Network Forensics and Lawful Interception Total Solutions Provider

Computer and Network Forensics Evidence Investigation Tools

**Internet content** Network Forensics and Lawful Interception are important tasks for many organizations including small medium business, enterprises, banking and finance industry, Government bodies, forensics and intelligence agencies for different purposes such as archiving, intercepting and auditing Internet traffic for future references and forensics need. This archived and reconstructed Internet data can be used for legal evidence in case of any dispute. Government and intelligence agencies uses such technology for protecting and defending national security.

Products such as **E-Detective System** (Wired LAN Interception System), **Wireless-Detective System** (802.11 a/b/g/n Wireless LAN Interception System), HTTPS/SSL Network Packet Forensic Device, **VOIP-Detective System** (for VOIP SIP packet) and Network Packet Forensics and Reconstruction software are products that provide network monitoring, network forensics, auditing and Lawful Interception solutions.

E-Detective System is a high-performance, low cost platform, based on x86 hardware and Linux and Window Operating systems. Technical support is delivered on a 24x7 basis.

Our Core Technology
Real-Time Deep Packet Inspection and Reconstruction for Ethernet, Wireless 802.11 a/b/g/n (WiFi), HTTPS/SSL and VoIP . Read More
