

Intelligence and National Security Experience

Information Assurance Technology Analysis Center. Booz Allen's national resource for collecting, analyzing, generating, and disseminating scientific and technical information on emerging technologies is critical for information operations and information assurance.

- **Public Key Infrastructure.** We support the PKI planning and implementation strategy for U.S. security agencies, civil agencies, and the Department of Defense (DoD).
 - **Knowledge Management/Decision Support Tool.** For the U.S. Joint Requirements Oversight Council, we are developing a tool that merges document management capability with architectural analysis/visualization.
 - **Information Risk Analysis.** We regularly perform risk analysis, penetration testing, contingency planning, networking, and secure data transfer for U.S. government civilian agencies. We are one of seven companies certified by the NSA to perform vulnerability assessments of commercial and government entities under the INFOSEC Assessment Training and Rating Program (IATRP).
 - **Intelligence Data Applications.** We analyze intelligence collection capabilities, intelligence dissemination systems, and intelligence products to seek ways to improve support to both military and national intelligence "consumers." These improvements have included concepts for improved collection capabilities, tailored intelligence-collection strategies, new intelligence-analysis tools, and enhanced support to the military operations of the U.S. and its allies.
 - **Border Control.** We built and deployed worldwide the Personal Identification Secure Comparison and Evaluation System (PISCES), which allows countries to collect, compare, and analyze data to secure their borders or other controlled areas. The system provides border-control officials and other interested groups with a tracking system and set of analytical tools to capture and evaluate information of interest, making PISCES a critical tool in the war on terrorism.
 - **Certification and Accreditation.** We provided planning and documentation support, and conducted numerous C&A activities in support of DoD and security agencies, and we are one of six U.S. companies to be certified as an approved test and evaluation facility to develop IT security evaluation criteria that are broadly useful within the international community. (NAIP and TTAP Certification)
 - **Mission Assurance.** We assisted with the development of the only approved mission implementation plan for the NSA.
 - **Privatization.** We support the NSA's activities in analysis and evaluation for the feasibility of acquiring IT services by evaluating various sourcing options and strategies.
 - **Distance Learning.** We developed CLEON, a distance education effort developed and managed by Booz Allen, which is currently the NRO's primary distance education tool. We develop, implement, and maintain training courses over existing wide-area networks to include SIPRNET, GWAN, and JWICS.
 - **Customer Advocacy.** We have won six national Telly Awards for our innovative multimedia/video products used by our customers to communicate their vision and mission.
 - **Message Handling Systems.** We developed the primary message handling systems for the NRO.
 - **Voting Over the Internet (VOI).** We developed the prototype for the first system to use the Internet to cast binding votes in a U.S. general election.
-

Intelligence Community

SUPPORTING THE US INTELLIGENCE MISSION

Intelligence agencies face a complex array of interconnected threats and challenges — challenges that require not only deep analytic capabilities but secure collaborative systems and processes as well.

For more than six decades, Booz Allen's strategy and technology experts have helped with strategic planning, intelligence management and analysis, information sharing, training, counterintelligence and other mission support.

We serve the Director of National Intelligence, Undersecretary of Defense for Intelligence, National Intelligence and Civil Agencies, and Military Intelligence.

By delivering up-to-the-minute expertise and innovative technology solutions, we help intelligence agencies gain the knowledge they need to bolster national security.

Mike McConnell Rejoins Booz Allen as Senior VP

January 27, 2009

McLean, VA — Booz Allen Hamilton today announced that J. Michael (Mike) McConnell will rejoin the firm as senior vice president upon the completion of his service as Director of National Intelligence.

“We are proud to welcome Mike McConnell back to the Booz Allen family,” said Dr. Ralph W. Shrader, Chairman and Chief Executive Officer of Booz Allen Hamilton. “Mike embodies what Booz Allen has long stood for: integrity and dedication to service. He is a leader in the national security community and true patriot who has devoted his life to keeping our country safe and secure.”

McConnell has an illustrious record of government service. He previously served as Director of the National Security Agency under Presidents George H.W. Bush and Bill Clinton. A Vietnam veteran, he served a total of 29 years in the Navy retiring in 1996 as a Vice Admiral.

Upon his retirement from the Navy, he joined Booz Allen where he attained the position of senior vice president, and departed in 2006 when asked by President George W. Bush to become the Director of National Intelligence. President Obama has asked McConnell to continue to serve by accepting a position on his President Intelligence Advisory Board (PIAB), the Board which advises the President on all matters related to intelligence.

“I couldn’t be happier to return to Booz Allen as it continues to provide vital national security, civilian, and defense assistance to the government,” said McConnell. “I’ve always admired Booz Allen’s dedication to government service and look forward to contributing.” McConnell will lead the firm’s national security business unit.
