent years by spending only what we believed was essential to maintain our existing facilities and service levels, and to increase efficiencies. However, continued increases in capital investment are necessary to upgrade our facilities, fleet of vehicles and processing equipment in order to remain operationally viable. Aggressive management of the business operations, as well as legislative and regulatory reforms that will enable us to increase revenue and reduce costs, will all be necessary to restore our financial health.

Our status as an independent establishment of the executive branch that does not receive tax dollars for our operations presents unique requirements and restrictions, but also potentially mitigates some of the financial risk that would otherwise be associated with a cash shortfall. With annual total revenue in 2019 of approximately $71 billion, a financially sound Postal Service continues to be vital to U.S. commerce.

The U.S. economy benefits greatly from us and the many businesses that provide the printing and mailing services that we support. Disruption of the mail would cause undue hardship to businesses and consumers as it would significantly inhibit the remittance of payments through the mail, and in the event of a cash shortfall, the U.S. government would likely prevent us from significantly curtailing or ceasing operations. We continue to inform the executive branch, Congress, the PRC and other stakeholders of the immediate and long-term financial challenges we face and the legislative and regulatory changes that are required to restore our financial stability.

LEGISLATIVE, REGULATORY AND RELATED MATTERS

TASK FORCE ON THE UNITED STATES POSTAL SYSTEM
As previously reported, on April 12, 2018, the President issued Executive Order 13829 to establish a Task Force on the United States Postal Service ("Task Force"), to be chaired by the Secretary of the Treasury, as Secretary and as Chairman of the FFB, or his designee. In accordance with the Executive Order, the Task Force conducted an evaluation of our operations and finances, and submitted its report to the President in August 2018.

There has been no further congressional activity related to the President’s Task Force report on the Postal Service subsequent to the March 12, 2019, Senate Homeland Security and Governmental Affairs Committee hearing titled, "A Path to Sustainability: Recommendations from the President’s Task Force on the United States Postal Service."

LEGISLATIVE UPDATE
As a self-funded independent establishment of the executive branch, our business model and operations are significantly influenced by congressional oversight and legislation. Additionally, Congress intended for us to be governed by an eleven-member Board of Governors ("Board") which generally consists of our Postmaster General, Deputy Postmaster General and nine independent governors ("Governors"). The President appoints the Governors with the advice and consent of the Senate. We have five Senate-confirmed Governors currently in office.

Legislation
Several bills introduced in response to the COVID-19 pandemic have financial implications for us.

On March 18, 2020, the President signed the Families First Coronavirus Response Act, enacted as Public Law 116-127, which provides new paid sick leave that may be used by an employee in COVID-19 situations for themselves, or to care for sick family members, as well as Family and Medical Leave Act-protected unpaid and paid leave if a school/child care is closed.

On March 27, 2020, the President signed the CARES Act, which allows the Postal Service to borrow up to an additional $10.0 billion in financing from the U.S. Treasury to fund operating expenses. The law stipulates that the Secretary of Treasury may lend up to this amount at the request of the Postal Service, upon terms and conditions mutually agreed upon by the Secretary and the Postal Service.

H.R. 6425, the Protect our Post Offices Act, introduced on March 31, 2020, would also appropriate $25.0 billion for payment to the Postal Service Fund for revenue forgone due to the COVID-19 pandemic. The bill was referred to the House Committees on Appropriations and Budget.
Postal Service Reform
The 116th Congress has not introduced any major Postal Service reform bills to date. Legislative and regulatory reforms remain critical for us to meet the needs of the American public, and we will continue to work with Congress and all of our stakeholders to enact Postal Service reform legislation.

Board of Governors Nominations
On March 2, 2020, the President submitted to the Senate the nomination of Donald Lee Moak to serve on the Board for a term expiring December 8, 2022. The nomination was referred to the Senate Homeland Security and Governmental Affairs Committee for its consideration. The nomination of William Zollars to serve for a term expiring December 8, 2022, is also pending the committee’s consideration.

FAIR VALUE MEASUREMENTS
As required by authoritative accounting literature, certain fair value disclosures for the periods ended March 31, 2020, and September 30, 2019, are discussed in Item 1. Financial Statements, Notes to Unaudited Financial Statements. We did not recognize gains as a result of valuation measurements during the three and six months ended March 31, 2020. All recognized losses have been incorporated into our financial statements as of March 31, 2020. See Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 13 - Fair Value Measurement.

RELATED PARTY TRANSACTIONS
As disclosed throughout this quarterly report, we have significant transactions with other U.S. government entities, which are considered related parties for reporting purposes. For a more detailed description, see Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 5 - Related Parties.

CRITICAL ACCOUNTING POLICIES AND ESTIMATES
The preparation of financial statements in accordance with GAAP requires management to make significant judgments and estimates to develop certain amounts reflected and disclosed in the financial statements. In many cases, alternative policies or estimation techniques may be used.

We maintain a thorough process to review the application of accounting policies and to evaluate the appropriateness of the many estimates that are required to prepare the financial statements of a large organization. However, even under optimal circumstances, estimates routinely require adjustment based on changing circumstances and new or better information.

The accounting policies deemed either the most judgmental or which involve the selection or application of alternative accounting policies, and are material to the interim financial statements, are described in Critical Accounting Estimates contained in Management’s Discussion and Analysis of Financial Condition and Results of Operations of the Annual Report. Management normally discusses the development and selection of accounting policies and estimates with the Audit and Finance Committee of the Board.

RECENT ACCOUNTING STANDARDS
See Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 2 - Recent Accounting Pronouncements, for a description of recently announced accounting standards.

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK
In the normal course of business we are exposed to market risks from changes in commodity prices, certain foreign currency exchange rates and interest rates. Our commodity price risk consists primarily of exposure to changes in prices for diesel fuel, unleaded gasoline and aircraft fuel for transportation of the mail, and fuel for heating facilities. We have foreign currency risk related to the settlement of terminal dues and transit fees with foreign postal administrations for international mail.
We have not used derivative commodity or financial instruments to manage market risk related to commodities, foreign currency exchange or interest rate fluctuations for debt instruments. Additionally, we do not purchase or hold derivative financial instruments for speculative purposes.

We also have provisions in our debt agreements that allow us to prepay our $11.0 billion debt at any time at a price determined by the Secretary of the Treasury, based on prevailing interest rates in the U.S. Treasury market at the time of repayment.

See Item 7A. Quantitative and Qualitative Disclosures about Market Risk in the Annual Report for additional information.

ITEM 4. CONTROLS AND PROCEDURES

Management is responsible for the preparation, integrity and fair presentation of our financial statements.

DISCLOSURE CONTROLS

We maintain disclosure controls and procedures that are designed to ensure that information required to be disclosed in quarterly and annual reports is recorded, processed, summarized, and reported within the time frames specified by PAEA, and that this information is accumulated and communicated to our management, including the Postmaster General and Chief Financial Officer, as appropriate, to allow timely decisions regarding required disclosure.

We carried out an evaluation under the supervision and with the participation of management, including the Postmaster General and the Chief Financial Officer, of the effectiveness of the design and operation of disclosure controls and procedures as of March 31, 2020. Based upon and as of the date of the evaluation, the Postmaster General and the Chief Financial Officer concluded that our disclosure controls and procedures were effective.

INTERNAL CONTROLS

We have made no changes in our internal control over financial reporting during the three months ended March 31, 2020, that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.
PART II. OTHER INFORMATION

ITEM 1. LEGAL PROCEEDINGS

For a discussion of legal proceedings affecting us, please refer to Item 1. Financial Statements, Notes to Unaudited Financial Statements and Note 8 - Commitments and Contingencies, as well as our Annual Report.

ITEM 1A. RISK FACTORS

The following risk factor supplements Item 1A. Risk Factors of our Annual Report.

The occurrence of a global pandemic or other adverse public health developments could have a material and adverse effect on our business operations, financial condition and results of operations.

In March 2020, the World Health Organization declared COVID-19 a global pandemic, which has since spread throughout the U.S. Given our mandate to provide universal postal services to the nation, we provide an essential service and have continued to process and deliver mail and packages during the pandemic.

We expect the COVID-19 pandemic to have a material effect on our financial condition, results of operations and liquidity. Quarantines, shelter-in-place orders, and travel and logistics restrictions in connection with the outbreak have affected retail and commercial customers, as well as suppliers and mail service providers. The Postal Service relies on the sale of postal products and services to fund its operations, and these sales have declined significantly as a result of the pandemic. The sudden drop in mail volumes, the Postal Service’s most profitable revenue stream, has been steep and may never fully recover to levels prior to the pandemic.

CERTIFICATION PURSUANT TO
RULES 13a-14(a) AND 15d-14(a) UNDER THE SECURITIES AND EXCHANGE ACT OF
1934, AS ADOPTED PURSUANT TO SECTION 302 OF THE SARBANES-OXLEY ACT OF
2002.

I, Megan J. Brennan, certify that:

1. I have reviewed this quarterly report on Form 10-Q of the United States Postal Service (“Postal Service”);
2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;
3. Based on my knowledge, the financial statements and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the Postal Service as of, and for, the periods presented in this report;
4. The Postal Service’s other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the Postal Service and have:
   a. Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the Postal Service, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
   b. Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
   c. Evaluated the effectiveness of the Postal Service’s disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
   d. Disclosed in this report any change in the Postal Service’s internal control over financial reporting that occurred during the Postal Service’s most recent fiscal quarter (the Postal Service’s fourth fiscal quarter in the case of an Annual Report) that has materially affected, or is reasonably likely to materially affect, the Postal Service’s internal control over financial reporting;
5. The Postal Service’s other certifying officer and I have disclosed based on our most recent evaluation of internal control over financial reporting, to the Postal Service’s independent registered accounting firm and the Audit and Finance Committee of the Postal Service’s Board of Governors:
   a. All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the Postal Service’s ability to record, process, summarize and report financial information; and
   b. Any fraud, whether or not material, that involves management or other employees who have significant role in the Postal Service’s internal control over financial reporting.

NOTES TO UNAUDITED FINANCIAL STATEMENTS

NOTE 1 - BASIS OF PRESENTATION

Interim Financial Statements
The accompanying unaudited interim financial statements of the United States Postal Service (the “Postal Service”) have been prepared in accordance with accounting principles generally accepted in the United States (“GAAP”) for interim financial information and with the instructions to Form 10-Q and Rule 10-01 of the U.S. Securities and Exchange Commission Regulation S-X. These financial statements should be read in conjunction with the Postal Service’s financial statements for the year ended September 30, 2019, included in its Annual Report on Form 10-K (“Annual Report”) filed with the Postal Regulatory Commission (“PRC”) on November 14, 2019, and do not include all information and footnotes which are normally included in the Annual Report. Except as otherwise specified, all references to years are to fiscal years beginning October 1 and ending September 30, and quarters are quarters within fiscal years 2020 and 2019.

In the opinion of management, the accompanying unaudited interim financial statements reflect all material adjustments, including recurring adjustments, necessary to fairly present the financial position as of March 31, 2020, the results of operations for the three and six months ended March 31, 2020, and 2019, the changes in net deficiency for the six months ended March 31, 2020, and 2019, and cash flows for the six months ended March 31, 2020, and 2019. Operating results for the three and six months ended March 31, 2020, are not necessarily indicative of the results that may be expected for all of 2020. Mail volume and revenue are historically greatest in the first quarter of the year, which includes the holiday mailing season.

Reclassifications
Certain reclassifications have been made to the financial statements for the three and six months ended March 31, 2019, as well as subsequent footnotes, to conform to the current period presentation. Specifically, certain retirement benefit expenses have been reclassified from Compensation and benefits and separately identified as Retirement benefits within Operating expenses in the accompanying unaudited Statements of Operations. In addition, unfunded retirement benefits amortization expenses associated with the Civil Service Retirement System (“CSRS”) and the Federal Employee Retirement System (“FERS”) have been reclassified from Unfunded retirement benefits amortization to Retirement benefits within Operating expenses in the accompanying unaudited Statements of Operations.

The liabilities associated with these retirement benefits have also been reclassified from Compensation and benefits and separately identified as Retirement benefits within Current liabilities in the balance sheets. In addition, the unfunded retirement benefits liabilities associated with CSRS and FERS have been reclassified from Unfunded retirement benefits to Retirement benefits within Current liabilities in the balance sheets. Corresponding reclassifications have been made within Changes in current assets and liabilities in the accompanying unaudited Statements of Cash Flows.

These reclassifications had no effect on previously reported total operating expenses, loss from operations or net loss. See Note 9 - Retirement Plans for further disclosure pertaining to retirement benefits.

NOTE 2 - RECENT ACCOUNTING PRONOUNCEMENTS

Recently Adopted Accounting Pronouncement
In February 2016, the Financial Accounting Standards Board (“FASB”) issued Accounting Standards Update 2016-02 Leases, which has since been codified in Accounting Standards Codification (“ASC”) 842, Leases (“ASC 842”). The new standard requires an entity to record most leases in its balance sheets but continue to recognize expenses in its statements of operations in a manner similar to current accounting practices. The new standard requires a lessee to recognize a lease liability for the obligation to make lease payments and a right-of-use (“ROU”) asset for the right to use the underlying asset for the lease term. Expenses associated with operating leases are recognized on a straight-line basis and include embedded interest and amortization components. The Postal Service recognizes expenses associated with operating leases as rent expense or transportation expense within Other operating expenses or Transportation, respectively, in the statements of operations. The Postal Service recognizes expenses associated with finance leases (formerly capital leases under previous guidance) with both
interest and amortization expenses and presents these separately in the statements of operations. As such, finance leases generally have higher expenses in the earlier periods of the lease term.

The Postal Service adopted ASC 842 for its 2020 fiscal year (beginning October 1, 2019). In connection with the adoption of ASC 842, the Postal Service has made necessary changes to relevant policies, processes, information systems and internal controls. For transition purposes, the Postal Service has elected the option not to restate comparative financial statements under the modified retrospective transition model. This option allows the application of the standard to all leases in effect as of the effective date (October 1, 2019) or commencing thereafter, without any restatement impact on the comparative financial statement balances. Accordingly, all comparative financial statements enclosed herein are presented in accordance with the previous ASC 840, Leases (“ASC 840”), with related ASC 840 disclosures provided in Note 12 - Leases.

In implementing ASC 842, the Postal Service has elected the package of practical expedients which permits carrying forward historical accounting positions around lease identification, lease classification and initial direct costs for all leases commencing prior to October 1, 2019. The Postal Service has also made a policy election to not separate the lease and non-lease components for all types of underlying assets and to exclude its short-term leases from the ROU asset and lease liability balances.

The Postal Service adopted ASC 842 on October 1, 2019. The implementation of ASC 842 resulted in an opening balance sheet adjustment, as of October 1, 2019, to recognize $4.4 billion in right-of-use assets and lease liabilities relating to operating leases as follows:

<table>
<thead>
<tr>
<th>(in millions)</th>

</tr>
</tbody>
</table>

The implementation of ASC 842 did not have a material impact on the Postal Service’s Statement of Operations or Statement of Cash Flows and did not have any impact on the Postal Service’s Statement of Changes in Net Deficiency. See Note 12 - Leases and Item 4. Controls and Procedures for additional disclosures pertaining to ASC 842.

**Accounting Pronouncements Issued but not Adopted**

**Accounting Standards Update 2016-13 Financial Instruments - Credit Losses**

In June 2016, the FASB issued Accounting Standards Update 2016-13 Financial Instruments - Credit Losses, which has since been codified in ASC 326, Financial Instruments - Credit Losses (“ASC 326”). The new standard requires entities to measure expected credit losses on financial instruments and other commitments by replacing the incurred loss impairment methodology in current GAAP with a methodology that reflects expected credit losses and requires consideration of a broader range of reasonable and supportable information to inform credit loss estimates.

The Postal Service intends to adopt ASC 326 for its 2021 fiscal year (beginning October 1, 2020) and the quarters therein. The standard is applicable to the Postal Service’s valuation of its receivables. The Postal Service is currently evaluating the impact of adopting this standard on its financial statements and related disclosures.
Accounting Standards Update 2018-13 Fair Value Measurement
In August 2018, the FASB issued Accounting Standards Update 2018-13 Fair Value Measurement: Disclosure Framework - Changes to the Disclosure Requirements for Fair Value Measurement, which has since been codified in ASC 820, Fair Value Measurement (“ASC 820”). The new standard modifies the disclosure requirements for fair value measurements by adding, modifying or removing certain disclosures.

The Postal Service intends to adopt ASC 820 for its 2021 fiscal year (beginning October 1, 2020) and the quarters therein. The standard is applicable to the Postal Service’s fair value measurements of its revenue forgone installment receivable and its long-term debt, as described further in Note 13 - Fair Value Measurement. Under ASC 820, certain disclosures are required to be applied on a retrospective basis and others on a prospective basis. The Postal Service is currently evaluating the impact of adopting this standard on its financial statements and related disclosures.

Accounting Standards Update 2018-15 Intangibles - Goodwill and Other - Internal-Use Software
In August 2018, the FASB issued Accounting Standards Update 2018-15 Intangibles - Goodwill and Other - Internal-Use Software (Subtopic 350-40) - Customer’s Accounting for Implementation Costs Incurred in a Cloud Computing Arrangement, which has since been codified in ASC Subtopic 350-40, Intangibles - Goodwill and Other - Internal-Use Software (“ASC 350-40”). This is an update to a standard the FASB issued in April 2015 for entities evaluating the accounting for fees paid by a customer in a cloud computing (hosting) arrangement by providing guidance for determining when such arrangement includes a software license.

If a cloud computing arrangement includes a license for internal-use software, then the software license is accounted for by the customer in accordance with ASC 350-40. This generally means that an intangible asset is recognized for the software license and, to the extent that the payments attributable to the software license are made over time, a liability also is recognized. If a cloud computing arrangement does not include a software license, the entity should account for the arrangement as a service contract. This generally means that the fees associated with the hosting element (service) of the arrangement are expensed as incurred.

The Postal Service intends to adopt ASC 350-40 for its 2021 fiscal year (beginning October 1, 2020) and the quarters therein. The Postal Service is currently evaluating the impact of adopting this standard on its financial statements and related disclosures.

NOTE 3 - LIQUIDITY
The Postal Service’s liquidity consists of unrestricted cash and cash equivalents plus available borrowing capacity.

Cash
The Postal Service generates its cash almost entirely through the sale of postal products and services. As of March 31, 2020, and September 30, 2019, the Postal Service held unrestricted cash and cash equivalents of $9.0 billion and $8.8 billion, respectively. See Note 6 - Cash, Cash Equivalents and Restricted Cash for further disclosures pertaining to cash.

The Postal Reorganization Act, as amended by Public Laws 101-227 and 109-435 (the "PRA"), authorizes the Postal Service to raise cash through the issuance of debt obligations. The Postal Service is limited by statute to annual net increases in debt of $3.0 billion calculated as of the end of each fiscal year, and total debt of $15.0 billion. In 1974, the Postal Service began issuing debt through individual debt agreements to the Federal Financing Bank (“FFB”), a government-owned corporation under the general supervision of the Secretary of the Treasury.

COVID-19 Considerations
In March 2020, the World Health Organization declared a novel strain of coronavirus (“COVID-19”) a global pandemic, which has since spread throughout the U.S. Given its mandate to provide universal postal services to the nation, the Postal Service provides an essential service as part of the nation’s critical infrastructure and has continued to process and deliver mail and packages during the pandemic.

The Postal Service expects the COVID-19 pandemic to have a material effect on its financial condition, results of operations and liquidity. Quarantines, shelter-in-place orders and travel and logistics restrictions in connection with the outbreak have affected retail and commercial customers, as well as suppliers and mail service providers. The
Postal Service relies on the sale of postal products and services to fund its operations, and these sales declined significantly in late March 2020 as a result of the pandemic, and the impact has continued to worsen since then. The sudden drop in mail volumes, the Postal Service’s most profitable revenue stream, has been steep and may never fully recover to levels prior to the pandemic.

On March 27, 2020, the President signed the Coronavirus Aid, Relief, and Economic Security Act, enacted as Public Law 116-136 (the “CARES Act”). Notwithstanding the $15.0 billion statutory debt limit, and the $3.0 billion limit on annual borrowing, the CARES Act allows the Postal Service to borrow up to an additional $10.0 billion in financing from the U.S. Treasury to fund operating expenses. The U.S. Treasury may lend up to this amount at the request of the Postal Service, upon terms and conditions mutually agreed upon. However, the Postal Service has no assurance that the U.S. Treasury will agree to provide such financing or if it will be provided upon favorable terms.

The Postal Service estimates that the COVID-19 pandemic may increase its net operating loss by more than $22.0 billion over the next eighteen months, threatening its ability to operate. If the Postal Service is able to borrow the $10.0 billion from the U.S. Treasury as provided by the CARES Act, it expects that it will have sufficient liquidity to continue operations through April 2021. However, if the Postal Service is unable to secure this $10.0 billion in financing, it expects to be able to continue to operate only through September 2020.

Given these COVID-19 considerations, the Postal Service may require an additional injection of liquidity, provided by either the U.S. government or other sources, or through additional defaults, to remain a going concern. While the COVID-19 disruption is expected to be temporary, its duration remains uncertain, and the Postal Service expects that its liquidity may continue to worsen if the nation experiences a prolonged period of disruption.

**Subsequent Events**

The CARES Act offers certain employers the ability to defer payment of the employer’s share of the Social Security payroll tax on wages incurred from March 27, 2020, through December 31, 2020. In accordance with this provision, the Postal Service began deferring these payments in April 2020, and intends to continue the deferral for the remainder of calendar year 2020 for an estimated total deferral amount of approximately $1.6 billion. One half of these deferred payments would be due by December 31, 2021, and the other half by December 31, 2022.

On April 1, 2020, the Postal Service drew $3.4 billion on a revolving credit facility with the FFB that survived the expiration of the Note Purchase Agreement (“NPA”). In order to comply with the annual net increase limit, the Postal Service must repay $400 million from this credit facility by September 30, 2020. Given that the credit facility has a maximum term of up to one year, the Postal Service must repay any outstanding balance of the credit facility by April 1, 2021. The credit facility’s interest rate was determined by the U.S. Treasury based on the market rates of similar instruments as of the day of the funding request.

**Debt**

As of both March 31, 2020, and September 30, 2019, the Postal Service had a combination of fixed-rate and floating-rate notes outstanding with various maturities totaling $11.0 billion. As of March 31, 2020, the Postal Service’s statutory borrowing capacity was $4.0 billion, of which $1.0 billion would require repayment by September 30, 2020, to comply with the annual debt net increase limit.

In 1999, the Postal Service entered into the NPA with the FFB to establish standardized procedures for issuing debt. Under the NPA, the Postal Service was able to issue a series of notes and revolving credit line facilities with established terms and conditions by providing two days prior notice. These note arrangements and credit line facilities provided the flexibility to borrow short or long-term, using floating or fixed-rate instruments.

The NPA was extended each year through September 30, 2018, and in shorter increments between that date and August 31, 2019, at which time the NPA expired. This expiration did not affect the terms of any of the Postal Service’s outstanding debt as of March 31, 2020, all of which was issued under the NPA. As a contractual matter, the FFB continued to lend to the Postal Service under each commitment and line of credit until it expired. If the Postal Service is unable to renew or replace the NPA with the FFB, it has no assurance that it could obtain alternative debt financing on comparable terms.
Liquidity Concerns

The Postal Service is constrained by laws and regulations, including the *Postal Accountability and Enhancement Act* ("PAEA"), which restrict revenue sources and mandate certain expenses.

The Postal Service is required, either by law or by union contract, to participate in U.S. government pension and health and benefits programs for employees and retirees, including the Federal Employees Health Benefit ("FEHB") program, CSRS and FERS, which the Office of Personnel Management ("OPM") administers. Statutorily mandated expenses include amortization payments to provide full funding of retirement benefits under CSRS and FERS, as well as FERS normal costs, described in greater detail below and in Note 9 - Retirement Plans. Additionally, the PAEA established the Postal Service Retiree Health Benefits Fund ("PSRHBF") and mandated certain obligations for paying normal costs, the present value of the estimated retiree health benefits attributable to active employees' current year of service, and amortization payments for full prefunding of retiree health benefits. These prefunding obligations, described in greater detail below and in Note 10 - Health Benefits Plans, are unlike expenses imposed on most other federal entities or private-sector businesses that offer such benefits.

The Postal Service reported operating expenses of approximately $80 billion in 2019 and has incurred cumulative net losses of $83.1 billion from 2007 through March 31, 2020.

Notwithstanding the challenges resulting from the COVID-19 pandemic, absent legislative and regulatory change, the Postal Service projects continuing annual net losses in the future. As a result of these losses and its liquidity concerns, the Postal Service will unlikely have sufficient liquidity to meet all of its existing legal obligations when due while also reducing its debt and making the critical infrastructure investments that have been deferred in recent years.

In the event that circumstances leave the Postal Service with insufficient liquidity, it would likely be required to implement additional contingency plans to ensure that its primary mission is fulfilled and that mail deliveries continue. These measures may require the Postal Service to prioritize payments to the FFB, employees and suppliers ahead of some payments to fund retirement and retiree health benefits, as has been done in the past.

Business Model Challenges and Constraints

Market-Dominant services, which accounted for approximately 66% of the Postal Service’s annual operating revenues in 2019, are currently subject to a price cap as measured by the Consumer Price Index for All Urban Consumers ("CPI-U"). However, the Postal Service’s costs are not similarly constrained. A large portion of its cost structure cannot be altered expeditiously due to the Postal Service’s universal service obligation. Further, the number of delivery points continues to grow by approximately one million per year, which drives up delivery costs. When combined with the impact of lower mail volume, the average number of pieces delivered per delivery point per day has decreased from approximately 5.5 pieces in 2007 to 3.4 pieces in 2019, a decline of approximately 39%, and a further significant decline is expected in 2020.

Many employee and retiree benefit costs are mandated by law and cannot be altered without legislative change. Under current law, the Postal Service is generally unable to increase prices sufficiently to offset increased costs, and is likewise constrained by law from reducing many of its costs or from pursuing many alternate sources of revenue.

Aside from its universal service obligation, a significant factor contributing to Postal Service losses is the ongoing decline in the volume of Market-Dominant products and services, and those declines are being exacerbated by the COVID-19 pandemic. Specifically, declines in *First-Class Mail* are largely the result of changes in consumers' and businesses' use of mail resulting from the continuing migration to electronic communication and transactional alternatives, which have taken place over the last decade and are expected to continue. After experiencing relatively flat volume between 2009 and 2016, beginning in 2017, *Marketing Mail* volume has generally been challenged by commercial mailers' increasing use of digital and mobile advertising, and more recently by the COVID-19 pandemic, although this class has benefited from strong political and election mail volumes, particularly in the second half of 2018 and the first quarter of 2019.

The Postal Service’s Shipping and Packages category has historically provided revenue and volume growth as a result of its successful efforts to compete in shipping services, including last-mile e-commerce fulfillment markets.
and Sunday delivery as well as end-to-end markets. However, this service category is subject to intense competition which significantly impacts both revenue and volume. Certain major customers of the Postal Service had begun diverting volume from the Postal Service’s network by in-sourcing last-mile delivery. Competitors in the package delivery market are aggressively pricing their products and services in order to fill their networks and grow package density. However, as a result of the temporary surge in e-commerce growth driven by the COVID-19 pandemic, some of these customers increased their volume to the Postal Service’s network during March 2020 due to their delivery capacity constraints.

Because the Postal Service provides its services primarily through its employees, its costs are heavily concentrated in wages and benefits for both current employees and retirees. These costs are significantly impacted by contractual wage increases, employee health benefit premium increases, and statutorily mandated retirement and workers’ compensation programs. Some of these costs have historically increased at a higher rate than inflation.

**Past Due Obligations**

The following table presents the total expenses accrued but unpaid by the Postal Service as of September 30, 2019, related to retiree health benefits, CSRS and FERS and the fiscal years in which the accruals were recorded:

<table>

</tbody>
</table>

1 The 2012 to 2016 period amount includes $5.8 billion for 2016, $5.7 billion for 2015, $5.7 billion for 2014, $5.6 billion for 2013 and $11.1 billion for 2012.

2 The 2012 to 2016 period amount includes $247.6 million for 2016, $240.9 million for 2015 and $6.7 million for 2014.

**Mitigating Circumstances**

The Postal Service continues to pursue strategies within its control to increase operational efficiency and improve liquidity. The Postal Service has managed capital in recent years by spending what it believed was essential to maintain its existing facilities and service levels, to ensure employee safety and to increase efficiencies. However, continued increases in capital investment are necessary to upgrade its facilities, fleet of vehicles and processing equipment in order to remain operationally viable. Irrespective of the challenges resulting from the COVID-19 pandemic, aggressive management of the business operations, as well as legislative and regulatory reforms that will enable it to increase revenue and reduce costs, will all be necessary to restore the Postal Service to financial health.

The Postal Service’s status as an independent establishment of the executive branch that does not receive tax dollars for its operations presents unique requirements and restrictions, but also potentially mitigates some of the financial risk that would otherwise be associated with a cash shortfall. With annual total revenue in 2019 of approximately $71 billion, a financially sound Postal Service continues to be vital to U.S. commerce.

The U.S. economy benefits greatly from the Postal Service and the many businesses that provide the printing and mailing services that it supports. Disruption of the mail would cause undue hardship to businesses and consumers as it would significantly inhibit the remittance of payments through the mail, and in the event of a cash shortfall, the U.S. government would likely prevent the Postal Service from significantly curtailing or ceasing operations. The Postal Service continues to inform the executive branch, Congress, the PRC and other stakeholders of the immediate and long-term financial challenges it faces and the legislative and regulatory changes that are required to restore its financial stability.
**NOTE 4 - REVENUE RECOGNITION**

The Postal Service generates the majority of its revenue from contracts associated with the processing and delivery of different types of mail and packages, both domestically and internationally, which generally occur over a relatively short period of time (e.g., several days).

**Disaggregation of Revenue**

The following table summarizes the Postal Service’s disaggregated operating revenue for the three and six months ended March 31, 2020, and 2019, by each service category:

<table>
<thead>
<tr>

</tbody>
</table>

*Prior period amounts for certain service categories include reclassifications of amounts amongst service categories to conform to current period presentation. These reclassifications are immaterial for each affected category, and had no effect on total operating revenue for the period.

**Satisfaction of Performance Obligations**

A performance obligation is a promise in a contract to transfer a distinct good or service to the customer. A contract’s transaction price is allocated to each distinct performance obligation and recognized as revenue when, or as, the performance obligation is satisfied.

*First-Class Mail, Marketing Mail, Shipping and Packages, International Mail and Periodicals* are categorized as Mailing and Shipping services for purposes of satisfying performance obligations. The Postal Service recognizes revenue for Mailing and Shipping services as it fulfills its obligation to process and deliver each mailpiece and the customer mail sender/recipient receives and consumes the benefits of these services.

Other revenue includes *PO Box* services, Return Receipts, Insurance, Other Ancillary Services, Shipping and Mailing Supplies, Collect on Delivery, *Registered Mail*, Stamped Envelopes and Cards, Money Orders and other goods and services. The Postal Service recognizes revenue for the majority of these services over time as the customer receives and consumes the benefits of the service. The revenue for a small portion of certain goods or services in this service category is recognized at a point in time when the goods or services are provided to the customer.

The vast majority of the Postal Service’s contracts include only one performance obligation. However, if a contract is separated into more than one performance obligation, the total transaction price for each performance obligation is allocated in an amount based on the estimated relative stand-alone selling prices of the promised goods or services underlying each performance obligation. The majority of the goods or services sold by the Postal Service have observable stand-alone sales prices. Further, payment for the majority of the goods and services is received up front.

If the Postal Service were unable to complete delivery to the destination point, another entity would not need to re-perform the entire portion of delivery already performed by the Postal Service. Accordingly, control from the Postal Service to the customer transfers over time for the vast majority of services the Postal Service offers, and revenue is recognized based on the progress of the completion of the performance obligations.
**Variable Consideration**
The Postal Service offers certain contracts to its customers that contain various types of customer incentives or other provisions that can either increase or decrease the transaction price. Customer incentives include discounts, money back guarantees, rebates, refunds or incentive payments. The other provisions include performance penalties. The Postal Service uses the expected value approach to estimate variable consideration to which it expects to be entitled.

**Contract Modifications**
The Postal Service considers contract modifications to exist when the modification either creates new enforceable rights and obligations or alters the existing arrangement. Contract modifications do not add distinct services; they are typically used to change the prices that the Postal Service charges its customer for existing services. These contract modifications are accounted for prospectively as the remaining performance obligations are executed.

**Principal vs. Agent Consideration**
The Postal Service utilizes third parties to assist with the transportation of mailpieces between different points as part of the delivery process. Based on its evaluation of the transfer of control model, the Postal Service has determined that it acts as the principal rather than the agent within these arrangements.

**Contract Liabilities**
The vast majority of the Postal Service’s contract liabilities consist of Deferred revenue-prepaid postage and prepaid PO Box and Caller Service fees. Deferred revenue-prepaid postage is an estimate of postage that has been sold, but not yet used by customers. The Postal Service recognizes revenue over time as the Postal Service delivers mailpieces. Because payments for postage are collected in advance of the satisfaction of related performance obligations, the Postal Service defers and reports this unearned revenue as Deferred revenue-prepaid postage in its balance sheet. Stamp sales and metered postage account for the majority of Deferred revenue-prepaid postage. The liability also includes an estimate for mail that is in-transit within the Postal Service network.

The prepaid PO Box and Caller Service fees consist of the payments received from customers for PO Box fees at the beginning of their contracts. The Postal Service defers and reflects this unearned revenue as prepaid PO Box and Caller Service fees within Other current liabilities in the accompanying Balance Sheets. Revenue is recognized over time as customers use the PO Box and Caller Services over the terms of their contracts.

The following table presents the balances of the Postal Service’s contract liabilities, including Deferred revenue-prepaid postage and prepaid PO Box and Caller Service fees, as of March 31, 2020, and September 30, 2019, respectively:

**NOTE 5 - RELATED PARTIES**

As disclosed throughout this report, the Postal Service has significant transactions with other U.S. government entities, which are considered related parties for accounting purposes.

The following table presents related-party assets and liabilities as of March 31, 2020, and September 30, 2019:

<table>
<thead>

</tbody>
</table>

1 Included within Operating revenue in the accompanying unaudited Statements of Operations.
2 Included within Operating expenses in the accompanying unaudited Statements of Operations.
3 Represents interest imputed on the revenue forgone installment receivable as well as interest generated on U.S. Treasury instruments and other cash equivalents held with the Federal Reserve Bank of New York. Included within Interest and investment income in the accompanying unaudited Statements of Operations.
4 Incurred on debt issued to the FFB, and included within Interest expense in the accompanying unaudited Statements of Operations.

NOTE 6 - CASH, CASH EQUIVALENTS AND RESTRICTED CASH

The following table provides a reconciliation of Cash and cash equivalents and Restricted cash reported in the balance sheets as of March 31, 2020, and 2019, respectively, and as of September 30, 2019, and 2018, respectively (to disclose the opening balances), that sum to the totals of the same such amounts presented in the accompanying unaudited Statements of Cash Flows for the six months ended March 31, 2020, and 2019:

<table>
<thead>
<tr>
<th></th>
<th>March 31,</th>
<th>September 30,</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>2020</td>
<td>2019</td>
</tr>
<tr>
<td>Cash and cash equivalents</td>
<td>$ 8,987</td>
<td>$ 8,108</td>
</tr>
<tr>
<td>Restricted cash</td>
<td>472</td>
<td>546</td>
</tr>
<tr>
<td>Total cash, cash equivalents and restricted cash</td>
<td><strong>$ 9,459</strong></td>
<td><strong>$ 8,654</strong></td>
</tr>
</tbody>
</table>

Restricted cash represents Postal Service cash that is not available for general use. This includes cash originated from forfeitures or seizures related to consumer fraud or other criminal activity related to the mail and either held for third-party beneficiaries or awaiting disposition. Restricted cash also includes funds for use in restricted activities such as congressional appropriation for Postal Service obligations to the PRC and the United States Postal Service Office of Inspector General, or that are otherwise restricted.

The Postal Service holds its Cash and cash equivalents and Restricted cash with the Federal Reserve Bank of New York and invests its excess cash, when available, in highly-liquid, short-term investments issued by the U.S. Department of the Treasury.

NOTE 7 - PROPERTY AND EQUIPMENT, NET

Assets within Property and equipment, net in the accompanying Balance Sheets are recorded at cost, which includes the interest on borrowings used to finance construction of major capital additions, less allowances for depreciation and amortization. Interest capitalized during both the three and six months ended March 31, 2020, and 2019, was not significant. Fixed assets are depreciated over estimated useful lives ranging from 3 to 40 years using the straight-line method.

The net book values of assets classified as held for sale were approximately $6 million and $10 million as of March 31, 2020, and September 30, 2019, respectively, and are included within Property and equipment, net in the accompanying Balance Sheets.

For the three months ended March 31, 2020, and 2019, depreciation and amortization expense was $423 million and $424 million respectively, and impairment charges were de minimis. For the six months ended March 31, 2020, and 2019, depreciation and amortization expense was $854 million and $841 million respectively, and impairment charges were de minimis. These items are included within Other operating expenses in the accompanying unaudited Statements of Operations.
NOTE 8 - COMMITMENTS AND CONTINGENCIES

Collective Bargaining Agreements
On January 22, 2020, the Postal Service reached a tentative agreement with the National Postal Mail Handlers Union, AFL-CIO (“NPMHU”) on a new three-year collective bargaining agreement, which the union membership ratified on April 8, 2020. The new contract went into effect on April 25, 2020, and will expire on September 20, 2022.

On March 10, 2020, a three-member arbitration panel reached a decision in the Postal Service’s legally mandated binding interest arbitration process with the American Postal Workers Union, AFL-CIO (“APWU”), which established the terms of a new collective bargaining agreement. The new contract went into effect on March 10, 2020, and will expire on September 20, 2021.

In September 2019, the Postal Service agreed to extend contract negotiations relating to a new collective bargaining agreement with the National Association of Letter Carriers, AFL-CIO (“NALC”). The previous contract with the NALC expired on September 20, 2019, and negotiations with the NALC are at an impasse. The Postal Service and the NALC will continue to follow the current agreement until a new contract is reached through the dispute resolution process.

Contingent Liabilities
The Postal Service’s contingent liabilities consist primarily of claims resulting from labor and employment matters; asset retirement obligations and environmental matters; property damage and injuries on Postal Service properties; and issues arising from Postal Service contracts, personal claims and traffic accidents. Each quarter, the Postal Service evaluates each claim to determine its potential liability. If the Postal Service determines that an unfavorable outcome from a new claim is both probable and reasonably estimable, it records a liability for the amount. Preexisting claims are also reviewed and adjusted quarterly for resolutions or revisions to prior estimates based on new facts and circumstances.

The Postal Service is from time to time involved in other litigation incidental to the conduct of its business, none of which is expected to be material to its financial condition or operations.

Provision for Losses
The Postal Service has made adequate provision for probable losses arising from all claims. The following table presents contingent liabilities by current and noncurrent portions and by category, as of March 31, 2020, and September 30, 2019:

<table>
<thead>
<tr>
<th>(in millions)</th>

<td>$336</td>
</tr>
</tbody>
</table>

¹ Included within Payables and accrued expenses in the accompanying Balance Sheets.
² Included within Other noncurrent liabilities in the accompanying Balance Sheets.
Reasonably Possible Contingencies
The Postal Service does not accrue for contingencies which it deems reasonably possible of an unfavorable outcome. These ranged in amount from approximately $175 million to $1.0 billion at March 31, 2020, and from approximately $150 million to $1.0 billion at September 30, 2019.

Class Action Litigation
As previously reported, on January 14, 2010, the Equal Employment Opportunity Commission's (“EEOC”) Office of Federal Operations (“OFO”) certified the case McConnell v. Brennan (first instituted in 2006 as McConnell v. Potter) as a class action against the Postal Service, with the class consisting of permanent-rehabilitation and limited-duty Postal Service employees who the Postal Service assessed under the National Reassessment Process (“NRP”) between the dates of May 5, 2006, and July 1, 2011. The Postal Service utilized the NRP to ensure employees receiving workers' compensation benefits were placed in jobs consistent with their abilities, and that records regarding employees injured on the job were correct.

The McConnell case alleges violations of the Rehabilitation Act of 1973 resulting from the NRP's failure to provide a reasonable accommodation, the NRP's wrongful disclosure of medical information, the NRP's creation of a hostile work environment, and the NRP's adverse impact on disabled employees. The class is seeking injunctive relief and damages of an uncertain amount.

In 2015, the Administrative Judge assigned to handle the McConnell case granted in-part both the Class Agent's and the Postal Service's motions for summary judgment. In her decision, the Administrative Judge found that the NRP violated the Rehabilitation Act. The Postal Service appealed this decision to the OFO, and the OFO denied this appeal in 2018. The Postal Service implemented the OFO's order, and notified all class members of their right to file an individual claim for relief. Class members were allowed thirty days to submit claims to the Postal Service's National Equal Employment Opportunity Investigative Services Office. The claims submission deadline has now passed and the dispute process for individual claims is currently underway before a newly assigned EEOC Administrative Judge.

The class members have the right to pursue individual claims. Should they be successful in establishing liability and damages, the ultimate outcome in this case could have a material impact on the Postal Service's financial results.

Other
The U.S. is a member of the Universal Postal Union (“UPU”), a specialized agency of the United Nations that facilitates the exchange of international mail. The Postal Service is the designated postal operator for the U.S. under the UPU, and payments to the designated postal operator for the delivery of foreign origin letter-post mails are known as “terminal dues”.

In September 2019, the UPU members had a special meeting -- known as the Extraordinary Congress -- to discuss the terminal dues system. During that meeting, UPU members agreed to establish a new remuneration system that will allow the Postal Service to self-declare rates beginning in July 2020. Other foreign postal operators may also reciprocally apply rates at full-self-declared rates at that time.

In February 2020, the Postal Service officially invoked its provision to self-declare rates beginning in July 2020, creating an obligation to pay the UPU the amount of 40 million Swiss Francs (“CHF”), or approximately $41 million, based on the prevailing exchange rate on March 31, 2020. This amount will be payable over five years in annual increments of 8 million CHF, with the first payment due between July and December 2020.

The Postal Service considers the right to self-declare rates as an intangible asset recorded in Other assets in the accompanying unaudited Balance Sheet at March 31, 2020, and its amortization starts in July 2020 when the self-declared rates are in effect. The current portion of the obligation is recorded in Payables and accrued expenses and the noncurrent portion of the obligation is recorded in Other noncurrent liabilities in the accompanying unaudited Balance Sheet at March 31, 2020, respectively.
NOTE 9 - RETIREMENT PLANS

The majority of career employees participate in one of two U.S. government defined benefit pension programs, CSRS and FERS, which OPM administers. These plans provide retirement, death and disability benefits for eligible employees based on specific eligibility and participation requirements, vesting periods and benefit formulas. Each employee’s participation in either plan is based on the starting date of employment with the Postal Service or another U.S. government entity.

As government-sponsored benefit plans, CSRS and FERS are not subject to the provisions of the Employee Retirement Income Security Act of 1974, as amended. Likewise, because the Postal Service cannot direct the costs, benefits or funding requirements of these plans, it accounts for program expenses under multiemployer plan accounting rules. As such, the Postal Service records required contributions to the plans as an expense in the period in which each contribution is due. For FERS, the Postal Service contributes to the plan an amount established by OPM as the employer portion of retirement benefits for participating employees and their qualifying survivors, upon retirement, for each employee’s current year of service, which is considered the FERS normal cost. As further discussed below, the Postal Service is not required to pay the normal cost for those employees who participate in CSRS.

Career employees may also participate in the Thrift Savings Plan (“TSP”), a defined contribution retirement savings and investment plan administered by the Federal Retirement Thrift Investment Board. The Postal Service’s TSP expenses relate only to its contributions for FERS employees who participate in the TSP.

CSRS provides a basic annuity plan benefit to employees hired before January 1, 1984. CSRS Offset provides Social Security benefits in addition to its basic annuity plan for employees hired between January 1, 1984, and January 1, 1987. CSRS and CSRS Offset employees may also participate in the TSP, although the Postal Service does not match contributions for these participants.

The PAEA suspended the Postal Service’s employer contributions to CSRS that would otherwise have been required under Title 5, Section 8334(a)(1) of the U.S. Code, although CSRS employees continue to contribute to the plan.

Effective January 1, 1987, FERS covers employees hired since December 31, 1983, and FERS employees are covered by an annuity, Social Security and TSP benefits. For FERS employees who participate in TSP, the Postal Service contributes 1% of basic pay and matches voluntary employee contributions up to an additional 4% of basic pay. The Postal Service recognizes Social Security and TSP expenses as they are incurred and records them within Compensation and benefits in the accompanying unaudited Statements of Operations. A liability is established for any contribution due and unpaid at the end of each reporting period and is included within Compensation and benefits in the accompanying Balance Sheets.

FERS employees are further categorized as either FERS, FERS - Revised Annuity Employees (“FERS-RAE”), or FERS - Further Revised Annuity Employees (“FERS-FRAE”) depending on whether their date of hire was before, during, or after calendar year 2013, respectively.

The following table presents the employee and employer contributions, as a percentage of employee basic pay, during the three and six months ended March 31, 2020, and 2019:

<table>
<thead>
<tr>
<th></th>
<th>March 31, 2020</th>
<th>March 31, 2019</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Employee</td>
<td>Postal Service</td>
</tr>
<tr>
<td></td>
<td>Contributions</td>
<td>Contributions</td>
</tr>
<tr>
<td>CSRS</td>
<td>7.0%</td>
<td>—%</td>
</tr>
<tr>
<td>FERS</td>
<td>0.8%</td>
<td>14.7%</td>
</tr>

</tbody>
</table>

\(^1\) Expense for the accrual for the annual payment due to OPM by September 30 of the respective fiscal year, to amortize the unfunded CSRS retirement obligation. The 2020 amounts are based on updated Postal Service estimates resulting from revised actuarial assumptions. Payments are to be made through 2043 based on OPM invoices.

\(^2\) Expense for the accrual for the annual payment due to OPM by September 30 of the respective fiscal year, to amortize the unfunded FERS retirement obligation. The 2020 amounts are based on updated Postal Service estimates resulting from revised actuarial assumptions. Payments are to be made over a 30-year rolling period based on OPM invoices.

**FERS Normal Costs**

The Postal Service records expenses for FERS normal costs within Retirement benefits in the accompanying unaudited Statements of Operations.

The Postal Service makes payments for FERS normal costs in accordance with its bi-weekly payroll cycle. The employer contributions and employee withholdings not yet remitted to OPM were $209 million and $157 million at March 31, 2020, and September 30, 2019, respectively, and were recorded as a current liability within Retirement benefits in the accompanying Balance Sheets.

**CSRS and FERS Unfunded Retirement Benefits**

OPM periodically notifies the Postal Service regarding its revaluation of unfunded CSRS and FERS liabilities. OPM calculates these obligations using Postal Service-specific demographics data and government-wide economic assumptions. The Postal Service records these expenses as Retirement benefits in the accompanying unaudited Statements of Operations. These amounts may be significantly impacted by changes in actuarial assumptions used to revalue the unfunded liabilities.

In October 2019, OPM provided the Postal Service with an actuarial report indicating the projected annual amortization payments due September 30, 2020, would be $1.6 billion for the CSRS obligation and $1.1 billion for the FERS obligation.

On April 2, 2020, the Board of Actuaries of the CSRS, which oversees OPM’s calculation of actuarial liabilities for CSRS and FERS, lowered the discount rate used to calculate CSRS and FERS unfunded retirement liabilities from 4.25% to 4.0%. The Postal Service has estimated that the impact of this change in discount rate on the annual CSRS and FERS amortization expense will result in revised projected amortization payments due September 30, 2020, of approximately $1.8 billion for the CSRS obligation and approximately $1.3 billion for the FERS obligation, increases of $181 million and $226 million, respectively.

Accordingly, the Postal Service accrued additional CSRS and FERS amortization expenses during the three months ended March 31, 2020, to reflect the proportional adjustment between the original OPM estimate and the updated Postal Service estimate as a result of these changes. The Postal Service expects to receive invoices from OPM for the actual amounts due September 30, 2020, during the fourth quarter of 2020, and these invoices may differ from the estimated projections due to further changes in experience, discount rates and/or actuarial assumptions as of the calculation date.
The amounts the Postal Service has accrued for CSRS and FERS unfunded retirement benefits but has not yet paid are recorded as a current liability within Retirement benefits in the accompanying Balance Sheets. Those accrued but unpaid amounts were approximately $9.8 billion and $8.2 billion at March 31, 2020, and September 30, 2019, respectively.

**NOTE 10 - HEALTH BENEFITS PLANS**

FEHB Program covers nearly all career employees and also covers non-career employees and retirees who meet certain eligibility requirements. OPM administers FEHB and allocates the cost of funding the program to participating U.S. government employers. Separate from FEHB, the Postal Service offers its own healthcare plan to certain non-career employees who are ineligible for FEHB.

**Active Employees**

The Postal Service paid 71.9% of healthcare premium costs during both the three months ended March 31, 2020, and 2019. The Postal Service paid 72.0% and 72.3% of healthcare premium costs during the six months ended March 31, 2020, and 2019, respectively. Although OPM determines the actual FEHB premium costs, the allocation of these costs between the Postal Service and most of its employees is determined through agreements with Postal Service labor unions.

Postal Service employee health benefits expense (which includes the employer portion of Medicare taxes) is most significantly impacted by the number of employees electing coverage and the premium costs of the selected plans. Postal Service employee health benefits expense was approximately $1.3 billion for each of the three-month periods ended March 31, 2020, and 2019. Postal Service employee health benefits expense was approximately $2.6 billion for each of the six-month periods ended March 31, 2020, and 2019. These expenses are included within Compensation and benefits in the accompanying unaudited Statements of Operations.

**Retirees**

Postal Service retirees who participated in FEHB for the five years immediately preceding their retirement may continue to participate in the plan during retirement. Qualifying survivors of retirees are also eligible to receive benefits. The Postal Service is required to contribute to the PSRHBF an amount estimated to be equal to the employer portion of FEHB insurance premiums for participating employees and their qualifying survivors, upon retirement, for each employee’s current year of service (normal cost). The Postal Service is also required to contribute an amount sufficient to fully amortize the unfunded liability of the PSRHBF by 2056. These amounts are based, in part, on each current and prospective retiree’s length of federal civilian service occurring on or after July 1, 1971. Each participant’s share of premium costs is set by law and is not subject to negotiation with Postal Service labor unions. The Postal Service cannot direct the costs, benefits or funding requirements of the plans. Therefore, it accounts for program expenses using multiemployer plan accounting rules by recording contributions to the plans that will be required by OPM as an expense in the period in which the contributions are due.

The PAEA required the Postal Service to prefund retiree health benefits during years 2007 through 2016 by paying statutorily specified annual amounts ranging from $1.4 billion to $5.8 billion, totaling $54.8 billion, into the PSRHBF, which began paying the Postal Service’s share of retiree health benefit premiums in 2017. The Postal Service remains obligated to fund the $33.9 billion in statutorily required PSRHBF prefunding payments that it defaulted on for the years 2012 through 2016, as well as the normal cost and amortization payments of $10.7 billion and $2.6 billion, respectively, that it did not pay for the years 2017 through 2019. As of the date of this report, the Postal Service has not been assessed any penalties associated with these non-payments. The cumulative amount of statutorily specified, normal cost and amortization PSRHBF obligations the Postal Service has accrued is $49.7 billion as of March 31, 2020, inclusive of the $47.2 billion that was unpaid as of September 30, 2019. Given that OPM considers these amounts to be due and payable, the Postal Service reflects the cumulative unpaid amount as a current liability within Retiree health benefits in the accompanying Balance Sheets.

As required by PAEA, OPM annually performs an actuarial valuation for the purpose of developing a payment schedule for the Postal Service to fund the remaining unfunded PSRHBF obligation in annual payments through the year 2056. Based on preliminary calculations provided by OPM, the amortization payment due September 30, 2020, is estimated to be $900 million.
Furthermore, the Postal Service is obligated to pay the estimated normal cost of retiree health benefits attributable to the service of its employees during the most recent year. Based on preliminary calculations provided by OPM, the Postal Service has estimated the normal cost payment, also due by September 30, 2020, to be $4.0 billion.

The Postal Service expects to receive the invoice from OPM for with the actual amounts due during the fourth quarter of 2020 and these may differ from the original projected amounts due to changes in discount rates, actuarial assumptions and experience as of the calculation date.

The following table details retiree health benefits expenses for the three and six months ended March 31, 2020, and 2019:

<table>
<thead>
<tr>

</tbody>
</table>

\(^1\) Expense for the accrual for the annual payment due to OPM by September 30 of the respective year, as calculated by OPM, to amortize the unfunded PSRHBF retirement health benefit obligation. Payments are to be made through 2056 based on OPM invoices.

\(^2\) Expense for the accrual for the annual payment due to the PSRHBF by September 30 of the respective year, based on information provided by OPM, for the actuarially determined normal cost of retiree health benefits for current employees.

**NOTE 11 - WORKERS' COMPENSATION**
Postal Service employees injured on the job are covered by the Federal Employees' Compensation Act ("FECA"), administered by the U.S. Department of Labor’s ("DOL") Office of Workers' Compensation Programs, which makes all decisions regarding injured workers' eligibility for benefits. The Postal Service reimburses DOL for all workers' compensation benefits paid to or on behalf of Postal Service employees, plus an administrative fee.

**Workers' Compensation Liability**
The Postal Service records a liability for its workers’ compensation obligations for employees who have been injured on the job and are eligible for benefits, or their qualified survivors. Both the current and noncurrent portions of the workers’ compensation liability are recorded in the accompanying Balance Sheets. The Postal Service uses an estimation model that utilizes four generally accepted actuarial valuation techniques based upon past claim-payment experience and exposure to claims as measured by total employee hours worked.

Changes in the liability are primarily attributable to the combined impacts of routine changes in actuarial assumptions, new compensation and medical cases, the progression of existing cases and changes in discount (interest) and inflation rates, including long-term COLA rates for compensation claims, and medical rates for medical claims. These rates are updated as of the balance sheet date and factored into the model.

To determine the fair value of the liability each quarter, the Postal Service first estimates the future total cost of workers’ compensation claims based on the dates of claim-related injuries, frequency or severity of the injuries, the pattern of historical payments to beneficiaries and the expected trend in future costs. The Postal Service then calculates the amount that would need to be invested at current discount (interest) rates to fully fund the future total cost of claims, and this calculated present value is the recorded value of the workers’ compensation liability.

This liability calculation is highly sensitive to changes in discount rates. For example, a 1% increase in the discount rate would decrease the March 31, 2020, liability and related expense by approximately $2.4 billion. Likewise, a 1% decrease in the discount rate would increase the March 31, 2020, liability and related expense by approximately $3.1 billion.
The following table details the applicable inflation and discount rates for compensation and medical claims used to estimate the workers’ compensation liability as of March 31, 2020, and September 30, 2019:

<table>
<thead>
<tr>

</tbody>
</table>

As of March 31, 2020, and September 30, 2019, the Postal Service’s total liability for workers’ compensation was approximately $20.0 billion and $18.5 billion, respectively. As of March 31, 2020, and September 30, 2019, the current portion of the liability was approximately $1.3 billion and $1.4 billion, respectively, and the noncurrent portion of the liability was approximately $18.7 billion and $17.1 billion, respectively, as reflected in the accompanying Balance Sheets.

**Workers’ Compensation Expense**

The impacts of changes in discount rates and inflation rates, as well as the actuarial valuation of new cases and revaluation of existing cases, are components of total workers’ compensation expense as recorded in the accompanying unaudited Statements of Operations. In addition, the Postal Service pays an administrative fee to DOL, which is considered a component of workers’ compensation expense.

The following table presents the components of workers’ compensation expense for the three and six months ended March 31, 2020, and 2019:

**NOTE 12 - LEASES**

**Postal Service Leases**

The Postal Service holds lessee positions in real property leases as well as lessee positions embedded in service contracts involving rights to use transportation equipment and facilities.

Real property leases support retail, delivery, mail processing, maintenance, administrative and support activities. The non-cancellable base terms of these leases typically range from one to five years, with one or more options to renew for additional five-year terms. The lease terms for these arrangements generally range from one to thirty years including any renewal options that are reasonably certain to be exercised. Additionally, certain real property leases contain purchase and termination options. At the commencement of most real property lease arrangements, the Postal Service is not reasonably certain if it will exercise such options. Real property leases include certain variable lease payments associated with non-lease components, such as common area maintenance costs, and non-lease components such as real estate taxes, which are generally charged as a pass-through based on actual amounts incurred by the lessor. The Postal Service records costs associated with real property leases within Other operating expenses in the accompanying unaudited Statements of Operations.
Transportation equipment leases apply primarily to vehicles, trailers, and aircraft. The non-cancellable base terms of these leases typically range from two to five years, and may include one or more options to renew for an additional one or two years. The lease terms for these arrangements generally range from two to five years including any renewal options the Postal Service is reasonably certain to exercise. Transportation equipment leases do not contain purchase options, however certain of these leases contain termination options. At the commencement of most transportation lease arrangements, the Postal Service is not reasonably certain if it will exercise such termination options. Certain transportation leases contain variable lease payments based on the volume of activity under the contract. The Postal Service records costs associated with transportation leases within Transportation in the accompanying unaudited Statements of Operations.

Postal Service leases do not contain any material residual value guarantees or restrictive covenants.

Sublease income was not material to the financial statements for the three and six months ended March 31, 2020.

Balances disclosed herein include those pertaining to certain related-party transactions. See Note 5 - Related Parties for additional information on related party transactions.

The table below reconciles the undiscounted cash flows for the first five years and the total remaining finance lease liabilities and operating lease liabilities recorded in the accompanying unaudited Balance Sheet as of March 31, 2020:

</tbody>
</table>

Capital leases, recorded at historical cost within Property and equipment, net in the accompanying Balance Sheets, were $496 million as of September 30, 2019. Total accumulated amortization related to capital leases was $377 million at September 30, 2019. Amortization expense for capital leases was approximately $33 million and $37 million for the years ended September 30, 2019, and 2018, respectively, and is included within the Other operating expense in the respective Statements of Operations.

Lease Accounting Policies

Lease Accounting Policy for Comparative Periods
As the lessee, the Postal Service classifies leases which have original lease terms greater than one year and that transfer substantially all the risks and rewards of ownership to the Postal Service, as capital leases. These leases are capitalized on the lease commencement date at the lower of the fair value of the leased assets or the present value of the minimum lease payments. The discount rate used to determine the present value is based on average U.S. Treasury rates. Property acquired under a capital lease is amortized over the lease term. Capital leases are included within Property and equipment, net in the accompanying Balance Sheets.

The Postal Service classifies all other lease arrangements in which substantially all risks and rewards of ownership are retained by the lessor as operating leases. Rent expense for operating leases is included in Other operating
expenses in the accompanying unaudited Statements of Operations on a straight-line basis over the term of the
lease.

**Lease Accounting Policy for the Six Months Ended March 31, 2020**

The Postal Service determines at the inception of the contract if an arrangement represents a lease or contains
lease components. A contract is deemed to represent or include a lease if it conveys the right to control the use
of an identified asset for a period of time in exchange for consideration. The Postal Service is assumed to have
the right to control the use of the underlying asset if the contract conveys the rights to obtain substantially all of
the economic benefits of the underlying asset and the rights to direct how and for what purpose such asset is used
during the contract term.

As the lessee, the Postal Service classifies all leases with original lease terms less than one year as short-term
leases. The Postal Service classifies all other leases which transfer substantially all the risks and rewards of
ownership to the Postal Service as finance leases. Finance lease right-of-use assets are included within Property
and equipment, net in the accompanying Balance Sheets. The current and noncurrent portions of finance lease
liabilities are included within Payables and accrued expenses and Other noncurrent liabilities, respectively, within
the accompanying Balance Sheets. The Postal Service classifies the remaining leases, not classified as short-
term leases or finance leases, as operating leases. The Postal Service considers a lease term to include all non-
cancelable periods and renewal periods when the Postal Service is reasonably certain that it will exercise the
related renewal option.

For short-term leases, the Postal Service records lease expenses in the statement of operations on a straight-line
basis over the lease term.

Leases that do not qualify as short-term are recorded in the balance sheet on the lease commencement date,
each as a right-of-use asset and a lease liability.

Lease liabilities are initially measured at the net present value of the lease payments due after the commencement
date. For this purpose, lease payments include fixed and in-substance fixed rental payments, variable lease
payments that depend on an index or rate, and the price of options that the Postal Service is, at the commencement
of the lease, reasonably certain to exercise. Lease liabilities are subsequently increased to reflect the interest
accrued and reduced when lease payments are made by the Postal Service.

Right-of-use assets are initially measured at the net present value of the lease payments (including amounts due
prior to or on the commencement date), adjusted for the impact of initial direct costs and lease incentives. For
finance leases, right-of-use assets are subsequently amortized on a straight-line basis over the shorter of the
useful life of the underlying asset or the lease term. For operating leases, right-of-use assets are amortized in such
a way that the combination of the interest expense accrued on the lease liability and the asset amortization results
in a straight-line expense over the lease term.

Right-of-use assets for operating and finance leases are periodically reviewed for impairment losses, following the
same process as for other long-lived assets. Impairment losses on long-lived assets are recorded when events or
circumstances indicate that an asset's fair value is less than its carrying value. When such a determination is made,
the carrying values of the assets are written down to fair value. The Postal Service uses the long-lived assets
impairment guidance in ASC Subtopic 360-10, Property, Plant, and Equipment - Overall, to determine whether a
right-of-use asset is impaired, and if so, the amount of the impairment loss to recognize. No impairment losses
have been recognized to date.

The discount rates used in net present value calculations are determined based on the Postal Service’s incremental
borrowing rates on debt outstanding with the FFB at the beginning of each year, which is approximated as the
daily U.S. Treasury Yield Curve Rates for the five-year, 10-year, 20-year and 30-year periods, plus a 12.5 basis
point spread.

Variable lease payments, except for those based on an index or rate, are recognized as variable lease expenses
in the period in which the obligation for those payments are incurred.
NOTE 13 - FAIR VALUE MEASUREMENT

The Postal Service defines fair value as the price that would be received upon sale of an asset or the price that would be paid to transfer a liability between unrelated parties.

The carrying amounts of certain current assets and liabilities, including cash, accounts receivable, accounts payable and accrued expenses, approximate fair value due to their short-term nature. Assets within Property and equipment, net are recorded at cost and measured at fair value on a nonrecurring basis if they are determined to be impaired or classified as assets held for sale.

Noncurrent receivables and long-term debt are measured using a fair value hierarchy model. This model prioritizes observable and unobservable inputs used to measure fair value, and consists of three broad levels, as defined in authoritative literature.

For the three and six months ended March 31, 2020, no significant transfers between Level 1 and Level 2 assets or liabilities transpired. The carrying amount and fair value of the revenue forgone installment receivable and long-term debt are presented for disclosure purposes only in the following table:

<table>
<thead>
<tr>
<th></th>
<th>March 31, 2020</th>
<th></th>
<th>September 30, 2019</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Carrying</td>
<td>Fair</td>
<td>Carrying</td>
<td>Fair</td>
</tr>
<tr>
<td></td>
<td>Amount</td>
<td>Value</td>
<td>Amount</td>
<td>Value</td>
</tr>
<tr>
<td>Revenue forgone</td>
<td>$476</td>
<td>$584</td>
<td>$466</td>

</tr>
<tr>
<td>Long-term debt</td>
<td>$11,000</td>
<td>$11,936</td>
<td>$11,000</td>
<td>$11,437</td>
</tr>
</tbody>
</table>

*The carrying amount is included within Other assets (which includes items in addition to the revenue forgone installment receivable) in the accompanying Balance Sheets.

The revenue forgone installment receivable qualifies as a financial instrument in accordance with authoritative literature. To calculate its fair value, the Postal Service recognizes the imputed interest it is owed as interest income and estimates the value of this receivable using the interest method, which converts future cash flows to a single discounted amount using interest rates for similar assets, which are considered Level 2 inputs. The Postal Service then calculates the net present value of anticipated annual installment payments to be received, discounted by the 20-year U.S. Treasury Constant Maturity Rate, which was 1.15% and 1.94% as of March 31, 2020, and September 30, 2019, respectively.

The long-term debt also qualifies as a financial instrument. Because no active market exists for its debt with the FFB, the Postal Service estimates the fair value of the long-term debt by imputing future payments at discount rates provided by the FFB, considered Level 3 inputs. The weighted averages of the FFB discount rates, based on U.S. Treasury Yield Curve Rates, were 0.36% and 1.79% as of March 31, 2020, and September 30, 2019, respectively.

ITEM 2. MANAGEMENT’S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

CAUTIONARY STATEMENTS

The following Management’s Discussion and Analysis of Financial Condition and Results of Operations and other parts of this report describe the principal factors affecting the financial results, liquidity, capital resources and critical accounting estimates of the United States Postal Service (“Postal Service,” “USPS,” “we,” “our” and “us”). Our results of operations may be impacted by risks and uncertainties discussed here and in our Annual Report on Form 10-K for the year ended September 30, 2019, (“Annual Report”) filed with the Postal Regulatory Commission (“PRC”) on November 14, 2019. Such factors, many of which we cannot control or influence, may cause actual results to differ materially from those currently contemplated.

Our operating results for the three and six months ended March 31, 2020, are presented in accordance with accounting principles generally accepted in the United States (“GAAP”). These results are not necessarily indicative of the results to be expected for the year ended September 30, 2020, and should be read in conjunction with
Annual Report. All references to years in this report, unless otherwise stated, refer to fiscal years beginning October 1 and ending September 30. All references to quarters, unless otherwise stated, refer to quarters within fiscal years 2020 and 2019.

Forward-looking statements contained in this report represent our best estimates of known and anticipated trends believed relevant to future operations. However, actual results may differ significantly from current estimates. Certain forward-looking statements included in this report use such words as “may,” “will,” “could,” “expect,” “believe,” “plan,” “estimate,” “project” or other similar terminology. These forward-looking statements, which involve a number of risks and uncertainties, reflect current expectations regarding future events and operating performance as of the date of this report. These risks include, but are not limited to, the effects of the novel strain of coronavirus (“COVID-19”) on our business, financial condition and results of operations. We have no obligation to publicly update or revise any forward-looking statements, whether as a result of new information, future events or otherwise.

OVERVIEW

With our mandate to provide universal postal services to the nation, we serve retail and commercial customers in the U.S., as well as internationally. Our operations include an extensive and integrated retail, processing, distribution, transportation and delivery network, and we operate throughout the U.S., its possessions and territories. We operate as a single segment and report our performance as such.

The Postal Accountability and Enhancement Act (“PAEA”) classifies our products into two broad categories: Market-Dominant and Competitive “products,” however, we use the term “services” in this document for consistency with other descriptions of services offered. The statutes under which we operate also establish certain requirements that affect our financial results, including obligations for retirement benefits within the Civil Service Retirement System (“CSRS”) and the Federal Employee Retirement System (“FERS”), and obligations for retiree health benefits including funding of the Postal Service Retiree Health Benefits Fund (“PSRHBF”). We must coordinate with the U.S. Office of Personnel Management (“OPM”) to address these obligations.

We have successfully implemented initiatives that have reduced the growth in certain costs by billions of dollars while offering new features for customers such as Informed Delivery. However, legal restrictions on pricing, service diversification and operations restrict our ability to cover our costs to provide prompt, reliable and efficient postal services to the nation.

We have established a core set of goals that drive our strategic initiatives and continuous improvement efforts:

1. Deliver a world-class customer experience;
2. Equip, empower and engage employees;
3. Innovate faster to deliver value; and
4. Invest in our future platforms.

As part of these efforts, we aim to achieve long-term financial stability. Our focus on maintaining liquidity and reducing operating expenses reflects current trends, as well as projected future volume of mail and packages. We believe that financial stability is within reach with targeted legislative and regulatory reform to address our overall cost structure and enhance our revenue-generating opportunities as we continue to identify and create innovative and affordable services, and deliver high levels of performance and service. Such financial stability would continue to provide Congress and the executive branch with additional time to address the broader issues regarding our overall cost structure and revenue-generating opportunities.

RESULTS OF OPERATIONS

SUMMARY

The major factors that impact our operating results include overall customer demand, the mix of postal services and contribution associated with those services, volume of mail and packages processed through our network and our ability to manage our cost structure in line with declining levels of mail volume, increased competition in the more labor-intensive Shipping and Packages business and an increasing number of delivery points.
Effects of COVID-19
In March 2020, the World Health Organization (“WHO”) declared COVID-19 a global pandemic, which has since spread throughout the U.S. Changing federal, state and local government actions to address the pandemic have been occurring on a daily basis, and government-imposed shelter-in-place and other movement restrictions designed to slow the pace of the outbreak have severely impacted the U.S. economy. We believe the severity and duration of the COVID-19 pandemic is uncertain, and such uncertainty may continue during the second half of 2020.

Our employees provide an essential public service and bind the nation together as a part of the country’s critical infrastructure. At least six days per week, and in some instances seven, our employees accept, process, transport, and deliver vital mail and packages like medicine, essential consumer staples, benefits checks, and important information, in every community, to every home and business, and we will continue to do so. As Americans are urged to stay home, the importance of the mail will only grow as our customers, including those in rural areas and senior citizens, will need access to vital communications, essential packages and other necessities.

Shortly after the WHO declaration, we created a dedicated COVID-19 response team to lead our response efforts. All of our employees are considered essential, and their safety is our highest priority. Following strategies recommended by the Centers for Disease Control and Prevention, we have implemented enhanced safety measures to protect the health of our employees.

In late March 2020, we restricted business travel and implemented remote work arrangements for certain of our office-based employees. We have also implemented new leave policies for employees who may be affected by illness, quarantines or childcare obligations. These arrangements have not materially affected our ability to maintain our business operations, including the operation of financial reporting systems, internal control over financial reporting, and disclosure controls and procedures.

While we have maintained full operations during the pandemic, travel and logistics restrictions have negatively affected our retail and commercial customers, as well as our suppliers and mail service providers. Many of our commercial customers, especially those with consumer-facing businesses, have been required to suspend their operations or operate at a lower capacity. As a result, our mail volumes began to decline significantly in March 2020. The sudden drop in mail volumes, our most profitable revenue stream, is steep and may never fully recover to levels prior to the pandemic.

Although the COVID-19 pandemic has caused a recent surge in the nation’s use of e-commerce, resulting in higher Shipping and Packages volumes, we do not expect the resulting increases in Shipping and Packages revenues to be sustainable or to offset losses in mail service revenue caused by COVID-19. While the future is uncertain, we believe that the nation’s increased use of e-commerce is likely to plateau in the short term as the effects of the pandemic begin to subside, followed by a longer-term regression of e-commerce caused by a weakened U.S. economy. Furthermore, this anticipated economic weakness has resulted in significant interest rate declines, which have caused an increase in certain of our workers’ compensation and retirement benefits expenses.

On March 27, 2020, the President signed the Coronavirus Aid, Relief, and Economic Security Act, enacted as Public Law 116-136 (the “CARES Act”). Notwithstanding our $15.0 billion statutory debt limit, and $3.0 billion annual limit on new borrowing, the CARES Act allows us to borrow up to an additional $10.0 billion in financing from the U.S. Treasury to fund operating expenses. The U.S. Treasury may lend up to this amount at our request, upon terms and conditions mutually agreed upon. However, we have no assurance that the U.S. Treasury will agree to provide such financing or if it will be provided upon favorable terms.

We estimate that the COVID-19 pandemic may increase our net operating loss by more than $22.0 billion over the next eighteen months, threatening our ability to operate. If we are able to borrow the $10.0 billion from the U.S. Treasury as provided by the CARES Act, we expect that we will have sufficient liquidity to continue to operate through April 2021. However, if we are unable to secure this $10.0 billion in financing, we expect to be able to continue to operate only through September 2020, unless we default on additional obligations.
Three Months Ended March 31, 2020

As more fully described below in Operating Revenue and Volume, our operating revenue for the three months ended March 31, 2020, increased $349 million, or 2.0%, compared to the same period last year. The increase in operating revenue was due to the following:

- Shipping and Packages revenue increase of $386 million, or 7.1%, with a volume growth of 12 million pieces, or 0.8%, driven largely by the January 2020 price increases applicable to certain Competitive services and the temporary surge in e-commerce resulting from the COVID-19 pandemic; and
- First-Class Mail revenue increase of $89 million, or 1.4%, despite a volume decline of 29 million pieces, or 0.2%. Revenue growth was the result of decennial mailings associated with the 2020 U.S. Census, otherwise revenue and volume would have each declined during the quarter.

The above increases in operating revenue were partially offset by a decrease in Marketing Mail revenue of $94 million, or 2.5%, with a volume decline of 604 million pieces, or 3.4%, largely the result of the COVID-19 pandemic, as many of our commercial customers, especially those with consumer-facing businesses, began to suspend their operations or operate at a lower capacity in March 2020. Political and election mail revenue and volumes increased by approximately $100 million and 500 million pieces, respectively, compared to the same period last year, resulting from the impact of the 2020 primary and general elections.

As more fully described below in Operating Expenses, our operating expenses for the three months ended March 31, 2020, increased approximately $2.8 billion, or 14.2%, compared to the same period last year. The increase in operating expenses was primarily due to the following:

- Workers’ compensation expense increase of approximately $2.2 billion, primarily due to declines in discount rates, outside of management’s control, as the COVID-19 pandemic weighed on the U.S. economy;
- Retirement benefits expense increase of $348 million, or 23.7%, due to revised actuarial assumptions for CSRS and FERS unfunded retirement benefits amortization, which are outside of management’s control, and to increased contribution rates for FERS normal costs, compared to the same period last year;
- Other operating expenses increase of $124 million, or 5.3%, due to spending increases in various categories including enhancements to cyber security and information technology;
- Compensation and benefits expense increase of $119 million, or 1.0%, due primarily to contractual wage increases.

The above increases were partially offset by a decrease in retiree health benefits expense of $50 million, or 3.9%, primarily due to the impact of discount rates in effect during October 2019 that were used in OPM’s preliminary annual estimates.

Overall, we reported a net loss of approximately $4.5 billion for the three months ended March 31, 2020, compared to a net loss of approximately $2.1 billion for the same period last year.

Six Months Ended March 31, 2020

As more fully described below in Operating Revenue and Volume, our operating revenue for the six months ended March 31, 2020, decreased $11 million, which was essentially flat, compared to the same period last year.

The decrease in operating revenue was largely due to the following:

- Marketing Mail revenue decrease of $347 million, or 4.1%, with a volume decline of approximately 2.3 billion pieces, or 5.9%, driven by decreases in revenue and volume from political and election mail in the first quarter. Political and election mail revenue and volumes decreased by approximately $140 million and 900 million pieces, respectively, compared to the same period last year, which benefited from the impact of the 2018 mid-term elections during the first quarter of 2019. Furthermore, volume declined due to the COVID-19 pandemic in the second quarter, as the pandemic affected many of our commercial customers;
- First-Class Mail revenue decrease of $79 million, or 0.6%, with a volume decline of 600 million pieces, or 2.1%, reflecting the continuing migration from mail to electronic communication and transaction alternatives; and
Periodicals revenue decrease of $57 million, or 9.4%, with a volume decline of 231 million pieces, or 9.8%, driven by the continuing migration to electronic communication and digital advertising.

The decrease in operating revenue was partially offset by an increase in Shipping and Packages revenue of $532 million, or 4.5%, despite a volume decline of 73 million pieces, or 2.2%, as we continued to see revenue growth in this service category during the six-month period driven largely by the January 2020 price increases applicable to certain Competitive services.

As more fully described below in Operating Expenses, our operating expenses for the six months ended March 31, 2020, increased approximately $1.6 billion, or 4.0%, compared to the same period last year. The increase in operating expenses was primarily due to the following:

- Workers’ compensation expense increase of approximately $1.1 billion, primarily due to declines in discount rates, outside of management’s control, as the COVID-19 pandemic weighed on the U.S. economy;
- Retirement benefits expense increase of $477 million, or 16.1%, due to revised actuarial assumptions for CSRS and FERS unfunded retirement benefits amortization, which are outside of management’s control, and to increased contribution rates for FERS normal costs, compared to the same period last year;
- Other operating expenses increase of $122 million, or 2.5%, due to spending increases in various categories including enhancements to cyber security and information technology; and
- Transportation expenses increase of $63 million, or 1.5%, primarily resulting from higher air transportation costs, but partially offset by lower international transportation costs. The increase in highway transportation costs was driven by a one-time adjustment for our adoption of Accounting Standards Update 2016-02 Leases, which has since been codified in Accounting Standards Codification (“ASC”) 842, Leases (“ASC 842”), but partially offset by a decrease in the number of miles driven and lower average diesel fuel prices. The decrease in international transportation costs was driven by lower International Mail volumes.

The above increases in operating expenses were partially offset by the following decreases in operating expenses:

- Retiree health benefits expense decrease of $100 million, or 3.9%, primarily due to the impact of discount rate changes in effect during October 2019 that were used in OPM’s preliminary annual estimates; and
- Compensation and benefits expense decrease of $71 million, or 0.3%, primarily due to management’s efforts to align work hours with volume workloads, but partially offset from increases due to contractual wage adjustments.

Overall, we reported a net loss of approximately $5.3 billion for the six months ended March 31, 2020, compared to a net loss of approximately $3.6 billion for the same period last year.

Non-GAAP Controllable Loss
In the day-to-day operation of our business, we focus on costs that can be managed in the course of normal business operations, such as salaries and transportation. We calculate controllable loss, a non-GAAP measure, by excluding items over which we have no control, such as PSRHB actuarial revaluation and amortization expenses, workers’ compensation expenses caused by actuarial revaluation and discount rate changes, and retirement expenses caused by actuarial revaluation. Controllable loss should not be considered a substitute for net loss and other GAAP reporting measures.
The following table reconciles our GAAP net loss to controllable loss for the three and six months ended March 31, 2020, and 2019:

<table>

¹ Expense for the accrual for the annual payment due to OPM by September 30 of the respective year, as calculated by OPM, to amortize the unfunded PSRHBFD retirement health benefit obligation. Payments are to be made through 2056 based on OPM invoices.

² Net amounts include changes in assumptions, valuation of new claims and revaluation of existing claims, less current year claim payments.

³ Expense for the accrual for the annual payment due to OPM by September 30 of the respective fiscal year, to amortize the unfunded CSRS retirement obligation. The 2020 amounts are based on updated Postal Service estimates resulting from revised actuarial assumptions. Payments are to be made through 2043 based on OPM invoices.

⁴ Expense for the accrual for the annual payment due to OPM by September 30 of the respective fiscal year, to amortize the unfunded FERS retirement obligation. The 2020 amounts are based on updated Postal Service estimates resulting from revised actuarial assumptions. Payments are to be made over a 30-year rolling period based on OPM invoices.

Our controllable loss decreased $14 million for the three months ended March 31, 2020, compared to the same period last year. This decrease was largely driven by the $349 million increase in operating revenue, offset by higher other operating expenses of $124 million, higher compensation and benefits expenses of $119 million, and higher FERS normal costs of $75 million.

Our controllable loss increased $270 million for the six months ended March 31, 2020, compared to the same period last year. This increase was largely driven by higher FERS normal costs of $134 million and higher transportation expenses of $63 million, partially offset by lower compensation and benefits expenses of $71 million.

These items are discussed in greater detail in Operating Revenue and Volume and Operating Expenses below.

**OPERATING REVENUE AND VOLUME**

The combined categories of First-Class Mail and Marketing Mail continued to provide the majority of our revenue, despite long-term trends away from traditional paper communication and correspondence to electronic media. Although this migration to electronic media has resulted in significant volume declines in First-Class Mail over the last decade, Marketing Mail volume remained relatively steady between 2009 and 2016. However, Marketing Mail volume began to decline at a greater rate beginning in 2017 and continued to declare through the first half of 2018. Aside from a volume rebound between the second half of 2018 through the first quarter of 2019 that was driven by increases in political and election mail associated with the 2018 mid-term elections, Marketing Mail resumed its volume decline through the remainder of 2019 and the first half of 2020.
The following table summarizes our operating revenue and volume for the three and six months ended March 31, 2020, and 2019, by each service category:

1 Excludes First-Class Package Service - Retail and First-Class Package Service - Commercial.
2 Excludes Marketing Mail Parcels.
3 Includes Priority Mail, USPS Retail Ground, Parcel Select Mail, Parcel Return Service Mail, Marketing Mail Parcels, Package Service Mail, First-Class Package Service - Retail, First-Class Package Service - Commercial and Priority Mail Express.
4 Revenue includes PO Box services, Certified Mail, Return Receipts, Insurance, Other Ancillary Services, Shipping and Mailing Supplies, Collect on Delivery, Registered Mail, Stamped Envelopes and Cards, Money Orders and Other services.
5 Volume includes Postal Service internal mail and free mail provided to certain congressionally mandated groups.

For the three months ended March 31, 2020, First-Class Mail generated approximately 36% of operating revenue, which was essentially unchanged compared to the same period last year, and approximately 42% of our volume, a 1% increase compared to the same period last year. Marketing Mail generated approximately 21% of operating revenue and 50% of our volume, both 1% decreases from the same period last year.

For the six months ended March 31, 2020, First-Class Mail generated approximately 35% of operating revenue, which is essentially unchanged compared to the same period last year, and approximately 40% of our volume, a 1% increase compared to the same period last year. Marketing Mail generated approximately 22% of operating revenue and 52% of our volume, both 1% decreases from the same period last year.

We continued to experience positive revenue results in our Shipping and Packages category, and it represented approximately 33% of our revenue for the three months ended March 31, 2020, which was a 2% increase from the same period last year, and approximately 33% of our revenue for the six months ended March 31, 2020, a 1% increase from the same period last year. Shipping and Packages generated approximately 4% of our volume for both the three and six months ended March 31, 2020, which was relatively unchanged compared to the same period last year.

Although revenue and volume are closely linked to the strength of the U.S. economy and changes in how our customers use the mail, we have proactively targeted opportunities to grow our business. We continue to focus on our customers’ needs and have increased our investment in mail and package innovation. However, we also
recognize that revenue growth is constrained by laws and regulations restricting the types of products, services and pricing we may offer to our customers and the speed with which we can bring new products to market.

We anticipate that First-Class Mail will continue to lose volume in future years with the migration to electronic communication and transactional alternatives resulting from technological changes. To address the long-term trend that such changes have had on our First-Class Mail revenue and volume, we have been working with the mailing industry to slow the decline through mailing promotions and leveraging the high open-and-read rates of, for example, bills and statements for additional customer engagement and education.

Furthermore, due to the COVID-19 pandemic our First-Class Mail and Marketing Mail volumes began an accelerated decline in March 2020. The sudden drop in mail volumes, our most profitable revenue stream, is steep and may never fully recover to levels prior to the pandemic.

We have also focused on providing new services and innovating with Marketing Mail. We have expanded service offerings such as Informed Delivery, which enables customers to preview mail and manage packages scheduled to arrive as a means of merging digital and physical mail, as well as allowing mailers to launch interactive digital campaigns. Additionally, we are focusing on opportunities to pilot new products and innovate with customers and the mail industry to enhance the value of hard-copy communication. We believe these service offerings will further improve the value of both First-Class Mail and Marketing Mail.

Our Shipping and Packages category has historically experienced revenue and volume growth as a result of our successful efforts to compete in shipping services, including last-mile e-commerce fulfillment markets and Sunday delivery as well as end-to-end markets. We continue to focus on responding to customers’ needs by implementing solutions and maintaining strategic business partnerships that help us capitalize on the growing e-commerce business.

The COVID-19 pandemic has caused a recent surge in the nation’s use of e-commerce, resulting in higher Shipping and Packages volumes. However we do not expect the resulting increases in Shipping and Packages revenues to be sustainable or to offset losses in mail service revenue caused by COVID-19. Although the future is uncertain, we believe that the nation’s increased use of e-commerce is likely to plateau in the short term as the effects of the pandemic begin to subside, followed by a longer-term regression of e-commerce caused by a weakened U.S. economy.

Our Shipping and Packages category is subject to intense competition which significantly impacts both revenue and volume. Certain major customers continue to divert volume from our network by in-sourcing the last-mile delivery into their own networks. These customers are also aggressively pricing their products and services in order to fill their networks and grow package density.

We implemented price increases for certain Market-Dominant and Competitive services in January 2019 and 2020. Additionally, we implemented dimensional weighting provisions that amount to price increases for certain Shipping and Packages subcategories in June 2019.

First-Class Mail

First-Class Mail, presented in this report as a mail class and a Market-Dominant service category, includes cards, letters and flats. Prices of First-Class Mail, our most profitable service category, are the same regardless the geographic distance between the origination and delivery points. Because First-Class Mail is classified by law as Market-Dominant, price increases are currently generally subject to a price cap based on the Consumer Price Index for All Urban Consumers (“CPI-U”).

For the three months ended March 31, 2020, First-Class Mail revenue increased $89 million, or 1.4%, despite a volume decline of 29 million pieces, or 0.2%, compared to the same period last year. Revenue growth was the result of decennial mailings associated with the 2020 U.S. Census, otherwise revenue and volume would have each declined during the quarter. For the six months ended March 31, 2020, First-Class Mail revenue decreased $79 million, or 0.6%, and volume declined 600 million pieces, or 2.1%, compared to the same period last year. The change in revenue for both periods was less than the corresponding volume declines due to the January 2020 price increase applicable to certain Market-Dominant services. The most significant factor contributing to the
declining trend in *First-Class Mail* volume has been the continuing migration from mail to electronic communication and transaction alternatives.

Due to the COVID-19 pandemic, our *First-Class Mail* volume began to decline significantly in late March 2020, and it may never fully recover to levels prior to the pandemic. A protracted loss in customer demand for our services will continue to have a material effect on *First-Class Mail* revenue and volume.

**Marketing Mail**

*USPS Marketing Mail* (more commonly, *Marketing Mail*), presented as a mail class and a Market-Dominant service category, generally consists of advertising, newsletters, catalogs, small marketing parcels and other printed matter not required to be processed and delivered as *First-Class Mail* or *Periodicals*.

Between 2009 and 2016, *Marketing Mail* experienced relatively flat volume. However, *Marketing Mail* volume began to decline at a greater rate beginning in 2017 and continued to decline through the first half of 2018. Aside from a volume rebound between the second half of 2018 through the first quarter of 2019 that was driven by increases in political and election mail associated with the 2018 mid-term elections, *Marketing Mail* continued its volume decline through the remainder of 2019 and the first half of 2020, exacerbated by the COVID-19 pandemic.

For the three months ended March 31, 2020, *Marketing Mail* revenue decreased $94 million, or 2.5%, and volume declined 604 million pieces, or 3.4%, compared to the same period last year. For the six months ended March 31, 2020, *Marketing Mail* revenue decreased $347 million, or 4.1%, and volume declined approximately 2.3 billion pieces, or 5.9%, compared to the same period last year. For the three months ended March 31, 2020, our revenue and volume from political and election mail increased by approximately $100 million and 500 million pieces, respectively, compared to the same period last year, as we began to benefit from the impact of the 2020 elections during the second quarter of 2020. For the six months ended March 31, 2020, our revenue and volume from political and election mail decreased by approximately $140 million and 900 million pieces, respectively, compared to the same period last year, which benefited from the impact of the 2018 mid-term elections during the first quarter of 2019.

Due to the COVID-19 pandemic, many of our commercial customers, especially those with consumer-facing businesses, have been required to suspend their operations or operate at a lower capacity. As a result, our *Marketing Mail* volume began to decline significantly in March 2020, and it may never fully recover to levels prior to the pandemic. A protracted loss in customer demand for our services will continue to have a material effect on our *Marketing Mail* revenue and volume.

*Marketing Mail* is subject to intense competition, and price increases are currently generally capped at the rate of inflation. *Marketing Mail* volume is somewhat reflective of the cyclical nature of the U.S. economy, although targeted advertising campaigns can stimulate demand for this service, and our customers have used *Marketing Mail* to mail to more targeted prospects.
Shipping and Packages

¹ Includes Priority Mail, a 1-3 business day delivery service; Priority Mail Express, an overnight delivery service available 365 days per year; and USPS Retail Ground, a retail-only Competitive service priced identically and functionally equivalent to Priority Mail for Zones 1-4.
² Includes Parcel Select, Parcel Return, and Marketing Mail Parcels.
³ Includes First-Class Package Services - Retail and First-Class Package Services - Commercial.

Our Shipping and Packages category has historically experienced revenue and volume growth as a result of our successful efforts to compete in shipping services, including last-mile e-commerce fulfillment markets and Sunday delivery as well as end-to-end markets. However, this service category is subject to intense competition which significantly impacts both our revenue and volume. Shipping and Packages revenue and volume are historically greatest in the first quarter of the year due to the holiday shipping season.

For the three months ended March 31, 2020, Shipping and Packages revenue increased 7.1%, with a volume growth of 0.8%, compared to the same period last year. The volume increased due to a temporary surge in e-commerce resulting from the COVID-19 pandemic, and revenue outpaced volume increases due to the January 2020 price increases associated with certain Competitive services.

For the six months ended March 31, 2020, Shipping and Packages revenue increased 4.5%, despite a volume decline of 2.2%, compared to the same period last year. The revenue increases were largely due to the January 2020 price increases associated with certain Competitive services. The volume declines largely resulted from intense competition and certain major commercial customers and competitors delivering more of their own packages, compared to the same period last year, offset by the temporary surge in e-commerce resulting from the COVID-19 pandemic.

Priority Mail Services
Priority Mail Services is our Shipping and Packages subcategory that includes Priority Mail, Priority Mail Express and USPS Retail Ground. Priority Mail and Priority Mail Express services allow customers the ability to send documents and packages requiring expedited transportation and handling. While Priority Mail Services revenue has historically grown year-over-year, its service offerings are price sensitive and its growth rate has been lower than other Shipping and Packages subcategories due to intense competition.

Priority Mail Services accounted for our largest portion of Shipping and Packages revenue, representing approximately 46% of the total for the three and six months ended March 31, 2020, and 2019. However, Priority
Mail Services accounted for approximately 19% and 18% of the total Shipping and Packages volume for three and six months ended March 31, 2020, respectively, essentially unchanged compared to the same periods last year.

For the three months ended March 31, 2020, Priority Mail Services revenue grew 7.0%, on volume growth of 2.2%, compared to the same period last year. For the six months ended March 31, 2020, Priority Mail Services revenue grew 3.4%, despite a volume decline of 1.9%, compared to the same period last year. Revenue grew at a greater rate than volume for the three-month period and despite the volume decline for the six-month period, largely due to the January 2020 price increases applicable to Competitive services.

**Parcel Services**

Our Parcel Services subcategory includes Competitive services Parcel Select and Parcel Return, as well as Market-Dominant USPS Marketing Mail Parcels (more commonly, Marketing Mail Parcels). Parcel Select and Parcel Return services largely consist of last-mile deliveries, offered to large bulk shippers that perform their own sorting before dropping parcels deeper into our network.

For the three months ended March 31, 2020, revenue from Parcel Services increased 9.6%, on volume growth of 3.4%, compared to the same period last year. For the six months ended March 31, 2020, revenue from Parcel Services increased 6.3%, despite a volume decline of 0.8%, compared to the same period last year. This subcategory is primarily a last-mile service that bypasses much of our infrastructure and therefore is one of our lowest-priced package services, and as a result, produces a lower contribution per piece when compared to many of our other services. For the six months ended March 31, 2020, volume declined due to certain major commercial customers delivering more of their own packages. However, for the three months ended March 31, 2020, volume increased due to the temporary surge in e-commerce from the COVID-19 pandemic. Revenue grew at a greater rate than volume for the three-month period and despite the volume decline for the six-month period, largely due to the January 2020 price increases applicable to Competitive services.

**First-Class Package Services**

Our First-Class Package Services subcategory includes the competitively priced First-Class Package Service - Retail, a Competitive service targeted to retail customers for packages weighing up to 13 ounces, and First-Class Package Service - Commercial, a Competitive service targeted to commercial customers for packages weighing up to 16 ounces. This subcategory offers commercial customers that ship primarily lightweight fulfillment parcels the lowest-priced expedited end-to-end tracked package option in the marketplace. First-Class Package Services revenue and volume performance has historically experienced strong increases for the past several years, particularly from our commercial customers. These increases are primarily attributable to growth in e-commerce.

For the three months ended March 31, 2020, First-Class Package Services revenue increased 5.9%, despite a volume decline of 0.3%, compared to the same period last year. For the six months ended March 31, 2020, First-Class Package Services revenue increased 6.0%, despite a volume decline of 1.7%, compared to the same period last year. Revenue grew despite the volume declines, largely due to the January 2020 price increases applicable to Competitive services.

**Package Services**

Our Package Services subcategory is a Market-Dominant service that includes both Bound Printed Matter for materials up to 15 pounds and Library and Media Mail for materials up to 70 pounds. For the three months ended March 31, 2020, Package Services revenue decreased 5.2% on a volume decline of 10.7%, compared to the same period last year. For the six months ended March 31, 2020, Package Services revenue decreased 5.3% on a volume decline of 11.1%, compared to the same period last year. Revenue declined at a slower rate than volume for the three and six months ended March 31, 2020, due to the January 2020 price increase applicable to Market-Dominant services.

**International Mail**

Our International Mail category includes several services that enable customers, both domestic and abroad, to send international mail, including postcards, envelopes, flats and packages with either standard or express delivery options. “Outbound” services, which allow customers in the U.S. to send mail and packages to other countries, generate approximately two thirds of International Mail revenue, but “inbound” services are the opposite, generating two thirds of volume but only a third of the revenue. This is primarily due to the smaller size and lower rates for inbound international e-commerce packages.
For the three months ended March 31, 2020, *International Mail* revenue increased 2.4%, despite a volume decline of 11.7%, compared to the same period last year. For the six months ended March 31, 2020, *International Mail* revenue increased 0.4%, despite a volume decline of 9.1%, compared to the same period last year. These revenue increases were largely due to the January 2020 price increases applicable to Competitive services. The declines in both inbound and outbound volume were due to various competitive pricing, political and economic factors.

The U.S. is a member of the Universal Postal Union ("UPU"), a specialized agency of the United Nations that facilitates the exchange of international mail. We are the designated postal operator for the U.S. under the UPU, and payments to the designated postal operator for the delivery of foreign origin letter-post mails are known as "terminal dues".

In September 2019, the UPU members had a special meeting -- known as the Extraordinary Congress -- to discuss the terminal dues system. During that meeting, UPU members agreed to establish a new remuneration system that will allow us to self-declare rates beginning in July 2020. Other foreign postal operators may also reciprocally apply rates at full-self-declared rates at that time.

In February 2020, we officially invoked our provision to self-declare rates beginning in July 2020.

**Periodicals**

*Periodicals* also presented as a mail class and a Market-Dominant service category, includes services designed for publishers of newspapers, magazines and other periodical publications whose primary purpose is providing publications to subscribers or other users. For the three months ended March 31, 2020, *Periodicals* revenue decreased 11.1% and volume declined 12.2%, compared to the same period last year. For the six months ended March 31, 2020, *Periodicals* revenue decreased 9.4% and volume declined 9.8%, compared to the same period last year.

*Periodicals* revenue and volume have been in decline for more than a decade as trends in hard-copy reading behavior and shifts of advertising away from print have eroded this business. The *Periodicals* category is not expected to rebound as electronic content continues to grow in popularity with the public.

**Other**

Other services include ancillary services such as *Certified Mail*, *PO Box* services, and *Return Receipt* services. Also included in this category are money orders and passport services. Other services revenue decreased 1.2%, and 3.3% for the three and six months ended March 31, 2020, respectively, compared to the same periods last year.

**OPERATING EXPENSES**

In an effort to align our resources with anticipated future mail and package volume, we continue to aggressively manage operating expenditures under management’s control.

We originally designed our mail processing and distribution network to provide overnight delivery service of *First-Class Mail* within specified delivery areas for a much higher volume of mail than we are required to process and deliver today, and the network’s legacy capabilities are not completely aligned to today’s mail mix and volumes. Consequently, certain of our processing and distribution facilities continue to operate at less than full capacity. Our challenge to contain costs is also compounded by the increasing number of delivery points, which, when combined with lower mail volume, has resulted in a drop in the average number of pieces delivered per delivery point per day from approximately 5.5 pieces in 2007 to 3.4 pieces in 2019, a reduction of approximately 39%, and a further significant decline is expected in 2020.

**Compensation and Benefits**

Compensation and benefits is our largest operating expense category. These expenses consist of costs related to our active career and non-career employees other than retirement costs associated with U.S. government defined benefit pension programs and retiree health costs which are further discussed in Retirement benefits and Retiree Health Benefits, respectively.
Overall, our compensation and benefits expenses increased 1.0% for the three months ended March 31, 2020, but decreased 0.3% for the six months ended March 31, 2020, compared to the same periods last year. The following table presents compensation and benefits expenses for the three and six months ended March 31, 2020, and 2019:

</tbody>
</table>

**Compensation**
Compensation expense increased 0.6% for the three months ended March 31, 2020, but decreased 0.5% for six months ended March 31, 2020, compared to the same periods last year. The activity in both periods represents increases due to contractual wage adjustments and approximately 3.6 million hours attributable to the extra work day due to the leap year, offset by management’s efforts to align work hours with volume workloads.

**Work Hours**
For the three months ended March 31, 2020, total work hours were approximately 286 million, essentially unchanged compared to the same period last year. However, approximately 3.6 million hours, or 1.3%, were attributable to the extra work day due to the leap year in 2020. Were it not for the extra work day due to the leap year, work hours would have declined for the period.

For the six months ended March 31, 2020, total work hours were approximately 592 million, a decrease of 1.0%, compared to approximately 598 million total work hours for the six months ended March 31, 2019. This decrease was the result of management’s efforts to reduce work hours in line with volume workloads.

As a result of the COVID-19 pandemic, work hours began to decline in late March 2020 due to lower mail volumes and workforce availability, and we expect this trend to continue for the duration of the pandemic.

**Workforce Composition**
The number of career employees at March 31, 2020, was approximately 496,000, a decrease of approximately 1,500 employees, or 0.3%, compared to the same date a year ago. This decrease primarily reflected natural attrition, continued efforts to align our workforce with declining mail volume, offset by conversions of non-career employees to career status, in accordance with our contractual agreements.

The number of non-career employees at March 31, 2020, was approximately 129,500, a decrease of approximately 10,500 employees, or 7.5%, compared to the same date a year ago. This decrease primarily reflected management’s continued efforts to align our workforce with declining mail volume, and the conversions of non-career employees to career status, in accordance with our contractual agreements.

**Collective Bargaining Agreements**
On January 22, 2020, we reached a tentative agreement with the National Postal Mail Handlers Union, AFL-CIO ("NPMHU") on a new three-year collective bargaining agreement, which the union membership ratified on April 8, 2020. The new contract went into effect on April 25, 2020, and will expire on September 20, 2022.

On March 10, 2020, a three-member arbitration panel reached a decision in our legally mandated binding interest arbitration process with the American Postal Workers Union, AFL-CIO ("APWU"), establishing the terms of a new collective bargaining agreement. The new contract went into effect on March 10, 2020, and will expire on September 20, 2021.
In September 2019, we agreed to extend contract negotiations relating to a new collective bargaining agreement with the National Association of Letter Carriers, AFL-CIO ("NALC"). The previous contract with the NALC expired on September 20, 2019, and negotiations with the NALC are at an impasse. The parties will continue to follow the current agreement until a new contract is reached through the dispute resolution process.

**Employee Health Benefits**

Our expense for employee health benefits (which includes the employer portion of Medicare taxes) is most significantly impacted by the number of employees electing coverage and the premium costs of the selected plans. Our active employees may participate in the Federal Employees Health Benefits ("FEHB") Program, which OPM administers. Separate from FEHB, we offer our own self-insured healthcare plan to certain non-career employees who are ineligible for FEHB.

Employee health benefits expense increased 3.2% and 0.8% for the three and six months ended March 31, 2020, compared to the same periods last year, driven by average premium increases of 4.0% in calendar year 2020, and partially offset by the lower contribution rate of the employer portion of healthcare premiums that we paid, by management efforts to provide employees with information and tools for selecting the health benefit plans that best meet their needs, and by the small decrease in number of career employees, as previously discussed.

Our share of healthcare premiums for our employees represented 71.9% of the total healthcare premium costs for both the three months ended March 31, 2020, and 2019. Our share of healthcare premiums for our employees represented 72.0% and 72.3% of the total healthcare premium costs for the six months ended March 31, 2020, and 2019, respectively. This decrease in our share of healthcare premium costs for employees during the six-month period was consistent with the terms of our contractual agreements.

**Social Security**

For the three and six months ended March 31, 2020, our Social Security costs increased 1.0% for the three months ended March 31, 2020, but decreased 0.4% for the six months ended March 31, 2020, compared to the same periods last year. These fluctuations were consistent with the general changes in compensation for the period, as described above in Compensation.

The CARES Act offers certain employers the ability to defer payment of the employer’s share of the Social Security payroll tax on wages incurred from March 27, 2020, through December 31, 2020. In accordance with this provision, we began deferring these payments in April 2020, and intend to continue the deferral for the remainder of calendar year 2020 for an estimated total deferral amount of approximately $1.6 billion. One half of these deferred payments would be due by December 31, 2021, and the other half by December 31, 2022.

**Thrift Savings Plan**

Career employees may participate in the Thrift Savings Plan ("TSP"), a defined contribution retirement savings and investment plan administered by the Federal Retirement Thrift Investment Board. Our TSP expenses are related only to our contributions for FERS employees who participate in the TSP. For these employees, we contribute 1% of basic pay and match voluntary employee contributions up to an additional 4% of basic pay.

For the three and six months ended March 31, 2020, our TSP matching costs increased 3.9% and 2.8%, respectively, compared to the same periods last year. The increase in expenses correlates to the changing workforce composition of CSRS and FERS employees.

**Retirement Benefits**

The majority of our career employees participate in one of two U.S. government defined benefit pension programs, CSRS and FERS, based on the starting date of their employment with us or another U.S. government employer. We incur normal costs (the amount determined by OPM representing the employer portion of retirement benefits for participating employees and their qualifying survivors, upon retirement, for each employee’s current year of service) for FERS employees; however, by law we do not pay normal costs for CSRS retirement benefits. FERS employees are further categorized as either FERS, FERS - Revised Annuity Employees (FERS - RAE), or FERS - Further Revised Annuity Employees (FERS - FRAE) depending on whether their date of hire was before, during,
or after calendar year 2013, respectively. This categorization determines the percentage of basic pay that we are required to contribute for normal cost.

Our retirement benefits expenses consist of three components: 1) FERS normal costs, 2) CSRS unfunded retirement benefits amortization, and 3) FERS unfunded retirement benefits amortization. These retirement benefits expense components are further described in detail in the sections below. The following table presents the retirement benefits expenses for the three and six months ended March 31, 2020, and 2019:

<table>

</tbody>
</table>

⁠¹ Expense for the accrual for the annual payment due to OPM by September 30 of the respective year, based on information provided by OPM, to amortize the unfunded CSRS retirement obligation. Payments are to be made through 2043 based on OPM invoices.

⁠² Expense for the accrual for the annual payment due to OPM by September 30 of the respective year, based on information provided by OPM, to amortize the unfunded FERS retirement obligation. Payments are to be made over a 30-year rolling period based on OPM invoices.

Our retirement benefits expenses increased 23.7% and 16.1% for the three and six months ended March 31, 2020, respectively, compared to the same periods last year. This increase was due to rising employer contributions rates for FERS normal cost, as well as increases in the CSRS and FERS unfunded retirement benefits amortization, as discussed below.

For additional information, see Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 9 - Retirement Plans.

**FERS Normal Costs**

We record our contributions to FERS normal costs as they are incurred. Any unpaid employer amounts at the end of a period, along with any employee amounts withheld but not remitted at the end of a period, are recorded as a current liability within Retirement benefits in the accompanying Balance Sheets.

As determined by OPM, our FERS normal cost contribution rates increased from 13.7% to 14.7% of basic pay for 2020, an increase of 7.3% from the prior year, affecting most of our FERS participants. As a result of this contribution rate increase, FERS normal cost expenses increased 8.6% and 7.6% for the three and six months ended March 31, 2020, respectively, compared to the same periods last year.

**CSRS and FERS Unfunded Retirement Benefits**

OPM periodically notifies us regarding its revaluation of unfunded CSRS and FERS retirement benefits. The amounts we record as expenses for our unfunded CSRS and FERS liabilities may be significantly impacted by changes in actuarial assumptions used by OPM to revalue the unfunded liabilities.

In October 2019, OPM provided an actuarial report projecting the annual amortization payments due September 30, 2020, to be $1.6 billion for CSRS and $1.1 billion for FERS.

On April 2, 2020, the Board of Actuaries of the CSRS, which oversees OPM’s calculation of actuarial liabilities for CSRS and FERS, lowered the discount rate used to calculate CSRS and FERS unfunded retirement liabilities from 4.25% to 4.0%. We have estimated that the impact of this change in discount rate on the annual CSRS and FERS amortization expense, will result in revised projected amortization payments due September 30, 2020, of approximately $1.8 billion for the CSRS obligation and approximately $1.3 billion for the FERS obligation, increases of $181 million and $226 million, respectively.
Accordingly, we have accrued $495 million and $899 million for the three and six months ended March 31, 2020, for the CSRS amortization expense, reflecting an adjustment of approximately $91 million for the revised assumptions. Likewise, we have accrued $378 million and $643 million for the three and six months ended March 31, 2020, for the FERS amortization expense, reflecting an adjustment of approximately $113 million for the revised assumptions.

Our CSRS and FERS unfunded retirement benefits amortization expenses increased 45.5% and 28.6% for the three and six months ended March 31, 2020, respectively, compared to the same periods last year, due to higher estimated annual amortization payments resulting from revised actuarial assumptions and discount rate changes.

We expect to receive invoices from OPM for the actual amounts due September 30, 2020, for CSRS and FERS during the fourth quarter of 2020, and the amounts invoiced could differ from the projected amounts, due to further changes in experience, discount rates and/or actuarial assumptions as of the calculation date.

**Retiree Health Benefits**
We participate in federal employee benefit programs for retiree health benefits. Retirees who participated in FEHB for the five years immediately preceding their retirement may continue to participate in the plan during retirement. Qualifying survivors of retirees are also eligible to receive benefits.

In accordance with PAEA, since the beginning of 2017, the PSRHBFP has funded our share of retiree health benefit premiums. Also since 2017, we have been obligated to pay into the PSRHBFP the actuarially determined normal costs of retiree health benefits attributable to the service of our employees, as well as the amortization payment for the PSRHBFP unfunded liability. Our total retiree health benefits expenses therefore consist of both the normal and the amortization costs. We record the required contributions to the plan as an expense in the period in which each contribution is due.

Based on preliminary calculations provided by OPM in October 2019, we have projected the PSRHBFP amortization payment amount due September 30, 2020, to be $900 million, and therefore accrued expenses of $225 million and $450 million for the three and six months ended March 31, 2020, respectively. We expect to receive the invoice from OPM for the actual amount due during the fourth quarter of 2020 and this may differ from the original projected amount due to changes in discount rates, actuarial assumptions and experience as of the invoice calculation date.

Also, based on preliminary calculations provided by OPM in October 2019 using updated discount rate assumptions, we have estimated the amount of our PSRHBFP normal cost payment due September 30, 2020, to be $4.0 billion, and therefore accrued expenses of $1.0 billion and $2.0 billion for the three and six months ended March 31, 2020, respectively. We expect to receive the invoice from OPM for the actual amount due during the fourth quarter of 2020 and this may differ from the original projected amount due to changes in discount rates, actuarial assumptions and experience as of the invoice calculation date.

For the three and six months ended March 31, 2020, our total retiree health benefits expenses decreased by $50 million, or 3.9%, and $100 million, or 3.9%, respectively, compared to the same periods last year, all of which was attributable to a decrease in the estimated amortization payment for the PSRHBFP unfunded liability.

For additional information, see Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 10 - Health Benefits Plans, Retirees.

**Workers' Compensation**
Our employees injured on the job are covered by the Federal Employees’ Compensation Act (“FECA”), administered by the U.S. Department of Labor’s (“DOL”) Office of Workers’ Compensation Programs, which makes all decisions regarding injured workers’ eligibility for benefits. We are legally mandated to participate in the federal workers’ compensation program. Our workers’ compensation expense reflects the impacts of changes in discount rates, as well as the actuarial valuation of new workers’ compensation cases and revaluation of existing ones. We reimburse the DOL for all workers’ compensation benefits paid to or on behalf of our employees, plus an administrative fee.
On a daily basis we focus on costs that can be managed in the course of normal business operations. Certain aspects of workers’ compensation can be managed through human resource initiatives, safety measures and training. Other workers’ compensation costs cannot be managed in the course of normal business operations and are less predictable, including expenses caused by actuarial revaluation and discount rate changes. We subtract the cash payments made by DOL on behalf of workers’ compensation obligations, which are relatively predictable, from total workers’ compensation expense in order to determine the non-cash component of workers' compensation expense, a non-GAAP financial measure.

The following table presents the components of workers’ compensation expense, including the cash payments made by DOL on behalf of workers’ compensation obligations, for the three and six months ended March 31, 2020, and 2019:

<table>
<thead>
<tr>

<td>(370)</td>
</tr>
<tr>
<td><strong>Total workers’ compensation non-cash expense</strong></td>
<td><strong>$2,625</strong></td>
<td><strong>$401</strong></td>
</tr>
</tbody>
</table>

For the three months ended March 31, 2020, the portion of workers’ compensation expense due to the impact of discount rate changes increased approximately $2.2 billion, compared to the same period last year. For the six months ended March 31, 2020, the portion of workers’ compensation expense due to the impact of discount rate changes increased approximately $1.1 billion, compared to the same period last year. These changes are the result of changes in interest rates, outside of management’s control.

The combined costs of new workers’ compensation cases and revaluation of existing workers’ compensation cases increased by $52 million and $14 million for the three and six months ended March 31, 2020, compared to the same periods last year. Changes in actuarial valuation are primarily attributable to the combined impacts of routine changes in actuarial estimation, the progression of existing cases and updated COLA assumptions, which are largely outside of management’s control.

Under FECA, workers’ compensation claims for many types of injuries cannot be settled through lump-sum payments, and in some instances with regard to those claims, compensation may be paid over many years. Federal law grants COLA rates to those claims, and these factors result in substantially higher costs to us than would likely result if we managed our own claims. Additionally, since we do not manage the FECA program, we have no ability to control the significant administrative costs associated with managing the claims and payments process.

For additional information, see Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 11 - Workers’ Compensation.

**Transportation**
Transportation expenses include the costs we incur to transport mail and packages between our facilities, comprising highway, air and international transportation contracts, plus contract delivery services.

With the exception of contract delivery services, our costs to deliver mail and other products to delivery points are not included within Transportation but in Compensation and benefits for employee costs and in Other operating expenses for fuel, vehicle maintenance and repair, and other costs. Furthermore, transportation expenses do not
include the compensation and related costs of employees responsible for transporting mail and packages between our facilities.

Variations in the volume and weight of mail transported, the mode of transportation used, and fuel prices have significant impact on transportation expenses.

The components of transportation expenses for the three and six months ended March 31, 2020, and 2019, are presented in the following table:

<table>
<thead>
<tr>
<th></th>
<th>Three Months Ended March 31,</th>
<th>Six Months Ended March 31,</th>
</tr>
</thead>
<tbody>
<tr>

<td>11</td>
<td>13</td>
</tr>
<tr>
<td><strong>Total transportation expenses</strong></td>
<td><strong>$2,008</strong></td>
<td><strong>$2,000</strong></td>
</tr>
</tbody>
</table>

Overall, transportation expenses increased 0.4% and 1.5% for the three and six months ended March 31, 2020, compared to the same periods last year.

Highway transportation expenses decreased 1.5% for the three months ended March 31, 2020, but increased 3.4% during the six months ended March 31, 2020, compared to the same periods in last year. For the three and six months ended March 31, 2020, highway contract expenses decreased, primarily due to a decrease in the number of miles driven and lower average diesel fuel prices. However, results for the six months ended March 31, 2020, include a one-time adjustment resulting from our adoption of ASC 842, whereby we recorded transportation expenses associated with embedded leases in certain of our transportation contracts during the first quarter of 2020 (see Note 2 - Recent Accounting Pronouncements for additional disclosures regarding our adoption of ASC 842).

Air transportation expenses increased 3.9% for the three months ended March 31, 2020, but decreased 0.6% during the six months ended March 31, 2020, compared to the same periods last year. For the six months ended March 31, 2020, the slight decrease was due primarily to lower volumes and lower average jet fuel prices. However, both volumes and average jet fuel prices rose in the three months ended March 31, 2020, leading to an increase in air transportation expenses for the period.

International transportation expenses are related only to outbound services that allow customers in the U.S. to send mail and packages to other countries. For the three and six months ended March 31, 2020, international transportation expenses decreased 1.4% and 2.9% compared to the same periods last year, primarily due to decreases in our international service volumes.
Other Operating Expenses
Other operating expenses for the three and six months ended March 31, 2020, and 2019, are detailed in the following table:

<table>
<thead>
<tr>
<th>(in millions)</th>

</tbody>
</table>

Other operating expenses increased by 5.3% and 2.5% for the three and six months ended March 31, 2020, compared to the same periods in the prior year. While these aggregate changes were relatively immaterial, the period-over-period changes in the various components of other operating expenses for the three and six months ended March 31, 2020, were also relatively immaterial.

LIQUIDITY AND CAPITAL RESOURCES

Our liquidity consists of unrestricted cash and cash equivalents plus available borrowing capacity. As of March 31, 2020, and September 30, 2019, we held unrestricted cash and cash equivalents of $9.0 billion and $8.8 billion, respectively. During the six months ended March 31, 2020, our average daily liquidity balance under our statutory borrowing capacity was $12.3 billion, representing approximately 56 days of liquidity available, which we define as liquidity divided by estimated average cash disbursements (including capital expenditures) per calendar day (365 days per year).

We face certain risks caused by the COVID-19 pandemic, including the disruptions to our revenue and business operations, which will have a material effect on our financial condition and results of operations. Quarantines, shelter-in-place orders, and travel and logistics restrictions in connection with the outbreak have affected our retail and commercial customers, as well as suppliers and mail service providers. While the disruption is expected to be temporary, its duration remains uncertain. A protracted loss in customer demand for our services is likely to have a material effect on our financial condition, results of operations and liquidity. The sudden drop in mail volumes, our most profitable revenue stream, is steep and may never fully recover to levels prior to the pandemic.

Notwithstanding our $15.0 billion statutory debt limit, and $3.0 billion annual limitation on new borrowing, the CARES Act allows us to borrow up to an additional $10.0 billion in financing from the U.S. Treasury to fund operating expenses. The U.S. Treasury may lend up to this amount at our request, upon terms and conditions mutually agreed upon. However we have no assurance that the U.S. Treasury will agree to provide such financing or if it will be provided upon favorable terms.

We estimate that the COVID-19 pandemic may increase our net operating loss by more than $22.0 billion over the next eighteen months, threatening our ability to operate. If we are able to borrow the $10.0 billion from the U.S. Treasury as provided by the CARES Act, we expect that we will have sufficient liquidity to continue to operate through April 2021. However, if we are unable to secure this $10.0 billion in financing, we expect to be able to continue to operate only through September 2020, absent additional defaults.

Although our liquidity has generally increased since 2012, it remains insufficient to support an organization with approximately $80 billion in annual operating expenses, to make capital investments necessary for continuity of
operations and to prepare for unexpected contingencies. Much of this liquidity improvement as of March 31, 2020, would not have occurred but for the temporary exigent surcharge, which allowed us to collect a total of $4.6 billion in incremental revenue between January 2014 and April 2016.

Aside from the temporary exigent surcharge, we defaulted on $33.9 billion of statutorily specified PSRHBF prefunding payments from 2012 through 2016, and did not make the approximately $495 million in payments due for FERS unfunded liabilities between 2014 and 2016, or the approximately $21.0 billion in payments due for PSRHBF normal cost and amortization on PSRHBF, CSRS and FERS unfunded liabilities between 2017 and 2019, in order to preserve liquidity, and to ensure that our ability to fulfill our primary universal service mission was not placed at undue risk. The combination of these defaults and non-payments, plus the incremental revenue associated with the temporary exigent surcharge referred to above, and the increased revenue from growth in our Shipping and Packages business, are the primary reasons why our cash and available liquidity has improved.

**CASH FLOW ANALYSIS**

**Operating Activities**
Cash provided by operating activities decreased $148 million for the six months ended March 31, 2020, compared to the same period last year, largely the result of timing differences in cash payments for compensation and benefits.

**Investing Activities**
We invested $741 million in the purchase of property and equipment for the six months ended March 31, 2020, which is an increase of $82 million, or 12.4%, compared to the same period last year. As of the date of this report, the amount of our full year projected capital expenditures is approximately $2.0 billion, which is approximately $300 million less than our original forecast of $2.3 billion. We anticipate that this may further decline if equipment and information technology investments and other programs are deferred to future years as a result of COVID-19.

**Financing Activities**
Except as described otherwise in this quarterly report, the nature and amounts of our payment obligations under our debt, capital and operating lease agreements, purchase commitments and other liabilities as of March 31, 2020, have not materially changed from those described in our Annual Report.

As of both March 31, 2020, and September 30, 2019, the aggregate principal balance of our outstanding debt was $11.0 billion, consisting of a combination of fixed-rate note and floating-rate notes, all of which we consider long-term debt.

**DEBT**
As of March 31, 2020, our statutory borrowing capacity was $4.0 billion, of which $1.0 billion would require repayment by September 30, 2020, to comply with our annual debt increase limits. Furthermore, notwithstanding our $15.0 billion statutory debt limit, and the $3.0 billion annual limitation on new borrowing, the CARES Act allows us to borrow up to an additional $10.0 billion in financing from the U.S. Treasury to fund operating expenses. The U.S. Treasury may lend up to this amount at our request, upon terms and conditions mutually agreed upon.

In 1974, we began issuing debt through individual debt agreements to the Federal Financing Bank (“FFB”), a government-owned corporation under the general supervision of the Secretary of the Treasury. In 1999, we entered into a Note Purchase Agreement (“NPA”) with the FFB to establish standardized procedures for issuing debt. Under the NPA, we were able to issue a series of notes with established terms and conditions by providing two days prior notice. Also under the NPA, we could make borrowings against two annually renewable revolving credit line facilities. These note arrangements and credit line facilities provided the flexibility to borrow short or long-term, using floating or fixed-rate instruments.

The NPA was extended each year through September 30, 2018, and in shorter increments between that date and August 31, 2019, at which time the NPA expired. This expiration did not affect the terms of any of our outstanding debt as of March 31, 2020, all of which was issued under the NPA.
If we are unable to renew or replace the NPA with the FFB, we have no assurance that we could obtain alternative debt financing on comparable terms. However, we believe that we will be able to maintain adequate liquidity through existing and new financing arrangements, as necessary and allowed by statute, to fund our operations.

On April 1, 2020, we drew $3.4 billion on a revolving credit facility with the FFB that survived the expiration of the NPA. In order to comply with the annual net increase limit, we must repay $400 million from this credit facility by September 30, 2020. Given that the credit facility has a maximum term of up to one year, we must repay any outstanding balance of the credit facility by April 1, 2021. The credit facility's interest rate was determined by the U.S. Treasury based on the market rates of similar instruments as of the day of the funding request.

**LIQUIDITY OUTLOOK**

We are constrained by laws and regulations, including the PAEA, which restrict revenue sources and mandates certain expenses. Statutorily mandated expenses include amortization payments to provide full funding of retirement benefits under the CSRS and the FERS, as well as FERS normal costs, described in greater detail in *Note 9 - Retirement Plans*. Additionally, the PAEA established the PSRHBF and mandated certain obligations for paying normal costs, the present value of the estimated retiree health benefits attributable to active employees' current year of service, and amortization payments for full prefunding of retiree health benefits. These prefunding obligations, described in greater detail in *Note 10 - Health Benefits Plans*, are unlike expenses imposed on most other federal entities or private-sector businesses that offer such benefits.

We continue to face challenges from the ongoing migration of mail to electronic alternatives, and we are legally limited under current law in how we can price our products and streamline our legacy business model. Our operations will require significant capital investment over the next few years to modernize and improve our processing and delivery infrastructure and update our delivery fleet in order to continue to meet our primary statutory obligation to provide prompt, reliable and efficient postal services to the nation.

Irrespective of our challenges resulting from the COVID-19 pandemic, absent legislative and regulatory change, we project continuing annual net losses in the future. As a result of these losses and our liquidity concerns, we will unlikely have sufficient cash balances to meet all of our existing legal obligations and make all of the critical investments in our infrastructure that are necessary for operational continuity and that have been deferred in recent years.

In the event that circumstances leave us with insufficient liquidity to continue operating, we may deem it necessary to implement additional contingency plans to ensure that our primary mission is fulfilled and that mail deliveries continue. These measures may require us to prioritize payments to the FFB, our employees and suppliers ahead of some payments to fund retirement and retiree health benefits, as we have done in the past.

With the anticipated continued migration to electronic communication and transactional alternatives, we continue to pursue long-term financial sustainability by focusing on the following items:

1. Continued efforts to control costs and drive efficiencies, innovate to keep mail relevant and generate increased revenue;
2. Postal Service reform legislation that addresses our overall cost structure and enhances our revenue-generating opportunities; and
3. Favorable outcome of the PRC’s ten-year review (discussed below), which would allow additional pricing flexibility.

Although we continue to inform the executive branch, Congress, the PRC and other stakeholders of the immediate and long-term financial challenges we face, we have no assurances that our requests will result in meaningful reform in the foreseeable future.
**PRC Ten-year Review**

In December 2016, the PRC initiated its ten-year review of the system for regulating rates and classes for Market-Dominant products as required by the PAEA. The purpose of the ten-year review was to determine if the system for regulating such rates and classes has achieved the objectives Congress established in the PAEA. As part of this review, the PRC evaluated the CPI-U price cap for our Market-Dominant services.

On December 1, 2017, the PRC announced its initial decision in connection with its ten-year review. The PRC concluded that the rates system has not achieved its objectives and needs to be changed, primarily because it does not enable us to achieve our mission of providing prompt, reliable, and efficient universal postal services to the American people in a financially sustainable manner. The PRC's proposed changes to the system do not include the elimination of the CPI-U price cap; however, its proposal does provide for some additional pricing authority within a price cap system.

On December 5, 2019, the PRC announced a revised decision in connection with its ten-year review. The PRC's proposed changes to the system still do not include the elimination of the CPI-U price cap. Moreover, while the revised proposal does include adjustment factors as we had requested to provide more flexibility for the regulatory system to better deal with future exogenous changes, the new proposal no longer includes any "true-up" authority to provide us with a reasonable opportunity to cover all of our costs. We continue to assert that the price cap should be eliminated, and that if the PRC insists on maintaining a price cap that the system must include both a resetting of rates so they are compensable, as well as adjustment factors to ensure the system is sufficiently flexible going forward.

The PRC was expected to issue a final rule after considering the comments and reply comments of any interested stakeholders, which were due no later than February 3, 2020, and March 4, 2020, respectively. As of the date of this report, the PRC has not issued a final rule. Additional information regarding the ten-year review may be found at the PRC website: https://www.prc.gov/press-releases/prc-revises-proposals-second-rulemaking-modify-rate-system-classes-market-dominant.

**2020 and Beyond**

Irrespective of our challenges resulting from the COVID-19 pandemic, we anticipate that given our ongoing liquidity concerns, and without legislative action and regulatory reform, we may not be able to pay all legally required obligations and also invest in much-needed capital expenditures in 2020 and future years that are necessary to ensure our ability to fulfill our primary mission. Furthermore, we believe that continuing productivity improvements alone will not be sufficient to address the challenges presented by declining Market-Dominant volume and revenue, and any future growth in operating revenue would unlikely keep pace with increased costs.

**Legally Required Obligations**

In addition to our previously discussed obligations for unfunded retirement and retiree health benefits of approximately $8.0 billion due on September 30, 2020, we expect to pay the DOL approximately $1.3 billion in October 2020, representing the workers’ compensation claims paid by DOL for the chargeback year July 1, 2019, to June 30, 2020, plus the estimated administrative fee.

The CARES Act offers certain employers the ability to defer payment of the employer’s share of the Social Security payroll tax on wages incurred from March 27, 2020, through December 31, 2020. In accordance with this provision, we began deferring these payments in April 2020, and intend to continue the deferral for the remainder of calendar year 2020 for an estimated total deferral amount of approximately $1.6 billion. One half of these deferred payments would be due by December 31, 2021, and the other half by December 31, 2022.

**Capital Investments**

We currently estimate that our required cash outlays for capital investments necessary to ensure that we can continue to perform our universal service obligation will amount to approximately $1.3 billion for the remainder of 2020, and an additional $11.0 billion for years 2021 through 2024, as we plan to invest in a new fleet of delivery vehicles and other appropriate capital assets. Although our future projections include these capital cash outlays, future cash flow from operations alone may not generate the cash needed to enable us to fully fund such necessary capital investments.
**Mitigating Circumstances**

We continue to pursue strategies within our control to increase operational efficiency and improve liquidity. We have managed capital in recent years by spending only what we believed was essential to maintain our existing facilities and service levels, and to increase efficiencies. However, continued increases in capital investment are necessary to upgrade our facilities, fleet of vehicles and processing equipment in order to remain operationally viable. Aggressive management of the business operations, as well as legislative and regulatory reforms that will enable us to increase revenue and reduce costs, will all be necessary to restore our financial health.

Our status as an independent establishment of the executive branch that does not receive tax dollars for our operations presents unique requirements and restrictions, but also potentially mitigates some of the financial risk that would otherwise be associated with a cash shortfall. With annual total revenue in 2019 of approximately $71 billion, a financially sound Postal Service continues to be vital to U.S. commerce.

The U.S. economy benefits greatly from us and the many businesses that provide the printing and mailing services that we support. Disruption of the mail would cause undue hardship to businesses and consumers as it would significantly inhibit the remittance of payments through the mail, and in the event of a cash shortfall, the U.S. government would likely prevent us from significantly curtailing or ceasing operations. We continue to inform the executive branch, Congress, the PRC and other stakeholders of the immediate and long-term financial challenges we face and the legislative and regulatory changes that are required to restore our financial stability.

**LEGISLATIVE, REGULATORY AND RELATED MATTERS**

**TASK FORCE ON THE UNITED STATES POSTAL SYSTEM**

As previously reported, on April 12, 2018, the President issued Executive Order 13829 to establish a Task Force on the United States Postal Service ("Task Force"), to be chaired by the Secretary of the Treasury, as Secretary and as Chairman of the FFB, or his designee. In accordance with the Executive Order, the Task Force conducted an evaluation of our operations and finances, and submitted its report to the President in August 2018.

There has been no further congressional activity related to the President’s Task Force report on the Postal Service subsequent to the March 12, 2019, Senate Homeland Security and Governmental Affairs Committee hearing titled, "A Path to Sustainability: Recommendations from the President’s Task Force on the United States Postal Service."

**LEGISLATIVE UPDATE**

As a self-funded independent establishment of the executive branch, our business model and operations are significantly influenced by congressional oversight and legislation. Additionally, Congress intended for us to be governed by an eleven-member Board of Governors ("Board") which generally consists of our Postmaster General, Deputy Postmaster General and nine independent governors ("Governors"). The President appoints the Governors with the advice and consent of the Senate. We have five Senate-confirmed Governors currently in office.

**Legislation**

Several bills introduced in response to the COVID-19 pandemic have financial implications for us.

On March 18, 2020, the President signed the Families First Coronavirus Response Act, enacted as Public Law 116-127, which provides new paid sick leave that may be used by an employee in COVID-19 situations for themselves, or to care for sick family members, as well as Family and Medical Leave Act-protected unpaid and paid leave if a school/child care is closed.

On March 27, 2020, the President signed the CARES Act, which allows the Postal Service to borrow up to an additional $10.0 billion in financing from the U.S. Treasury to fund operating expenses. The law stipulates that the Secretary of Treasury may lend up to this amount at the request of the Postal Service, upon terms and conditions mutually agreed upon by the Secretary and the Postal Service.

H.R. 6425, the Protect our Post Offices Act, introduced on March 31, 2020, would also appropriate $25.0 billion for payment to the Postal Service Fund for revenue forgone due to the COVID-19 pandemic. The bill was referred to the House Committees on Appropriations and Budget.
Postal Service Reform
The 116th Congress has not introduced any major Postal Service reform bills to date. Legislative and regulatory reforms remain critical for us to meet the needs of the American public, and we will continue to work with Congress and all of our stakeholders to enact Postal Service reform legislation.

Board of Governors Nominations
On March 2, 2020, the President submitted to the Senate the nomination of Donald Lee Moak to serve on the Board for a term expiring December 8, 2022. The nomination was referred to the Senate Homeland Security and Governmental Affairs Committee for its consideration. The nomination of William Zollars to serve for a term expiring December 8, 2022, is also pending the committee’s consideration.

FAIR VALUE MEASUREMENTS
As required by authoritative accounting literature, certain fair value disclosures for the periods ended March 31, 2020, and September 30, 2019, are discussed in Item 1. Financial Statements, Notes to Unaudited Financial Statements. We did not recognize gains as a result of valuation measurements during the three and six months ended March 31, 2020. All recognized losses have been incorporated into our financial statements as of March 31, 2020. See Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 13 - Fair Value Measurement.

RELATED PARTY TRANSACTIONS
As disclosed throughout this quarterly report, we have significant transactions with other U.S. government entities, which are considered related parties for reporting purposes. For a more detailed description, see Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 5 - Related Parties.

CRITICAL ACCOUNTING POLICIES AND ESTIMATES
The preparation of financial statements in accordance with GAAP requires management to make significant judgments and estimates to develop certain amounts reflected and disclosed in the financial statements. In many cases, alternative policies or estimation techniques may be used.

We maintain a thorough process to review the application of accounting policies and to evaluate the appropriateness of the many estimates that are required to prepare the financial statements of a large organization. However, even under optimal circumstances, estimates routinely require adjustment based on changing circumstances and new or better information.

The accounting policies deemed either the most judgmental or which involve the selection or application of alternative accounting policies, and are material to the interim financial statements, are described in Critical Accounting Estimates contained in Management’s Discussion and Analysis of Financial Condition and Results of Operations of the Annual Report. Management normally discusses the development and selection of accounting policies and estimates with the Audit and Finance Committee of the Board.

RECENT ACCOUNTING STANDARDS
See Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 2 - Recent Accounting Pronouncements, for a description of recently announced accounting standards.

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK
In the normal course of business we are exposed to market risks from changes in commodity prices, certain foreign currency exchange rates and interest rates. Our commodity price risk consists primarily of exposure to changes in prices for diesel fuel, unleaded gasoline and aircraft fuel for transportation of the mail, and fuel for heating facilities. We have foreign currency risk related to the settlement of terminal dues and transit fees with foreign postal administrations for international mail.
We have not used derivative commodity or financial instruments to manage market risk related to commodities, foreign currency exchange or interest rate fluctuations for debt instruments. Additionally, we do not purchase or hold derivative financial instruments for speculative purposes.

We also have provisions in our debt agreements that allow us to prepay our $11.0 billion debt at any time at a price determined by the Secretary of the Treasury, based on prevailing interest rates in the U.S. Treasury market at the time of repayment.

See Item 7A. Quantitative and Qualitative Disclosures about Market Risk in the Annual Report for additional information.

ITEM 4. CONTROLS AND PROCEDURES

Management is responsible for the preparation, integrity and fair presentation of our financial statements.

DISCLOSURE CONTROLS

We maintain disclosure controls and procedures that are designed to ensure that information required to be disclosed in quarterly and annual reports is recorded, processed, summarized, and reported within the time frames specified by PAEA, and that this information is accumulated and communicated to our management, including the Postmaster General and Chief Financial Officer, as appropriate, to allow timely decisions regarding required disclosure.

We carried out an evaluation under the supervision and with the participation of management, including the Postmaster General and the Chief Financial Officer, of the effectiveness of the design and operation of disclosure controls and procedures as of March 31, 2020. Based upon and as of the date of the evaluation, the Postmaster General and the Chief Financial Officer concluded that our disclosure controls and procedures were effective.

INTERNAL CONTROLS

We have made no changes in our internal control over financial reporting during the three months ended March 31, 2020, that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.
PART II. OTHER INFORMATION

ITEM 1. LEGAL PROCEEDINGS

For a discussion of legal proceedings affecting us, please refer to Item 1. Financial Statements, Notes to Unaudited Financial Statements and Note 8 - Commitments and Contingencies, as well as our Annual Report.

ITEM 1A. RISK FACTORS

The following risk factor supplements Item 1A. Risk Factors of our Annual Report.

The occurrence of a global pandemic or other adverse public health developments could have a material and adverse effect on our business operations, financial condition and results of operations.

In March 2020, the World Health Organization declared COVID-19 a global pandemic, which has since spread throughout the U.S. Given our mandate to provide universal postal services to the nation, we provide an essential service and have continued to process and deliver mail and packages during the pandemic.

We expect the COVID-19 pandemic to have a material effect on our financial condition, results of operations and liquidity. Quarantines, shelter-in-place orders, and travel and logistics restrictions in connection with the outbreak have affected retail and commercial customers, as well as suppliers and mail service providers. The Postal Service relies on the sale of postal products and services to fund its operations, and these sales have declined significantly as a result of the pandemic. The sudden drop in mail volumes, the Postal Service’s most profitable revenue stream, has been steep and may never fully recover to levels prior to the pandemic.

Chief Financial Officer and Executive Vice President
Date: May 7, 2020
I, Megan J. Brennan, certify that:

1. I have reviewed this quarterly report on Form 10-Q of the United States Postal Service (“Postal Service”);

2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;

3. Based on my knowledge, the financial statements and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the Postal Service as of, and for, the periods presented in this report;

4. The Postal Service’s other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the Postal Service and have:
   a. Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the Postal Service, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
   b. Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
   c. Evaluated the effectiveness of the Postal Service’s disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
   d. Disclosed in this report any change in the Postal Service’s internal control over financial reporting that occurred during the Postal Service’s most recent fiscal quarter (the Postal Service’s fourth fiscal quarter in the case of an Annual Report) that has materially affected, or is reasonably likely to materially affect, the Postal Service’s internal control over financial reporting;

5. The Postal Service’s other certifying officer and I have disclosed based on our most recent evaluation of internal control over financial reporting, to the Postal Service’s independent registered accounting firm and the Audit and Finance Committee of the Postal Service’s Board of Governors:
   a. All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the Postal Service’s ability to record, process, summarize and report financial information; and
   b. Any fraud, whether or not material, that involves management or other employees who have significant role in the Postal Service’s internal control over financial reporting.

Washington, D.C. 20268-0001

FORM 10-Q

QUARTERLY REPORT PURSUANT TO 39 U.S.C. § 3654 AND SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the Quarterly Period Ended March 31, 2020

UNITED STATES POSTAL SERVICE
(Exact name of registrant as specified in its charter)

Washington, D.C. 41-0760000
(State or other jurisdiction of incorporation or organization) (I.R.S. Employer Identification No.)

475 L’Enfant Plaza, S.W.
Washington, D.C. 20260
(Address of principal executive offices) (ZIP Code)

(202) 268-2000
(Registrant’s telephone number, including area code)

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes ☐ No ☐ Not Applicable ☑

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to rule 405 of Regulation S-T ($232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files). Yes ☐ No ☐ Not Applicable ☑

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, a smaller reporting company or an emerging growth company. See the definitions of "large accelerated filer," "accelerated filer," "smaller reporting company" and "emerging growth company" in Rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer ☐ Accelerated filer ☐ Non-accelerated filer ☐
Smaller reporting company ☐ Emerging growth company ☐ Not applicable ☑

If an emerging growth company, indicate by check mark if the registrant has elected not to use the extended transition period for complying with any new or revised financial accounting standards provided pursuant to Section 13(a) of the Exchange Act. ☐

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). Yes ☐ No ☑

NOTES TO UNAUDITED FINANCIAL STATEMENTS

NOTE 1 - BASIS OF PRESENTATION

Interim Financial Statements
The accompanying unaudited interim financial statements of the United States Postal Service (the “Postal Service”) have been prepared in accordance with accounting principles generally accepted in the United States (“GAAP”) for interim financial information and with the instructions to Form 10-Q and Rule 10-01 of the U.S. Securities and Exchange Commission Regulation S-X. These financial statements should be read in conjunction with the Postal Service’s financial statements for the year ended September 30, 2019, included in its Annual Report on Form 10-K (“Annual Report”) filed with the Postal Regulatory Commission (“PRC”) on November 14, 2019, and do not include all information and footnotes which are normally included in the Annual Report. Except as otherwise specified, all references to years are to fiscal years beginning October 1 and ending September 30, and quarters are quarters within fiscal years 2020 and 2019.

In the opinion of management, the accompanying unaudited interim financial statements reflect all material adjustments, including recurring adjustments, necessary to fairly present the financial position as of March 31, 2020, the results of operations for the three and six months ended March 31, 2020, and 2019, the changes in net deficiency for the six months ended March 31, 2020, and 2019, and cash flows for the six months ended March 31, 2020, and 2019. Operating results for the three and six months ended March 31, 2020, are not necessarily indicative of the results that may be expected for all of 2020. Mail volume and revenue are historically greatest in the first quarter of the year, which includes the holiday mailing season.

Reclassifications
Certain reclassifications have been made to the financial statements for the three and six months ended March 31, 2019, as well as subsequent footnotes, to conform to the current period presentation. Specifically, certain retirement benefit expenses have been reclassified from Compensation and benefits and separately identified as Retirement benefits within Operating expenses in the accompanying unaudited Statements of Operations. In addition, unfunded retirement benefits amortization expenses associated with the Civil Service Retirement System (“CSRS”) and the Federal Employee Retirement System (“FERS”) have been reclassified from Unfunded retirement benefits amortization to Retirement benefits within Operating expenses in the accompanying unaudited Statements of Operations.

The liabilities associated with these retirement benefits have also been reclassified from Compensation and benefits and separately identified as Retirement benefits within Current liabilities in the balance sheets. In addition, the unfunded retirement benefits liabilities associated with CSRS and FERS have been reclassified from Unfunded retirement benefits to Retirement benefits within Current liabilities in the balance sheets. Corresponding reclassifications have been made within Changes in current assets and liabilities in the accompanying unaudited Statements of Cash Flows.

These reclassifications had no effect on previously reported total operating expenses, loss from operations or net loss. See Note 9 - Retirement Plans for further disclosure pertaining to retirement benefits.

NOTE 2 - RECENT ACCOUNTING PRONOUNCEMENTS

Recently Adopted Accounting Pronouncement
In February 2016, the Financial Accounting Standards Board (“FASB”) issued Accounting Standards Update 2016-02 Leases, which has since been codified in Accounting Standards Codification (“ASC”) 842, Leases (“ASC 842”). The new standard requires an entity to record most leases in its balance sheets but continue to recognize expenses in its statements of operations in a manner similar to current accounting practices. The new standard requires a lessee to recognize a lease liability for the obligation to make lease payments and a right-of-use (“ROU”) asset for the right to use the underlying asset for the lease term. Expenses associated with operating leases are recognized on a straight-line basis and include embedded interest and amortization components. The Postal Service recognizes expenses associated with operating leases as rent expense or transportation expense within Other operating expenses or Transportation, respectively, in the statements of operations. The Postal Service recognizes expenses associated with finance leases (formerly capital leases under previous guidance) with both
interest and amortization expenses and presents these separately in the statements of operations. As such, finance leases generally have higher expenses in the earlier periods of the lease term.

The Postal Service adopted ASC 842 for its 2020 fiscal year (beginning October 1, 2019). In connection with the adoption of ASC 842, the Postal Service has made necessary changes to relevant policies, processes, information systems and internal controls. For transition purposes, the Postal Service has elected the option not to restate comparative financial statements under the modified retrospective transition model. This option allows the application of the standard to all leases in effect as of the effective date (October 1, 2019) or commencing thereafter, without any restatement impact on the comparative financial statement balances. Accordingly, all comparative financial statements enclosed herein are presented in accordance with the previous ASC 840, Leases (“ASC 840”), with related ASC 840 disclosures provided in Note 12 - Leases.

In implementing ASC 842, the Postal Service has elected the package of practical expedients which permits carrying forward historical accounting positions around lease identification, lease classification and initial direct costs for all leases commencing prior to October 1, 2019. The Postal Service has also made a policy election to not separate the lease and non-lease components for all types of underlying assets and to exclude its short-term leases from the ROU asset and lease liability balances.

The Postal Service adopted ASC 842 on October 1, 2019. The implementation of ASC 842 resulted in an opening balance sheet adjustment, as of October 1, 2019, to recognize $4.4 billion in right-of-use assets and lease liabilities relating to operating leases as follows:

<table>
<thead>
<tr>
<th>(in millions)</th>

</tr>
</tbody>
</table>

The implementation of ASC 842 did not have a material impact on the Postal Service’s Statement of Operations or Statement of Cash Flows and did not have any impact on the Postal Service’s Statement of Changes in Net Deficiency. See Note 12 - Leases and Item 4. Controls and Procedures for additional disclosures pertaining to ASC 842.

**Accounting Pronouncements Issued but not Adopted**

**Accounting Standards Update 2016-13 Financial Instruments - Credit Losses**

In June 2016, the FASB issued Accounting Standards Update 2016-13 Financial Instruments - Credit Losses, which has since been codified in ASC 326, Financial Instruments - Credit Losses (“ASC 326”). The new standard requires entities to measure expected credit losses on financial instruments and other commitments by replacing the incurred loss impairment methodology in current GAAP with a methodology that reflects expected credit losses and requires consideration of a broader range of reasonable and supportable information to inform credit loss estimates.

The Postal Service intends to adopt ASC 326 for its 2021 fiscal year (beginning October 1, 2020) and the quarters therein. The standard is applicable to the Postal Service’s valuation of its receivables. The Postal Service is currently evaluating the impact of adopting this standard on its financial statements and related disclosures.
Accounting Standards Update 2018-13 Fair Value Measurement
In August 2018, the FASB issued Accounting Standards Update 2018-13 Fair Value Measurement: Disclosure Framework - Changes to the Disclosure Requirements for Fair Value Measurement, which has since been codified in ASC 820, Fair Value Measurement (“ASC 820”). The new standard modifies the disclosure requirements for fair value measurements by adding, modifying or removing certain disclosures.

The Postal Service intends to adopt ASC 820 for its 2021 fiscal year (beginning October 1, 2020) and the quarters therein. The standard is applicable to the Postal Service’s fair value measurements of its revenue forgone installment receivable and its long-term debt, as described further in Note 13 - Fair Value Measurement. Under ASC 820, certain disclosures are required to be applied on a retrospective basis and others on a prospective basis. The Postal Service is currently evaluating the impact of adopting this standard on its financial statements and related disclosures.

Accounting Standards Update 2018-15 Intangibles - Goodwill and Other - Internal-Use Software
In August 2018, the FASB issued Accounting Standards Update 2018-15 Intangibles - Goodwill and Other - Internal-Use Software (Subtopic 350-40) - Customer’s Accounting for Implementation Costs Incurred in a Cloud Computing Arrangement, which has since been codified in ASC Subtopic 350-40, Intangibles - Goodwill and Other - Internal-Use Software (“ASC 350-40”). This is an update to a standard the FASB issued in April 2015 for entities evaluating the accounting for fees paid by a customer in a cloud computing (hosting) arrangement by providing guidance for determining when such arrangement includes a software license.

If a cloud computing arrangement includes a license for internal-use software, then the software license is accounted for by the customer in accordance with ASC 350-40. This generally means that an intangible asset is recognized for the software license and, to the extent that the payments attributable to the software license are made over time, a liability also is recognized. If a cloud computing arrangement does not include a software license, the entity should account for the arrangement as a service contract. This generally means that the fees associated with the hosting element (service) of the arrangement are expensed as incurred.

The Postal Service intends to adopt ASC 350-40 for its 2021 fiscal year (beginning October 1, 2020) and the quarters therein. The Postal Service is currently evaluating the impact of adopting this standard on its financial statements and related disclosures.

NOTE 3 - LIQUIDITY
The Postal Service’s liquidity consists of unrestricted cash and cash equivalents plus available borrowing capacity.

Cash
The Postal Service generates its cash almost entirely through the sale of postal products and services. As of March 31, 2020, and September 30, 2019, the Postal Service held unrestricted cash and cash equivalents of $9.0 billion and $8.8 billion, respectively. See Note 6 - Cash, Cash Equivalents and Restricted Cash for further disclosures pertaining to cash.

The Postal Reorganization Act, as amended by Public Laws 101-227 and 109-435 (the "PRA"), authorizes the Postal Service to raise cash through the issuance of debt obligations. The Postal Service is limited by statute to annual net increases in debt of $3.0 billion calculated as of the end of each fiscal year, and total debt of $15.0 billion. In 1974, the Postal Service began issuing debt through individual debt agreements to the Federal Financing Bank (“FFB”), a government-owned corporation under the general supervision of the Secretary of the Treasury.

COVID-19 Considerations
In March 2020, the World Health Organization declared a novel strain of coronavirus (“COVID-19”) a global pandemic, which has since spread throughout the U.S. Given its mandate to provide universal postal services to the nation, the Postal Service provides an essential service as part of the nation’s critical infrastructure and has continued to process and deliver mail and packages during the pandemic.

The Postal Service expects the COVID-19 pandemic to have a material effect on its financial condition, results of operations and liquidity. Quarantines, shelter-in-place orders and travel and logistics restrictions in connection with the outbreak have affected retail and commercial customers, as well as suppliers and mail service providers. The
Postal Service relies on the sale of postal products and services to fund its operations, and these sales declined significantly in late March 2020 as a result of the pandemic, and the impact has continued to worsen since then. The sudden drop in mail volumes, the Postal Service’s most profitable revenue stream, has been steep and may never fully recover to levels prior to the pandemic.

On March 27, 2020, the President signed the Coronavirus Aid, Relief, and Economic Security Act, enacted as Public Law 116-136 (the “CARES Act”). Notwithstanding the $15.0 billion statutory debt limit, and the $3.0 billion limit on annual borrowing, the CARES Act allows the Postal Service to borrow up to an additional $10.0 billion in financing from the U.S. Treasury to fund operating expenses. The U.S. Treasury may lend up to this amount at the request of the Postal Service, upon terms and conditions mutually agreed upon. However, the Postal Service has no assurance that the U.S. Treasury will agree to provide such financing or if it will be provided upon favorable terms.

The Postal Service estimates that the COVID-19 pandemic may increase its net operating loss by more than $22.0 billion over the next eighteen months, threatening its ability to operate. If the Postal Service is able to borrow the $10.0 billion from the U.S. Treasury as provided by the CARES Act, it expects that it will have sufficient liquidity to continue operations through April 2021. However, if the Postal Service is unable to secure this $10.0 billion in financing, it expects to be able to continue to operate only through September 2020.

Given these COVID-19 considerations, the Postal Service may require an additional injection of liquidity, provided by either the U.S. government or other sources, or through additional defaults, to remain a going concern. While the COVID-19 disruption is expected to be temporary, its duration remains uncertain, and the Postal Service expects that its liquidity may continue to worsen if the nation experiences a prolonged period of disruption.

**Subsequent Events**

The CARES Act offers certain employers the ability to defer payment of the employer’s share of the Social Security payroll tax on wages incurred from March 27, 2020, through December 31, 2020. In accordance with this provision, the Postal Service began deferring these payments in April 2020, and intends to continue the deferral for the remainder of calendar year 2020 for an estimated total deferral amount of approximately $1.6 billion. One half of these deferred payments would be due by December 31, 2021, and the other half by December 31, 2022.

On April 1, 2020, the Postal Service drew $3.4 billion on a revolving credit facility with the FFB that survived the expiration of the Note Purchase Agreement (“NPA”). In order to comply with the annual net increase limit, the Postal Service must repay $400 million from this credit facility by September 30, 2020. Given that the credit facility has a maximum term of up to one year, the Postal Service must repay any outstanding balance of the credit facility by April 1, 2021. The credit facility’s interest rate was determined by the U.S. Treasury based on the market rates of similar instruments as of the day of the funding request.

**Debt**

As of both March 31, 2020, and September 30, 2019, the Postal Service had a combination of fixed-rate and floating-rate notes outstanding with various maturities totaling $11.0 billion. As of March 31, 2020, the Postal Service’s statutory borrowing capacity was $4.0 billion, of which $1.0 billion would require repayment by September 30, 2020, to comply with the annual debt net increase limit.

In 1999, the Postal Service entered into the NPA with the FFB to establish standardized procedures for issuing debt. Under the NPA, the Postal Service was able to issue a series of notes and revolving credit line facilities with established terms and conditions by providing two days prior notice. These note arrangements and credit line facilities provided the flexibility to borrow short or long-term, using floating or fixed-rate instruments.

The NPA was extended each year through September 30, 2018, and in shorter increments between that date and August 31, 2019, at which time the NPA expired. This expiration did not affect the terms of any of the Postal Service’s outstanding debt as of March 31, 2020, all of which was issued under the NPA. As a contractual matter, the FFB continued to lend to the Postal Service under each commitment and line of credit until it expired. If the Postal Service is unable to renew or replace the NPA with the FFB, it has no assurance that it could obtain alternative debt financing on comparable terms.
**Liquidity Concerns**

The Postal Service is constrained by laws and regulations, including the *Postal Accountability and Enhancement Act* ("PAEA"), which restrict revenue sources and mandate certain expenses.

The Postal Service is required, either by law or by union contract, to participate in U.S. government pension and health and benefits programs for employees and retirees, including the Federal Employees Health Benefit ("FEHB") program, CSRS and FERS, which the Office of Personnel Management ("OPM") administers. Statutorily mandated expenses include amortization payments to provide full funding of retirement benefits under CSRS and FERS, as well as FERS normal costs, described in greater detail below and in Note 9 - Retirement Plans. Additionally, the PAEA established the Postal Service Retiree Health Benefits Fund ("PSRHBHF") and mandated certain obligations for paying normal costs, the present value of the estimated retiree health benefits attributable to active employees' current year of service, and amortization payments for full prefunding of retiree health benefits. These prefunding obligations, described in greater detail below and in Note 10 - Health Benefits Plans, are unlike expenses imposed on most other federal entities or private-sector businesses that offer such benefits.

The Postal Service reported operating expenses of approximately $80 billion in 2019 and has incurred cumulative net losses of $83.1 billion from 2007 through March 31, 2020.

Notwithstanding the challenges resulting from the COVID-19 pandemic, absent legislative and regulatory change, the Postal Service projects continuing annual net losses in the future. As a result of these losses and its liquidity concerns, the Postal Service will unlikely have sufficient liquidity to meet all of its existing legal obligations when due while also reducing its debt and making the critical infrastructure investments that have been deferred in recent years.

In the event that circumstances leave the Postal Service with insufficient liquidity, it would likely be required to implement additional contingency plans to ensure that its primary mission is fulfilled and that mail deliveries continue. These measures may require the Postal Service to prioritize payments to the FFB, employees and suppliers ahead of some payments to fund retirement and retiree health benefits, as has been done in the past.

**Business Model Challenges and Constraints**

Market-Dominant services, which accounted for approximately 66% of the Postal Service’s annual operating revenues in 2019, are currently subject to a price cap as measured by the Consumer Price Index for All Urban Consumers ("CPI-U"). However, the Postal Service’s costs are not similarly constrained. A large portion of its cost structure cannot be altered expeditiously due to the Postal Service’s universal service obligation. Further, the number of delivery points continues to grow by approximately one million per year, which drives up delivery costs. When combined with the impact of lower mail volume, the average number of pieces delivered per delivery point per day has decreased from approximately 5.5 pieces in 2007 to 3.4 pieces in 2019, a decline of approximately 39%, and a further significant decline is expected in 2020.

Many employee and retiree benefit costs are mandated by law and cannot be altered without legislative change. Under current law, the Postal Service is generally unable to increase prices sufficiently to offset increased costs, and is likewise constrained by law from reducing many of its costs or from pursuing many alternate sources of revenue.

Aside from its universal service obligation, a significant factor contributing to Postal Service losses is the ongoing decline in the volume of Market-Dominant products and services, and those declines are being exacerbated by the COVID-19 pandemic. Specifically, declines in *First-Class Mail* are largely the result of changes in consumers' and businesses' use of mail resulting from the continuing migration to electronic communication and transactional alternatives, which have taken place over the last decade and are expected to continue. After experiencing relatively flat volume between 2009 and 2016, beginning in 2017, *Marketing Mail* volume has generally been challenged by commercial mailers' increasing use of digital and mobile advertising, and more recently by the COVID-19 pandemic, although this class has benefited from strong political and election mail volumes, particularly in the second half of 2018 and the first quarter of 2019.

The Postal Service’s Shipping and Packages category has historically provided revenue and volume growth as a result of its successful efforts to compete in shipping services, including last-mile e-commerce fulfillment markets.
and Sunday delivery as well as end-to-end markets. However, this service category is subject to intense competition which significantly impacts both revenue and volume. Certain major customers of the Postal Service had begun diverting volume from the Postal Service’s network by in-sourcing last-mile delivery. Competitors in the package delivery market are aggressively pricing their products and services in order to fill their networks and grow package density. However, as a result of the temporary surge in e-commerce growth driven by the COVID-19 pandemic, some of these customers increased their volume to the Postal Service’s network during March 2020 due to their delivery capacity constraints.

Because the Postal Service provides its services primarily through its employees, its costs are heavily concentrated in wages and benefits for both current employees and retirees. These costs are significantly impacted by contractual wage increases, employee health benefit premium increases, and statutorily mandated retirement and workers’ compensation programs. Some of these costs have historically increased at a higher rate than inflation.

**Past Due Obligations**

The following table presents the total expenses accrued but unpaid by the Postal Service as of September 30, 2019, related to retiree health benefits, CSRS and FERS and the fiscal years in which the accruals were recorded:

<table>

¹ The 2012 to 2016 period amount includes $5.8 billion for 2016, $5.7 billion for 2015, $5.7 billion for 2014, $5.6 billion for 2013 and $11.1 billion for 2012.

² The 2012 to 2016 period amount includes $247.6 million for 2016, $240.9 million for 2015 and $6.7 million for 2014.

**Mitigating Circumstances**

The Postal Service continues to pursue strategies within its control to increase operational efficiency and improve liquidity. The Postal Service has managed capital in recent years by spending what it believed was essential to maintain its existing facilities and service levels, to ensure employee safety and to increase efficiencies. However, continued increases in capital investment are necessary to upgrade its facilities, fleet of vehicles and processing equipment in order to remain operationally viable. Irrespective of the challenges resulting from the COVID-19 pandemic, aggressive management of the business operations, as well as legislative and regulatory reforms that will enable it to increase revenue and reduce costs, will all be necessary to restore the Postal Service to financial health.

The Postal Service’s status as an independent establishment of the executive branch that does not receive tax dollars for its operations presents unique requirements and restrictions, but also potentially mitigates some of the financial risk that would otherwise be associated with a cash shortfall. With annual total revenue in 2019 of approximately $71 billion, a financially sound Postal Service continues to be vital to U.S. commerce.

The U.S. economy benefits greatly from the Postal Service and the many businesses that provide the printing and mailing services that it supports. Disruption of the mail would cause undue hardship to businesses and consumers as it would significantly inhibit the remittance of payments through the mail, and in the event of a cash shortfall, the U.S. government would likely prevent the Postal Service from significantly curtailing or ceasing operations. The Postal Service continues to inform the executive branch, Congress, the PRC and other stakeholders of the immediate and long-term financial challenges it faces and the legislative and regulatory changes that are required to restore its financial stability.
**NOTE 4 - REVENUE RECOGNITION**

The Postal Service generates the majority of its revenue from contracts associated with the processing and delivery of different types of mail and packages, both domestically and internationally, which generally occur over a relatively short period of time (e.g., several days).

**Disaggregation of Revenue**

The following table summarizes the Postal Service’s disaggregated operating revenue for the three and six months ended March 31, 2020, and 2019, by each service category:

<table>
<thead>

</tr>
</tbody>
</table>

* Prior period amounts for certain service categories include reclassifications of amounts amongst service categories to conform to current period presentation. These reclassifications are immaterial for each affected category, and had no effect on total operating revenue for the period.

**Satisfaction of Performance Obligations**

A performance obligation is a promise in a contract to transfer a distinct good or service to the customer. A contract’s transaction price is allocated to each distinct performance obligation and recognized as revenue when, or as, the performance obligation is satisfied.

**First-Class Mail, Marketing Mail, Shipping and Packages, International Mail and Periodicals** are categorized as Mailing and Shipping services for purposes of satisfying performance obligations. The Postal Service recognizes revenue for Mailing and Shipping services as it fulfills its obligation to process and deliver each mailpiece and the customer mail sender/recipient receives and consumes the benefits of these services.

Other revenue includes **PO Box** services, Return Receipts, Insurance, Other Ancillary Services, Shipping and Mailing Supplies, Collect on Delivery, **Registered Mail**, Stamped Envelopes and Cards, Money Orders and other goods and services. The Postal Service recognizes revenue for the majority of these services over time as the customer receives and consumes the benefits of the service. The revenue for a small portion of certain goods or services in this service category is recognized at a point in time when the goods or services are provided to the customer.

The vast majority of the Postal Service’s contracts include only one performance obligation. However, if a contract is separated into more than one performance obligation, the total transaction price for each performance obligation is allocated in an amount based on the estimated relative stand-alone selling prices of the promised goods or services underlying each performance obligation. The majority of the goods or services sold by the Postal Service have observable stand-alone sales prices. Further, payment for the majority of the goods and services is received up front.

If the Postal Service were unable to complete delivery to the destination point, another entity would not need to re-perform the entire portion of delivery already performed by the Postal Service. Accordingly, control from the Postal Service to the customer transfers over time for the vast majority of services the Postal Service offers, and revenue is recognized based on the progress of the completion of the performance obligations.
Variable Consideration
The Postal Service offers certain contracts to its customers that contain various types of customer incentives or other provisions that can either increase or decrease the transaction price. Customer incentives include discounts, money back guarantees, rebates, refunds or incentive payments. The other provisions include performance penalties. The Postal Service uses the expected value approach to estimate variable consideration to which it expects to be entitled.

Contract Modifications
The Postal Service considers contract modifications to exist when the modification either creates new enforceable rights and obligations or alters the existing arrangement. Contract modifications do not add distinct services; they are typically used to change the prices that the Postal Service charges its customer for existing services. These contract modifications are accounted for prospectively as the remaining performance obligations are executed.

Principal vs. Agent Consideration
The Postal Service utilizes third parties to assist with the transportation of mailpieces between different points as part of the delivery process. Based on its evaluation of the transfer of control model, the Postal Service has determined that it acts as the principal rather than the agent within these arrangements.

Contract Liabilities
The vast majority of the Postal Service’s contract liabilities consist of Deferred revenue-prepaid postage and prepaid PO Box and Caller Service fees. Deferred revenue-prepaid postage is an estimate of postage that has been sold, but not yet used by customers. The Postal Service recognizes revenue over time as the Postal Service delivers mailpieces. Because payments for postage are collected in advance of the satisfaction of related performance obligations, the Postal Service defers and reports this unearned revenue as Deferred revenue-prepaid postage in its balance sheet. Stamp sales and metered postage account for the majority of Deferred revenue-prepaid postage. The liability also includes an estimate for mail that is in-transit within the Postal Service network.

The prepaid PO Box and Caller Service fees consist of the payments received from customers for PO Box fees at the beginning of their contracts. The Postal Service defers and reflects this unearned revenue as prepaid PO Box and Caller Service fees within Other current liabilities in the accompanying Balance Sheets. Revenue is recognized over time as customers use the PO Box and Caller Services over the terms of their contracts.

The following table presents the balances of the Postal Service’s contract liabilities, including Deferred revenue-prepaid postage and prepaid PO Box and Caller Service fees, as of March 31, 2020, and September 30, 2019, respectively:

**NOTE 5 - RELATED PARTIES**

As disclosed throughout this report, the Postal Service has significant transactions with other U.S. government entities, which are considered related parties for accounting purposes.

The following table presents related-party assets and liabilities as of March 31, 2020, and September 30, 2019:

<table>
<thead>

</tbody>
</table>

¹ Included within Operating revenue in the accompanying unaudited Statements of Operations.
² Included within Operating expenses in the accompanying unaudited Statements of Operations.
³ Represents interest imputed on the revenue forgone installment receivable as well as interest generated on U.S. Treasury instruments and other cash equivalents held with the Federal Reserve Bank of New York. Included within Interest and investment income in the accompanying unaudited Statements of Operations.
⁴ Incurred on debt issued to the FFB, and included within Interest expense in the accompanying unaudited Statements of Operations.

**NOTE 6 - CASH, CASH EQUIVALENTS AND RESTRICTED CASH**

The following table provides a reconciliation of Cash and cash equivalents and Restricted cash reported in the balance sheets as of March 31, 2020, and 2019, respectively, and as of September 30, 2019, and 2018, respectively (to disclose the opening balances), that sum to the totals of the same such amounts presented in the accompanying unaudited Statements of Cash Flows for the six months ended March 31, 2020, and 2019:

<table>
<thead>
<tr>
<th></th>
<th>March 31,</th>
<th>September 30,</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>2020</td>
<td>2019</td>
</tr>
<tr>
<td>Cash and cash equivalents</td>
<td>$ 8,987</td>
<td>$ 8,108</td>
</tr>
<tr>
<td>Restricted cash</td>
<td>472</td>
<td>546</td>
</tr>
<tr>
<td>Total cash, cash equivalents and restricted cash</td>
<td>$ 9,459</td>
<td>$ 8,654</td>
</tr>
</tbody>
</table>

Restricted cash represents Postal Service cash that is not available for general use. This includes cash originated from forfeitures or seizures related to consumer fraud or other criminal activity related to the mail and either held for third-party beneficiaries or awaiting disposition. Restricted cash also includes funds for use in restricted activities such as congressional appropriation for Postal Service obligations to the PRC and the United States Postal Service Office of Inspector General, or that are otherwise restricted.

The Postal Service holds its Cash and cash equivalents and Restricted cash with the Federal Reserve Bank of New York and invests its excess cash, when available, in highly-liquid, short-term investments issued by the U.S. Department of the Treasury.

**NOTE 7 - PROPERTY AND EQUIPMENT, NET**

Assets within Property and equipment, net in the accompanying Balance Sheets are recorded at cost, which includes the interest on borrowings used to finance construction of major capital additions, less allowances for depreciation and amortization. Interest capitalized during both the three and six months ended March 31, 2020, and 2019, was not significant. Fixed assets are depreciated over estimated useful lives ranging from 3 to 40 years using the straight-line method.

The net book values of assets classified as held for sale were approximately $6 million and $10 million as of March 31, 2020, and September 30, 2019, respectively, and are included within Property and equipment, net in the accompanying Balance Sheets.

For the three months ended March 31, 2020, and 2019, depreciation and amortization expense was $423 million and $424 million respectively, and impairment charges were de minimis. For the six months ended March 31, 2020, and 2019, depreciation and amortization expense was $854 million and $841 million respectively, and impairment charges were de minimis. These items are included within Other operating expenses in the accompanying unaudited Statements of Operations.
NOTE 8 - COMMITMENTS AND CONTINGENCIES

Collective Bargaining Agreements
On January 22, 2020, the Postal Service reached a tentative agreement with the National Postal Mail Handlers Union, AFL-CIO (“NPMHU”) on a new three-year collective bargaining agreement, which the union membership ratified on April 8, 2020. The new contract went into effect on April 25, 2020, and will expire on September 20, 2022.

On March 10, 2020, a three-member arbitration panel reached a decision in the Postal Service’s legally mandated binding interest arbitration process with the American Postal Workers Union, AFL-CIO (“APWU”), which established the terms of a new collective bargaining agreement. The new contract went into effect on March 10, 2020, and will expire on September 20, 2021.

In September 2019, the Postal Service agreed to extend contract negotiations relating to a new collective bargaining agreement with the National Association of Letter Carriers, AFL-CIO (“NALC”). The previous contract with the NALC expired on September 20, 2019, and negotiations with the NALC are at an impasse. The Postal Service and the NALC will continue to follow the current agreement until a new contract is reached through the dispute resolution process.

Contingent Liabilities
The Postal Service’s contingent liabilities consist primarily of claims resulting from labor and employment matters; asset retirement obligations and environmental matters; property damage and injuries on Postal Service properties; and issues arising from Postal Service contracts, personal claims and traffic accidents. Each quarter, the Postal Service evaluates each claim to determine its potential liability. If the Postal Service determines that an unfavorable outcome from a new claim is both probable and reasonably estimable, it records a liability for the amount. Preexisting claims are also reviewed and adjusted quarterly for resolutions or revisions to prior estimates based on new facts and circumstances.

The Postal Service is from time to time involved in other litigation incidental to the conduct of its business, none of which is expected to be material to its financial condition or operations.

Provision for Losses
The Postal Service has made adequate provision for probable losses arising from all claims. The following table presents contingent liabilities by current and noncurrent portions and by category, as of March 31, 2020, and September 30, 2019:

<table>
<thead>
<tr>
<th>(in millions)</th>

<td>$336</td>
</tr>
</tbody>
</table>

¹ Included within Payables and accrued expenses in the accompanying Balance Sheets.
² Included within Other noncurrent liabilities in the accompanying Balance Sheets.
Reasonably Possible Contingencies
The Postal Service does not accrue for contingencies which it deems reasonably possible of an unfavorable outcome. These ranged in amount from approximately $175 million to $1.0 billion at March 31, 2020, and from approximately $150 million to $1.0 billion at September 30, 2019.

Class Action Litigation
As previously reported, on January 14, 2010, the Equal Employment Opportunity Commission's ("EEOC") Office of Federal Operations ("OFO") certified the case *McConnell v. Brennan* (first instituted in 2006 as *McConnell v. Potter*) as a class action against the Postal Service, with the class consisting of permanent-rehabilitation and limited-duty Postal Service employees who the Postal Service assessed under the National Reassessment Process ("NRP") between the dates of May 5, 2006, and July 1, 2011. The Postal Service utilized the NRP to ensure employees receiving workers' compensation benefits were placed in jobs consistent with their abilities, and that records regarding employees injured on the job were correct.

The *McConnell* case alleges violations of the Rehabilitation Act of 1973 resulting from the NRP's failure to provide a reasonable accommodation, the NRP's wrongful disclosure of medical information, the NRP's creation of a hostile work environment, and the NRP's adverse impact on disabled employees. The class is seeking injunctive relief and damages of an uncertain amount.

In 2015, the Administrative Judge assigned to handle the *McConnell* case granted in-part both the Class Agent's and the Postal Service's motions for summary judgment. In her decision, the Administrative Judge found that the NRP violated the Rehabilitation Act. The Postal Service appealed this decision to the OFO, and the OFO denied this appeal in 2018. The Postal Service implemented the OFO's order, and notified all class members of their right to file an individual claim for relief. Class members were allowed thirty days to submit claims to the Postal Service's National Equal Employment Opportunity Investigative Services Office. The claims submission deadline has now passed and the dispute process for individual claims is currently underway before a newly assigned EEOC Administrative Judge.

The class members have the right to pursue individual claims. Should they be successful in establishing liability and damages, the ultimate outcome in this case could have a material impact on the Postal Service's financial results.

Other
The U.S. is a member of the Universal Postal Union ("UPU"), a specialized agency of the United Nations that facilitates the exchange of international mail. The Postal Service is the designated postal operator for the U.S. under the UPU, and payments to the designated postal operator for the delivery of foreign origin letter-post mails are known as "terminal dues".

In September 2019, the UPU members had a special meeting -- known as the Extraordinary Congress -- to discuss the terminal dues system. During that meeting, UPU members agreed to establish a new remuneration system that will allow the Postal Service to self-declare rates beginning in July 2020. Other foreign postal operators may also reciprocally apply rates at full-self-declared rates at that time.

In February 2020, the Postal Service officially invoked its provision to self-declare rates beginning in July 2020, creating an obligation to pay the UPU the amount of 40 million Swiss Francs ("CHF"), or approximately $41 million, based on the prevailing exchange rate on March 31, 2020. This amount will be payable over five years in annual increments of 8 million CHF, with the first payment due between July and December 2020.

The Postal Service considers the right to self-declare rates as an intangible asset recorded in *Other assets* in the accompanying unaudited Balance Sheet at March 31, 2020, and its amortization starts in July 2020 when the self-declared rates are in effect. The current portion of the obligation is recorded in *Payables and accrued expenses* and the noncurrent portion of the obligation is recorded in *Other noncurrent liabilities* in the accompanying unaudited Balance Sheet at March 31, 2020, respectively.
NOTE 9 - RETIREMENT PLANS

The majority of career employees participate in one of two U.S. government defined benefit pension programs, CSRS and FERS, which OPM administers. These plans provide retirement, death and disability benefits for eligible employees based on specific eligibility and participation requirements, vesting periods and benefit formulas. Each employee’s participation in either plan is based on the starting date of employment with the Postal Service or another U.S. government entity.

As government-sponsored benefit plans, CSRS and FERS are not subject to the provisions of the Employee Retirement Income Security Act of 1974, as amended. Likewise, because the Postal Service cannot direct the costs, benefits or funding requirements of these plans, it accounts for program expenses under multiemployer plan accounting rules. As such, the Postal Service records required contributions to the plans as an expense in the period in which each contribution is due. For FERS, the Postal Service contributes to the plan an amount established by OPM as the employer portion of retirement benefits for participating employees and their qualifying survivors, upon retirement, for each employee’s current year of service, which is considered the FERS normal cost. As further discussed below, the Postal Service is not required to pay the normal cost for those employees who participate in CSRS.

Career employees may also participate in the Thrift Savings Plan (“TSP”), a defined contribution retirement savings and investment plan administered by the Federal Retirement Thrift Investment Board. The Postal Service’s TSP expenses relate only to its contributions for FERS employees who participate in the TSP.

CSRS provides a basic annuity plan benefit to employees hired before January 1, 1984. CSRS Offset provides Social Security benefits in addition to its basic annuity plan for employees hired between January 1, 1984, and January 1, 1987. CSRS and CSRS Offset employees may also participate in the TSP, although the Postal Service does not match contributions for these participants.

The PAEA suspended the Postal Service’s employer contributions to CSRS that would otherwise have been required under Title 5, Section 8334(a)(1) of the U.S. Code, although CSRS employees continue to contribute to the plan.

Effective January 1, 1987, FERS covers employees hired since December 31, 1983, and FERS employees are covered by an annuity, Social Security and TSP benefits. For FERS employees who participate in TSP, the Postal Service contributes 1% of basic pay and matches voluntary employee contributions up to an additional 4% of basic pay. The Postal Service recognizes Social Security and TSP expenses as they are incurred and records them within Compensation and benefits in the accompanying unaudited Statements of Operations. A liability is established for any contribution due and unpaid at the end of each reporting period and is included within Compensation and benefits in the accompanying Balance Sheets.

FERS employees are further categorized as either FERS, FERS - Revised Annuity Employees (“FERS-RAE”), or FERS - Further Revised Annuity Employees (“FERS-FRAE”) depending on whether their date of hire was before, during, or after calendar year 2013, respectively.

The following table presents the employee and employer contributions, as a percentage of employee basic pay, during the three and six months ended March 31, 2020, and 2019:

<table>

¹ Expense for the accrual for the annual payment due to OPM by September 30 of the respective fiscal year, to amortize the unfunded CSRS retirement obligation. The 2020 amounts are based on updated Postal Service estimates resulting from revised actuarial assumptions. Payments are to be made through 2043 based on OPM invoices.

² Expense for the accrual for the annual payment due to OPM by September 30 of the respective fiscal year, to amortize the unfunded FERS retirement obligation. The 2020 amounts are based on updated Postal Service estimates resulting from revised actuarial assumptions. Payments are to be made over a 30-year rolling period based on OPM invoices.

**FERS Normal Costs**
The Postal Service records expenses for FERS normal costs within *Retirement benefits* in the accompanying unaudited *Statements of Operations*.

The Postal Service makes payments for FERS normal costs in accordance with its bi-weekly payroll cycle. The employer contributions and employee withholdings not yet remitted to OPM were $209 million and $157 million at March 31, 2020, and September 30, 2019, respectively, and were recorded as a current liability within *Retirement benefits* in the accompanying *Balance Sheets*.

**CSRS and FERS Unfunded Retirement Benefits**
OPM periodically notifies the Postal Service regarding its revaluation of unfunded CSRS and FERS liabilities. OPM calculates these obligations using Postal Service-specific demographics data and government-wide economic assumptions. The Postal Service records these expenses as *Retirement benefits* in the accompanying unaudited *Statements of Operations*. These amounts may be significantly impacted by changes in actuarial assumptions used to revalue the unfunded liabilities.

In October 2019, OPM provided the Postal Service with an actuarial report indicating the projected annual amortization payments due September 30, 2020, would be $1.6 billion for the CSRS obligation and $1.1 billion for the FERS obligation.

On April 2, 2020, the Board of Actuaries of the CSRS, which oversees OPM’s calculation of actuarial liabilities for CSRS and FERS, lowered the discount rate used to calculate CSRS and FERS unfunded retirement liabilities from 4.25% to 4.0%. The Postal Service has estimated that the impact of this change in discount rate on the annual CSRS and FERS amortization expense will result in revised projected amortization payments due September 30, 2020, of approximately $1.8 billion for the CSRS obligation and approximately $1.3 billion for the FERS obligation, increases of $181 million and $226 million, respectively.

Accordingly, the Postal Service accrued additional CSRS and FERS amortization expenses during the three months ended March 31, 2020, to reflect the proportional adjustment between the original OPM estimate and the updated Postal Service estimate as a result of these changes. The Postal Service expects to receive invoices from OPM for the actual amounts due September 30, 2020, during the fourth quarter of 2020, and these invoices may differ from the estimated projections due to further changes in experience, discount rates and/or actuarial assumptions as of the calculation date.
The amounts the Postal Service has accrued for CSRS and FERS unfunded retirement benefits but has not yet paid are recorded as a current liability within Retirement benefits in the accompanying Balance Sheets. Those accrued but unpaid amounts were approximately $9.8 billion and $8.2 billion at March 31, 2020, and September 30, 2019, respectively.

**NOTE 10 - HEALTH BENEFITS PLANS**

FEHB Program covers nearly all career employees and also covers non-career employees and retirees who meet certain eligibility requirements. OPM administers FEHB and allocates the cost of funding the program to participating U.S. government employers. Separate from FEHB, the Postal Service offers its own healthcare plan to certain non-career employees who are ineligible for FEHB.

**Active Employees**

The Postal Service paid 71.9% of healthcare premium costs during both the three months ended March 31, 2020, and 2019. The Postal Service paid 72.0% and 72.3% of healthcare premium costs during the six months ended March 31, 2020, and 2019, respectively. Although OPM determines the actual FEHB premium costs, the allocation of these costs between the Postal Service and most of its employees is determined through agreements with Postal Service labor unions.

Postal Service employee health benefits expense (which includes the employer portion of Medicare taxes) is most significantly impacted by the number of employees electing coverage and the premium costs of the selected plans. Postal Service employee health benefits expense was approximately $1.3 billion for each of the three-month periods ended March 31, 2020, and 2019. Postal Service employee health benefits expense was approximately $2.6 billion for each of the six-month periods ended March 31, 2020, and 2019. These expenses are included within Compensation and benefits in the accompanying unaudited Statements of Operations.

**Retirees**

Postal Service retirees who participated in FEHB for the five years immediately preceding their retirement may continue to participate in the plan during retirement. Qualifying survivors of retirees are also eligible to receive benefits. The Postal Service is required to contribute to the PSRHBF an amount estimated to be equal to the employer portion of FEHB insurance premiums for participating employees and their qualifying survivors, upon retirement, for each employee’s current year of service (normal cost). The Postal Service is also required to contribute an amount sufficient to fully amortize the unfunded liability of the PSRHBF by 2056. These amounts are based, in part, on each current and prospective retiree’s length of federal civilian service occurring on or after July 1, 1971. Each participant’s share of premium costs is set by law and is not subject to negotiation with Postal Service labor unions. The Postal Service cannot direct the costs, benefits or funding requirements of the plans. Therefore, it accounts for program expenses using multiemployer plan accounting rules by recording contributions to the plans that will be required by OPM as an expense in the period in which the contributions are due.

The PAEA required the Postal Service to prefund retiree health benefits during years 2007 through 2016 by paying statutorily specified annual amounts ranging from $1.4 billion to $5.8 billion, totaling $54.8 billion, into the PSRHBF, which began paying the Postal Service’s share of retiree health benefit premiums in 2017. The Postal Service remains obligated to fund the $33.9 billion in statutorily required PSRHBF prefunding payments that it defaulted on for the years 2012 through 2016, as well as the normal cost and amortization payments of $10.7 billion and $2.6 billion, respectively, that it did not pay for the years 2017 through 2019. As of the date of this report, the Postal Service has not been assessed any penalties associated with these non-payments. The cumulative amount of statutorily specified, normal cost and amortization PSRHBF obligations the Postal Service has accrued is $49.7 billion as of March 31, 2020, inclusive of the $47.2 billion that was unpaid as of September 30, 2019. Given that OPM considers these amounts to be due and payable, the Postal Service reflects the cumulative unpaid amount as a current liability within Retiree health benefits in the accompanying Balance Sheets.

As required by PAEA, OPM annually performs an actuarial valuation for the purpose of developing a payment schedule for the Postal Service to fund the remaining unfunded PSRHBF obligation in annual payments through the year 2056. Based on preliminary calculations provided by OPM, the amortization payment due September 30, 2020, is estimated to be $900 million.
Furthermore, the Postal Service is obligated to pay the estimated normal cost of retiree health benefits attributable to the service of its employees during the most recent year. Based on preliminary calculations provided by OPM, the Postal Service has estimated the normal cost payment, also due by September 30, 2020, to be $4.0 billion.

The Postal Service expects to receive the invoice from OPM for with the actual amounts due during the fourth quarter of 2020 and these may differ from the original projected amounts due to changes in discount rates, actuarial assumptions and experience as of the calculation date.

The following table details retiree health benefits expenses for the three and six months ended March 31, 2020, and 2019:

¹ Expense for the accrual for the annual payment due to OPM by September 30 of the respective year, as calculated by OPM, to amortize the unfunded PSRHBF retirement health benefit obligation. Payments are to be made through 2056 based on OPM invoices.

² Expense for the accrual for the annual payment due to the PSRHBF by September 30 of the respective year, based on information provided by OPM, for the actuarially determined normal cost of retiree health benefits for current employees.

### NOTE 11 - WORKERS’ COMPENSATION

Postal Service employees injured on the job are covered by the Federal Employees’ Compensation Act (“FECA”), administered by the U.S. Department of Labor’s (“DOL”) Office of Workers’ Compensation Programs, which makes all decisions regarding injured workers’ eligibility for benefits. The Postal Service reimburses DOL for all workers’ compensation benefits paid to or on behalf of Postal Service employees, plus an administrative fee.

**Workers’ Compensation Liability**

The Postal Service records a liability for its workers’ compensation obligations for employees who have been injured on the job and are eligible for benefits, or their qualified survivors. Both the current and noncurrent portions of the workers’ compensation liability are recorded in the accompanying Balance Sheets. The Postal Service uses an estimation model that utilizes four generally accepted actuarial valuation techniques based upon past claim-payment experience and exposure to claims as measured by total employee hours worked.

Changes in the liability are primarily attributable to the combined impacts of routine changes in actuarial assumptions, new compensation and medical cases, the progression of existing cases and changes in discount (interest) and inflation rates, including long-term COLA rates for compensation claims, and medical rates for medical claims. These rates are updated as of the balance sheet date and factored into the model.

To determine the fair value of the liability each quarter, the Postal Service first estimates the future total cost of workers’ compensation claims based on the dates of claim-related injuries, frequency or severity of the injuries, the pattern of historical payments to beneficiaries and the expected trend in future costs. The Postal Service then calculates the amount that would need to be invested at current discount (interest) rates to fully fund the future total cost of claims, and this calculated present value is the recorded value of the workers’ compensation liability.

This liability calculation is highly sensitive to changes in discount rates. For example, a 1% increase in the discount rate would decrease the March 31, 2020, liability and related expense by approximately $2.4 billion. Likewise, a 1% decrease in the discount rate would increase the March 31, 2020, liability and related expense by approximately $3.1 billion.
The following table details the applicable inflation and discount rates for compensation and medical claims used to estimate the workers' compensation liability as of March 31, 2020, and September 30, 2019:

<table>
<thead>
<tr>
<th></th>
<th>March 31, 2020</th>
<th>September 30, 2019</th>
</tr>
</thead>
<tbody>

<td>1.07%</td>
<td>1.91%</td>
</tr>
<tr>
<td>Medical inflation rate</td>
<td>3.50%</td>
<td>2.50%</td>
</tr>
</tbody>
</table>

As of March 31, 2020, and September 30, 2019, the Postal Service’s total liability for workers’ compensation was approximately $20.0 billion and $18.5 billion, respectively. As of March 31, 2020, and September 30, 2019, the current portion of the liability was approximately $1.3 billion and $1.4 billion, respectively, and the noncurrent portion of the liability was approximately $18.7 billion and $17.1 billion, respectively, as reflected in the accompanying Balance Sheets.

**Workers’ Compensation Expense**

The impacts of changes in discount rates and inflation rates, as well as the actuarial valuation of new cases and revaluation of existing cases, are components of total workers’ compensation expense as recorded in the accompanying unaudited Statements of Operations. In addition, the Postal Service pays an administrative fee to DOL, which is considered a component of workers’ compensation expense.

The following table presents the components of workers’ compensation expense for the three and six months ended March 31, 2020, and 2019:

**NOTE 12 - LEASES**

**Postal Service Leases**

The Postal Service holds lessee positions in real property leases as well as lessee positions embedded in service contracts involving rights to use transportation equipment and facilities.

Real property leases support retail, delivery, mail processing, maintenance, administrative and support activities. The non-cancellable base terms of these leases typically range from one to five years, with one or more options to renew for additional five-year terms. The lease terms for these arrangements generally range from one to thirty years including any renewal options that are reasonably certain to be exercised. Additionally, certain real property leases contain purchase and termination options. At the commencement of most real property lease arrangements, the Postal Service is not reasonably certain if it will exercise such options. Real property leases include certain variable lease payments associated with non-lease components, such as common area maintenance costs, and non-lease components such as real estate taxes, which are generally charged as a pass-through based on actual amounts incurred by the lessor. The Postal Service records costs associated with real property leases within Other operating expenses in the accompanying unaudited Statements of Operations.
Transportation equipment leases apply primarily to vehicles, trailers, and aircraft. The non-cancellable base terms of these leases typically range from two to five years, and may include one or more options to renew for an additional one or two years. The lease terms for these arrangements generally range from two to five years including any renewal options the Postal Service is reasonably certain to exercise. Transportation equipment leases do not contain purchase options, however certain of these leases contain termination options. At the commencement of most transportation lease arrangements, the Postal Service is not reasonably certain if it will exercise such termination options. Certain transportation leases contain variable lease payments based on the volume of activity under the contract. The Postal Service records costs associated with transportation leases within Transportation in the accompanying unaudited Statements of Operations.

Postal Service leases do not contain any material residual value guarantees or restrictive covenants.

Sublease income was not material to the financial statements for the three and six months ended March 31, 2020.

Balances disclosed herein include those pertaining to certain related-party transactions. See Note 5 - Related Parties for additional information on related party transactions.

The table below reconciles the undiscounted cash flows for the first five years and the total remaining finance lease liabilities and operating lease liabilities recorded in the accompanying unaudited Balance Sheet as of March 31, 2020:

</table>

Capital leases, recorded at historical cost within Property and equipment, net in the accompanying Balance Sheets, were $496 million as of September 30, 2019. Total accumulated amortization related to capital leases was $377 million at September 30, 2019. Amortization expense for capital leases was approximately $33 million and $37 million for the years ended September 30, 2019, and 2018, respectively, and is included within the Other operating expense in the respective Statements of Operations.

Lease Accounting Policies

Lease Accounting Policy for Comparative Periods
As the lessee, the Postal Service classifies leases which have original lease terms greater than one year and that transfer substantially all the risks and rewards of ownership to the Postal Service, as capital leases. These leases are capitalized on the lease commencement date at the lower of the fair value of the leased assets or the present value of the minimum lease payments. The discount rate used to determine the present value is based on average U.S. Treasury rates. Property acquired under a capital lease is amortized over the lease term. Capital leases are included within Property and equipment, net in the accompanying Balance Sheets.

The Postal Service classifies all other lease arrangements in which substantially all risks and rewards of ownership are retained by the lessor as operating leases. Rent expense for operating leases is included in Other operating expense.
expenses in the accompanying unaudited Statements of Operations on a straight-line basis over the term of the lease.

**Lease Accounting Policy for the Six Months Ended March 31, 2020**

The Postal Service determines at the inception of the contract if an arrangement represents a lease or contains lease components. A contract is deemed to represent or include a lease if it conveys the right to control the use of an identified asset for a period of time in exchange for consideration. The Postal Service is assumed to have the right to control the use of the underlying asset if the contract conveys the rights to obtain substantially all of the economic benefits of the underlying asset and the rights to direct how and for what purpose such asset is used during the contract term.

As the lessee, the Postal Service classifies all leases with original lease terms less than one year as short-term leases. The Postal Service classifies all other leases which transfer substantially all the risks and rewards of ownership to the Postal Service as finance leases. Finance lease right-of-use assets are included within Property and equipment, net in the accompanying Balance Sheets. The current and noncurrent portions of finance lease liabilities are included within Payables and accrued expenses and Other noncurrent liabilities, respectively, within the accompanying Balance Sheets. The Postal Service classifies the remaining leases, not classified as short-term leases or finance leases, as operating leases. The Postal Service considers a lease term to include all non-cancelable periods and renewal periods when the Postal Service is reasonably certain that it will exercise the related renewal option.

For short-term leases, the Postal Service records lease expenses in the statement of operations on a straight-line basis over the lease term.

Leases that do not qualify as short-term are recorded in the balance sheet on the lease commencement date, each as a right-of-use asset and a lease liability.

Lease liabilities are initially measured at the net present value of the lease payments due after the commencement date. For this purpose, lease payments include fixed and in-substance fixed rental payments, variable lease payments that depend on an index or rate, and the price of options that the Postal Service is, at the commencement of the lease, reasonably certain to exercise. Lease liabilities are subsequently increased to reflect the interest accrued and reduced when lease payments are made by the Postal Service.

Right-of-use assets are initially measured at the net present value of the lease payments (including amounts due prior to or on the commencement date), adjusted for the impact of initial direct costs and lease incentives. For finance leases, right-of-use assets are subsequently amortized on a straight-line basis over the shorter of the useful life of the underlying asset or the lease term. For operating leases, right-of-use assets are amortized in such a way that the combination of the interest expense accrued on the lease liability and the asset amortization results in a straight-line expense over the lease term.

Right-of-use assets for operating and finance leases are periodically reviewed for impairment losses, following the same process as for other long-lived assets. Impairment losses on long-lived assets are recorded when events or circumstances indicate that an asset's fair value is less than its carrying value. When such a determination is made, the carrying values of the assets are written down to fair value. The Postal Service uses the long-lived assets impairment guidance in ASC Subtopic 360-10, Property, Plant, and Equipment - Overall, to determine whether a right-of-use asset is impaired, and if so, the amount of the impairment loss to recognize. No impairment losses have been recognized to date.

The discount rates used in net present value calculations are determined based on the Postal Service’s incremental borrowing rates on debt outstanding with the FFB at the beginning of each year, which is approximated as the daily U.S. Treasury Yield Curve Rates for the five-year, 10-year, 20-year and 30-year periods, plus a 12.5 basis point spread.

Variable lease payments, except for those based on an index or rate, are recognized as variable lease expenses in the period in which the obligation for those payments are incurred.
NOTE 13 - FAIR VALUE MEASUREMENT
The Postal Service defines fair value as the price that would be received upon sale of an asset or the price that would be paid to transfer a liability between unrelated parties.

The carrying amounts of certain current assets and liabilities, including cash, accounts receivable, accounts payable and accrued expenses, approximate fair value due to their short-term nature. Assets within Property and equipment, net are recorded at cost and measured at fair value on a nonrecurring basis if they are determined to be impaired or classified as assets held for sale.

Noncurrent receivables and long-term debt are measured using a fair value hierarchy model. This model prioritizes observable and unobservable inputs used to measure fair value, and consists of three broad levels, as defined in authoritative literature.

For the three and six months ended March 31, 2020, no significant transfers between Level 1 and Level 2 assets or liabilities transpired. The carrying amount and fair value of the revenue forgone installment receivable and long-term debt are presented for disclosure purposes only in the following table:

<table>
<thead>
<tr>
<th></th>
<th>March 31, 2020</th>
<th>September 30, 2019</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Carrying Amount</td>
<td>Fair Value</td>
</tr>
<tr>
<td>Revenue forgone installment receivable*</td>
<td>$476</td>
<td>$584</td>
</tr>
<tr>
<td>Long-term debt</td>
<td>$11,000</td>
<td>$11,936</td>
</tr>
</tbody>
</table>

*The carrying amount is included within Other assets (which includes items in addition to the revenue forgone installment receivable) in the accompanying Balance Sheets.

The revenue forgone installment receivable qualifies as a financial instrument in accordance with authoritative literature. To calculate its fair value, the Postal Service recognizes the imputed interest it is owed as interest income and estimates the value of this receivable using the interest method, which converts future cash flows to a single discounted amount using interest rates for similar assets, which are considered Level 2 inputs. The Postal Service then calculates the net present value of anticipated annual installment payments to be received, discounted by the 20-year U.S. Treasury Constant Maturity Rate, which was 1.15% and 1.94% as of March 31, 2020, and September 30, 2019, respectively.

The long-term debt also qualifies as a financial instrument. Because no active market exists for its debt with the FFB, the Postal Service estimates the fair value of the long-term debt by imputing future payments at discount rates provided by the FFB, considered Level 3 inputs. The weighted averages of the FFB discount rates, based on U.S. Treasury Yield Curve Rates, were 0.36% and 1.79% as of March 31, 2020, and September 30, 2019, respectively.

ITEM 2. MANAGEMENT’S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS
CAUTIONARY STATEMENTS

The following Management’s Discussion and Analysis of Financial Condition and Results of Operations and other parts of this report describe the principal factors affecting the financial results, liquidity, capital resources and critical accounting estimates of the United States Postal Service (“Postal Service,” “USPS,” “we,” “our” and “us”). Our results of operations may be impacted by risks and uncertainties discussed here and in our Annual Report on Form 10-K for the year ended September 30, 2019, (“Annual Report”) filed with the Postal Regulatory Commission (“PRC”) on November 14, 2019. Such factors, many of which we cannot control or influence, may cause actual results to differ materially from those currently contemplated.

Our operating results for the three and six months ended March 31, 2020, are presented in accordance with accounting principles generally accepted in the United States (“GAAP”). These results are not necessarily indicative of the results to be expected for the year ended September 30, 2020, and should be read in conjunction with our
Annual Report. All references to years in this report, unless otherwise stated, refer to fiscal years beginning October 1 and ending September 30. All references to quarters, unless otherwise stated, refer to quarters within fiscal years 2020 and 2019.

Forward-looking statements contained in this report represent our best estimates of known and anticipated trends believed relevant to future operations. However, actual results may differ significantly from current estimates. Certain forward-looking statements included in this report use such words as “may,” “will,” “could,” “expect,” “believe,” “plan,” “estimate,” “project” or other similar terminology. These forward-looking statements, which involve a number of risks and uncertainties, reflect current expectations regarding future events and operating performance as of the date of this report. These risks include, but are not limited to, the effects of the novel strain of coronavirus (“COVID-19”) on our business, financial condition and results of operations. We have no obligation to publicly update or revise any forward-looking statements, whether as a result of new information, future events or otherwise.

OVERVIEW

With our mandate to provide universal postal services to the nation, we serve retail and commercial customers in the U.S., as well as internationally. Our operations include an extensive and integrated retail, processing, distribution, transportation and delivery network, and we operate throughout the U.S., its possessions and territories. We operate as a single segment and report our performance as such.

The Postal Accountability and Enhancement Act (“PAEA”) classifies our products into two broad categories: Market-Dominant and Competitive “products,” however, we use the term “services” in this document for consistency with other descriptions of services offered. The statutes under which we operate also establish certain requirements that affect our financial results, including obligations for retirement benefits within the Civil Service Retirement System (“CSRS”) and the Federal Employee Retirement System (“FERS”), and obligations for retiree health benefits including funding of the Postal Service Retiree Health Benefits Fund (“PSRHBF”). We must coordinate with the U.S. Office of Personnel Management (“OPM”) to address these obligations.

We have successfully implemented initiatives that have reduced the growth in certain costs by billions of dollars while offering new features for customers such as Informed Delivery. However, legal restrictions on pricing, service diversification and operations restrict our ability to cover our costs to provide prompt, reliable and efficient postal services to the nation.

We have established a core set of goals that drive our strategic initiatives and continuous improvement efforts:

1. Deliver a world-class customer experience;
2. Equip, empower and engage employees;
3. Innovate faster to deliver value; and
4. Invest in our future platforms.

As part of these efforts, we aim to achieve long-term financial stability. Our focus on maintaining liquidity and reducing operating expenses reflects current trends, as well as projected future volume of mail and packages. We believe that financial stability is within reach with targeted legislative and regulatory reform to address our overall cost structure and enhance our revenue-generating opportunities as we continue to identify and create innovative and affordable services, and deliver high levels of performance and service. Such financial stability would continue to provide Congress and the executive branch with additional time to address the broader issues regarding our overall cost structure and revenue-generating opportunities.

RESULTS OF OPERATIONS

SUMMARY
The major factors that impact our operating results include overall customer demand, the mix of postal services and contribution associated with those services, volume of mail and packages processed through our network and our ability to manage our cost structure in line with declining levels of mail volume, increased competition in the more labor-intensive Shipping and Packages business and an increasing number of delivery points.
Effects of COVID-19
In March 2020, the World Health Organization (“WHO”) declared COVID-19 a global pandemic, which has since spread throughout the U.S. Changing federal, state and local government actions to address the pandemic have been occurring on a daily basis, and government-imposed shelter-in-place and other movement restrictions designed to slow the pace of the outbreak have severely impacted the U.S. economy. We believe the severity and duration of the COVID-19 pandemic is uncertain, and such uncertainty may continue during the second half of 2020.

Our employees provide an essential public service and bind the nation together as a part of the country’s critical infrastructure. At least six days per week, and in some instances seven, our employees accept, process, transport, and deliver vital mail and packages like medicine, essential consumer staples, benefits checks, and important information, in every community, to every home and business, and we will continue to do so. As Americans are urged to stay home, the importance of the mail will only grow as our customers, including those in rural areas and senior citizens, will need access to vital communications, essential packages and other necessities.

Shortly after the WHO declaration, we created a dedicated COVID-19 response team to lead our response efforts. All of our employees are considered essential, and their safety is our highest priority. Following strategies recommended by the Centers for Disease Control and Prevention, we have implemented enhanced safety measures to protect the health of our employees.

In late March 2020, we restricted business travel and implemented remote work arrangements for certain of our office-based employees. We have also implemented new leave policies for employees who may be affected by illness, quarantines or childcare obligations. These arrangements have not materially affected our ability to maintain our business operations, including the operation of financial reporting systems, internal control over financial reporting, and disclosure controls and procedures.

While we have maintained full operations during the pandemic, travel and logistics restrictions have negatively affected our retail and commercial customers, as well as our suppliers and mail service providers. Many of our commercial customers, especially those with consumer-facing businesses, have been required to suspend their operations or operate at a lower capacity. As a result, our mail volumes began to decline significantly in March 2020. The sudden drop in mail volumes, our most profitable revenue stream, is steep and may never fully recover to levels prior to the pandemic.

Although the COVID-19 pandemic has caused a recent surge in the nation’s use of e-commerce, resulting in higher Shipping and Packages volumes, we do not expect the resulting increases in Shipping and Packages revenues to be sustainable or to offset losses in mail service revenue caused by COVID-19. While the future is uncertain, we believe that the nation’s increased use of e-commerce is likely to plateau in the short term as the effects of the pandemic begin to subside, followed by a longer-term regression of e-commerce caused by a weakened U.S. economy. Furthermore, this anticipated economic weakness has resulted in significant interest rate declines, which have caused an increase in certain of our workers’ compensation and retirement benefits expenses.

On March 27, 2020, the President signed the Coronavirus Aid, Relief, and Economic Security Act, enacted as Public Law 116-136 (the “CARES Act”). Notwithstanding our $15.0 billion statutory debt limit, and $3.0 billion annual limit on new borrowing, the CARES Act allows us to borrow up to an additional $10.0 billion in financing from the U.S. Treasury to fund operating expenses. The U.S. Treasury may lend up to this amount at our request, upon terms and conditions mutually agreed upon. However, we have no assurance that the U.S. Treasury will agree to provide such financing or if it will be provided upon favorable terms.

We estimate that the COVID-19 pandemic may increase our net operating loss by more than $22.0 billion over the next eighteen months, threatening our ability to operate. If we are able to borrow the $10.0 billion from the U.S. Treasury as provided by the CARES Act, we expect that we will have sufficient liquidity to continue to operate through April 2021. However, if we are unable to secure this $10.0 billion in financing, we expect to be able to continue to operate only through September 2020, unless we default on additional obligations.
Three Months Ended March 31, 2020

As more fully described below in Operating Revenue and Volume, our operating revenue for the three months ended March 31, 2020, increased $349 million, or 2.0%, compared to the same period last year. The increase in operating revenue was due to the following:

- Shipping and Packages revenue increase of $386 million, or 7.1%, with a volume growth of 12 million pieces, or 0.8%, driven largely by the January 2020 price increases applicable to certain Competitive services and the temporary surge in e-commerce resulting from the COVID-19 pandemic; and
- First-Class Mail revenue increase of $89 million, or 1.4%, despite a volume decline of 29 million pieces, or 0.2%. Revenue growth was the result of decennial mailings associated with the 2020 U.S. Census, otherwise revenue and volume would have each declined during the quarter.

The above increases in operating revenue were partially offset by a decrease in Marketing Mail revenue of $94 million, or 2.5%, with a volume decline of 604 million pieces, or 3.4%, largely the result of the COVID-19 pandemic, as many of our commercial customers, especially those with consumer-facing businesses, began to suspend their operations or operate at a lower capacity in March 2020. Political and election mail revenue and volumes increased by approximately $100 million and 500 million pieces, respectively, compared to the same period last year, resulting from the impact of the 2020 primary and general elections.

As more fully described below in Operating Expenses, our operating expenses for the three months ended March 31, 2020, increased approximately $2.8 billion, or 14.2%, compared to the same period last year. The increase in operating expenses was primarily due to the following:

- Workers’ compensation expense increase of approximately $2.2 billion, primarily due to declines in discount rates, outside of management’s control, as the COVID-19 pandemic weighed on the U.S. economy;
- Retirement benefits expense increase of $348 million, or 23.7%, due to revised actuarial assumptions for CSRS and FERS unfunded retirement benefits amortization, which are outside of management’s control, and to increased contribution rates for FERS normal costs, compared to the same period last year;
- Other operating expenses increase of $124 million, or 5.3%, due to spending increases in various categories including enhancements to cyber security and information technology;
- Compensation and benefits expense increase of $119 million, or 1.0%, due primarily to contractual wage increases.

The above increases were partially offset by a decrease in retiree health benefits expense of $50 million, or 3.9%, primarily due to the impact of discount rates in effect during October 2019 that were used in OPM’s preliminary annual estimates.

Overall, we reported a net loss of approximately $4.5 billion for the three months ended March 31, 2020, compared to a net loss of approximately $2.1 billion for the same period last year.

Six Months Ended March 31, 2020

As more fully described below in Operating Revenue and Volume, our operating revenue for the six months ended March 31, 2020, decreased $11 million, which was essentially flat, compared to the same period last year.

The decrease in operating revenue was largely due to the following:

- Marketing Mail revenue decrease of $347 million, or 4.1%, with a volume decline of approximately 2.3 billion pieces, or 5.9%, driven by decreases in revenue and volume from political and election mail in the first quarter. Political and election mail revenue and volumes decreased by approximately $140 million and 900 million pieces, respectively, compared to the same period last year, which benefited from the impact of the 2018 mid-term elections during the first quarter of 2019. Furthermore, volume declined due to the COVID-19 pandemic in the second quarter, as the pandemic affected many of our commercial customers;
- First-Class Mail revenue decrease of $79 million, or 0.6%, with a volume decline of 600 million pieces, or 2.1%, reflecting the continuing migration from mail to electronic communication and transaction alternatives; and
Periodicals revenue decrease of $57 million, or 9.4%, with a volume decline of 231 million pieces, or 9.8%, driven by the continuing migration to electronic communication and digital advertising.

The decrease in operating revenue was partially offset by an increase in Shipping and Packages revenue of $532 million, or 4.5%, despite a volume decline of 73 million pieces, or 2.2%, as we continued to see revenue growth in this service category during the six-month period driven largely by the January 2020 price increases applicable to certain Competitive services.

As more fully described below in Operating Expenses, our operating expenses for the six months ended March 31, 2020, increased approximately $1.6 billion, or 4.0%, compared to the same period last year. The increase in operating expenses was primarily due to the following:

- Workers’ compensation expense increase of approximately $1.1 billion, primarily due to declines in discount rates, outside of management’s control, as the COVID-19 pandemic weighed on the U.S. economy;
- Retirement benefits expense increase of $477 million, or 16.1%, due to revised actuarial assumptions for CSRS and FERS unfunded retirement benefits amortization, which are outside of management’s control, and to increased contribution rates for FERS normal costs, compared to the same period last year;
- Other operating expenses increase of $122 million, or 2.5%, due to spending increases in various categories including enhancements to cyber security and information technology; and
- Transportation expenses increase of $63 million, or 1.5%, primarily resulting from higher air transportation costs, but partially offset by lower international transportation costs. The increase in highway transportation costs was driven by a one-time adjustment for our adoption of Accounting Standards Update 2016-02 Leases, which has since been codified in Accounting Standards Codification (“ASC”) 842, Leases (“ASC 842”), but partially offset by a decrease in the number of miles driven and lower average diesel fuel prices. The decrease in international transportation costs was driven by lower International Mail volumes.

The above increases in operating expenses were partially offset by the following decreases in operating expenses:

- Retiree health benefits expense decrease of $100 million, or 3.9%, primarily due to the impact of discount rate changes in effect during October 2019 that were used in OPM’s preliminary annual estimates; and
- Compensation and benefits expense decrease of $71 million, or 0.3%, primarily due to management’s efforts to align work hours with volume workloads, but partially offset from increases due to contractual wage adjustments.

Overall, we reported a net loss of approximately $5.3 billion for the six months ended March 31, 2020, compared to a net loss of approximately $3.6 billion for the same period last year.

Non-GAAP Controllable Loss
In the day-to-day operation of our business, we focus on costs that can be managed in the course of normal business operations, such as salaries and transportation. We calculate controllable loss, a non-GAAP measure, by excluding items over which we have no control, such as PSRHB actuarial revaluation and amortization expenses, workers’ compensation expenses caused by actuarial revaluation and discount rate changes, and retirement expenses caused by actuarial revaluation. Controllable loss should not be considered a substitute for net loss and other GAAP reporting measures.
The following table reconciles our GAAP net loss to controllable loss for the three and six months ended March 31, 2020, and 2019:

<table>
<thead>

¹ Expense for the accrual for the annual payment due to OPM by September 30 of the respective year, as calculated by OPM, to amortize the unfunded PSRHBF retirement health benefit obligation. Payments are to be made through 2056 based on OPM invoices.

² Net amounts include changes in assumptions, valuation of new claims and revaluation of existing claims, less current year claim payments.

³ Expense for the accrual for the annual payment due to OPM by September 30 of the respective fiscal year, to amortize the unfunded CSRS retirement obligation. The 2020 amounts are based on updated Postal Service estimates resulting from revised actuarial assumptions. Payments are to be made through 2043 based on OPM invoices.

⁴ Expense for the accrual for the annual payment due to OPM by September 30 of the respective fiscal year, to amortize the unfunded FERS retirement obligation. The 2020 amounts are based on updated Postal Service estimates resulting from revised actuarial assumptions. Payments are to be made over a 30-year rolling period based on OPM invoices.

Our controllable loss decreased $14 million for the three months ended March 31, 2020, compared to the same period last year. This decrease was largely driven by the $349 million increase in operating revenue, offset by higher other operating expenses of $124 million, higher compensation and benefits expenses of $119 million, and higher FERS normal costs of $75 million.

Our controllable loss increased $270 million for the six months ended March 31, 2020, compared to the same period last year. This increase was largely driven by higher FERS normal costs of $134 million and higher transportation expenses of $63 million, partially offset by lower compensation and benefits expenses of $71 million.

These items are discussed in greater detail in Operating Revenue and Volume and Operating Expenses below.

**OPERATING REVENUE AND VOLUME**

The combined categories of First-Class Mail and Marketing Mail continued to provide the majority of our revenue, despite long-term trends away from traditional paper communication and correspondence to electronic media. Although this migration to electronic media has resulted in significant volume declines in First-Class Mail over the last decade, Marketing Mail volume remained relatively steady between 2009 and 2016. However, Marketing Mail volume began to decline at a greater rate beginning in 2017 and continued to decline through the first half of 2018. Aside from a volume rebound between the second half of 2018 through the first quarter of 2019 that was driven by increases in political and election mail associated with the 2018 mid-term elections, Marketing Mail resumed its volume decline through the remainder of 2019 and the first half of 2020.
The following table summarizes our operating revenue and volume for the three and six months ended March 31, 2020, and 2019, by each service category:

¹ Excludes First-Class Package Service - Retail and First-Class Package Service - Commercial.
² Excludes Marketing Mail Parcels.
³ Includes Priority Mail, USPS Retail Ground, Parcel Select Mail, Parcel Return Service Mail, Marketing Mail Parcels, Package Service Mail, First-Class Package Service - Retail, First-Class Package Service - Commercial and Priority Mail Express.
⁴ Revenue includes PO Box services, Certified Mail, Return Receipts, Insurance, Other Ancillary Services, Shipping and Mailing Supplies, Collect on Delivery, Registered Mail, Stamped Envelopes and Cards, Money Orders and Other services.
⁵ Volume includes Postal Service internal mail and free mail provided to certain congressionally mandated groups.

For the three months ended March 31, 2020, First-Class Mail generated approximately 36% of operating revenue, which was essentially unchanged compared to the same period last year, and approximately 42% of our volume, a 1% increase compared to the same period last year. Marketing Mail generated approximately 21% of operating revenue and 50% of our volume, both 1% decreases from the same period last year.

For the six months ended March 31, 2020, First-Class Mail generated approximately 35% of operating revenue, which is essentially unchanged compared to the same period last year, and approximately 40% of our volume, a 1% increase compared to the same period last year. Marketing Mail generated approximately 22% of operating revenue and 52% of our volume, both 1% decreases from the same period last year.

We continued to experience positive revenue results in our Shipping and Packages category, and it represented approximately 33% of our revenue for the three months ended March 31, 2020, which was a 2% increase from the same period last year, and approximately 33% of our revenue for the six months ended March 31, 2020, a 1% increase from the same period last year. Shipping and Packages generated approximately 4% of our volume for both the three and six months ended March 31, 2020, which was relatively unchanged compared to the same period last year.

Although revenue and volume are closely linked to the strength of the U.S. economy and changes in how our customers use the mail, we have proactively targeted opportunities to grow our business. We continue to focus on our customers' needs and have increased our investment in mail and package innovation. However, we also
recognize that revenue growth is constrained by laws and regulations restricting the types of products, services and pricing we may offer to our customers and the speed with which we can bring new products to market.

We anticipate that First-Class Mail will continue to lose volume in future years with the migration to electronic communication and transactional alternatives resulting from technological changes. To address the long-term trend that such changes have had on our First-Class Mail revenue and volume, we have been working with the mailing industry to slow the decline through mailing promotions and leveraging the high open-and-read rates of, for example, bills and statements for additional customer engagement and education.

Furthermore, due to the COVID-19 pandemic our First-Class Mail and Marketing Mail volumes began an accelerated decline in March 2020. The sudden drop in mail volumes, our most profitable revenue stream, is steep and may never fully recover to levels prior to the pandemic.

We have also focused on providing new services and innovating with Marketing Mail. We have expanded service offerings such as Informed Delivery, which enables customers to preview mail and manage packages scheduled to arrive as a means of merging digital and physical mail, as well as allowing mailers to launch interactive digital campaigns. Additionally, we are focusing on opportunities to pilot new products and innovate with customers and the mail industry to enhance the value of hard-copy communication. We believe these service offerings will further improve the value of both First-Class Mail and Marketing Mail.

Our Shipping and Packages category has historically experienced revenue and volume growth as a result of our successful efforts to compete in shipping services, including last-mile e-commerce fulfillment markets and Sunday delivery as well as end-to-end markets. We continue to focus on responding to customers’ needs by implementing solutions and maintaining strategic business partnerships that help us capitalize on the growing e-commerce business.

The COVID-19 pandemic has caused a recent surge in the nation’s use of e-commerce, resulting in higher Shipping and Packages volumes. However we do not expect the resulting increases in Shipping and Packages revenues to be sustainable or to offset losses in mail service revenue caused by COVID-19. Although the future is uncertain, we believe that the nation’s increased use of e-commerce is likely to plateau in the short term as the effects of the pandemic begin to subside, followed by a longer-term regression of e-commerce caused by a weakened U.S. economy.

Our Shipping and Packages category is subject to intense competition which significantly impacts both revenue and volume. Certain major customers continue to divert volume from our network by in-sourcing the last-mile delivery into their own networks. These customers are also aggressively pricing their products and services in order to fill their networks and grow package density.

We implemented price increases for certain Market-Dominant and Competitive services in January 2019 and 2020. Additionally, we implemented dimensional weighting provisions that amount to price increases for certain Shipping and Packages subcategories in June 2019.

**First-Class Mail**

First-Class Mail, presented in this report as a mail class and a Market-Dominant service category, includes cards, letters and flats. Prices of First-Class Mail, our most profitable service category, are the same regardless the geographic distance between the origination and delivery points. Because First-Class Mail is classified by law as Market-Dominant, price increases are currently generally subject to a price cap based on the Consumer Price Index for All Urban Consumers (“CPI-U”).

For the three months ended March 31, 2020, First-Class Mail revenue increased $89 million, or 1.4%, despite a volume decline of 29 million pieces, or 0.2%, compared to the same period last year. Revenue growth was the result of decennial mailings associated with the 2020 U.S. Census, otherwise revenue and volume would have each declined during the quarter. For the six months ended March 31, 2020, First-Class Mail revenue decreased $79 million, or 0.6%, and volume declined 600 million pieces, or 2.1%, compared to the same period last year. The change in revenue for both periods was less than the corresponding volume declines due to the January 2020 price increase applicable to certain Market-Dominant services. The most significant factor contributing to the
declining trend in First-Class Mail volume has been the continuing migration from mail to electronic communication and transaction alternatives.

Due to the COVID-19 pandemic, our First-Class Mail volume began to decline significantly in late March 2020, and it may never fully recover to levels prior to the pandemic. A protracted loss in customer demand for our services will continue to have a material effect on First-Class Mail revenue and volume.

Marketing Mail
USPS Marketing Mail (more commonly, Marketing Mail), presented as a mail class and a Market-Dominant service category, generally consists of advertising, newsletters, catalogs, small marketing parcels and other printed matter not required to be processed and delivered as First-Class Mail or Periodicals.

Between 2009 and 2016, Marketing Mail experienced relatively flat volume. However, Marketing Mail volume began to decline at a greater rate beginning in 2017 and continued to decline through the first half of 2018. Aside from a volume rebound between the second half of 2018 through the first quarter of 2019 that was driven by increases in political and election mail associated with the 2018 mid-term elections, Marketing Mail continued its volume decline through the remainder of 2019 and the first half of 2020, exacerbated by the COVID-19 pandemic.

For the three months ended March 31, 2020, Marketing Mail revenue decreased $94 million, or 2.5%, and volume declined 604 million pieces, or 3.4%, compared to the same period last year. For the six months ended March 31, 2020, Marketing Mail revenue decreased $347 million, or 4.1%, and volume declined approximately 2.3 billion pieces, or 5.9%, compared to the same period last year. For the three months ended March 31, 2020, our revenue and volume from political and election mail increased by approximately $100 million and 500 million pieces, respectively, compared to the same period last year, as we began to benefit from the impact of the 2020 elections during the second quarter of 2020. For the six months ended March 31, 2020, our revenue and volume from political and election mail decreased by approximately $140 million and 900 million pieces, respectively, compared to the same period last year, which benefited from the impact of the 2018 mid-term elections during the first quarter of 2019.

Due to the COVID-19 pandemic, many of our commercial customers, especially those with consumer-facing businesses, have been required to suspend their operations or operate at a lower capacity. As a result, our Marketing Mail volume began to decline significantly in March 2020, and it may never fully recover to levels prior to the pandemic. A protracted loss in customer demand for our services will continue to have a material effect on our Marketing Mail revenue and volume.

Marketing Mail is subject to intense competition, and price increases are currently generally capped at the rate of inflation. Marketing Mail volume is somewhat reflective of the cyclical nature of the U.S. economy, although targeted advertising campaigns can stimulate demand for this service, and our customers have used Marketing Mail to mail to more targeted prospects.
**Shipping and Packages**

The following table summarizes our operating revenue and volume for Shipping and Packages for the three and six months ended March 31, 2020, and 2019, by each service subcategory:

¹ Includes **Priority Mail**, a 1-3 business day delivery service; **Priority Mail Express**, an overnight delivery service available 365 days per year; and **USPS Retail Ground**, a retail-only Competitive service priced identically and functionally equivalent to **Priority Mail for Zones** 1-4.

² Includes **Parcel Select**, **Parcel Return**, and **Marketing Mail Parcels**.

³ Includes **First-Class Package Services - Retail** and **First-Class Package Services - Commercial**.

Our Shipping and Packages category has historically experienced revenue and volume growth as a result of our successful efforts to compete in shipping services, including last-mile e-commerce fulfillment markets and Sunday delivery as well as end-to-end markets. However, this service category is subject to intense competition which significantly impacts both our revenue and volume. Shipping and Packages revenue and volume are historically greatest in the first quarter of the year due to the holiday shipping season.

For the three months ended March 31, 2020, Shipping and Packages revenue increased 7.1%, with a volume growth of 0.8%, compared to the same period last year. The volume increased due to a temporary surge in e-commerce resulting from the COVID-19 pandemic, and revenue outpaced volume increases due to the January 2020 price increases associated with certain Competitive services.

For the six months ended March 31, 2020, Shipping and Packages revenue increased 4.5%, despite a volume decline of 2.2%, compared to the same period last year. The revenue increases were largely due to the January 2020 price increases associated with certain Competitive services. The volume declines largely resulted from intense competition and certain major commercial customers and competitors delivering more of their own packages, compared to the same period last year, offset by the temporary surge in e-commerce resulting from the COVID-19 pandemic.

**Priority Mail Services**

Priority Mail Services is our Shipping and Packages subcategory that includes **Priority Mail**, **Priority Mail Express** and **USPS Retail Ground**. **Priority Mail** and **Priority Mail Express** services allow customers the ability to send documents and packages requiring expedited transportation and handling. While Priority Mail Services revenue has historically grown year-over-year, its service offerings are price sensitive and its growth rate has been lower than other Shipping and Packages subcategories due to intense competition.

Priority Mail Services accounted for our largest portion of Shipping and Packages revenue, representing approximately 46% of the total for the three and six months ended March 31, 2020, and 2019. However, Priority
Mail Services accounted for approximately 19% and 18% of the total Shipping and Packages volume for three and six months ended March 31, 2020, respectively, essentially unchanged compared to the same periods last year.

For the three months ended March 31, 2020, Priority Mail Services revenue grew 7.0%, on volume growth of 2.2%, compared to the same period last year. For the six months ended March 31, 2020, Priority Mail Services revenue grew 3.4%, despite a volume decline of 1.9%, compared to the same period last year. Revenue grew at a greater rate than volume for the three-month period and despite the volume decline for the six-month period, largely due to the January 2020 price increases applicable to Competitive services.

Parcel Services
Our Parcel Services subcategory includes Competitive services Parcel Select and Parcel Return, as well as Market-Dominant USPS Marketing Mail Parcels (more commonly, Marketing Mail Parcels). Parcel Select and Parcel Return services largely consist of last-mile deliveries, offered to large bulk shippers that perform their own sorting before dropping parcels deeper into our network.

For the three months ended March 31, 2020, revenue from Parcel Services increased 9.6%, on volume growth of 3.4%, compared to the same period last year. For the six months ended March 31, 2020, revenue from Parcel Services increased 6.3%, despite a volume decline of 0.8%, compared to the same period last year. This subcategory is primarily a last-mile service that bypasses much of our infrastructure and therefore is one of our lowest-priced package services, and as a result, produces a lower contribution per piece when compared to many of our other services. For the six months ended March 31, 2020, volume declined due to certain major commercial customers delivering more of their own packages. However, for the three months ended March 31, 2020, volume increased due to the temporary surge in e-commerce from the COVID-19 pandemic. Revenue grew at a greater rate than volume for the three-month period and despite the volume decline for the six-month period, largely due to the January 2020 price increases applicable to Competitive services.

First-Class Package Services
Our First-Class Package Services subcategory includes the competitively priced First-Class Package Service - Retail, a Competitive service targeted to retail customers for packages weighing up to 13 ounces, and First-Class Package Service - Commercial, a Competitive service targeted to commercial customers for packages weighing up to 16 ounces. This subcategory offers commercial customers that ship primarily lightweight fulfillment parcels the lowest-priced expedited end-to-end tracked package option in the marketplace. First-Class Package Services revenue and volume performance has historically experienced strong increases for the past several years, particularly from our commercial customers. These increases are primarily attributable to growth in e-commerce.

For the three months ended March 31, 2020, First-Class Package Services revenue increased 5.9%, despite a volume decline of 0.3%, compared to the same period last year. For the six months ended March 31, 2020, First-Class Package Services revenue increased 6.0%, despite a volume decline of 1.7%, compared to the same period last year. Revenue grew despite the volume declines, largely due to the January 2020 price increases applicable to Competitive services.

Package Services
Our Package Services subcategory is a Market-Dominant service that includes both Bound Printed Matter for materials up to 15 pounds and Library and Media Mail for materials up to 70 pounds. For the three months ended March 31, 2020, Package Services revenue decreased 5.2% on a volume decline of 10.7%, compared to the same period last year. For the six months ended March 31, 2020, Package Services revenue decreased 5.3% on a volume decline of 11.1%, compared to the same period last year. Revenue declined at a slower rate than volume for the three and six months ended March 31, 2020, due to the January 2020 price increase applicable to Market-Dominant services.

International Mail
Our International Mail category includes several services that enable customers, both domestic and abroad, to send international mail, including postcards, envelopes, flats and packages with either standard or express delivery options. “Outbound” services, which allow customers in the U.S. to send mail and packages to other countries, generate approximately two thirds of International Mail revenue, but “inbound” services are the opposite, generating two thirds of volume but only a third of the revenue. This is primarily due to the smaller size and lower rates for inbound international e-commerce packages.
For the three months ended March 31, 2020, *International Mail* revenue increased 2.4%, despite a volume decline of 11.7%, compared to the same period last year. For the six months ended March 31, 2020, *International Mail* revenue increased 0.4%, despite a volume decline of 9.1%, compared to the same period last year. These revenue increases were largely due to the January 2020 price increases applicable to Competitive services. The declines in both inbound and outbound volume were due to various competitive pricing, political and economic factors.

The U.S. is a member of the Universal Postal Union ("UPU"), a specialized agency of the United Nations that facilitates the exchange of international mail. We are the designated postal operator for the U.S. under the UPU, and payments to the designated postal operator for the delivery of foreign origin letter-post mails are known as "terminal dues".

In September 2019, the UPU members had a special meeting -- known as the Extraordinary Congress -- to discuss the terminal dues system. During that meeting, UPU members agreed to establish a new remuneration system that will allow us to self-declare rates beginning in July 2020. Other foreign postal operators may also reciprocally apply rates at full-self-declared rates at that time.

In February 2020, we officially invoked our provision to self-declare rates beginning in July 2020.

**Periodicals**

*Periodicals*, also presented as a mail class and a Market-Dominant service category, includes services designed for publishers of newspapers, magazines and other periodical publications whose primary purpose is providing publications to subscribers or other users. For the three months ended March 31, 2020, *Periodicals* revenue decreased 11.1% and volume declined 12.2%, compared to the same period last year. For the six months ended March 31, 2020, *Periodicals* revenue decreased 9.4% and volume declined 9.8%, compared to the same period last year.

*Periodicals* revenue and volume have been in decline for more than a decade as trends in hard-copy reading behavior and shifts of advertising away from print have eroded this business. The *Periodicals* category is not expected to rebound as electronic content continues to grow in popularity with the public.

**Other**

Other services include ancillary services such as *Certified Mail*, *PO Box* services, and *Return Receipt* services. Also included in this category are money orders and passport services. Other services revenue decreased 1.2%, and 3.3% for the three and six months ended March 31, 2020, respectively, compared to the same periods last year.

**OPERATING EXPENSES**

In an effort to align our resources with anticipated future mail and package volume, we continue to aggressively manage operating expenditures under management's control.

We originally designed our mail processing and distribution network to provide overnight delivery service of *First-Class Mail* within specified delivery areas for a much higher volume of mail than we are required to process and deliver today, and the network's legacy capabilities are not completely aligned to today's mail mix and volumes. Consequently, certain of our processing and distribution facilities continue to operate at less than full capacity. Our challenge to contain costs is also compounded by the increasing number of delivery points, which, when combined with lower mail volume, has resulted in a drop in the average number of pieces delivered per delivery point per day from approximately 5.5 pieces in 2007 to 3.4 pieces in 2019, a reduction of approximately 39%, and a further significant decline is expected in 2020.

**Compensation and Benefits**

Compensation and benefits is our largest operating expense category. These expenses consist of costs related to our active career and non-career employees other than retirement costs associated with U.S. government defined benefit pension programs and retiree health costs which are further discussed in *Retirement benefits* and *Retiree Health Benefits*, respectively.
Overall, our compensation and benefits expenses increased 1.0% for the three months ended March 31, 2020, but decreased 0.3% for the six months ended March 31, 2020, compared to the same periods last year. The following table presents compensation and benefits expenses for the three and six months ended March 31, 2020, and 2019:

</table>

**Compensation**

Compensation expense increased 0.6% for the three months ended March 31, 2020, but decreased 0.5% for six months ended March 31, 2020, compared to the same periods last year. The activity in both periods represents increases due to contractual wage adjustments and approximately 3.6 million hours attributable to the extra work day due to the leap year, offset by management’s efforts to align work hours with volume workloads.

**Work Hours**

For the three months ended March 31, 2020, total work hours were approximately 286 million, essentially unchanged compared to the same period last year. However, approximately 3.6 million hours, or 1.3%, were attributable to the extra work day due to the leap year in 2020. Were it not for the extra work day due to the leap year, work hours would have declined for the period.

For the six months ended March 31, 2020, total work hours were approximately 592 million, a decrease of 1.0%, compared to approximately 598 million total work hours for the six months ended March 31, 2019. This decrease was the result of management’s efforts to reduce work hours in line with volume workloads.

As a result of the COVID-19 pandemic, work hours began to decline in late March 2020 due to lower mail volumes and workforce availability, and we expect this trend to continue for the duration of the pandemic.

**Workforce Composition**

The number of career employees at March 31, 2020, was approximately 496,000, a decrease of approximately 1,500 employees, or 0.3%, compared to the same date a year ago. This decrease primarily reflected natural attrition, continued efforts to align our workforce with declining mail volume, offset by conversions of non-career employees to career status, in accordance with our contractual agreements.

The number of non-career employees at March 31, 2020, was approximately 129,500, a decrease of approximately 10,500 employees, or 7.5%, compared to the same date a year ago. This decrease primarily reflected management’s continued efforts to align our workforce with declining mail volume, and the conversions of non-career employees to career status, in accordance with our contractual agreements.

**Collective Bargaining Agreements**

On January 22, 2020, we reached a tentative agreement with the National Postal Mail Handlers Union, AFL-CIO (“NPMHU”) on a new three-year collective bargaining agreement, which the union membership ratified on April 8, 2020. The new contract went into effect on April 25, 2020, and will expire on September 20, 2022.

On March 10, 2020, a three-member arbitration panel reached a decision in our legally mandated binding interest arbitration process with the American Postal Workers Union, AFL-CIO (“APWU”), establishing the terms of a new collective bargaining agreement. The new contract went into effect on March 10, 2020, and will expire on September 20, 2021.
In September 2019, we agreed to extend contract negotiations relating to a new collective bargaining agreement with the National Association of Letter Carriers, AFL-CIO (“NALC”). The previous contract with the NALC expired on September 20, 2019, and negotiations with the NALC are at an impasse. The parties will continue to follow the current agreement until a new contract is reached through the dispute resolution process.

**Employee Health Benefits**

Our expense for employee health benefits (which includes the employer portion of Medicare taxes) is most significantly impacted by the number of employees electing coverage and the premium costs of the selected plans. Our active employees may participate in the Federal Employees Health Benefits (“FEHB”) Program, which OPM administers. Separate from FEHB, we offer our own self-insured healthcare plan to certain non-career employees who are ineligible for FEHB.

Employee health benefits expense increased 3.2% and 0.8% for the three and six months ended March 31, 2020, compared to the same periods last year, driven by average premium increases of 4.0% in calendar year 2020, and partially offset by the lower contribution rate of the employer portion of healthcare premiums that we paid, by management efforts to provide employees with information and tools for selecting the health benefit plans that best meet their needs, and by the small decrease in number of career employees, as previously discussed.

Our share of healthcare premiums for our employees represented 71.9% of the total healthcare premium costs for both the three months ended March 31, 2020, and 2019. Our share of healthcare premiums for our employees represented 72.0% and 72.3% of the total healthcare premium costs for the six months ended March 31, 2020, and 2019, respectively. This decrease in our share of healthcare premium costs for employees during the six-month period was consistent with the terms of our contractual agreements.

**Social Security**

For the three and six months ended March 31, 2020, our Social Security costs increased 1.0% for the three months ended March 31, 2020, but decreased 0.4% for the six months ended March 31, 2020, compared to the same periods last year. These fluctuations were consistent with the general changes in compensation for the period, as described above in Compensation.

The CARES Act offers certain employers the ability to defer payment of the employer’s share of the Social Security payroll tax on wages incurred from March 27, 2020, through December 31, 2020. In accordance with this provision, we began deferring these payments in April 2020, and intend to continue the deferral for the remainder of calendar year 2020 for an estimated total deferral amount of approximately $1.6 billion. One half of these deferred payments would be due by December 31, 2021, and the other half by December 31, 2022.

**Thrift Savings Plan**

Career employees may participate in the Thrift Savings Plan (“TSP”), a defined contribution retirement savings and investment plan administered by the Federal Retirement Thrift Investment Board. Our TSP expenses are related only to our contributions for FERS employees who participate in the TSP. For these employees, we contribute 1% of basic pay and match voluntary employee contributions up to an additional 4% of basic pay.

For the three and six months ended March 31, 2020, our TSP matching costs increased 3.9% and 2.8%, respectively, compared to the same periods last year. The increase in expenses correlates to the changing workforce composition of CSRS and FERS employees.

**Retirement Benefits**

The majority of our career employees participate in one of two U.S. government defined benefit pension programs, CSRS and FERS, based on the starting date of their employment with us or another U.S. government employer. We incur normal costs (the amount determined by OPM representing the employer portion of retirement benefits for participating employees and their qualifying survivors, upon retirement, for each employee’s current year of service) for FERS employees; however, by law we do not pay normal costs for CSRS retirement benefits. FERS employees are further categorized as either FERS, FERS - Revised Annuity Employees (FERS - RAE), or FERS - Further Revised Annuity Employees (FERS - FRAE) depending on whether their date of hire was before, during,
or after calendar year 2013, respectively. This categorization determines the percentage of basic pay that we are required to contribute for normal cost.

Our retirement benefits expenses consist of three components: 1) FERS normal costs, 2) CSRS unfunded retirement benefits amortization, and 3) FERS unfunded retirement benefits amortization. These retirement benefits expense components are further described in detail in the sections below. The following table presents the retirement benefits expenses for the three and six months ended March 31, 2020, and 2019:

<table>

<td>$1,470</td>
</tr>
</tbody>
</table>

¹ Expense for the accrual for the annual payment due to OPM by September 30 of the respective year, based on information provided by OPM, to amortize the unfunded CSRS retirement obligation. Payments are to be made through 2043 based on OPM invoices.

² Expense for the accrual for the annual payment due to OPM by September 30 of the respective year, based on information provided by OPM, to amortize the unfunded FERS retirement obligation. Payments are to be made over a 30-year rolling period based on OPM invoices.

Our retirement benefits expenses increased 23.7% and 16.1% for the three and six months ended March 31, 2020, respectively, compared to the same periods last year. This increase was due to rising employer contributions rates for FERS normal cost, as well as increases in the CSRS and FERS unfunded retirement benefits amortization, as discussed below.

For additional information, see Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 9 - Retirement Plans.

**FERS Normal Costs**

We record our contributions to FERS normal costs as they are incurred. Any unpaid employer amounts at the end of a period, along with any employee amounts withheld but not remitted at the end of a period, are recorded as a current liability within Retirement benefits in the accompanying Balance Sheets.

As determined by OPM, our FERS normal cost contribution rates increased from 13.7% to 14.7% of basic pay for 2020, an increase of 7.3% from the prior year, affecting most of our FERS participants. As a result of this contribution rate increase, FERS normal cost expenses increased 8.6% and 7.6% for the three and six months ended March 31, 2020, respectively, compared to the same periods last year.

**CSRS and FERS Unfunded Retirement Benefits**

OPM periodically notifies us regarding its revaluation of unfunded CSRS and FERS retirement benefits. The amounts we record as expenses for our unfunded CSRS and FERS liabilities may be significantly impacted by changes in actuarial assumptions used by OPM to revalue the unfunded liabilities.

In October 2019, OPM provided an actuarial report projecting the annual amortization payments due September 30, 2020, to be $1.6 billion for CSRS and $1.1 billion for FERS.

On April 2, 2020, the Board of Actuaries of the CSRS, which oversees OPM’s calculation of actuarial liabilities for CSRS and FERS, lowered the discount rate used to calculate CSRS and FERS unfunded retirement liabilities from 4.25% to 4.0%. We have estimated that the impact of this change in discount rate on the annual CSRS and FERS amortization expense, will result in revised projected amortization payments due September 30, 2020, of approximately $1.8 billion for the CSRS obligation and approximately $1.3 billion for the FERS obligation, increases of $181 million and $226 million, respectively.
Accordingly, we have accrued $495 million and $899 million for the three and six months ended March 31, 2020, for the CSRS amortization expense, reflecting an adjustment of approximately $91 million for the revised assumptions. Likewise, we have accrued $378 million and $643 million for the three and six months ended March 31, 2020, for the FERS amortization expense, reflecting an adjustment of approximately $113 million for the revised assumptions.

Our CSRS and FERS unfunded retirement benefits amortization expenses increased 45.5% and 28.6% for the three and six months ended March 31, 2020, respectively, compared to the same periods last year, due to higher estimated annual amortization payments resulting from revised actuarial assumptions and discount rate changes.

We expect to receive invoices from OPM for the actual amounts due September 30, 2020, for CSRS and FERS during the fourth quarter of 2020, and the amounts invoiced could differ from the projected amounts, due to further changes in experience, discount rates and/or actuarial assumptions as of the calculation date.

**Retiree Health Benefits**

We participate in federal employee benefit programs for retiree health benefits. Retirees who participated in FEHB for the five years immediately preceding their retirement may continue to participate in the plan during retirement. Qualifying survivors of retirees are also eligible to receive benefits.

In accordance with PAEA, since the beginning of 2017, the PSRHBF has funded our share of retiree health benefit premiums. Also since 2017, we have been obligated to pay into the PSRHBF the actuarially determined normal costs of retiree health benefits attributable to the service of our employees, as well as the amortization payment for the PSRHBF unfunded liability. Our total retiree health benefits expenses therefore consist of both the normal and the amortization costs. We record the required contributions to the plan as an expense in the period in which each contribution is due.

Based on preliminary calculations provided by OPM in October 2019, we have projected the PSRHBF amortization payment amount due September 30, 2020, to be $900 million, and therefore accrued expenses of $225 million and $450 million for the three and six months ended March 31, 2020, respectively. We expect to receive the invoice from OPM for the actual amount due during the fourth quarter of 2020 and this may differ from the original projected amount due to changes in discount rates, actuarial assumptions and experience as of the invoice calculation date.

Also, based on preliminary calculations provided by OPM in October 2019 using updated discount rate assumptions, we have estimated the amount of our PSRHBF normal cost payment due September 30, 2020, to be $4.0 billion, and therefore accrued expenses of $1.0 billion and $2.0 billion for the three and six months ended March 31, 2020, respectively. We expect to receive the invoice from OPM for the actual amount due during the fourth quarter of 2020 and this may differ from the original projected amount due to changes in discount rates, actuarial assumptions and experience as of the invoice calculation date.

For the three and six months ended March 31, 2020, our total retiree health benefits expenses decreased by $50 million, or 3.9%, and $100 million, or 3.9%, respectively, compared to the same periods last year, all of which was attributable to a decrease in the estimated amortization payment for the PSRHBF unfunded liability.

For additional information, see Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 10 - Health Benefits Plans, Retirees.

**Workers' Compensation**

Our employees injured on the job are covered by the Federal Employees' Compensation Act ("FECA"), administered by the U.S. Department of Labor’s ("DOL") Office of Workers’ Compensation Programs, which makes all decisions regarding injured workers’ eligibility for benefits. We are legally mandated to participate in the federal workers’ compensation program. Our workers’ compensation expense reflects the impacts of changes in discount rates, as well as the actuarial valuation of new workers’ compensation cases and revaluation of existing ones. We reimburse the DOL for all workers’ compensation benefits paid to or on behalf of our employees, plus an administrative fee.
On a daily basis we focus on costs that can be managed in the course of normal business operations. Certain aspects of workers’ compensation can be managed through human resource initiatives, safety measures and training. Other workers’ compensation costs cannot be managed in the course of normal business operations and are less predictable, including expenses caused by actuarial revaluation and discount rate changes. We subtract the cash payments made by DOL on behalf of workers’ compensation obligations, which are relatively predictable, from total workers’ compensation expense in order to determine the non-cash component of workers’ compensation expense, a non-GAAP financial measure.

The following table presents the components of workers’ compensation expense, including the cash payments made by DOL on behalf of workers’ compensation obligations, for the three and six months ended March 31, 2020, and 2019:

<table>
<thead>
<tr>

<td>(370)</td>
</tr>
<tr>
<td><strong>Total workers’ compensation non-cash expense</strong></td>
<td><strong>$ 2,625</strong></td>
<td><strong>$ 401</strong></td>
</tr>
</tbody>
</table>

For the three months ended March 31, 2020, the portion of workers’ compensation expense due to the impact of discount rate changes increased approximately $2.2 billion, compared to the same period last year. For the six months ended March 31, 2020, the portion of workers’ compensation expense due to the impact of discount rate changes increased approximately $1.1 billion, compared to the same period last year. These changes are the result of changes in interest rates, outside of management’s control.

The combined costs of new workers’ compensation cases and revaluation of existing workers’ compensation cases increased by $52 million and $14 million for the three and six months ended March 31, 2020, compared to the same periods last year. Changes in actuarial valuation are primarily attributable to the combined impacts of routine changes in actuarial estimation, the progression of existing cases and updated COLA assumptions, which are largely outside of management’s control.

Under FECA, workers’ compensation claims for many types of injuries cannot be settled through lump-sum payments, and in some instances with regard to those claims, compensation may be paid over many years. Federal law grants COLA rates to those claims, and these factors result in substantially higher costs to us than would likely result if we managed our own claims. Additionally, since we do not manage the FECA program, we have no ability to control the significant administrative costs associated with managing the claims and payments process.

For additional information, see Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 11 - Workers’ Compensation.

**Transportation**

Transportation expenses include the costs we incur to transport mail and packages between our facilities, comprising highway, air and international transportation contracts, plus contract delivery services.

With the exception of contract delivery services, our costs to deliver mail and other products to delivery points are not included within Transportation but in Compensation and benefits for employee costs and in Other operating expenses for fuel, vehicle maintenance and repair, and other costs. Furthermore, transportation expenses do not
include the compensation and related costs of employees responsible for transporting mail and packages between our facilities.

Variations in the volume and weight of mail transported, the mode of transportation used, and fuel prices have significant impact on transportation expenses.

The components of transportation expenses for the three and six months ended March 31, 2020, and 2019, are presented in the following table:

<table>
<thead>
<tr>
<th>(in millions)</th>
<th>Three Months Ended March 31,</th>
<th>Six Months Ended March 31,</th>

<tr>
<td>Other</td>
<td>11</td>
<td>13</td>
</tr>
<tr>
<td><strong>Total transportation expenses</strong></td>
<td><strong>$2,008</strong></td>
<td><strong>$2,000</strong></td>
</tr>
</tbody>
</table>

Overall, transportation expenses increased 0.4% and 1.5% for the three and six months ended March 31, 2020, compared to the same periods last year.

Highway transportation expenses decreased 1.5% for the three months ended March 31, 2020, but increased 3.4% during the six months ended March 31, 2020, compared to the same periods in last year. For the three and six months ended March 31, 2020, highway contract expenses decreased, primarily due to a decrease in the number of miles driven and lower average diesel fuel prices. However, results for the six months ended March 31, 2020, include a one-time adjustment resulting from our adoption of ASC 842, whereby we recorded transportation expenses associated with embedded leases in certain of our transportation contracts during the first quarter of 2020 (see Note 2 - Recent Accounting Pronouncements for additional disclosures regarding our adoption of ASC 842).

Air transportation expenses increased 3.9% for the three months ended March 31, 2020, but decreased 0.6% during the six months ended March 31, 2020, compared to the same periods last year. For the six months ended March 31, 2020, the slight decrease was due primarily to lower volumes and lower average jet fuel prices. However, both volumes and average jet fuel prices rose in the three months ended March 31, 2020, leading to an increase in air transportation expenses for the period.

International transportation expenses are related only to outbound services that allow customers in the U.S. to send mail and packages to other countries. For the three and six months ended March 31, 2020, international transportation expenses decreased 1.4% and 2.9% compared to the same periods last year, primarily due to decreases in our international service volumes.
Other Operating Expenses

Other operating expenses for the three and six months ended March 31, 2020, and 2019, are detailed in the following table:

</tbody>
</table>

Other operating expenses increased by 5.3% and 2.5% for the three and six months ended March 31, 2020, compared to the same periods in the prior year. While these aggregate changes were relatively immaterial, the period-over-period changes in the various components of other operating expenses for the three and six months ended March 31, 2020, were also relatively immaterial.

LIQUIDITY AND CAPITAL RESOURCES

Our liquidity consists of unrestricted cash and cash equivalents plus available borrowing capacity. As of March 31, 2020, and September 30, 2019, we held unrestricted cash and cash equivalents of $9.0 billion and $8.8 billion, respectively. During the six months ended March 31, 2020, our average daily liquidity balance under our statutory borrowing capacity was $12.3 billion, representing approximately 56 days of liquidity available, which we define as liquidity divided by estimated average cash disbursements (including capital expenditures) per calendar day (365 days per year).

We face certain risks caused by the COVID-19 pandemic, including the disruptions to our revenue and business operations, which will have a material effect on our financial condition and results of operations. Quarantines, shelter-in-place orders, and travel and logistics restrictions in connection with the outbreak have affected our retail and commercial customers, as well as suppliers and mail service providers. While the disruption is expected to be temporary, its duration remains uncertain. A protracted loss in customer demand for our services is likely to have a material effect on our financial condition, results of operations and liquidity. The sudden drop in mail volumes, our most profitable revenue stream, is steep and may never fully recover to levels prior to the pandemic.

Notwithstanding our $15.0 billion statutory debt limit, and $3.0 billion annual limitation on new borrowing, the CARES Act allows us to borrow up to an additional $10.0 billion in financing from the U.S. Treasury to fund operating expenses. The U.S. Treasury may lend up to this amount at our request, upon terms and conditions mutually agreed upon. However we have no assurance that the U.S. Treasury will agree to provide such financing or if it will be provided upon favorable terms.

We estimate that the COVID-19 pandemic may increase our net operating loss by more than $22.0 billion over the next eighteen months, threatening our ability to operate. If we are able to borrow the $10.0 billion from the U.S. Treasury as provided by the CARES Act, we expect that we will have sufficient liquidity to continue to operate through April 2021. However, if we are unable to secure this $10.0 billion in financing, we expect to be able to continue to operate only through September 2020, absent additional defaults.

Although our liquidity has generally increased since 2012, it remains insufficient to support an organization with approximately $80 billion in annual operating expenses, to make capital investments necessary for continuity of
operations and to prepare for unexpected contingencies. Much of this liquidity improvement as of March 31, 2020, would not have occurred but for the temporary exigent surcharge, which allowed us to collect a total of $4.6 billion in incremental revenue between January 2014 and April 2016.

Aside from the temporary exigent surcharge, we defaulted on $33.9 billion of statutorily specified PSRHBF prefunding payments from 2012 through 2016, and did not make the approximately $495 million in payments due for FERS unfunded liabilities between 2014 and 2016, or the approximately $21.0 billion in payments due for PSRHBF normal cost and amortization on PSRHBF, CSRS and FERS unfunded liabilities between 2017 and 2019, in order to preserve liquidity, and to ensure that our ability to fulfill our primary universal service mission was not placed at undue risk. The combination of these defaults and non-payments, plus the incremental revenue associated with the temporary exigent surcharge referred to above, and the increased revenue from growth in our Shipping and Packages business, are the primary reasons why our cash and available liquidity has improved.

**CASH FLOW ANALYSIS**

**Operating Activities**
Cash provided by operating activities decreased $148 million for the six months ended March 31, 2020, compared to the same period last year, largely the result of timing differences in cash payments for compensation and benefits.

**Investing Activities**
We invested $741 million in the purchase of property and equipment for the six months ended March 31, 2020, which is an increase of $82 million, or 12.4%, compared to the same period last year. As of the date of this report, the amount of our full year projected capital expenditures is approximately $2.0 billion, which is approximately $300 million less than our original forecast of $2.3 billion. We anticipate that this may further decline if equipment and information technology investments and other programs are deferred to future years as a result of COVID-19.

**Financing Activities**
Except as described otherwise in this quarterly report, the nature and amounts of our payment obligations under our debt, capital and operating lease agreements, purchase commitments and other liabilities as of March 31, 2020, have not materially changed from those described in our Annual Report.

As of both March 31, 2020, and September 30, 2019, the aggregate principal balance of our outstanding debt was $11.0 billion, consisting of a combination of fixed-rate note and floating-rate notes, all of which we consider long-term debt.

**DEBT**
As of March 31, 2020, our statutory borrowing capacity was $4.0 billion, of which $1.0 billion would require repayment by September 30, 2020, to comply with our annual debt increase limits. Furthermore, notwithstanding our $15.0 billion statutory debt limit, and the $3.0 billion annual limitation on new borrowing, the CARES Act allows us to borrow up to an additional $10.0 billion in financing from the U.S. Treasury to fund operating expenses. The U.S. Treasury may lend up to this amount at our request, upon terms and conditions mutually agreed upon.

In 1974, we began issuing debt through individual debt agreements to the Federal Financing Bank (“FFB”), a government-owned corporation under the general supervision of the Secretary of the Treasury. In 1999, we entered into a Note Purchase Agreement (“NPA”) with the FFB to establish standardized procedures for issuing debt. Under the NPA, we were able to issue a series of notes with established terms and conditions by providing two days prior notice. Also under the NPA, we could make borrowings against two annually renewable revolving credit line facilities. These note arrangements and credit line facilities provided the flexibility to borrow short or long-term, using floating or fixed-rate instruments.

The NPA was extended each year through September 30, 2018, and in shorter increments between that date and August 31, 2019, at which time the NPA expired. This expiration did not affect the terms of any of our outstanding debt as of March 31, 2020, all of which was issued under the NPA.
If we are unable to renew or replace the NPA with the FFB, we have no assurance that we could obtain alternative debt financing on comparable terms. However, we believe that we will be able to maintain adequate liquidity through existing and new financing arrangements, as necessary and allowed by statute, to fund our operations.

On April 1, 2020, we drew $3.4 billion on a revolving credit facility with the FFB that survived the expiration of the NPA. In order to comply with the annual net increase limit, we must repay $400 million from this credit facility by September 30, 2020. Given that the credit facility has a maximum term of up to one year, we must repay any outstanding balance of the credit facility by April 1, 2021. The credit facility’s interest rate was determined by the U.S. Treasury based on the market rates of similar instruments as of the day of the funding request.

**LIQUIDITY OUTLOOK**

We are constrained by laws and regulations, including the PAEA, which restrict revenue sources and mandates certain expenses. Statutorily mandated expenses include amortization payments to provide full funding of retirement benefits under the CSRS and the FERS, as well as FERS normal costs, described in greater detail in Note 9 - Retirement Plans. Additionally, the PAEA established the PSRHBF and mandated certain obligations for paying normal costs, the present value of the estimated retiree health benefits attributable to active employees’ current year of service, and amortization payments for full prefunding of retiree health benefits. These prefunding obligations, described in greater detail in Note 10 - Health Benefits Plans, are unlike expenses imposed on most other federal entities or private-sector businesses that offer such benefits.

We continue to face challenges from the ongoing migration of mail to electronic alternatives, and we are legally limited under current law in how we can price our products and streamline our legacy business model. Our operations will require significant capital investment over the next few years to modernize and improve our processing and delivery infrastructure and update our delivery fleet in order to continue to meet our primary statutory obligation to provide prompt, reliable and efficient postal services to the nation.

Irrespective of our challenges resulting from the COVID-19 pandemic, absent legislative and regulatory change, we project continuing annual net losses in the future. As a result of these losses and our liquidity concerns, we will unlikely have sufficient cash balances to meet all of our existing legal obligations and make all of the critical investments in our infrastructure that are necessary for operational continuity and that have been deferred in recent years.

In the event that circumstances leave us with insufficient liquidity to continue operating, we may deem it necessary to implement additional contingency plans to ensure that our primary mission is fulfilled and that mail deliveries continue. These measures may require us to prioritize payments to the FFB, our employees and suppliers ahead of some payments to fund retirement and retiree health benefits, as we have done in the past.

With the anticipated continued migration to electronic communication and transactional alternatives, we continue to pursue long-term financial sustainability by focusing on the following items:

1. Continued efforts to control costs and drive efficiencies, innovate to keep mail relevant and generate increased revenue;
2. Postal Service reform legislation that addresses our overall cost structure and enhances our revenue-generating opportunities; and
3. Favorable outcome of the PRC’s ten-year review (discussed below), which would allow additional pricing flexibility.

Although we continue to inform the executive branch, Congress, the PRC and other stakeholders of the immediate and long-term financial challenges we face, we have no assurances that our requests will result in meaningful reform in the foreseeable future.
**PRC Ten-year Review**

In December 2016, the PRC initiated its ten-year review of the system for regulating rates and classes for Market-Dominant products as required by the PAEA. The purpose of the ten-year review was to determine if the system for regulating such rates and classes has achieved the objectives Congress established in the PAEA. As part of this review, the PRC evaluated the CPI-U price cap for our Market-Dominant services.

On December 1, 2017, the PRC announced its initial decision in connection with its ten-year review. The PRC concluded that the rates system has not achieved its objectives and needs to be changed, primarily because it does not enable us to achieve our mission of providing prompt, reliable, and efficient universal postal services to the American people in a financially sustainable manner. The PRC’s proposed changes to the system do not include the elimination of the CPI-U price cap; however, its proposal does provide for some additional pricing authority within a price cap system.

On December 5, 2019, the PRC announced a revised decision in connection with its ten-year review. The PRC’s proposed changes to the system still do not include the elimination of the CPI-U price cap. Moreover, while the revised proposal does include adjustment factors as we had requested to provide more flexibility for the regulatory system to better deal with future exogenous changes, the new proposal no longer includes any “true-up” authority to provide us with a reasonable opportunity to cover all of our costs. We continue to assert that the price cap should be eliminated, and that if the PRC insists on maintaining a price cap that the system must include both a resetting of rates so they are compensable, as well as adjustment factors to ensure the system is sufficiently flexible going forward.

The PRC was expected to issue a final rule after considering the comments and reply comments of any interested stakeholders, which were due no later than February 3, 2020, and March 4, 2020, respectively. As of the date of this report, the PRC has not issued a final rule. Additional information regarding the ten-year review may be found at the PRC website: https://www.prc.gov/press-releases/prc-revises-proposals-second-rulemaking-modify-rate-system-classes-market-dominant.

**2020 and Beyond**

Irrespective of our challenges resulting from the COVID-19 pandemic, we anticipate that given our ongoing liquidity concerns, and without legislative action and regulatory reform, we may not be able to pay all legally required obligations and also invest in much-needed capital expenditures in 2020 and future years that are necessary to ensure our ability to fulfill our primary mission. Furthermore, we believe that continuing productivity improvements alone will not be sufficient to address the challenges presented by declining Market-Dominant volume and revenue, and any future growth in operating revenue would unlikely keep pace with increased costs.

**Legally Required Obligations**

In addition to our previously discussed obligations for unfunded retirement and retiree health benefits of approximately **$8.0 billion due on September 30, 2020**, we expect to pay the DOL approximately **$1.3 billion** in October 2020, representing the workers’ compensation claims paid by DOL for the chargeback year July 1, 2019, to June 30, 2020, plus the estimated administrative fee.

The CARES Act offers certain employers the ability to defer payment of the employer’s share of the Social Security payroll tax on wages incurred from March 27, 2020, through December 31, 2020. In accordance with this provision, we began deferring these payments in April 2020, and intend to continue the deferral for the remainder of calendar year 2020 for an estimated total deferral amount of approximately **$1.6 billion**. One half of these deferred payments would be due by December 31, 2021, and the other half by December 31, 2022.

**Capital Investments**

We currently estimate that our required cash outlays for capital investments necessary to ensure that we can continue to perform our universal service obligation will amount to approximately **$1.3 billion** for the remainder of 2020, and an additional **$11.0 billion** for years 2021 through 2024, as we plan to invest in a new fleet of delivery vehicles and other appropriate capital assets. Although our future projections include these capital cash outlays, future cash flow from operations alone may not generate the cash needed to enable us to fully fund such necessary capital investments.
**Mitigating Circumstances**

We continue to pursue strategies within our control to increase operational efficiency and improve liquidity. We have managed capital in recent years by spending only what we believed was essential to maintain our existing facilities and service levels, and to increase efficiencies. However, continued increases in capital investment are necessary to upgrade our facilities, fleet of vehicles and processing equipment in order to remain operationally viable. Aggressive management of the business operations, as well as legislative and regulatory reforms that will enable us to increase revenue and reduce costs, will all be necessary to restore our financial health.

Our status as an independent establishment of the executive branch that does not receive tax dollars for our operations presents unique requirements and restrictions, but also potentially mitigates some of the financial risk that would otherwise be associated with a cash shortfall. With annual total revenue in 2019 of approximately $71 billion, a financially sound Postal Service continues to be vital to U.S. commerce.

The U.S. economy benefits greatly from us and the many businesses that provide the printing and mailing services that we support. Disruption of the mail would cause undue hardship to businesses and consumers as it would significantly inhibit the remittance of payments through the mail, and in the event of a cash shortfall, the U.S. government would likely prevent us from significantly curtailing or ceasing operations. We continue to inform the executive branch, Congress, the PRC and other stakeholders of the immediate and long-term financial challenges we face and the legislative and regulatory changes that are required to restore our financial stability.

**LEGISLATIVE, REGULATORY AND RELATED MATTERS**

**TASK FORCE ON THE UNITED STATES POSTAL SYSTEM**

As previously reported, on April 12, 2018, the President issued Executive Order 13829 to establish a Task Force on the United States Postal Service ("Task Force"), to be chaired by the Secretary of the Treasury, as Secretary and as Chairman of the FFB, or his designee. In accordance with the Executive Order, the Task Force conducted an evaluation of our operations and finances, and submitted its report to the President in August 2018.

There has been no further congressional activity related to the President’s Task Force report on the Postal Service subsequent to the March 12, 2019, Senate Homeland Security and Governmental Affairs Committee hearing titled, “A Path to Sustainability: Recommendations from the President’s Task Force on the United States Postal Service.”

**LEGISLATIVE UPDATE**

As a self-funded independent establishment of the executive branch, our business model and operations are significantly influenced by congressional oversight and legislation. Additionally, Congress intended for us to be governed by an eleven-member Board of Governors ("Board") which generally consists of our Postmaster General, Deputy Postmaster General and nine independent governors ("Governors"). The President appoints the Governors with the advice and consent of the Senate. We have five Senate-confirmed Governors currently in office.

**Legislation**

Several bills introduced in response to the COVID-19 pandemic have financial implications for us.

On March 18, 2020, the President signed the Families First Coronavirus Response Act, enacted as Public Law 116-127, which provides new paid sick leave that may be used by an employee in COVID-19 situations for themselves, or to care for sick family members, as well as Family and Medical Leave Act-protected unpaid and paid leave if a school/child care is closed.

On March 27, 2020, the President signed the CARES Act, which allows the Postal Service to borrow up to an additional $10.0 billion in financing from the U.S. Treasury to fund operating expenses. The law stipulates that the Secretary of Treasury may lend up to this amount at the request of the Postal Service, upon terms and conditions mutually agreed upon by the Secretary and the Postal Service.

H.R. 6425, the Protect our Post Offices Act, introduced on March 31, 2020, would also appropriate $25.0 billion for payment to the Postal Service Fund for revenue forgone due to the COVID-19 pandemic. The bill was referred to the House Committees on Appropriations and Budget.
Postal Service Reform
The 116th Congress has not introduced any major Postal Service reform bills to date. Legislative and regulatory reforms remain critical for us to meet the needs of the American public, and we will continue to work with Congress and all of our stakeholders to enact Postal Service reform legislation.

Board of Governors Nominations
On March 2, 2020, the President submitted to the Senate the nomination of Donald Lee Moak to serve on the Board for a term expiring December 8, 2022. The nomination was referred to the Senate Homeland Security and Governmental Affairs Committee for its consideration. The nomination of William Zollars to serve for a term expiring December 8, 2022, is also pending the committee’s consideration.

FAIR VALUE MEASUREMENTS
As required by authoritative accounting literature, certain fair value disclosures for the periods ended March 31, 2020, and September 30, 2019, are discussed in Item 1. Financial Statements, Notes to Unaudited Financial Statements. We did not recognize gains as a result of valuation measurements during the three and six months ended March 31, 2020. All recognized losses have been incorporated into our financial statements as of March 31, 2020. See Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 13 - Fair Value Measurement.

RELATED PARTY TRANSACTIONS
As disclosed throughout this quarterly report, we have significant transactions with other U.S. government entities, which are considered related parties for reporting purposes. For a more detailed description, see Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 5 - Related Parties.

CRITICAL ACCOUNTING POLICIES AND ESTIMATES
The preparation of financial statements in accordance with GAAP requires management to make significant judgments and estimates to develop certain amounts reflected and disclosed in the financial statements. In many cases, alternative policies or estimation techniques may be used.

We maintain a thorough process to review the application of accounting policies and to evaluate the appropriateness of the many estimates that are required to prepare the financial statements of a large organization. However, even under optimal circumstances, estimates routinely require adjustment based on changing circumstances and new or better information.

The accounting policies deemed either the most judgmental or which involve the selection or application of alternative accounting policies, and are material to the interim financial statements, are described in Critical Accounting Estimates contained in Management’s Discussion and Analysis of Financial Condition and Results of Operations of the Annual Report. Management normally discusses the development and selection of accounting policies and estimates with the Audit and Finance Committee of the Board.

RECENT ACCOUNTING STANDARDS
See Item 1. Financial Statements, Notes to Unaudited Financial Statements, Note 2 - Recent Accounting Pronouncements, for a description of recently announced accounting standards.

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK
In the normal course of business we are exposed to market risks from changes in commodity prices, certain foreign currency exchange rates and interest rates. Our commodity price risk consists primarily of exposure to changes in prices for diesel fuel, unleaded gasoline and aircraft fuel for transportation of the mail, and fuel for heating facilities. We have foreign currency risk related to the settlement of terminal dues and transit fees with foreign postal administrations for international mail.
We have not used derivative commodity or financial instruments to manage market risk related to commodities, foreign currency exchange or interest rate fluctuations for debt instruments. Additionally, we do not purchase or hold derivative financial instruments for speculative purposes.

We also have provisions in our debt agreements that allow us to prepay our $11.0 billion debt at any time at a price determined by the Secretary of the Treasury, based on prevailing interest rates in the U.S. Treasury market at the time of repayment.

See Item 7A. Quantitative and Qualitative Disclosures about Market Risk in the Annual Report for additional information.

ITEM 4. CONTROLS AND PROCEDURES

Management is responsible for the preparation, integrity and fair presentation of our financial statements.

DISCLOSURE CONTROLS

We maintain disclosure controls and procedures that are designed to ensure that information required to be disclosed in quarterly and annual reports is recorded, processed, summarized, and reported within the time frames specified by PAEA, and that this information is accumulated and communicated to our management, including the Postmaster General and Chief Financial Officer, as appropriate, to allow timely decisions regarding required disclosure.

We carried out an evaluation under the supervision and with the participation of management, including the Postmaster General and the Chief Financial Officer, of the effectiveness of the design and operation of disclosure controls and procedures as of March 31, 2020. Based upon and as of the date of the evaluation, the Postmaster General and the Chief Financial Officer concluded that our disclosure controls and procedures were effective.

INTERNAL CONTROLS

We have made no changes in our internal control over financial reporting during the three months ended March 31, 2020, that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.
PART II. OTHER INFORMATION

ITEM 1. LEGAL PROCEEDINGS

For a discussion of legal proceedings affecting us, please refer to Item 1. Financial Statements, Notes to Unaudited Financial Statements and Note 8 - Commitments and Contingencies, as well as our Annual Report.

ITEM 1A. RISK FACTORS

The following risk factor supplements Item 1A. Risk Factors of our Annual Report.

The occurrence of a global pandemic or other adverse public health developments could have a material and adverse effect on our business operations, financial condition and results of operations.

In March 2020, the World Health Organization declared COVID-19 a global pandemic, which has since spread throughout the U.S. Given our mandate to provide universal postal services to the nation, we provide an essential service and have continued to process and deliver mail and packages during the pandemic.

We expect the COVID-19 pandemic to have a material effect on our financial condition, results of operations and liquidity. Quarantines, shelter-in-place orders, and travel and logistics restrictions in connection with the outbreak have affected retail and commercial customers, as well as suppliers and mail service providers. The Postal Service relies on the sale of postal products and services to fund its operations, and these sales have declined significantly as a result of the pandemic. The sudden drop in mail volumes, the Postal Service’s most profitable revenue stream, has been steep and may never fully recover to levels prior to the pandemic.

/s/Joseph Corbett
Joseph Corbett
Chief Financial Officer and Executive Vice President
Date: May 7, 2020
CERTIFICATION PURSUANT TO
RULES 13a-14(a) AND 15d-14(a) UNDER THE SECURITIES AND EXCHANGE ACT OF
1934, AS ADOPTED PURSUANT TO SECTION 302 OF THE SARBANES-OXLEY ACT OF
2002.

I, Megan J. Brennan, certify that:

1. I have reviewed this quarterly report on Form 10-Q of the United States Postal Service (“Postal Service”);

2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;

3. Based on my knowledge, the financial statements and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the Postal Service as of, and for, the periods presented in this report;

4. The Postal Service’s other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the Postal Service and have:
   a. Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the Postal Service, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
   b. Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
   c. Evaluated the effectiveness of the Postal Service’s disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
   d. Disclosed in this report any change in the Postal Service’s internal control over financial reporting that occurred during the Postal Service’s most recent fiscal quarter (the Postal Service’s fourth fiscal quarter in the case of an Annual Report) that has materially affected, or is reasonably likely to materially affect, the Postal Service’s internal control over financial reporting;

5. The Postal Service’s other certifying officer and I have disclosed based on our most recent evaluation of internal control over financial reporting, to the Postal Service’s independent registered accounting firm and the Audit and Finance Committee of the Postal Service’s Board of Governors:
   a. All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the Postal Service’s ability to record, process, summarize and report financial information; and
   b. Any fraud, whether or not material, that involves management or other employees who have significant role in the Postal Service’s internal control over financial reporting.

CERTIFICATION PURSUANT TO
RULES 13a-14(a) AND 15d-14(a) UNDER THE SECURITIES AND EXCHANGE ACT OF
1934, AS ADOPTED PURSUANT TO SECTION 302 OF THE SARBANES-OXLEY ACT OF
2002.

I, Joseph Corbett, certify that:

1. I have reviewed this quarterly report on Form 10-Q of the United States Postal Service ("Postal Service");

2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;

3. Based on my knowledge, the financial statements and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the Postal Service as of, and for, the periods presented in this report;

4. The Postal Service’s other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the Postal Service and have:
   a. Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the Postal Service, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
   b. Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
   c. Evaluated the effectiveness of the Postal Service’s disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
   d. Disclosed in this report any change in the Postal Service’s internal control over financial reporting that occurred during the Postal Service’s most recent fiscal quarter (the Postal Service’s fourth fiscal quarter in the case of an Annual Report) that has materially affected, or is reasonably likely to materially affect, the Postal Service’s internal control over financial reporting; and

5. The Postal Service’s other certifying officer and I have disclosed based on our most recent evaluation of internal control over financial reporting, to the Postal Service’s independent registered accounting firm and the Audit and Finance Committee of the Postal Service’s Board of Governors:
   a. All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the Postal Service’s ability to record, process, summarize and report financial information; and
   b. Any fraud, whether or not material, that involves management or other employees who have significant role in the Postal Service’s internal control over financial reporting.

UNITED STATES POSTAL REGULATORY COMMISSION
Washington, D.C. 20268-0001

FORM 10-Q

QUARTERLY REPORT PURSUANT TO 39 U.S.C. § 3654 AND SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the Quarterly Period Ended March 31, 2020

UNITED STATES POSTAL SERVICE
(Exact name of registrant as specified in its charter)

Washington, D.C. 20260
(State or other jurisdiction of incorporation or organization) (I.R.S. Employer Identification No.)

475 L’Enfant Plaza, S.W.
Washington, D.C. 20260
(Address of principal executive offices) (ZIP Code)

(202) 268-2000
(Registrant’s telephone number, including area code)

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. ☑ Yes ☐ No ☐ Not Applicable

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to rule 405 of Regulation S-T ($232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files). ☑ Yes ☐ No ☐ Not Applicable

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, a smaller reporting company or an emerging growth company. See the definitions of "large accelerated filer," "accelerated filer," "smaller reporting company" and "emerging growth company" in Rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer ☐ Accelerated filer ☐ Non-accelerated filer ☐
Smaller reporting company ☐ Emerging growth company ☐ Not applicable ☑

If an emerging growth company, indicate by check mark if the registrant has elected not to use the extended transition period for complying with any new or revised financial accounting standards provided pursuant to Section 13(a) of the Exchange Act. ☐

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). ☐ Yes ☑ No ☐

Securities registered pursuant to Section 12(b) of the Act:

NOTES TO UNAUDITED FINANCIAL STATEMENTS

NOTE 1 - BASIS OF PRESENTATION

Interim Financial Statements
The accompanying unaudited interim financial statements of the United States Postal Service (the “Postal Service”) have been prepared in accordance with accounting principles generally accepted in the United States (“GAAP”) for interim financial information and with the instructions to Form 10-Q and Rule 10-01 of the U.S. Securities and Exchange Commission Regulation S-X. These financial statements should be read in conjunction with the Postal Service’s financial statements for the year ended September 30, 2019, included in its Annual Report on Form 10-K (“Annual Report”) filed with the Postal Regulatory Commission (“PRC”) on November 14, 2019, and do not include all information and footnotes which are normally included in the Annual Report. Except as otherwise specified, all references to years are to fiscal years beginning October 1 and ending September 30, and quarters are quarters within fiscal years 2020 and 2019.

In the opinion of management, the accompanying unaudited interim financial statements reflect all material adjustments, including recurring adjustments, necessary to fairly present the financial position as of March 31, 2020, the results of operations for the three and six months ended March 31, 2020, and 2019, the changes in net deficiency for the six months ended March 31, 2020, and 2019, and cash flows for the six months ended March 31, 2020, and 2019. Operating results for the three and six months ended March 31, 2020, are not necessarily indicative of the results that may be expected for all of 2020. Mail volume and revenue are historically greatest in the first quarter of the year, which includes the holiday mailing season.

Reclassifications
Certain reclassifications have been made to the financial statements for the three and six months ended March 31, 2019, as well as subsequent footnotes, to conform to the current period presentation. Specifically, certain retirement benefit expenses have been reclassified from Compensation and benefits and separately identified as Retirement benefits within Operating expenses in the accompanying unaudited Statements of Operations. In addition, unfunded retirement benefits amortization expenses associated with the Civil Service Retirement System (“CSRS”) and the Federal Employee Retirement System (“FERS”) have been reclassified from Unfunded retirement benefits amortization to Retirement benefits within Operating expenses in the accompanying unaudited Statements of Operations.

The liabilities associated with these retirement benefits have also been reclassified from Compensation and benefits and separately identified as Retirement benefits within Current liabilities in the balance sheets. In addition, the unfunded retirement benefits liabilities associated with CSRS and FERS have been reclassified from Unfunded retirement benefits to Retirement benefits within Current liabilities in the balance sheets. Corresponding reclassifications have been made within Changes in current assets and liabilities in the accompanying unaudited Statements of Cash Flows.

These reclassifications had no effect on previously reported total operating expenses, loss from operations or net loss. See Note 9 - Retirement Plans for further disclosure pertaining to retirement benefits.

NOTE 2 - RECENT ACCOUNTING PRONOUNCEMENTS

Recently Adopted Accounting Pronouncement
In February 2016, the Financial Accounting Standards Board (“FASB”) issued Accounting Standards Update 2016-02 Leases, which has since been codified in Accounting Standards Codification (“ASC”) 842, Leases (“ASC 842”). The new standard requires an entity to record most leases in its balance sheets but continue to recognize expenses in its statements of operations in a manner similar to current accounting practices. The new standard requires a lessee to recognize a lease liability for the obligation to make lease payments and a right-of-use (“ROU”) asset for the right to use the underlying asset for the lease term. Expenses associated with operating leases are recognized on a straight-line basis and include embedded interest and amortization components. The Postal Service recognizes expenses associated with operating leases as rent expense or transportation expense within Other operating expenses or Transportation, respectively, in the statements of operations. The Postal Service recognizes expenses associated with finance leases (formerly capital leases under previous guidance) with both
interest and amortization expenses and presents these separately in the statements of operations. As such, finance leases generally have higher expenses in the earlier periods of the lease term.

The Postal Service adopted ASC 842 for its 2020 fiscal year (beginning October 1, 2019). In connection with the adoption of ASC 842, the Postal Service has made necessary changes to relevant policies, processes, information systems and internal controls. For transition purposes, the Postal Service has elected the option not to restate comparative financial statements under the modified retrospective transition model. This option allows the application of the standard to all leases in effect as of the effective date (October 1, 2019) or commencing thereafter, without any restatement impact on the comparative financial statement balances. Accordingly, all comparative financial statements enclosed herein are presented in accordance with the previous ASC 840, Leases (“ASC 840”), with related ASC 840 disclosures provided in Note 12 - Leases.

In implementing ASC 842, the Postal Service has elected the package of practical expedients which permits carrying forward historical accounting positions around lease identification, lease classification and initial direct costs for all leases commencing prior to October 1, 2019. The Postal Service has also made a policy election to not separate the lease and non-lease components for all types of underlying assets and to exclude its short-term leases from the ROU asset and lease liability balances.

The Postal Service adopted ASC 842 on October 1, 2019. The implementation of ASC 842 resulted in an opening balance sheet adjustment, as of October 1, 2019, to recognize $4.4 billion in right-of-use assets and lease liabilities relating to operating leases as follows:

**Accounting Pronouncements Issued but not Adopted**

**Accounting Standards Update 2016-13 Financial Instruments - Credit Losses**
In June 2016, the FASB issued Accounting Standards Update 2016-13 Financial Instruments - Credit Losses, which has since been codified in ASC 326, Financial Instruments - Credit Losses (“ASC 326”). The new standard requires entities to measure expected credit losses on financial instruments and other commitments by replacing the incurred loss impairment methodology in current GAAP with a methodology that reflects expected credit losses and requires consideration of a broader range of reasonable and supportable information to inform credit loss estimates.

The Postal Service intends to adopt ASC 326 for its 2021 fiscal year (beginning October 1, 2020) and the quarters therein. The standard is applicable to the Postal Service’s valuation of its receivables. The Postal Service is currently evaluating the impact of adopting this standard on its financial statements and related disclosures.
Accounting Standards Update 2018-13 Fair Value Measurement
In August 2018, the FASB issued Accounting Standards Update 2018-13 Fair Value Measurement: Disclosure Framework - Changes to the Disclosure Requirements for Fair Value Measurement, which has since been codified in ASC 820, Fair Value Measurement (“ASC 820”). The new standard modifies the disclosure requirements for fair value measurements by adding, modifying or removing certain disclosures.

The Postal Service intends to adopt ASC 820 for its 2021 fiscal year (beginning October 1, 2020) and the quarters therein. The standard is applicable to the Postal Service’s fair value measurements of its revenue forgone installment receivable and its long-term debt, as described further in Note 13 - Fair Value Measurement. Under ASC 820, certain disclosures are required to be applied on a retrospective basis and others on a prospective basis. The Postal Service is currently evaluating the impact of adopting this standard on its financial statements and related disclosures.

Accounting Standards Update 2018-15 Intangibles - Goodwill and Other - Internal-Use Software
In August 2018, the FASB issued Accounting Standards Update 2018-15 Intangibles - Goodwill and Other - Internal-Use Software (Subtopic 350-40) - Customer’s Accounting for Implementation Costs Incurred in a Cloud Computing Arrangement, which has since been codified in ASC Subtopic 350-40, Intangibles - Goodwill and Other - Internal-Use Software (“ASC 350-40”). This is an update to a standard the FASB issued in April 2015 for entities evaluating the accounting for fees paid by a customer in a cloud computing (hosting) arrangement by providing guidance for determining when such arrangement includes a software license.

If a cloud computing arrangement includes a license for internal-use software, then the software license is accounted for by the customer in accordance with ASC 350-40. This generally means that an intangible asset is recognized for the software license and, to the extent that the payments attributable to the software license are made over time, a liability also is recognized. If a cloud computing arrangement does not include a software license, the entity should account for the arrangement as a service contract. This generally means that the fees associated with the hosting element (service) of the arrangement are expensed as incurred.

The Postal Service intends to adopt ASC 350-40 for its 2021 fiscal year (beginning October 1, 2020) and the quarters therein. The Postal Service is currently evaluating the impact of adopting this standard on its financial statements and related disclosures.

NOTE 3 - LIQUIDITY
The Postal Service’s liquidity consists of unrestricted cash and cash equivalents plus available borrowing capacity.

Cash
The Postal Service generates its cash almost entirely through the sale of postal products and services. As of March 31, 2020, and September 30, 2019, the Postal Service held unrestricted cash and cash equivalents of $9.0 billion and $8.8 billion, respectively. See Note 6 - Cash, Cash Equivalents and Restricted Cash for further disclosures pertaining to cash.

The Postal Reorganization Act, as amended by Public Laws 101-227 and 109-435 (the "PRA"), authorizes the Postal Service to raise cash through the issuance of debt obligations. The Postal Service is limited by statute to annual net increases in debt of $3.0 billion calculated as of the end of each fiscal year, and total debt of $15.0 billion. In 1974, the Postal Service began issuing debt through individual debt agreements to the Federal Financing Bank ("FFB"), a government-owned corporation under the general supervision of the Secretary of the Treasury.

COVID-19 Considerations
In March 2020, the World Health Organization declared a novel strain of coronavirus ("COVID-19") a global pandemic, which has since spread throughout the U.S. Given its mandate to provide universal postal services to the nation, the Postal Service provides an essential service as part of the nation’s critical infrastructure and has continued to process and deliver mail and packages during the pandemic.

The Postal Service expects the COVID-19 pandemic to have a material effect on its financial condition, results of operations and liquidity. Quarantines, shelter-in-place orders and travel and logistics restrictions in connection with the outbreak have affected retail and commercial customers, as well as suppliers and mail service providers. The
Postal Service relies on the sale of postal products and services to fund its operations, and these sales declined significantly in late March 2020 as a result of the pandemic, and the impact has continued to worsen since then. The sudden drop in mail volumes, the Postal Service’s most profitable revenue stream, has been steep and may never fully recover to levels prior to the pandemic.

On March 27, 2020, the President signed the Coronavirus Aid, Relief, and Economic Security Act, enacted as Public Law 116-136 (the “CARES Act”). Notwithstanding the $15.0 billion statutory debt limit, and the $3.0 billion limit on annual borrowing, the CARES Act allows the Postal Service to borrow up to an additional $10.0 billion in financing from the U.S. Treasury to fund operating expenses. The U.S. Treasury may lend up to this amount at the request of the Postal Service, upon terms and conditions mutually agreed upon. However, the Postal Service has no assurance that the U.S. Treasury will agree to provide such financing or if it will be provided upon favorable terms.

The Postal Service estimates that the COVID-19 pandemic may increase its net operating loss by more than $22.0 billion over the next eighteen months, threatening its ability to operate. If the Postal Service is able to borrow the $10.0 billion from the U.S. Treasury as provided by the CARES Act, it expects that it will have sufficient liquidity to continue operations through April 2021. However, if the Postal Service is unable to secure this $10.0 billion in financing, it expects to be able to continue to operate only through September 2020.

Given these COVID-19 considerations, the Postal Service may require an additional injection of liquidity, provided by either the U.S. government or other sources, or through additional defaults, to remain a going concern. While the COVID-19 disruption is expected to be temporary, its duration remains uncertain, and the Postal Service expects that its liquidity may continue to worsen if the nation experiences a prolonged period of disruption.

Subsequent Events

The CARES Act offers certain employers the ability to defer payment of the employer’s share of the Social Security payroll tax on wages incurred from March 27, 2020, through December 31, 2020. In accordance with this provision, the Postal Service began deferring these payments in April 2020, and intends to continue the deferral for the remainder of calendar year 2020 for an estimated total deferral amount of approximately $1.6 billion. One half of these deferred payments would be due by December 31, 2021, and the other half by December 31, 2022.

On April 1, 2020, the Postal Service drew $3.4 billion on a revolving credit facility with the FFB that survived the expiration of the Note Purchase Agreement (“NPA”). In order to comply with the annual net increase limit, the Postal Service must repay $400 million from this credit facility by September 30, 2020. Given that the credit facility has a maximum term of up to one year, the Postal Service must repay any outstanding balance of the credit facility by April 1, 2021. The credit facility’s interest rate was determined by the U.S. Treasury based on the market rates of similar instruments as of the day of the funding request.

Debt

As of both March 31, 2020, and September 30, 2019, the Postal Service had a combination of fixed-rate and floating-rate notes outstanding with various maturities totaling $11.0 billion. As of March 31, 2020, the Postal Service’s statutory borrowing capacity was $4.0 billion, of which $1.0 billion would require repayment by September 30, 2020, to comply with the annual debt net increase limit.

In 1999, the Postal Service entered into the NPA with the FFB to establish standardized procedures for issuing debt. Under the NPA, the Postal Service was able to issue a series of notes and revolving credit line facilities with established terms and conditions by providing two days prior notice. These note arrangements and credit line facilities provided the flexibility to borrow short or long-term, using floating or fixed-rate instruments.

The NPA was extended each year through September 30, 2018, and in shorter increments between that date and August 31, 2019, at which time the NPA expired. This expiration did not affect the terms of any of the Postal Service’s outstanding debt as of March 31, 2020, all of which was issued under the NPA. As a contractual matter, the FFB continued to lend to the Postal Service under each commitment and line of credit until it expired. If the Postal Service is unable to renew or replace the NPA with the FFB, it has no assurance that it could obtain alternative debt financing on comparable terms.
**Liquidity Concerns**
The Postal Service is constrained by laws and regulations, including the *Postal Accountability and Enhancement Act* ("PAEA"), which restrict revenue sources and mandate certain expenses.

The Postal Service is required, either by law or by union contract, to participate in U.S. government pension and health and benefits programs for employees and retirees, including the Federal Employees Health Benefit ("FEHB") program, CSRS and FERS, which the Office of Personnel Management ("OPM") administers. Statutorily mandated expenses include amortization payments to provide full funding of retirement benefits under CSRS and FERS, as well as FERS normal costs, described in greater detail below and in *Note 9 - Retirement Plans*. Additionally, the PAEA established the Postal Service Retiree Health Benefits Fund ("PSRHBF") and mandated certain obligations for paying normal costs, the present value of the estimated retiree health benefits attributable to active employees' current year of service, and amortization payments for full prefunding of retiree health benefits. These prefunding obligations, described in greater detail below and in *Note 10 - Health Benefits Plans*, are unlike expenses imposed on most other federal entities or private-sector businesses that offer such benefits.

The Postal Service reported operating expenses of approximately $80 billion in 2019 and has incurred cumulative net losses of $83.1 billion from 2007 through March 31, 2020.

Notwithstanding the challenges resulting from the COVID-19 pandemic, absent legislative and regulatory change, the Postal Service projects continuing annual net losses in the future. As a result of these losses and its liquidity concerns, the Postal Service will unlikely have sufficient liquidity to meet all of its existing legal obligations when due while also reducing its debt and making the critical infrastructure investments that have been deferred in recent years.

In the event that circumstances leave the Postal Service with insufficient liquidity, it would likely be required to implement additional contingency plans to ensure that its primary mission is fulfilled and that mail deliveries continue. These measures may require the Postal Service to prioritize payments to the FFB, employees and suppliers ahead of some payments to fund retirement and retiree health benefits, as has been done in the past.

**Business Model Challenges and Constraints**
Market-Dominant services, which accounted for approximately 66% of the Postal Service's annual operating revenues in 2019, are currently subject to a price cap as measured by the Consumer Price Index for All Urban Consumers ("CPI-U"). However, the Postal Service's costs are not similarly constrained. A large portion of its cost structure cannot be altered expeditiously due to the Postal Service's universal service obligation. Further, the number of delivery points continues to grow by approximately one million per year, which drives up delivery costs. When combined with the impact of lower mail volume, the average number of pieces delivered per delivery point per day has decreased from approximately 5.5 pieces in 2007 to 3.4 pieces in 2019, a decline of approximately 39%, and a further significant decline is expected in 2020.

Many employee and retiree benefit costs are mandated by law and cannot be altered without legislative change. Under current law, the Postal Service is generally unable to increase prices sufficiently to offset increased costs, and is likewise constrained by law from reducing many of its costs or from pursuing many alternate sources of revenue.

Aside from its universal service obligation, a significant factor contributing to Postal Service losses is the ongoing decline in the volume of Market-Dominant products and services, and those declines are being exacerbated by the COVID-19 pandemic. Specifically, declines in *First-Class Mail* are largely the result of changes in consumers' and businesses' use of mail resulting from the continuing migration to electronic communication and transactional alternatives, which have taken place over the last decade and are expected to continue. After experiencing relatively flat volume between 2009 and 2016, beginning in 2017, *Marketing Mail* volume has generally been challenged by commercial mailers' increasing use of digital and mobile advertising, and more recently by the COVID-19 pandemic, although this class has benefited from strong political and election mail volumes, particularly in the second half of 2018 and the first quarter of 2019.

The Postal Service's Shipping and Packages category has historically provided revenue and volume growth as a result of its successful efforts to compete in shipping services, including last-mile e-commerce fulfillment markets...
and Sunday delivery as well as end-to-end markets. However, this service category is subject to intense competition which significantly impacts both revenue and volume. Certain major customers of the Postal Service had begun diverting volume from the Postal Service’s network by in-sourcing last-mile delivery. Competitors in the package delivery market are aggressively pricing their products and services in order to fill their networks and grow package density. However, as a result of the temporary surge in e-commerce growth driven by the COVID-19 pandemic, some of these customers increased their volume to the Postal Service’s network during March 2020 due to their delivery capacity constraints.

Because the Postal Service provides its services primarily through its employees, its costs are heavily concentrated in wages and benefits for both current employees and retirees. These costs are significantly impacted by contractual wage increases, employee health benefit premium increases, and statutorily mandated retirement and workers’ compensation programs. Some of these costs have historically increased at a higher rate than inflation.

**Past Due Obligations**

The following table presents the total expenses accrued but unpaid by the Postal Service as of September 30, 2019, related to retiree health benefits, CSRS and FERS and the fiscal years in which the accruals were recorded:

<table>

² The 2012 to 2016 period amount includes $247.6 million for 2016, $240.9 million for 2015 and $6.7 million for 2014.

**Mitigating Circumstances**

The Postal Service continues to pursue strategies within its control to increase operational efficiency and improve liquidity. The Postal Service has managed capital in recent years by spending what it believed was essential to maintain its existing facilities and service levels, to ensure employee safety and to increase efficiencies. However, continued increases in capital investment are necessary to upgrade its facilities, fleet of vehicles and processing equipment in order to remain operationally viable. Irrespective of the challenges resulting from the COVID-19 pandemic, aggressive management of the business operations, as well as legislative and regulatory reforms that will enable it to increase revenue and reduce costs, will all be necessary to restore the Postal Service to financial health.

The Postal Service’s status as an independent establishment of the executive branch that does not receive tax dollars for its operations presents unique requirements and restrictions, but also potentially mitigates some of the financial risk that would otherwise be associated with a cash shortfall. With annual total revenue in 2019 of approximately $71 billion, a financially sound Postal Service continues to be vital to U.S. commerce.

The U.S. economy benefits greatly from the Postal Service and the many businesses that provide the printing and mailing services that it supports. Disruption of the mail would cause undue hardship to businesses and consumers as it would significantly inhibit the remittance of payments through the mail, and in the event of a cash shortfall, the U.S. government would likely prevent the Postal Service from significantly curtailing or ceasing operations. The Postal Service continues to inform the executive branch, Congress, the PRC and other stakeholders of the immediate and long-term financial challenges it faces and the legislative and regulatory changes that are required to restore its financial stability.
NOTE 4 - REVENUE RECOGNITION

The Postal Service generates the majority of its revenue from contracts associated with the processing and delivery of different types of mail and packages, both domestically and internationally, which generally occur over a relatively short period of time (e.g., several days).

Disaggregation of Revenue

The following table summarizes the Postal Service’s disaggregated operating revenue for the three and six months ended March 31, 2020, and 2019, by each service category:

<table>

</tbody>
</table>

* Prior period amounts for certain service categories include reclassifications of amounts amongst service categories to conform to current period presentation. These reclassifications are immaterial for each affected category, and had no effect on total operating revenue for the period.

Satisfaction of Performance Obligations

A performance obligation is a promise in a contract to transfer a distinct good or service to the customer. A contract’s transaction price is allocated to each distinct performance obligation and recognized as revenue when, or as, the performance obligation is satisfied.

First-Class Mail, Marketing Mail, Shipping and Packages, International Mail and Periodicals are categorized as Mailing and Shipping services for purposes of satisfying performance obligations. The Postal Service recognizes revenue for Mailing and Shipping services as it fulfills its obligation to process and deliver each mailpiece and the customer mail sender/recipient receives and consumes the benefits of these services.

Other revenue includes PO Box services, Return Receipts, Insurance, Other Ancillary Services, Shipping and Mailing Supplies, Collect on Delivery, Registered Mail, Stamped Envelopes and Cards, Money Orders and other goods and services. The Postal Service recognizes revenue for the majority of these services over time as the customer receives and consumes the benefits of the service. The revenue for a small portion of certain goods or services in this service category is recognized at a point in time when the goods or services are provided to the customer.

The vast majority of the Postal Service’s contracts include only one performance obligation. However, if a contract is separated into more than one performance obligation, the total transaction price for each performance obligation is allocated in an amount based on the estimated relative stand-alone selling prices of the promised goods or services underlying each performance obligation. The majority of the goods or services sold by the Postal Service have observable stand-alone sales prices. Further, payment for the majority of the goods and services is received up front.

If the Postal Service were unable to complete delivery to the destination point, another entity would not need to re-perform the entire portion of delivery already performed by the Postal Service. Accordingly, control from the Postal Service to the customer transfers over time for the vast majority of services the Postal Service offers, and revenue is recognized based on the progress of the completion of the performance obligations.
Variable Consideration
The Postal Service offers certain contracts to its customers that contain various types of customer incentives or other provisions that can either increase or decrease the transaction price. Customer incentives include discounts, money back guarantees, rebates, refunds or incentive payments. The other provisions include performance penalties. The Postal Service uses the expected value approach to estimate variable consideration to which it expects to be entitled.

Contract Modifications
The Postal Service considers contract modifications to exist when the modification either creates new enforceable rights and obligations or alters the existing arrangement. Contract modifications do not add distinct services; they are typically used to change the prices that the Postal Service charges its customer for existing services. These contract modifications are accounted for prospectively as the remaining performance obligations are executed.

Principal vs. Agent Consideration
The Postal Service utilizes third parties to assist with the transportation of mailpieces between different points as part of the delivery process. Based on its evaluation of the transfer of control model, the Postal Service has determined that it acts as the principal rather than the agent within these arrangements.

Contract Liabilities
The vast majority of the Postal Service’s contract liabilities consist of Deferred revenue-prepaid postage and prepaid PO Box and Caller Service fees. Deferred revenue-prepaid postage is an estimate of postage that has been sold, but not yet used by customers. The Postal Service recognizes revenue over time as the Postal Service delivers mailpieces. Because payments for postage are collected in advance of the satisfaction of related performance obligations, the Postal Service defers and reports this unearned revenue as Deferred revenue-prepaid postage in its balance sheet. Stamp sales and metered postage account for the majority of Deferred revenue-prepaid postage. The liability also includes an estimate for mail that is in-transit within the Postal Service network.

The prepaid PO Box and Caller Service fees consist of the payments received from customers for PO Box fees at the beginning of their contracts. The Postal Service defers and reflects this unearned revenue as prepaid PO Box and Caller Service fees within Other current liabilities in the accompanying Balance Sheets. Revenue is recognized over time as customers use the PO Box and Caller Services over the terms of their contracts.

The following table presents the balances of the Postal Service’s contract liabilities, including Deferred revenue-prepaid postage and prepaid PO Box and Caller Service fees, as of March 31, 2020, and September 30, 2019, respectively:

1 Included within Operating revenue in the accompanying unaudited Statements of Operations.
2 Included within Operating expenses in the accompanying unaudited Statements of Operations.
3 Represents interest imputed on the revenue forgone installment receivable as well as interest generated on U.S. Treasury instruments and other cash equivalents held with the Federal Reserve Bank of New York. Included within Interest and investment income in the accompanying unaudited Statements of Operations.
4 Incurred on debt issued to the FFB, and included within Interest expense in the accompanying unaudited Statements of Operations.

**NOTE 6 - CASH, CASH EQUIVALENTS AND RESTRICTED CASH**

The following table provides a reconciliation of Cash and cash equivalents and Restricted cash reported in the balance sheets as of March 31, 2020, and 2019, respectively, and as of September 30, 2019, and 2018, respectively (to disclose the opening balances), that sum to the totals of the same such amounts presented in the accompanying unaudited Statements of Cash Flows for the six months ended March 31, 2020, and 2019:

<table>

</tbody>
</table>

Restricted cash represents Postal Service cash that is not available for general use. This includes cash originated from forfeitures or seizures related to consumer fraud or other criminal activity related to the mail and either held for third-party beneficiaries or awaiting disposition. Restricted cash also includes funds for use in restricted activities such as congressional appropriation for Postal Service obligations to the PRC and the United States Postal Service Office of Inspector General, or that are otherwise restricted.

The Postal Service holds its Cash and cash equivalents and Restricted cash with the Federal Reserve Bank of New York and invests its excess cash, when available, in highly-liquid, short-term investments issued by the U.S. Department of the Treasury.

**NOTE 7 - PROPERTY AND EQUIPMENT, NET**

Assets within Property and equipment, net in the accompanying Balance Sheets are recorded at cost, which includes the interest on borrowings used to finance construction of major capital additions, less allowances for depreciation and amortization. Interest capitalized during both the three and six months ended March 31, 2020, and 2019, was not significant. Fixed assets are depreciated over estimated useful lives ranging from 3 to 40 years using the straight-line method.

The net book values of assets classified as held for sale were approximately $6 million and $10 million as of March 31, 2020, and September 30, 2019, respectively, and are included within Property and equipment, net in the accompanying Balance Sheets.

For the three months ended March 31, 2020, and 2019, depreciation and amortization expense was $423 million and $424 million respectively, and impairment charges were de minimis. For the six months ended March 31, 2020, and 2019, depreciation and amortization expense was $854 million and $841 million respectively, and impairment charges were de minimis. These items are included within Other operating expenses in the accompanying unaudited Statements of Operations.
**NOTE 8 - COMMITMENTS AND CONTINGENCIES**

**Collective Bargaining Agreements**
On January 22, 2020, the Postal Service reached a tentative agreement with the National Postal Mail Handlers Union, AFL-CIO (“NPMHU”) on a new three-year collective bargaining agreement, which the union membership ratified on April 8, 2020. The new contract went into effect on April 25, 2020, and will expire on September 20, 2022.

On March 10, 2020, a three-member arbitration panel reached a decision in the Postal Service’s legally mandated binding interest arbitration process with the American Postal Workers Union, AFL-CIO (“APWU”), which established the terms of a new collective bargaining agreement. The new contract went into effect on March 10, 2020, and will expire on September 20, 2021.

In September 2019, the Postal Service agreed to extend contract negotiations relating to a new collective bargaining agreement with the National Association of Letter Carriers, AFL-CIO (“NALC”). The previous contract with the NALC expired on September 20, 2019, and negotiations with the NALC are at an impasse. The Postal Service and the NALC will continue to follow the current agreement until a new contract is reached through the dispute resolution process.

**Contingent Liabilities**
The Postal Service’s contingent liabilities consist primarily of claims resulting from labor and employment matters; asset retirement obligations and environmental matters; property damage and injuries on Postal Service properties; and issues arising from Postal Service contracts, personal claims and traffic accidents. Each quarter, the Postal Service evaluates each claim to determine its potential liability. If the Postal Service determines that an unfavorable outcome from a new claim is both probable and reasonably estimable, it records a liability for the amount. Preexisting claims are also reviewed and adjusted quarterly for resolutions or revisions to prior estimates based on new facts and circumstances.

The Postal Service is from time to time involved in other litigation incidental to the conduct of its business, none of which is expected to be material to its financial condition or operations.

**Provision for Losses**
The Postal Service has made adequate provision for probable losses arising from all claims. The following table presents contingent liabilities by current and noncurrent portions and by category, as of March 31, 2020, and September 30, 2019:

<table>
<thead>
<tr>

¹ Included within Payables and accrued expenses in the accompanying Balance Sheets.
² Included within Other noncurrent liabilities in the accompanying Balance Sheets.
Reasonably Possible Contingencies

The Postal Service does not accrue for contingencies which it deems reasonably possible of an unfavorable outcome. These ranged in amount from approximately $175 million to $1.0 billion at March 31, 2020, and from approximately $150 million to $1.0 billion at September 30, 2019.

Class Action Litigation

As previously reported, on January 14, 2010, the Equal Employment Opportunity Commission's ("EEOC") Office of Federal Operations ("OFO") certified the case *McConnell v. Brennan* (first instituted in 2006 as *McConnell v. Potter*) as a class action against the Postal Service, with the class consisting of permanent-rehabilitation and limited-duty Postal Service employees who the Postal Service assessed under the National Reassessment Process ("NRP") between the dates of May 5, 2006, and July 1, 2011. The Postal Service utilized the NRP to ensure employees receiving workers' compensation benefits were placed in jobs consistent with their abilities, and that records regarding employees injured on the job were correct.

The *McConnell* case alleges violations of the Rehabilitation Act of 1973 resulting from the NRP's failure to provide a reasonable accommodation, the NRP's wrongful disclosure of medical information, the NRP's creation of a hostile work environment, and the NRP's adverse impact on disabled employees. The class is seeking injunctive relief and damages of an uncertain amount.

In 2015, the Administrative Judge assigned to handle the *McConnell* case granted in-part both the Class Agent's and the Postal Service's motions for summary judgment. In her decision, the Administrative Judge found that the NRP violated the Rehabilitation Act. The Postal Service appealed this decision to the OFO, and the OFO denied this appeal in 2018. The Postal Service implemented the OFO's order, and notified all class members of their right to file an individual claim for relief. Class members were allowed thirty days to submit claims to the Postal Service's National Equal Employment Opportunity Investigative Services Office. The claims submission deadline has now passed and the dispute process for individual claims is currently underway before a newly assigned EEOC Administrative Judge.

The class members have the right to pursue individual claims. Should they be successful in establishing liability and damages, the ultimate outcome in this case could have a material impact on the Postal Service's financial results.

Other

The U.S. is a member of the Universal Postal Union ("UPU"), a specialized agency of the United Nations that facilitates the exchange of international mail. The Postal Service is the designated postal operator for the U.S. under the UPU, and payments to the designated postal operator for the delivery of foreign origin letter-post mails are known as "terminal dues".

In September 2019, the UPU members had a special meeting -- known as the Extraordinary Congress -- to discuss the terminal dues system. During that meeting, UPU members agreed to establish a new remuneration system that will allow the Postal Service to self-declare rates beginning in July 2020. Other foreign postal operators may also reciprocally apply rates at full-self-declared rates at that time.

In February 2020, the Postal Service officially invoked its provision to self-declare rates beginning in July 2020, creating an obligation to pay the UPU the amount of 40 million Swiss Francs ("CHF"), or approximately $41 million, based on the prevailing exchange rate on March 31, 2020. This amount will be payable over five years in annual increments of 8 million CHF, with the first payment due between July and December 2020.

The Postal Service considers the right to self-declare rates as an intangible asset recorded in *Other assets* in the accompanying unaudited Balance Sheet at March 31, 2020, and its amortization starts in July 2020 when the self-declared rates are in effect. The current portion of the obligation is recorded in *Payables and accrued expenses* and the noncurrent portion of the obligation is recorded in *Other noncurrent liabilities* in the accompanying unaudited Balance Sheet at March 31, 2020, respectively.
NOTE 9 - RETIREMENT PLANS
The majority of career employees participate in one of two U.S. government defined benefit pension programs, CSRS and FERS, which OPM administers. These plans provide retirement, death and disability benefits for eligible employees based on specific eligibility and participation requirements, vesting periods and benefit formulas. Each employee’s participation in either plan is based on the starting date of employment with the Postal Service or another U.S. government entity.

As government-sponsored benefit plans, CSRS and FERS are not subject to the provisions of the Employee Retirement Income Security Act of 1974, as amended. Likewise, because the Postal Service cannot direct the costs, benefits or funding requirements of these plans, it accounts for program expenses under multiemployer plan accounting rules. As such, the Postal Service records required contributions to the plans as an expense in the period in which each contribution is due. For FERS, the Postal Service contributes to the plan an amount established by OPM as the employer portion of retirement benefits for participating employees and their qualifying survivors, upon retirement, for each employee’s current year of service, which is considered the FERS normal cost. As further discussed below, the Postal Service is not required to pay the normal cost for those employees who participate in CSRS.

Career employees may also participate in the Thrift Savings Plan (“TSP”), a defined contribution retirement savings and investment plan administered by the Federal Retirement Thrift Investment Board. The Postal Service’s TSP expenses relate only to its contributions for FERS employees who participate in the TSP.

CSRS provides a basic annuity plan benefit to employees hired before January 1, 1984. CSRS Offset provides Social Security benefits in addition to its basic annuity plan for employees hired between January 1, 1984, and January 1, 1987. CSRS and CSRS Offset employees may also participate in the TSP, although the Postal Service does not match contributions for these participants.

The PAEA suspended the Postal Service’s employer contributions to CSRS that would otherwise have been required under Title 5, Section 8334(a)(1) of the U.S. Code, although CSRS employees continue to contribute to the plan.

Effective January 1, 1987, FERS covers employees hired since December 31, 1983, and FERS employees are covered by an annuity, Social Security and TSP benefits. For FERS employees who participate in TSP, the Postal Service contributes 1% of basic pay and matches voluntary employee contributions up to an additional 4% of basic pay. The Postal Service recognizes Social Security and TSP expenses as they are incurred and records them within Compensation and benefits in the accompanying unaudited Statements of Operations. A liability is established for any contribution due and unpaid at the end of each reporting period and is included within Compensation and benefits in the accompanying Balance Sheets.

FERS employees are further categorized as either FERS, FERS - Revised Annuity Employees (“FERS-RAE”), or FERS - Further Revised Annuity Employees (“FERS-FRAE”) depending on whether their date of hire was before, during, or after calendar year 2013, respectively.

The following table presents the employee and employer contributions, as a percentage of employee basic pay, during the three and six months ended March 31, 2020, and 2019:

<table>
<thead>
<tr>
<th></th>
<th>March 31, 2020</th>
<th>March 31, 2019</th>
</tr>
</thead>
<tbody>
<tr>

</tbody>
</table>

\(^1\) Expense for the accrual for the annual payment due to OPM by September 30 of the respective fiscal year, to amortize the unfunded CSRS retirement obligation. The 2020 amounts are based on updated Postal Service estimates resulting from revised actuarial assumptions. Payments are to be made through 2043 based on OPM invoices.

\(^2\) Expense for the accrual for the annual payment due to OPM by September 30 of the respective fiscal year, to amortize the unfunded FERS retirement obligation. The 2020 amounts are based on updated Postal Service estimates resulting from revised actuarial assumptions. Payments are to be made over a 30-year rolling period based on OPM invoices.

**FERS Normal Costs**

The Postal Service records expenses for FERS normal costs within *Retirement benefits* in the accompanying unaudited *Statements of Operations*.

The Postal Service makes payments for FERS normal costs in accordance with its bi-weekly payroll cycle. The employer contributions and employee withholdings not yet remitted to OPM were $209 million and $157 million at March 31, 2020, and September 30, 2019, respectively, and were recorded as a current liability within *Retirement benefits* in the accompanying *Balance Sheets*.

**CSRS and FERS Unfunded Retirement Benefits**

OPM periodically notifies the Postal Service regarding its revaluation of unfunded CSRS and FERS liabilities. OPM calculates these obligations using Postal Service-specific demographics data and government-wide economic assumptions. The Postal Service records these expenses as *Retirement benefits* in the accompanying unaudited *Statements of Operations*. These amounts may be significantly impacted by changes in actuarial assumptions used to revalue the unfunded liabilities.

In October 2019, OPM provided the Postal Service with an actuarial report indicating the projected annual amortization payments due September 30, 2020, would be $1.6 billion for the CSRS obligation and $1.1 billion for the FERS obligation.

On April 2, 2020, the Board of Actuaries of the CSRS, which oversees OPM’s calculation of actuarial liabilities for CSRS and FERS, lowered the discount rate used to calculate CSRS and FERS unfunded retirement liabilities from 4.25% to 4.0%. The Postal Service has estimated that the impact of this change in discount rate on the annual CSRS and FERS amortization expense will result in revised projected amortization payments due September 30, 2020, of approximately $1.8 billion for the CSRS obligation and approximately $1.3 billion for the FERS obligation, increases of $181 million and $226 million, respectively.

Accordingly, the Postal Service accrued additional CSRS and FERS amortization expenses during the three months ended March 31, 2020, to reflect the proportional adjustment between the original OPM estimate and the updated Postal Service estimate as a result of these changes. The Postal Service expects to receive invoices from OPM for the actual amounts due September 30, 2020, during the fourth quarter of 2020, and these invoices may differ from the estimated projections due to further changes in experience, discount rates and/or actuarial assumptions as of the calculation date.
The amounts the Postal Service has accrued for CSRS and FERS unfunded retirement benefits but has not yet paid are recorded as a current liability within Retirement benefits in the accompanying Balance Sheets. Those accrued but unpaid amounts were approximately $9.8 billion and $8.2 billion at March 31, 2020, and September 30, 2019, respectively.

**NOTE 10 - HEALTH BENEFITS PLANS**

FEHB Program covers nearly all career employees and also covers non-career employees and retirees who meet certain eligibility requirements. OPM administers FEHB and allocates the cost of funding the program to participating U.S. government employers. Separate from FEHB, the Postal Service offers its own healthcare plan to certain non-career employees who are ineligible for FEHB.

**Active Employees**

The Postal Service paid 71.9% of healthcare premium costs during both the three months ended March 31, 2020, and 2019. The Postal Service paid 72.0% and 72.3% of healthcare premium costs during the six months ended March 31, 2020, and 2019, respectively. Although OPM determines the actual FEHB premium costs, the allocation of these costs between the Postal Service and most of its employees is determined through agreements with Postal Service labor unions.

Postal Service employee health benefits expense (which includes the employer portion of Medicare taxes) is most significantly impacted by the number of employees electing coverage and the premium costs of the selected plans. Postal Service employee health benefits expense was approximately $1.3 billion for each of the three-month periods ended March 31, 2020, and 2019. Postal Service employee health benefits expense was approximately $2.6 billion for each of the six-month periods ended March 31, 2020, and 2019. These expenses are included within Compensation and benefits in the accompanying unaudited Statements of Operations.

**Retirees**

Postal Service retirees who participated in FEHB for the five years immediately preceding their retirement may continue to participate in the plan during retirement. Qualifying survivors of retirees are also eligible to receive benefits. The Postal Service is required to contribute to the PSRHBF an amount estimated to be equal to the employer portion of FEHB insurance premiums for participating employees and their qualifying survivors, upon retirement, for each employee’s current year of service (normal cost). The Postal Service is also required to contribute an amount sufficient to fully amortize the unfunded liability of the PSRHBF by 2056. These amounts are based, in part, on the current and prospective retiree’s length of federal civilian service occurring on or after July 1, 1971. Each participant’s share of premium costs is set by law and is not subject to negotiation with Postal Service labor unions. The Postal Service cannot direct the costs, benefits or funding requirements of the plans. Therefore, it accounts for program expenses using multiemployer plan accounting rules by recording contributions to the plans that will be required by OPM as an expense in the period in which the contributions are due.

The PAEA required the Postal Service to prefund retiree health benefits during years 2007 through 2016 by paying statutory specified annual amounts ranging from $1.4 billion to $5.8 billion, totaling $54.8 billion, into the PSRHBF, which began paying the Postal Service’s share of retiree health benefit premiums in 2017. The Postal Service remains obligated to fund the $33.9 billion in statutorily required PSRHBF prefunding payments that it defaulted on for the years 2012 through 2016, as well as the normal cost and amortization payments of $10.7 billion and $2.6 billion, respectively, that it did not pay for the years 2017 through 2019. As of the date of this report, the Postal Service has not been assessed any penalties associated with these non-payments. The cumulative amount of statutory specified, normal cost and amortization PSRHBF obligations the Postal Service has accrued is $49.7 billion as of March 31, 2020, inclusive of the $47.2 billion that was unpaid as of September 30, 2019. Given that OPM considers these amounts to be due and payable, the Postal Service reflects the cumulative unpaid amount as a current liability within Retiree health benefits in the accompanying Balance Sheets.

As required by PAEA, OPM annually performs an actuarial valuation for the purpose of developing a payment schedule for the Postal Service to fund the remaining unfunded PSRHBF obligation in annual payments through the year 2056. Based on preliminary calculations provided by OPM, the amortization payment due September 30, 2020, is estimated to be $900 million.
Furthermore, the Postal Service is obligated to pay the estimated normal cost of retiree health benefits attributable to the service of its employees during the most recent year. Based on preliminary calculations provided by OPM, the Postal Service has estimated the normal cost payment, also due by September 30, 2020, to be $4.0 billion.

The Postal Service expects to receive the invoice from OPM for with the actual amounts due during the fourth quarter of 2020 and these may differ from the original projected amounts due to changes in discount rates, actuarial assumptions and experience as of the calculation date.

The following table details retiree health benefits expenses for the three and six months ended March 31, 2020, and 2019:

¹ Expense for the accrual for the annual payment due to OPM by September 30 of the respective year, as calculated by OPM, to amortize the unfunded PSRHBF retirement health benefit obligation. Payments are to be made through 2056 based on OPM invoices.

² Expense for the accrual for the annual payment due to the PSRHBF by September 30 of the respective year, based on information provided by OPM, for the actuarially determined normal cost of retiree health benefits for current employees.

NOTE 11 - WORKERS’ COMPENSATION
Postal Service employees injured on the job are covered by the Federal Employees’ Compensation Act (“FECA”), administered by the U.S. Department of Labor’s (“DOL”) Office of Workers’ Compensation Programs, which makes all decisions regarding injured workers’ eligibility for benefits. The Postal Service reimburses DOL for all workers' compensation benefits paid to or on behalf of Postal Service employees, plus an administrative fee.

Workers’ Compensation Liability
The Postal Service records a liability for its workers’ compensation obligations for employees who have been injured on the job and are eligible for benefits, or their qualified survivors. Both the current and noncurrent portions of the workers’ compensation liability are recorded in the accompanying Balance Sheets. The Postal Service uses an estimation model that utilizes four generally accepted actuarial valuation techniques based upon past claim-payment experience and exposure to claims as measured by total employee hours worked.

Changes in the liability are primarily attributable to the combined impacts of routine changes in actuarial assumptions, new compensation and medical cases, the progression of existing cases and changes in discount (interest) and inflation rates, including long-term COLA rates for compensation claims, and medical rates for medical claims. These rates are updated as of the balance sheet date and factored into the model.

To determine the fair value of the liability each quarter, the Postal Service first estimates the future total cost of workers’ compensation claims based on the dates of claim-related injuries, frequency or severity of the injuries, the pattern of historical payments to beneficiaries and the expected trend in future costs. The Postal Service then calculates the amount that would need to be invested at current discount (interest) rates to fully fund the future total cost of claims, and this calculated present value is the recorded value of the workers’ compensation liability.

This liability calculation is highly sensitive to changes in discount rates. For example, a 1% increase in the discount rate would decrease the March 31, 2020, liability and related expense by approximately $2.4 billion. Likewise, a 1% decrease in the discount rate would increase the March 31, 2020, liability and related expense by approximately $3.1 billion.
The following table details the applicable inflation and discount rates for compensation and medical claims used to estimate the workers’ compensation liability as of March 31, 2020, and September 30, 2019:

<table>
<thead>
<tr>
<th></th>
<th>March 31, 2020</th>

<td>1.91%</td>
</tr>
<tr>
<td>Medical inflation rate</td>
<td>3.50%</td>
<td>2.50%</td>
</tr>
</tbody>
</table>

As of March 31, 2020, and September 30, 2019, the Postal Service’s total liability for workers’ compensation was approximately $20.0 billion and $18.5 billion, respectively. As of March 31, 2020, and September 30, 2019, the current portion of the liability was approximately $1.3 billion and $1.4 billion, respectively, and the noncurrent portion of the liability was approximately $18.7 billion and $17.1 billion, respectively, as reflected in the accompanying Balance Sheets.

**Workers’ Compensation Expense**

The impacts of changes in discount rates and inflation rates, as well as the actuarial valuation of new cases and revaluation of existing cases, are components of total workers’ compensation expense as recorded in the accompanying unaudited Statements of Operations. In addition, the Postal Service pays an administrative fee to DOL, which is considered a component of workers’ compensation expense.

The following table presents the components of workers’ compensation expense for the three and six months ended March 31, 2020, and 2019:

**NOTE 12 - LEASES**

**Postal Service Leases**

The Postal Service holds lessee positions in real property leases as well as lessee positions embedded in service contracts involving rights to use transportation equipment and facilities.

Real property leases support retail, delivery, mail processing, maintenance, administrative and support activities. The non-cancellable base terms of these leases typically range from one to five years, with one or more options to renew for additional five-year terms. The lease terms for these arrangements generally range from one to thirty years including any renewal options that are reasonably certain to be exercised. Additionally, certain real property leases contain purchase and termination options. At the commencement of most real property lease arrangements, the Postal Service is not reasonably certain if it will exercise such options. Real property leases include certain variable lease payments associated with non-lease components, such as common area maintenance costs, and non-lease components such as real estate taxes, which are generally charged as a pass-through based on actual amounts incurred by the lessor. The Postal Service records costs associated with real property leases within Other operating expenses in the accompanying unaudited Statements of Operations.
Transportation equipment leases apply primarily to vehicles, trailers, and aircraft. The non-cancellable base terms of these leases typically range from two to five years, and may include one or more options to renew for an additional one or two years. The lease terms for these arrangements generally range from two to five years including any renewal options the Postal Service is reasonably certain to exercise. Transportation equipment leases do not contain purchase options, however certain of these leases contain termination options. At the commencement of most transportation lease arrangements, the Postal Service is not reasonably certain if it will exercise such termination options. Certain transportation leases contain variable lease payments based on the volume of activity under the contract. The Postal Service records costs associated with transportation leases within Transportation in the accompanying unaudited Statements of Operations.

Postal Service leases do not contain any material residual value guarantees or restrictive covenants.

Sublease income was not material to the financial statements for the three and six months ended March 31, 2020.

Balances disclosed herein include those pertaining to certain related-party transactions. See Note 5 - Related Parties for additional information on related party transactions.

The table below reconciles the undiscounted cash flows for the first five years and the total remaining finance lease liabilities and operating lease liabilities recorded in the accompanying unaudited Balance Sheet as of March 31, 2020:

Capital leases, recorded at historical cost within Property and equipment, net in the accompanying Balance Sheets, were $496 million as of September 30, 2019. Total accumulated amortization related to capital leases was $377 million at September 30, 2019. Amortization expense for capital leases was approximately $33 million and $37 million for the years ended September 30, 2019, and 2018, respectively, and is included within the Other operating expense in the respective Statements of Operations.

Lease Accounting Policies

Lease Accounting Policy for Comparative Periods
As the lessee, the Postal Service classifies leases which have original lease terms greater than one year and that transfer substantially all the risks and rewards of ownership to the Postal Service, as capital leases. These leases are capitalized on the lease commencement date at the lower of the fair value of the leased assets or the present value of the minimum lease payments. The discount rate used to determine the present value is based on average U.S. Treasury rates. Property acquired under a capital lease is amortized over the lease term. Capital leases are included within Property and equipment, net in the accompanying Balance Sheets.

The Postal Service classifies all other lease arrangements in which substantially all risks and rewards of ownership are retained by the lessor as operating leases. Rent expense for operating leases is included in Other operating
expenses in the accompanying unaudited Statements of Operations on a straight-line basis over the term of the lease.

**Lease Accounting Policy for the Six Months Ended March 31, 2020**

The Postal Service determines at the inception of the contract if an arrangement represents a lease or contains lease components. A contract is deemed to represent or include a lease if it conveys the right to control the use of an identified asset for a period of time in exchange for consideration. The Postal Service is assumed to have the right to control the use of the underlying asset if the contract conveys the rights to obtain substantially all of the economic benefits of the underlying asset and the rights to direct how and for what purpose such asset is used during the contract term.

As the lessee, the Postal Service classifies all leases with original lease terms less than one year as short-term leases. The Postal Service classifies all other leases which transfer substantially all the risks and rewards of ownership to the Postal Service as finance leases. Finance lease right-of-use assets are included within Property and equipment, net in the accompanying Balance Sheets. The current and noncurrent portions of finance lease liabilities are included within Payables and accrued expenses and Other noncurrent liabilities, respectively, within the accompanying Balance Sheets. The Postal Service classifies the remaining leases, not classified as short-term leases or finance leases, as operating leases. The Postal Service considers a lease term to include all non-cancelable periods and renewal periods when the Postal Service is reasonably certain that it will exercise the related renewal option.

For short-term leases, the Postal Service records lease expenses in the statement of operations on a straight-line basis over the lease term.

Leases that do not qualify as short-term are recorded in the balance sheet on the lease commencement date, each as a right-of-use asset and a lease liability.

Lease liabilities are initially measured at the net present value of the lease payments due after the commencement date. For this purpose, lease payments include fixed and in-substance fixed rental payments, variable lease payments that depend on an index or rate, and the price of options that the Postal Service is, at the commencement of the lease, reasonably certain to exercise. Lease liabilities are subsequently increased to reflect the interest accrued and reduced when lease payments are made by the Postal Service.

Right-of-use assets are initially measured at the net present value of the lease payments (including amounts due prior to or on the commencement date), adjusted for the impact of initial direct costs and lease incentives. For finance leases, right-of-use assets are subsequently amortized on a straight-line basis over the shorter of the useful life of the underlying asset or the lease term. For operating leases, right-of-use assets are amortized in such a way that the combination of the interest expense accrued on the lease liability and the asset amortization results in a straight-line expense over the lease term.

Right-of-use assets for operating and finance leases are periodically reviewed for impairment losses, following the same process as for other long-lived assets. Impairment losses on long-lived assets are recorded when events or circumstances indicate that an asset's fair value is less than its carrying value. When such a determination is made, the carrying values of the assets are written down to fair value. The Postal Service uses the long-lived assets impairment guidance in ASC Subtopic 360-10, Property, Plant, and Equipment - Overall, to determine whether a right-of-use asset is impaired, and if so, the amount of the impairment loss to recognize. No impairment losses have been recognized to date.

The discount rates used in net present value calculations are determined based on the Postal Service’s incremental borrowing rates on debt outstanding with the FFB at the beginning of each year, which is approximated as the daily U.S. Treasury Yield Curve Rates for the five-year, 10-year, 20-year and 30-year periods, plus a 12.5 basis point spread.

Variable lease payments, except for those based on an index or rate, are recognized as variable lease expenses in the period in which the obligation for those payments are incurred.
NOTE 13 - FAIR VALUE MEASUREMENT
The Postal Service defines fair value as the price that would be received upon sale of an asset or the price that would be paid to transfer a liability between unrelated parties.

The carrying amounts of certain current assets and liabilities, including cash, accounts receivable, accounts payable and accrued expenses, approximate fair value due to their short-term nature. Assets within Property and equipment, net are recorded at cost and measured at fair value on a nonrecurring basis if they are determined to be impaired or classified as assets held for sale.

Noncurrent receivables and long-term debt are measured using a fair value hierarchy model. This model prioritizes observable and unobservable inputs used to measure fair value, and consists of three broad levels, as defined in authoritative literature.

For the three and six months ended March 31, 2020, no significant transfers between Level 1 and Level 2 assets or liabilities transpired. The carrying amount and fair value of the revenue forgone installment receivable and long-term debt are presented for disclosure purposes only in the following table:

<table>
<thead>
<tr>

</tr>
<tr>
<td>Long-term debt</td>
<td>$ 11,000</td>
<td>$ 11,936</td>
<td>$ 11,000</td>
<td>$ 11,437</td>
</tr>
</tbody>
</table>

*The carrying amount is included within Other assets (which includes items in addition to the revenue forgone installment receivable) in the accompanying Balance Sheets.

The revenue forgone installment receivable qualifies as a financial instrument in accordance with authoritative literature. To calculate its fair value, the Postal Service recognizes the imputed interest it is owed as interest income and estimates the value of this receivable using the interest method, which converts future cash flows to a single discounted amount using interest rates for similar assets, which are considered Level 2 inputs. The Postal Service then calculates the net present value of anticipated annual installment payments to be received, discounted by the 20-year U.S. Treasury Constant Maturity Rate, which was 1.15% and 1.94% as of March 31, 2020, and September 30, 2019, respectively.

The long-term debt also qualifies as a financial instrument. Because no active market exists for its debt with the FFB, the Postal Service estimates the fair value of the long-term debt by imputing future payments at discount rates provided by the FFB, considered Level 3 inputs. The weighted averages of the FFB discount rates, based on U.S. Treasury Yield Curve Rates, were 0.36% and 1.79% as of March 31, 2020, and September 30, 2019, respectively.

ITEM 2. MANAGEMENT’S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

CAUTIONARY STATEMENTS

The following Management’s Discussion and Analysis of Financial Condition and Results of Operations and other parts of this report describe the principal factors affecting the financial results, liquidity, capital resources and critical accounting estimates of the United States Postal Service (“Postal Service,” “USPS,” “we,” “our” and “us”). Our results of operations may be impacted by risks and uncertainties discussed here and in our Annual Report on Form 10-K for the year ended September 30, 2019, (“Annual Report”) filed with the Postal Regulatory Commission (“PRC”) on November 14, 2019. Such factors, many of which we cannot control or influence, may cause actual results to differ materially from those currently contemplated.

Our operating results for the three and six months ended March 31, 2020, are presented in accordance with accounting principles generally accepted in the United States (“GAAP”). These results are not necessarily indicative of the results to be expected for the year ended September 30, 2020, and should be read in conjunction with our...
Annual Report. All references to years in this report, unless otherwise stated, refer to fiscal years beginning October 1 and ending September 30. All references to quarters, unless otherwise stated, refer to quarters within fiscal years 2020 and 2019.

Forward-looking statements contained in this report represent our best estimates of known and anticipated trends believed relevant to future operations. However, actual results may differ significantly from current estimates. Certain forward-looking statements included in this report use such words as “may,” “will,” “could,” “expect,” “believe,” “plan,” “estimate,” “project” or other similar terminology. These forward-looking statements, which involve a number of risks and uncertainties, reflect current expectations regarding future events and operating performance as of the date of this report. These risks include, but are not limited to, the effects of the novel strain of coronavirus (“COVID-19”) on our business, financial condition and results of operations. We have no obligation to publicly update or revise any forward-looking statements, whether as a result of new information, future events or otherwise.

OVERVIEW

With our mandate to provide universal postal services to the nation, we serve retail and commercial customers in the U.S., as well as internationally. Our operations include an extensive and integrated retail, processing, distribution, transportation and delivery network, and we operate throughout the U.S., its possessions and territories. We operate as a single segment and report our performance as such.

The Postal Accountability and Enhancement Act ("PAEA") classifies our products into two broad categories: Market-Dominant and Competitive “products,” however, we use the term “services” in this document for consistency with other descriptions of services offered. The statutes under which we operate also establish certain requirements that affect our financial results, including obligations for retirement benefits within the Civil Service Retirement System ("CSRS") and the Federal Employee Retirement System ("FERS"), and obligations for retiree health benefits including funding of the Postal Service Retiree Health Benefits Fund ("PSRHBF"). We must coordinate with the U.S. Office of Personnel Management ("OPM") to address these obligations.

We have successfully implemented initiatives that have reduced the growth in certain costs by billions of dollars while offering new features for customers such as Informed Delivery. However, legal restrictions on pricing, service diversification and operations restrict our ability to cover our costs to provide prompt, reliable and efficient postal services to the nation.

We have established a core set of goals that drive our strategic initiatives and continuous improvement efforts:

1. Deliver a world-class customer experience;
2. Equip, empower and engage employees;
3. Innovate faster to deliver value; and
4. Invest in our future platforms.

As part of these efforts, we aim to achieve long-term financial stability. Our focus on maintaining liquidity and reducing operating expenses reflects current trends, as well as projected future volume of mail and packages. We believe that financial stability is within reach with targeted legislative and regulatory reform to address our overall cost structure and enhance our revenue-generating opportunities as we continue to identify and create innovative and affordable services, and deliver high levels of performance and service. Such financial stability would continue to provide Congress and the executive branch with additional time to address the broader issues regarding our overall cost structure and revenue-generating opportunities.

RESULTS OF OPERATIONS

SUMMARY

The major factors that impact our operating results include overall customer demand, the mix of postal services and contribution associated with those services, volume of mail and packages processed through our network and our ability to manage our cost structure in line with declining levels of mail volume, increased competition in the more labor-intensive Shipping and Packages business and an increasing number of delivery points.
Effects of COVID-19

In March 2020, the World Health Organization (“WHO”) declared COVID-19 a global pandemic, which has since spread throughout the U.S. Changing federal, state and local government actions to address the pandemic have been occurring on a daily basis, and government-imposed shelter-in-place and other movement restrictions designed to slow the pace of the outbreak have severely impacted the U.S. economy. We believe the severity and duration of the COVID-19 pandemic is uncertain, and such uncertainty may continue during the second half of 2020.

Our employees provide an essential public service and bind the nation together as a part of the country’s critical infrastructure. At least six days per week, and in some instances seven, our employees accept, process, transport, and deliver vital mail and packages like medicine, essential consumer staples, benefits checks, and important information, in every community, to every home and business, and we will continue to do so. As Americans are urged to stay home, the importance of the mail will only grow as our customers, including those in rural areas and senior citizens, will need access to vital communications, essential packages and other necessities.

Shortly after the WHO declaration, we created a dedicated COVID-19 response team to lead our response efforts. All of our employees are considered essential, and their safety is our highest priority. Following strategies recommended by the Centers for Disease Control and Prevention, we have implemented enhanced safety measures to protect the health of our employees.

In late March 2020, we restricted business travel and implemented remote work arrangements for certain of our office-based employees. We have also implemented new leave policies for employees who may be affected by illness, quarantines or childcare obligations. These arrangements have not materially affected our ability to maintain our business operations, including the operation of financial reporting systems, internal control over financial reporting, and disclosure controls and procedures.

While we have maintained full operations during the pandemic, travel and logistics restrictions have negatively affected our retail and commercial customers, as well as our suppliers and mail service providers. Many of our commercial customers, especially those with consumer-facing businesses, have been required to suspend their operations or operate at a lower capacity. As a result, our mail volumes began to decline significantly in March 2020. The sudden drop in mail volumes, our most profitable revenue stream, is steep and may never fully recover to levels prior to the pandemic.

Although the COVID-19 pandemic has caused a recent surge in the nation’s use of e-commerce, resulting in higher Shipping and Packages volumes, we do not expect the resulting increases in Shipping and Packages revenues to be sustainable or to offset losses in mail service revenue caused by COVID-19. While the future is uncertain, we believe that the nation’s increased use of e-commerce is likely to plateau in the short term as the effects of the pandemic begin to subside, followed by a longer-term regression of e-commerce caused by a weakened U.S. economy. Furthermore, this anticipated economic weakness has resulted in significant interest rate declines, which have caused an increase in certain of our workers’ compensation and retirement benefits expenses.

On March 27, 2020, the President signed the Coronavirus Aid, Relief, and Economic Security Act, enacted as Public Law 116-136 (the “CARES Act”). Notwithstanding our $15.0 billion statutory debt limit, and $3.0 billion annual limit on new borrowing, the CARES Act allows us to borrow up to an additional $10.0 billion in financing from the U.S. Treasury to fund operating expenses. The U.S. Treasury may lend up to this amount at our request, upon terms and conditions mutually agreed upon. However, we have no assurance that the U.S. Treasury will agree to provide such financing or if it will be provided upon favorable terms.

We estimate that the COVID-19 pandemic may increase our net operating loss by more than $22.0 billion over the next eighteen months, threatening our ability to operate. If we are able to borrow the $10.0 billion from the U.S. Treasury as provided by the CARES Act, we expect that we will have sufficient liquidity to continue to operate through April 2021. However, if we are unable to secure this $10.0 billion in financing, we expect to be able to continue to operate only through September 2020, unless we default on additional obligations.
Three Months Ended March 31, 2020
As more fully described below in Operating Revenue and Volume, our operating revenue for the three months ended March 31, 2020, increased $349 million, or 2.0%, compared to the same period last year. The increase in operating revenue was due to the following:

- Shipping and Packages revenue increase of $386 million, or 7.1%, with a volume growth of 12 million pieces, or 0.8%, driven largely by the January 2020 price increases applicable to certain Competitive services and the temporary surge in e-commerce resulting from the COVID-19 pandemic; and
- First-Class Mail revenue increase of $89 million, or 1.4%, despite a volume decline of 29 million pieces, or 0.2%. Revenue growth was the result of decennial mailings associated with the 2020 U.S. Census, otherwise revenue and volume would have each declined during the quarter.

The above increases in operating revenue were partially offset by a decrease in Marketing Mail revenue of $94 million, or 2.5%, with a volume decline of 604 million pieces, or 3.4%, largely the result of the COVID-19 pandemic, as many of our commercial customers, especially those with consumer-facing businesses, began to suspend their operations or operate at a lower capacity in March 2020. Political and election mail revenue and volumes increased by approximately $100 million and 500 million pieces, respectively, compared to the same period last year, resulting from the impact of the 2020 primary and general elections.

As more fully described below in Operating Expenses, our operating expenses for the three months ended March 31, 2020, increased approximately $2.8 billion, or 14.2%, compared to the same period last year. The increase in operating expenses was primarily due to the following:

- Workers’ compensation expense increase of approximately $2.2 billion, primarily due to declines in discount rates, outside of management’s control, as the COVID-19 pandemic weighed on the U.S. economy;
- Retirement benefits expense increase of $348 million, or 23.7%, due to revised actuarial assumptions for CSRS and FERS unfunded retirement benefits amortization, which are outside of management’s control, and to increased contribution rates for FERS normal costs, compared to the same period last year;
- Other operating expenses increase of $124 million, or 5.3%, due to spending increases in various categories including enhancements to cyber security and information technology;
- Compensation and benefits expense increase of $119 million, or 1.0%, due primarily to contractual wage increases.

The above increases were partially offset by a decrease in retiree health benefits expense of $50 million, or 3.9%, primarily due to the impact of discount rates in effect during October 2019 that were used in OPM’s preliminary annual estimates.

Overall, we reported a net loss of approximately $4.5 billion for the three months ended March 31, 2020, compared to a net loss of approximately $2.1 billion for the same period last year.

Six Months Ended March 31, 2020
As more fully described below in Operating Revenue and Volume, our operating revenue for the six months ended March 31, 2020, decreased $11 million, which was essentially flat, compared to the same period last year.

The decrease in operating revenue was largely due to the following:

- Marketing Mail revenue decrease of $347 million, or 4.1%, with a volume decline of approximately 2.3 billion pieces, or 5.9%, driven by decreases in revenue and volume from political and election mail in the first quarter. Political and election mail revenue and volumes decreased by approximately $140 million and 900 million pieces, respectively, compared to the same period last year, which benefited from the impact of the 2018 mid-term elections during the first quarter of 2019. Furthermore, volume declined due to the COVID-19 pandemic in the second quarter, as the pandemic affected many of our commercial customers;
- First-Class Mail revenue decrease of $79 million, or 0.6%, with a volume decline of 600 million pieces, or 2.1%, reflecting the continuing migration from mail to electronic communication and transaction alternatives; and
Periodicals revenue decrease of $57 million, or 9.4%, with a volume decline of 231 million pieces, or 9.8%, driven by the continuing migration to electronic communication and digital advertising.

The decrease in operating revenue was partially offset by an increase in Shipping and Packages revenue of $532 million, or 4.5%, despite a volume decline of 73 million pieces, or 2.2%, as we continued to see revenue growth in this service category during the six-month period driven largely by the January 2020 price increases applicable to certain Competitive services.

As more fully described below in Operating Expenses, our operating expenses for the six months ended March 31, 2020, increased approximately $1.6 billion, or 4.0%, compared to the same period last year. The increase in operating expenses was primarily due to the following:

- Workers’ compensation expense increase of approximately $1.1 billion, primarily due to declines in discount rates, outside of management’s control, as the COVID-19 pandemic weighed on the U.S. economy;
- Retirement benefits expense increase of $477 million, or 16.1%, due to revised actuarial assumptions for CSRS and FERS unfunded retirement benefits amortization, which are outside of management’s control, and to increased contribution rates for FERS normal costs, compared to the same period last year;
- Other operating expenses increase of $122 million, or 2.5%, due to spending increases in various categories including enhancements to cyber security and information technology; and
- Transportation expenses increase of $63 million, or 1.5%, primarily resulting from higher air transportation costs, but partially offset by lower international transportation costs. The increase in highway transportation costs was driven by a one-time adjustment for our adoption of Accounting Standards Update 2016-02 Leases, which has since been codified in Accounting Standards Codification (“ASC”) 842, Leases (“ASC 842”), but partially offset by a decrease in the number of miles driven and lower average diesel fuel prices. The decrease in international transportation costs was driven by lower International Mail volumes.

The above increases in operating expenses were partially offset by the following decreases in operating expenses:

- Retiree health benefits expense decrease of $100 million, or 3.9%, primarily due to the impact of discount rate changes in effect during October 2019 that were used in OPM’s preliminary annual estimates; and
- Compensation and benefits expense decrease of $71 million, or 0.3%, primarily due to management’s efforts to align work hours with volume workloads, but partially offset from increases due to contractual wage adjustments.

Overall, we reported a net loss of approximately $5.3 billion for the six months ended March 31, 2020, compared to a net loss of approximately $3.6 billion for the same period last year.

Non-GAAP Controllable Loss
In the day-to-day operation of our business, we focus on costs that can be managed in the course of normal business operations, such as salaries and transportation. We calculate controllable loss, a non-GAAP measure, by excluding items over which we have no control, such as PSRHB actuarial revaluation and amortization expenses, workers’ compensation expenses caused by actuarial revaluation and discount rate changes, and retirement expenses caused by actuarial revaluation. Controllable loss should not be considered a substitute for net loss and other GAAP reporting measures.
The following table reconciles our GAAP net loss to controllable loss for the three and six months ended March 31, 2020, and 2019:

¹ Expense for the accrual for the annual payment due to OPM by September 30 of the respective year, as calculated by OPM, to amortize the unfunded PSRHBF retirement health benefit obligation. Payments are to be made through 2056 based on OPM invoices.

² Net amounts include changes in assumptions, valuation of new claims and revaluation of existing claims, less current year claim payments.

³ Expense for the accrual for the annual payment due to OPM by September 30 of the respective fiscal year, to amortize the unfunded CSRS retirement obligation. The 2020 amounts are based on updated Postal Service estimates resulting from revised actuarial assumptions. Payments are to be made through 2043 based on OPM invoices.

⁴ Expense for the accrual for the annual payment due to OPM by September 30 of the respective fiscal year, to amortize the unfunded FERS retirement obligation. The 2020 amounts are based on updated Postal Service estimates resulting from revised actuarial assumptions. Payments are to be made over a 30-year rolling period based on OPM invoices.

Our controllable loss decreased $14 million for the three months ended March 31, 2020, compared to the same period last year. This decrease was largely driven by the $349 million increase in operating revenue, offset by higher other operating expenses of $124 million, higher compensation and benefits expenses of $119 million, and higher FERS normal costs of $75 million.

Our controllable loss increased $270 million for the six months ended March 31, 2020, compared to the same period last year. This increase was largely driven by higher FERS normal costs of $134 million and higher transportation expenses of $63 million, partially offset by lower compensation and benefits expenses of $71 million.

These items are discussed in greater detail in Operating Revenue and Volume and Operating Expenses below.

**OPERATING REVENUE AND VOLUME**

The combined categories of First-Class Mail and Marketing Mail continued to provide the majority of our revenue, despite long-term trends away from traditional paper communication and correspondence to electronic media. Although this migration to electronic media has resulted in significant volume declines in First-Class Mail over the last decade, Marketing Mail volume remained relatively steady between 2009 and 2016. However, Marketing Mail volume began to decline at a greater rate beginning in 2017 and continued to decline through the first half of 2018. Aside from a volume rebound between the second half of 2018 through the first quarter of 2019 that was driven by increases in political and election mail associated with the 2018 mid-term elections, Marketing Mail resumed its volume decline through the remainder of 2019 and the first half of 2020.
The following table summarizes our operating revenue and volume for the three and six months ended March 31, 2020, and 2019, by each service category:

1 Excludes First-Class Package Service - Retail and First-Class Package Service - Commercial.
2 Excludes Marketing Mail Parcels.
3 Includes Priority Mail, USPS Retail Ground, Parcel Select Mail, Parcel Return Service Mail, Marketing Mail Parcels, Package Service Mail, First-Class Package Service - Retail, First-Class Package Service - Commercial and Priority Mail Express.
4 Revenue includes PO Box services, Certified Mail, Return Receipts, Insurance, Other Ancillary Services, Shipping and Mailing Supplies, Collect on Delivery, Registered Mail, Stamped Envelopes and Cards, Money Orders and Other services.
5 Volume includes Postal Service internal mail and free mail provided to certain congressionally mandated groups.

For the three months ended March 31, 2020, First-Class Mail generated approximately 36% of operating revenue, which was essentially unchanged compared to the same period last year, and approximately 42% of our volume, a 1% increase compared to the same period last year. Marketing Mail generated approximately 21% of operating revenue and 50% of our volume, both 1% decreases from the same period last year.

For the six months ended March 31, 2020, First-Class Mail generated approximately 35% of operating revenue, which is essentially unchanged compared to the same period last year, and approximately 40% of our volume, a 1% increase compared to the same period last year. Marketing Mail generated approximately 22% of operating revenue and 52% of our volume, both 1% decreases from the same period last year.

We continued to experience positive revenue results in our Shipping and Packages category, and it represented approximately 33% of our revenue for the three months ended March 31, 2020, which was a 2% increase from the same period last year, and approximately 33% of our revenue for the six months ended March 31, 2020, a 1% increase from the same period last year. Shipping and Packages generated approximately 4% of our volume for both the three and six months ended March 31, 2020, which was relatively unchanged compared to the same period last year.

Although revenue and volume are closely linked to the strength of the U.S. economy and changes in how our customers use the mail, we have proactively targeted opportunities to grow our business. We continue to focus on our customers' needs and have increased our investment in mail and package innovation. However, we also
recognize that revenue growth is constrained by laws and regulations restricting the types of products, services and pricing we may offer to our customers and the speed with which we can bring new products to market.

We anticipate that First-Class Mail will continue to lose volume in future years with the migration to electronic communication and transactional alternatives resulting from technological changes. To address the long-term trend that such changes have had on our First-Class Mail revenue and volume, we have been working with the mailing industry to slow the decline through mailing promotions and leveraging the high open-and-read rates of, for example, bills and statements for additional customer engagement and education.

Furthermore, due to the COVID-19 pandemic our First-Class Mail and Marketing Mail volumes began an accelerated decline in March 2020. The sudden drop in mail volumes, our most profitable revenue stream, is steep and may never fully recover to levels prior to the pandemic.

We have also focused on providing new services and innovating with Marketing Mail. We have expanded service offerings such as Informed Delivery, which enables customers to preview mail and manage packages scheduled to arrive as a means of merging digital and physical mail, as well as allowing mailers to launch interactive digital campaigns. Additionally, we are focusing on opportunities to pilot new products and innovate with customers and the mail industry to enhance the value of hard-copy communication. We believe these service offerings will further improve the value of both First-Class Mail and Marketing Mail.

Our Shipping and Packages category has historically experienced revenue and volume growth as a result of our successful efforts to compete in shipping services, including last-mile e-commerce fulfillment markets and Sunday delivery as well as end-to-end markets. We continue to focus on responding to customers’ needs by implementing solutions and maintaining strategic business partnerships that help us capitalize on the growing e-commerce business.

The COVID-19 pandemic has caused a recent surge in the nation’s use of e-commerce, resulting in higher Shipping and Packages volumes. However we do not expect the resulting increases in Shipping and Packages revenues to be sustainable or to offset losses in mail service revenue caused by COVID-19. Although the future is uncertain, we believe that the nation’s increased use of e-commerce is likely to plateau in the short term as the effects of the pandemic begin to subside, followed by a longer-term regression of e-commerce caused by a weakened U.S. economy.

Our Shipping and Packages category is subject to intense competition which significantly impacts both revenue and volume. Certain major customers continue to divert volume from our network by in-sourcing the last-mile delivery into their own networks. These customers are also aggressively pricing their products and services in order to fill their networks and grow package density.

We implemented price increases for certain Market-Dominant and Competitive services in January 2019 and 2020. Additionally, we implemented dimensional weighting provisions that amount to price increases for certain Shipping and Packages subcategories in June 2019.

First-Class Mail

First-Class Mail, presented in this report as a mail class and a Market-Dominant service category, includes cards, letters and flats. Prices of First-Class Mail, our most profitable service category, are the same regardless the geographic distance between the origination and delivery points. Because First-Class Mail is classified by law as Market-Dominant, price increases are currently generally subject to a price cap based on the Consumer Price Index for All Urban Consumers (“CPI-U”).

For the three months ended March 31, 2020, First-Class Mail revenue increased $89 million, or 1.4%, despite a volume decline of 29 million pieces, or 0.2%, compared to the same period last year. Revenue growth was the result of decennial mailings associated with the 2020 U.S. Census, otherwise revenue and volume would have each declined during the quarter. For the six months ended March 31, 2020, First-Class Mail revenue decreased $79 million, or 0.6%, and volume declined 600 million pieces, or 2.1%, compared to the same period last year. The change in revenue for both periods was less than the corresponding volume declines due to the January 2020 price increase applicable to certain Market-Dominant services. The most significant factor contributing to the
declining trend in First-Class Mail volume has been the continuing migration from mail to electronic communication and transaction alternatives.

Due to the COVID-19 pandemic, our First-Class Mail volume began to decline significantly in late March 2020, and it may never fully recover to levels prior to the pandemic. A protracted loss in customer demand for our services will continue to have a material effect on First-Class Mail revenue and volume.

Marketing Mail

USPS Marketing Mail (more commonly, Marketing Mail), presented as a mail class and a Market-Dominant service category, generally consists of advertising, newsletters, catalogs, small marketing parcels and other printed matter not required to be processed and delivered as First-Class Mail or Periodicals.

Between 2009 and 2016, Marketing Mail experienced relatively flat volume. However, Marketing Mail volume began to decline at a greater rate beginning in 2017 and continued to decline through the first half of 2018. Aside from a volume rebound between the second half of 2018 through the first quarter of 2019 that was driven by increases in political and election mail associated with the 2018 mid-term elections, Marketing Mail continued its volume decline through the remainder of 2019 and the first half of 2020, exacerbated by the COVID-19 pandemic.

For the three months ended March 31, 2020, Marketing Mail revenue decreased $94 million, or 2.5%, and volume declined 604 million pieces, or 3.4%, compared to the same period last year. For the six months ended March 31, 2020, Marketing Mail revenue decreased $347 million, or 4.1%, and volume declined approximately 2.3 billion pieces, or 5.9%, compared to the same period last year. For the three months ended March 31, 2020, our revenue and volume from political and election mail increased by approximately $100 million and 500 million pieces, respectively, compared to the same period last year, as we began to benefit from the impact of the 2020 elections during the second quarter of 2020. For the six months ended March 31, 2020, our revenue and volume from political and election mail decreased by approximately $140 million and 900 million pieces, respectively, compared to the same period last year, which benefited from the impact of the 2018 mid-term elections during the first quarter of 2019.

Due to the COVID-19 pandemic, many of our commercial customers, especially those with consumer-facing businesses, have been required to suspend their operations or operate at a lower capacity. As a result, our Marketing Mail volume began to decline significantly in March 2020, and it may never fully recover to levels prior to the pandemic. A protracted loss in customer demand for our services will continue to have a material effect on our Marketing Mail revenue and volume.

Marketing Mail is subject to intense competition, and price increases are currently generally capped at the rate of inflation. Marketing Mail volume is somewhat reflective of the cyclical nature of the U.S. economy, although targeted advertising campaigns can stimulate demand for this service, and our customers have used Marketing Mail to mail to more targeted prospects.
**Shipping and Packages**
